Senator MILLER. Well, take the rank and file who are not members of the staff, just somebody who has been in the union for 6 months. He does not have to pay money into COPE if he does not want to, does he?

Mr. KETELHUT. The UAW constitution provides—I did not bring it along but it provides—that if a member—right in our constitution—if a member objects to his money, money from his dues being spent politically, they will——

Senator MILLER. I am not talking about dues, though.

Mr. KETELHUT. About what?

Senator MILLER. I am not talking about dues. I am talking about contributions to COPE.

Mr. KETELHUT. Yes.

Senator MILLER. Because my understanding is that the financing of COPE does not come out of dues. It comes out of contributions or purchasing chances on lotteries and things like that.

Mr. KETELHUT. I would have to go along with you. I cannot question you on that. All I know is that with my experience that is the way I have been approached on it. Whether or not they get additional funds from the general treasury I do not know.

Senator MILLER. Forgetting about the Committee on Political Education funds, and assuming that contributions by individual members are voluntary—as I have long understood to be the case, let us turn our attention to union dues. You have testified that some part of the dues has been used for political purposes by some unions. I assume by political purposes you mean partisan purposes.

Mr. KETELHUT. Yes!

Senator MILLER. Can you tell us how?

Mr. KETELHUT. I will give you some example, since I have a few moments to refresh my memory. I recall that when I served on the IM staff of 1953 through 1958. Senator Douglas was our Senator from Illinois. At election time International would send out a man and he would have his car loaded down with printed campaign material for Mr. Douglas. This material would be distributed to the area Democratic headquarters in my district. This man would inform me that I should keep quiet and not tell everybody that he was doing this on union time as he was a staff member of the IM.

Senator MILLER. The point you make here is that union dues which are used to pay the salaries of staff members of the union were diluted to the extent that the staff member took time away from his staff duties with the union and participated in a partisan political campaign?

Mr. KETELHUT. That is right.

Senator MILLER. Can you tell us how long this particular staff member took off to engage in the partisan political campaign?

Mr. KETELHUT. At different times when this man came through my area on these political excursions, I would ask him to stay over and assist me on local union problems as he was also a capable negotiator. He told me that he could not offer any assistance because he was ordered to spend all his time on seeing that Mr. Douglas was reelected.

Senator MILLER. You have given us an example. Do you know of other examples?

Mr. KETELHUT. Yes I do. The machinist union, as an arm of the organization which they refer to the machinists union partisan political league. They would encourage local lodges to put on parties and dances, and furnish lunch and refreshments, which may cost a local $300, $400, or $500 out of its local treasury. Then a collection would be made amongst the union members at this party who were told that they were contributing to the machinists nonpartisan political league.

Senator MILLER. What you are saying then is that the financing of the so-called nonpartisan political league was handled through parties of this nature with the local union's treasury, which had been funded by union dues, being used to pay for the expense of the parties and the parties being used as a vehicle for raising "voluntary" contributions to the league.

Mr. KETELHUT. That is right.

Senator MILLER. Were the activities of the so-called nonpartisan league genuinely nonpartisan?

Mr. KETELHUT. Let me put it this way, that the nonpartisan slogan was to elect our friends—defeat our enemies.

Senator MILLER. That is an interesting slogan, but the real question is whether those designated as friends represented mostly or entirely the candidates of one political party.

Mr. KETELHUT. I would say that their activities, 98 percent of the time, supported the candidates of one party.

Senator MILLER. And which party?

Mr. KETELHUT. The Democratic Party.

Senator MILLER. Can you give us another example of how union dues were used for partisan political purposes?

Mr. KETELHUT. During the last presidential election when Vice President Humphrey held his parade in Chicago, the Local 765 of the UAW, of which I am a member, took two bus loads of members, paid for the loss of time from their jobs, and paid for the bus fares and meals and lodging to participate in the Humhprey program in Chicago. This was done by the sizable UAW local in Rockville, which had the funds to support it.

Senator MILLER. You are saying that these payments were made from the union treasury into which dues had been paid, and not from a fund which was supported by voluntary contributions.

Mr. KETELHUT. That is absolutely right. UAW locals cannot have funds other than from dues.

Senator MILLER. In other words, the entire union membership through their dues, really paid for the expenses of the bus loads of union members going to and from Chicago, remaining in Chicago over night, and the loss in wages incurred by their absences from their employment.

Mr. KETELHUT. That is right.

Senator MILLER. I have heard that in some cases a local union's treasury, funded by union dues, has been used to reimburse union members for taking time away from their employment to actively work in getting out the vote for candidates endorsed by the union in partisan political elections. Do you know of any such practices in your experience?

Mr. KETELHUT. Yes, I do. In Illinois, approximately I would say 1954 or 1955, somewhere in the State legislature election, we had a man that was endorsed by the international union office in Chicago, to run against the incumbent State legislator.

Senator MILLER. Where?

Mr. KETELHUT. In the Freeport, Ill., district. The international office in Chicago requested that our IAM local in Freeport support and assist this man in every way. The local set up a committee. The members of this committee took time off to check the voting record at the county court house in the district. As many of our members were scattered in two or three counties, it was necessary for the members of this committee to take time off from their employment to encourage members that were not registered to vote to become registered, and this same committee, for a few days before the election, made up car pools to contact members at their homes and to get them to vote. We had many night-shift people who could only be contacted in this way. The members of this committee were reimbursed by the local union for wages lost by their activities.

Senator MILLER. Are you saying that their activities were directed at the support of the partisan candidate endorsed by the international office in Chicago?

Mr. KETELHUT. That is right.

---

STATEMENT OF MRS. J. M. FORD, ILU MEMBER, LAWRENCE, KANS.

Senator MILLER. What local are you a part of?

Mrs. FORD. Local 605 of the Laborers' International Union of North America, located at Sun Flower, Kans.

Senator MILLER. Does this union have a union shop contract with the management?

Mrs. FORD. Yes, sir, it does.

Senator MILLER. In other words, you must belong to the union to hold your job?

Mrs. FORD. Yes sir.

Senator MILLER. And, of course, you pay dues to the union.

Mrs. FORD. Yes sir, I do, and it is deducted from my pay check.

Senator MILLER. Do I understand that part of these dues are used by the union for partisan political purposes?

Mrs. FORD. As far as I know. I have in my hand a copy of an article that was in the Johnson County Herald on March 12, 1969, referring to the contributions reported in last fall's gubernatorial campaign in Kansas.

Senator MILLER. I note that the article refers to an F. E. Black as having contributed $10,000 to the "Docking for Governor Club," and that Black is believed to be a leader in the AFL–CIO in Kansas. The article also lists other Docking contributors to include the Amalgamated Meat Cutters, the Communications Works of America, the International Brotherhood of Boiler Makers, and other unions. Is this the basis for your belief that some part of union dues has been used for partisan political purposes?

Mrs. FORD. Yes, sir, this is one of the reasons that I believe this. Another reason is that we working on a bill to put teeth into the Kansas right-to-work law, and we thought that had accomplished this because we had a good majority—76–40 in the legislature. Then Governor Docking vetoed it.

Senator MILLER. Is the main thrust of your

criticism your understanding that a part of your union dues, which you must pay in order to hold your job, is used for partisan political purposes?

Mrs. FORD. Only partially because there are millions of people in my shoes in the United States who are forced to support candidates whom they oppose just as I.

Senator MILLER. Thank you.

Mr. MILLER. Mr. President, the thrust of the Fannin amendment is to make clear that dues and assessments paid to any organization—I emphasize any organization—which is tax exempt cannot be used for purposes of supporting a particular political party or a particular candidate for public office.

This has nothing to do with voluntary assessments such as those that may be obtained through medical associations, such as those known as AMPAC or through the union association known as COPE, which is an AFL–CIO voluntary organization, or in the case of DRIVE, which is a comparable organization for the Teamsters Union—all voluntary organizations to which dues and contributions are voluntarily paid. They are not touched at all by the Fannin amendment.

So that the amendment is directed at the portion of dues, assets, fees, and other income which go into a tax exempt organization and which are used for the use of a political party or a particular political candidate.

It seems to me that the amendment overcomes an objection, which has been voiced in years gone by, to amendments or proposed laws singling out a union or singling out a chamber of commerce for special treatment.

It is my understanding that the Fannin amendment treats them all alike and makes clear that they are all covered by the language of the amendment. I believe that the portions of the record which I have had printed in the RECORD indicate the kind of abuse which is occurring under present law. It is the kind of abuse which I believe should be ended.

I believe that members of all these kinds of organizations would be better satisfied, and the Treasury of the United States would be better served, if an amendment such as the Fannin amendment were to be adopted.

Mr. FANNIN. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator from Arizona has 4 minutes left.

Mr. FANNIN. Mr. President, the question is, Shall the people of the United States be forced to subsidize political candidates and political activities as mentioned in my amendment?

I feel that my amendment will bring about a better balance among management, labor, and Government.

The amendment is not punitive. It is fair and equitable.

The amendment will promote registration activities by political parties. That is the best kind of citizenship training that anyone can have.

Therefore, I feel that my amendment will promote good citizenship. It will be the basis for handling this question, which has been debated for many years.

I believe that the Senate will render a great service to the people of this country by adopting the amendment.

I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. MONDALE. Mr. President, this amendment goes far beyond the Talmadge amendment, which was just defeated. It would prohibit the League of Women Voters or unions from carrying on even voter registration drives. It would prohibit unions from printing in newspapers endorsements of or opposition to Members of Congress.

It is so broad that where it ends in restricting the right of tax exempt organizations to express themselves consistent with the first amendment is difficult to envisage.

Mr. President, the amendment offered by the Senator from Arizona has raised the question of the political activities of tax-exempt organizations under sections 501(c) and 501(d) of the Internal Revenue Code. In order to understand its significance, we need to consider another questions which it does not treat directly, that is the present tax deductibility of certain political expenses by corporations.

Complicating a discussion of this issue is the recent appearance of newspaper advertisements, paid for by the tax-exempt National Right to Work Committee, in which this and an earlier amendment of the Senator's were advocated. In the ad, the state of the law, as it presently stands, was completely distorted.

In order for us to clearly understand the amendment and its far-flung ramifications, particularly as to where its full thrust is intended to be felt, it is necessary to discuss the organizations that are now tax exempt, what their rights are and their restraints as tax-exempt organizations, how they differ, if at all, and what consideration has been given to this subject thus far in the legislation before us.

H.R. 13270, as passed by the House of Representatives and as reported by the Senate Finance Committee does not prevent tax-exempt organizations such as trade associations, chambers of commerce, or labor organizations from engaging in political activities. Further, the present law makes no distinction as to the rights of these organizations to engage in political activities. It is now impartial. Of the 18 different types of tax-exempt organizations, only charitable organizations operate under a "no politics" rule.

Thus, under the present law, which is in no way affected by the committee's bill, political activities may be undertaken by the National Associaton of Manufacturers, the American Medical Association, the National Rifle Association, the American Farm Bureau, the National Grange, the U.S. Chamber of Commerce, the American Legion, the American Trucking Association, the AFL–CIO, the National Right-to-Work Committee, the League of Women Voters, real estate boards, boards of trade, social clubs, fraternities, benevolent life insurance associations, mutual or cooperative ditch or irrigation companies, credit unions, certain mutual insurance companies and mutual savings banks, social welfare organizations and churches. There are thousands of specific organizations within these categories that are now tax exempt and share a right to political activity. The law does not favor either labor or business associations.

The amendment before us, we are informed, supersedes an amendment offered by the Senator from Arizona which would have changed that balance and equality among the tax exempt organizations as to political activities. The earlier amendment would have singled out labor organizations to deny them their tax exempt status entirely if any dues or assessments were used "to support or oppose any candidate for public office or for other political purposes." That amendment would not have affected business-oriented or other tax-exempt organizations—many of which I described above—all of which are and would have continued to be free to participate in political activities without loss of tax exemption.

The fact that unions were being singled out for punitive treatment and denied a right that would remain to the other organizations has been totally distorted in at least two instances. When the first amendment was introduced, accompanying remarks in the RECORD declared that "the amendment simply requires that unions operate under the same rules as those applied to chambers of commerce, charitable foundations, churches or fraternal organizations."

Second, an advertisement in the Washington Post on October 27, 1969, addressed to the Senate Finance Committee, asked Congress to close what it termed "the only unmentioned loophole" and went on to state that "unlike other organizations a union does not lose its tax exemption because it engages in political activities."

The fact is that the tax-exempt status of labor unions, and the political activities they may undertake, is identical to that of all the other tax-exempt organizations. To claim that unions enjoy a special privilege in the law is a clear misrepresentation of the facts.

Thus, the first step in putting this matter into perspective is to discount the erroneous information presented at the time the first amendment was introduced.

This background is also important if we are to understand the purpose of the amendment before us, which, as the sequence of events demonstrates, is to use the tax code to enact punitive restrictions that would fall most heavily on labor unions, and certain civic groups, under the cover of a supposed interest in tax equality and loophole closing.

There is a further area that must be noted if we are to fully understand what is being proposed. That is, the privileges accorded, under the tax code, to profit-making organizations when they engage in political and legislative activities. These privileges are untouched by the Senator's amendment. If we are to consider changing the Federal tax code in reference to the political activities of union and business groups, we should discuss the impact of the code in its entirety.

Let me point out that business cor-

porations are presently able to obtain a tax deduction for a wide range of political and legislative activities. No similar benefit is enjoyed by the workingman, the consumer, or the small taxpayer.

The Fannin amendment does not propose to change the present rules that favor business by allowing such organizations to propagandize with tax-deductible dollars. Pursuant to section 162(3) of the Internal Revenue Code, businesses and corporations—but not individuals—can obtain a tax deduction for expenses of lobbying concerning legislation which is "of direct interest" to business. The Internal Revenue Service has interpreted the direct interest requirement so leniently that hardly any major issue is not considered of direct interest to a significant segment of the business in America—thus business lobbying before committees and individuals of the Congress in connection with social security is tax deductible.

The Internal Revenue Service has also taken the position that profit-making business—but not individuals—may obtain a tax deduction for propaganda promoting a corporation's views on "economic, financial, social or other subjects of a general nature" so long as such political propaganda does not relate to "lobbying purposes, the promotion or defeat of legislation, or political campaign purposes."

This rule permits a corporate tax deduction for expenses to propagandize for business political views by buying space in newspapers and magazines, sponsoring radio and TV programs, publishing books and pamphlets, and conducting so-called educational campaigns for employees. Such activities are tax deductible so long as they do not discuss specific legislation or specific candidates. The expenses of such tax deductible propaganda efforts are imposed upon the corporation's workers, its customers, and its shareholders, many of whom strongly oppose the use of corporate funds for these purposes. No comparable tax benefit is presently made available to workingmen or consumers to assist them in having their views heard.

Specifically, the Internal Revenue Service has held that a corporation can deduct expenses: first, for ads urging the public to register and vote and to contribute to the political party of their choice, second, for sponsoring a debate between candidates, and third, for encouraging employees to register and vote and contribute to the party of their choice. Nothing in the present amendment affects these corporation privileges.

In summary, all tax-exempt organizations—except charitable ones—enjoy identical rights to engage in political activities. Further, profitmaking corporations enjoy broad opportunities for tax deductibilty for many political activities and they can undertake other political activities through their nonprofit associations funded by tax-deductible dues and fees.

While the effect of amendment No. 303 on most tax exempt organizations is unclear, it is plain that it would, for example, quite literally put the League of Women Voters out of business. The league has a major commitment to voter registration projects. It is ironic that that commitment is being threatened at a time when the league has just embarked on a major national campaign emphasizing the value of the right to vote. The league has designated 1970 as "the year of the voter" and intends to do all in its power to alert citizens to the value of the ballot in our society.

It is also ironic in that the Senate only a few days ago approved the continued conduct of voter registration activities by tax-exempt foundations. The league had its beginnings 50 years ago when the vote was granted to women. It has not forgotten its heritage nor its determination to involve all citizens in our system of representative government.

In the last presidential election, the league operated mobile registration units in inner city areas. In an 80-precinct area in New York's Harlem, more than 18,000 new voters were registered. Tens of thousands of "Vote Baby Vote" buttons were passed out as well as leaflets and a special "Voteman" comic book. Thousands of leaguers participate in voter registration activities—knocking on doors; providing transportation; baby sitting; telephoning; or whatever it takes to get people registered.

In many communities, leagues join forces with other civic groups to get people registered. The Dayton, Ohio, league worked with churches, civic groups, and others in an inner city registration drive which added 4,000 new voters. In addition, they successfully petitioned the board of election for more liberal registration hours and convenient sites. In the Waterloo-Cedar Falls area the league held a 1-week concentrated drive aimed mainly at reaching newcomers to the area, low-income groups, and the black community. They went to schools, churches, and park areas and added almost 800 voters to the election rolls.

The list of league accomplishments relating to voter registration projects is almost endless. They have written an enviable record in the voting field and all of us owe them a debt of gratitude. Any curtailment of their activities would be a serious blow to our political process.

What would loss of tax exemption mean to labor organizations?

The effect of such a loss is not clear. It would appear, however, that such a loss would have a devastating effect on labor unions, almost alone among the tax-exempt groups I have noted, for unions are multipurpose organizations that are required to accumulate money for fraternal benefits, strike benefits, and so forth. Most other tax-exempt organizations are in a position in which they could minimize the impact of a loss of tax exemption by spending all of their income each year.

It should also be noted that many tax-exempt organizations restrict their political activity to acts designed to influence public opinion in general, or legislators in particular on certain issues. They do not engage in voter registration which the amendment would forbid. Presumably this is because they fear the effect of a broadened franchise. Nor do they directly endorse or make contributions to specific candidates or parties, presumably because they count among their adherents men of substance who can make large contributions on their own. Is it my understanding that the National Right To Work Committee, among others, fit in this category. Such organizations would be able to continue their activities, and no one can doubt that their activities are political, without endangering their tax-exempt status to any degree.

Moreover, this tax-exemption loss on labor unions would occur only in the event that unions continued to exercise what have been recognized as their constitutional rights of free speech and association. A prudent union leader would have grave difficulty approving acts which might jeopardize his union treasury until we have ascertained the impact of this vague amendment on his organization. An expenditure of $1,000, for example, which the courts might say was prohibitory by the new amendment, could result in tax liabilities of hundreds of thousands of dollars. Thus, it is plain that both of the Senator's amendments had as their basic thrust, not an attempt to raise revenue, but to penalize the exercise of constitutional rights. As the Supreme Court said in Speiser against Randall:

> It cannot be gainsaid that a discriminatory denial of a tax exemption for engaging in speech is a limitation on free speech.

Now, let us turn to the exact language of the amendment before us. It provides that any organization would lose its tax exemption entirely if "any part of its income or of the amounts received for its support is used, directly or indirectly to support or oppose any candidate for public office any political party or to carry on any voter registration."

This amendment, unlike the earlier one introduced by the Senator, appears neutral on its face. It is, however, again an antiunion proposal intended to increase the relative political power of the business community and the wealthy. This amendment has had no explanation that one can turn to in the CONGRESSIONAL RECORD. But, as the first amendment the Washington Star carried a paid political advertisement paid for by the tax-exempt National Right To Work Committee. This ad appeared on December 1, 6 days after the second amendment was introduced. The facts again did not inhibit the copy writer. The Fannin amendment, the ad stated, "will eliminate a special tax privilege conferred only on labor unions."

Again, with tiresome sameness, the totally erroneous claim is made that unions somehow enjoy a special status by the tax exemption. They do not under the tax code or elsewhere in Federal law.

Lest anyone believe that unions are totally uninhibited in their political activities, it must be made clear that they do not have total freedom to engage in political activities as they might see fit. The tax code is not the only law regulating unions. There are many restrictions on unions in the Taft-Hartley Act, in the Landrum-Griffin Act and, most directly applicable here, the Federal Corrupt Practices Act.

Under this act, labor unions and corporations are treated identically. In the case of each, certain political contribu-

tions and expenditures are outlawed under the criminal code. It is illegal for a labor organization—or a corporation—to make a contribution or expenditure in connection with any election for President, Vice President, or to the Congress of the United States. As a result, union dues are not used for contributions to or expenditures on behalf of political candidates.

Contributions and expenditures made by COPE and other similar groups are financed solely by separate, completely voluntary, contributions, rarely of more than a dollar a man. The collection and distribution of such voluntary political contributions by both business and labor is perfectly lawful. Business has the full legal right to carry out identical activities. Moreover, as the Supreme Court stated in *United States* v. *CIO*, 335 U.S. 106, in upholding the legality of political editorials in unions newspapers, the law does not prohibit the use of union funds for the circulation of political information by a union to its members or for nonpartisan activities, such as registration directed at union members and their families.

There can be no doubt that Congress in shaping the contours of section 610 was wise in allowing the foregoing activities. The Supreme Court has made this clear in such cases as *Williams* v. *Rhodes*, 393 U.S. 23, which overturned a law making it impossible for George Wallace's third party to appear on the ballot and *NAACP* v. *Button*, 371 U.S. 415, which permitted group activities to vindicate basic legal rights through court litigation. The equal protection of the right to vote, the right of free expression and free association, all of which are basic to our democratic system, and all of which are protected by the Constitution, demand no less.

For example, the right of unions to solicit voluntary contributions and the right of individual workingmen to contribute is essential to a balanced political system. In the last election for which we have authoritative figures, the 1956 election, 12 families and the officers of the 225 largest corporations made contributions of $500 or more each, that totaled $3 million. Union officials contributed $19,000. Naturally, union members individually do not have the resources to make such contributions, but together they pooled their funds to make contributions of $1 million—one-third of the total of the wealthy individuals mentioned above.

Fundamental fairness supports the opportunity of millions of working men and women to counter the effectiveness of the small group of wealthy citizens who can afford highly visible and memorable large contributions.

The right of unions to engage in nonpartisan voter registration directed at their members is also essential to maintain a balance between labor and the industrial community. As I have pointed out, corporations, which are not tax exempt, enjoy substantial tax incentives to engage in nonpartisan political activity. Why does the Senator think it is wrong for unions to do so?

The law as it presently operates is, in large measure, responsive to basic constitutional imperatives and to the belief that all groups should have a fair opportunity to take part in the political process. In 1967, the Senate reaffirmed the balance struck by section 610 by rejecting a proposal—46 to 19—which would have prohibited group activity in the political area. The new amendment of the Senator from Arizona seeks to override this balance. It is in practical terms, the essence of the 1967 proposal in a new form. For example, it might be argued that the amendment reaches voluntary political contributions to unions by their members, or the mere statement by a union convention, directed at that union's membership, that a certain candidate is preferable to his opponent on labor matters. The amendment, of course, places no restraints on individual contributions by wealthy persons. The amendment plainly reaches voter registration and it is equally plain that it has no effect on corporate endeavors in the same area. Its total intent is to drive from the field of political action all those whose strength is provided by joining into associations for the pursuit of a common goal other than business profits.

It is beyond dispute that the regulation of political activity by unions and other nonprofit groups raises complex policy and constitutional questions. Yet, amendment 303 is offered without the benefit of thorough study and in the absence of hearings. The proposal has not been considered either by the Senate or House labor or tax committees or by Treasury or Justice Department officials.

A basic change of this kind should not be considered without adequate study. This axiom is certainly applicable where there is carefully considered legislation in force. Section 610 was fully considered and debated prior to enactment. The carefully delineated lines it drew should not be obliterated through a tax amendment first offered on the floor. This is especially clear since there is no evidence that section 610 is defective in design or in actual effect. There is no emergency situation precluding careful consideration of the ramifications of the rules presently in effect. There is simply no rational excuse for this type of back door amendment of the tax laws to strike at a recognized, legitimate exercise in political participation.

In addition to its failure on the substantive level, the new Fannin amendment would propose a highly punitive remedy. As proposed, an organization could totally lose its tax exemption for any violation, whether major or minor, accidental or deliberate. The tax committees of both Senate and House have recognized that loss of exemption is not an appropriate or an effective sanction. In many cases, the penalty is too harsh—a minor inadvertent violation can cause loss of exemption with disastrous consequences. In other cases, the same sanction—loss of exemption—may be totally ineffective because some organizations will owe no tax even if exemption is lost. To impose a sanction of this kind without adequate study is to risk crippling or destroying certain categories of exempt organizations while imposing only a trivial or ineffective sanction against another.

In sum, amendment No. 303 is without a redeeming feature. It does not serve the avowed purposes of H.R. 13270—the attainment of equity in our tax statute and the closing of loopholes. It would replace a relatively even-handed process for the regulation of group political activity with one that favors the business community and the wealthy, and specifically disfavors labor unions. Its avowed purposes have been shown to be without support in reason or law. It has not been subjected to the close scrutiny that is mandatory for a major place of legislation which touches on basic political and constitutional rights. It is an attempt to amend a section of the Criminal Code through the back door of tax reform. It embodies a harsh and unsound remedial scheme. Amendment No. 303 should therefore be rejected.

Mr. FANNIN. Mr. President, is the Senator willing to yield back his time?

Mr. MILLER. Mr. President, will the Senator yield to me so that I may ask a question?

Mr. FANNIN. I yield.

Mr. MILLER. Mr. President, the Senator from Minnesota indicated that this amendment would stop the League of Women Voters from registration drives. It is my understanding that the League of Women Voters sets up a special foundation for the purpose of organizing voter registration drives. As I understand the amendment by the Senator from Texas (Mr. YARBOROUGH) that was adopted the other day, the use of funds by a foundation for voter registration drives is not interfered with.

Mr. MONDALE. I think the Senator's understanding is incorrect. Where the assets of a tax-exempt organization, including staff, are used for the purposes mentioned, for voter registration, the tax-exempt status of the organization is to be terminated.

Mr. President, I yield back my time.

Mr. FANNIN. I yield back my time.

The PRESIDING OFFICER. All time on the amendment has been yielded back. The question is on agreeing to the amendment of the Senator from Arizona. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. COOPER (after having voted in the negative). Mr. President, on this vote, I have a pair with the distinguished Senator from Arizona (Mr. GOLDWATER). If he were present and voting, he would vote "yea"; if I were permitted to vote, I would vote "nay." Therefore, I withdraw my vote.

Mr. ALLOTT. Mr. President, on this vote I have a pair with the junior Senator from Colorado (Mr. DOMINICK). If he were present and voting, he would vote "yea." If I were permitted to vote, I would vote "nay." I therefore withhold my vote.

Mr. BAKER (after having voted in the affirmative). Mr. President, on this vote I have a live pair with the distinguished senior Senator from Missouri (Mr. SYMINGTON). If he were present and voting, he would vote "nay." If I were permitted to vote, I would vote "yea." Therefore, I withdraw my vote.

Mr. HRUSKA (after having voted in the affirmative). Mr. President, on this

vote I have a pair with the senior Senator from Louisiana (Mr. ELLENDER). If he were present and voting, he would vote "nay." If I were permitted to vote, I would vote "yea." Therefore, I withdraw my vote.

Mr. KENNEDY. I announce that the Senator from New Mexico (Mr. ANDERSON), the Senator from Montana (Mr. METCALF), and the Senator from Missouri (Mr. SYMINGTON) are necessarily absent.

I further announce that the Senator from Alabama (Mr. ALLEN), the Senator from Nevada (Mr. CANNON), and the Senator from Louisiana (Mr. ELLENDER) are absent on official business.

I further announce that, if present and voting, the Senator from Alabama, (Mr. ALLEN), the Senator from Nevada (Mr. CANNON), and the Senator from Montana (Mr. METCALF) would each vote "nay."

Mr. GRIFFIN. I announce that the Senator from Arizona (Mr. GOLDWATER) is absent on official business.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Colorado (Mr. DOMINICK) and the Senator from Alaska (Mr. STEVENS) are necessarily absent.

The respective pairs have been previously announced as follows: The Senator from Tennessee (Mr. BAKER) and the Senator from Missouri (Mr. SYMINGTON); the Senator from Kentucky (Mr. COOPER) and the Senator from Arizona (Mr. GOLDWATER); The senior Senator from Colorado (Mr. ALLOTT) and the junior Senator from Colorado (Mr. DOMINICK); and the Senator from Nebraska (Mr. HRUSKA) and the Senator from Louisiana (Mr. ELLENDER).

The result was announced—yeas 27, nays 59, as follows:

[No. 193 Leg.]

YEAS—27

So Mr. FANNIN's amendment was rejected.

Mr. MANSFIELD. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. MONDALE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MANSFIELD. Mr. President, for the information of the Senate and in response to a query, before I received recognition, from the distinguished Republican leader, we have come to a joint conclusion that it might be better to have the vote just cast be the last rollcall vote for today. If there is any amendment which can be passed on a voice vote, fine and dandy, but I know of no amendment of that nature at this time.

Mr. SCOTT. Mr. President, if we could have a limitation of time on the pending amendment, I would like to have that.

Mr. MANSFIELD. Yes. I understand that the distinguished Senator from Tennessee (Mr. GORE) and the distinguished Senator from Delaware (Mr. WILLIAMS), who are the cosponsors of an amendment which will soon be offered, are agreeable to a 40-minute time limitation, the time to be equally divided between the Senator from Tennessee, or whomever he may designate, and the distinguished chairman of the committee.

## ORDER FOR ADJOURNMENT TO 10 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business tonight, it stand in adjournment until 10 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

## ORDER FOR TRANSACTION OF ROUTINE MORNING BUSINESS TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that there be a brief period for the transaction of morning business at the conclusion of the prayer on tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

## LEGISLATIVE PROGRAM

Mr. MANSFIELD. Mr. President, if we are successful in passing the tax reform bill tomorrow, it is the anticipation of the leadership to take up the District of Columbia appropriations bill, the foreign aid authorization bill, and the Department of Transportation appropriations bill later in the week. There is another bill that I cannot think of at the moment, but there will be plenty of business to transact.

Mr. MAGNUSON. Mr. President, we will have a subcommittee meeting on the Department of Health, Education, and Welfare bill at 2 o'clock tomorrow and a full committee meeting on Thursday. The bill will have to be printed in the meanwhile. We ought to have that ready to report by Friday. We might have a vote on Monday.

## COMMITTEE MEETINGS DURING SENATE SESSION TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Committee on Agriculture and Forestry be authorized to meet during the session of the Senate tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McINTYRE. Mr. President, I ask unanimous consent that the Subcommittee on Small Business of the Commitee on Banking and Currency be authorized to meet during the session of the Senate tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

## TAX REFORM ACT OF 1969

The Senate continued with the consideration of the bill (H.R. 13270), the Tax Reform Act of 1969.

AMENDMENT NO. 389

Mr. GORE. Mr. President, I call up my Amendment 389 and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk proceeded to state the amendment.

Mr. GORE. Mr. President, I will not ask at this time that the amendments be considered en bloc. Some Senators have indicated that they would like to have a division of the question. However, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered; and the amendment will be printed in the RECORD.

The amendment, ordered to be printed in the RECORD, reads as follows:

Page 384, lines 7 and 8, strike out "and Rehabilitation Property".

Page 384, line 9, strike out "(m)" and insert "(l)".

Page 384, line 11, strike out "subsections" and insert "subsection".

Page 386, lines 18 and 19, strike out "(within the meaning of subsection (k)(3)(C))".

Page 389, line 2, after the period insert closing quotation marks.

Page 389, beginning with line 3, strike out all through line 5, page 391.

Page 394, beginning with line 10, strike out all through line 2, page 395, and redesignate succeeding subsections.

Page 397, line 13, strike out "(b), (j), and (k)" and insert "(b) and (j)".

Page 432, beginning with line 4, strike out all through line 2, page 454 (sections 704, 705, and 706 of the committee amendment).

UNANIMOUS-CONSENT AGREEMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at the conclusion of morning business tomorrow, there be a time limitation on the pending amendment of 40 minutes, the time to be equally divided between the distinguished Senator from Louisiana (Mr. LONG and the distinguished Senator from Tennessee (Mr. GORE).

Mr. GORE. Mr. President, the time is to begin on tomorrow. I will make some remarks tonight.

Mr. MANSFIELD. The Senator is correct.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GORE. Mr. President, I ask for the yeas and nays on the amendment.

The yeas and nays were ordered.

The unanimous-consent agreement, later reduced to writing, is as follows:

*Ordered*, That, on Tuesday, December 9, 1969, following the routine morning business, further debate on the Gore amendment (No. 389) to H.R. 13270, the tax reform bill, shall be limited to 40 minutes, to be equally divided and controlled by the Senator from Tennessee (Mr. GORE) and the Senator from Louisiana (Mr. LONG).

---

## ONE MILLION DOLLARS GIVEN TO STUDENT REVOLUTIONARIES

Mr. THURMOND. Mr. President, the Chicago Tribune has performed a notable public service in exposing the incredible story that the Department of Health, Education, and Welfare has made grants totaling more than a million dollars to an avowedly revolutionary student organization. Although the grants supposedly were for a "health survey," some of the individuals involved helped organize the 1968 riots during the Democratic National Convention in Chicago.

According to the Tribune, a total of $739,816 was given to this group, the so-called Student Health Organization, under the Johnson administration. This year the Government approved $254,800 for the same group.

The Tribune says that the latest issue of the SHO newsletter is dedicated to Ho Chi Minh. It idolizes Che Guevara, Mao Tse-tung, and Eldridge Cleaver. An article in the newsletter states its policy as follows:

We feel that it is absolutely critical to support third world liberation struggles in the mother country. To not do so would be an open form of racism. This means clear and real supoprt of the NLF and the Peoples' Revolutionary Government of Viet Nam.

Mr. President, to make matters worse, there were no guidelines set down by the Government. The only requirement was that the money be funneled through a hospital or medical group. These revolutionaries were allowed to do what they pleased in this so-called survey. No trained research personnel were hired. Professional methods of interviewing were ignored.

Mr. President, this grant appears to be nothing more than a form of subsidy for student revolutionaries. It is a method which someone has worked out to pay the revolutionaries while they are engaged in planning riots and mayhem. The immediate question is: Who devised this program? Who is responsible for approving it? I call upon Secretary Finch to investigate this situation immediately, and to take appropriate steps. HEW is a big department. I can understand how the Secretary may not have been aware of the exact nature of a $250,000 grant to a continuing program. However, the facts suggest that whoever devised the program under the Johnson administration may still be in positions of responsibility. This is a gross distortion of HEW's mission, and a perversion of our responsibility to the taxpayers. I hope that the Secretary will report to the people immediately on this topic, because I know that Congress will not delay long in studying this situation itself.

Mr. President, I ask unanimous consent that the articles from the Chicago Tribune, "Radicals Given $1 Million," December 7, 1969, and "How U.S. Pay Aided 1968 Rioters," December 8, 1969, be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Chicago Tribune, Dec. 7, 1969]

RADICALS GIVEN $1 MILLION—HEW FUNDS SURVEYS OF HEALTH NEEDS—GROUP OPENLY BACKS REDS

(By Ronald Koziol)

A student group which openly supports the Communist party has received more than one million dollars in federal funds in the last two years, a *Tribune* investigation has disclosed.

The group is the Student Health organization (S.H.O.), which has described itself in news letters as "a refuge for the left-of-center health student activists."

MONEY FROM HEW

It received the money from the department of health, education, and welfare to conduct surveys of health needs in Chicago and six other cities.

In Chicago, $183,953 was spent on the survey which was conducted in the summer of 1968. Other cities or areas surveyed included New York, Philadelphia, Colorado, and southern California. A total of $739,816 was given to five medical centers in the name of the S. H. O. to perform the surveys.

Money given to the S. H. O. during the Johnson administration continued to be funneled to the organization since President Nixon took office. This year, the government approved $254,800 for the S. H. O. to conduct similar surveys in Wisconsin and northern New England.

DEDICATED TO HO

The latest issue of the S. H. O. news letter is dedicated to the memory of North Vietnamese Communist leader Ho Chi Minh.

ST. LUKE'S IN CHICAGO

In Chicago, Presbyterian-St. Luke's hospital assumed the responsibility for the federal funding contract. Dr. Joyce Lashoff served as adviser to the group.

Its cover shows a picture of Che Guevara, slain Cuban revolutionary, and it quotes favorably Mao Tse-tung, Red Chinese leader, and Eldridge Cleaver, self-exiled leader of the militant Black Panther party.

It also carries obscene cartoons critical of the military and the war in Viet Nam, and a favorable story on "Cuba's Revolutionary Medicine." One article attacks American liberals, such as Mayor John Lindsay of New York, and Walter Reuther, president of the United Auto Workers union.

Another article by the S. H. O. national service center staff, which formerly had offices at 2024 N. Halstead St., spells out the strategies and policies of the organization. It states:

"We feel that it is absolutely crucial to support third world liberation struggles in the mother country. To not do so would be an open form of racism. This means clear and real support of the NLF (National Liberation Front) and the Peoples' Revolutionary Government of Viet Nam.

CREATING MANY VIETS

"It means not only relating to the anti-war movement, but also relating to the strategy of creating 'one, two, three, many Viet Nams.'

"We should try to understand, relate to, and work with other revolutionary groups. This would mean that we should start working closer with the largest of these organizations, the Students for a Democratic Society."

Government officials said the survey projects were devised, organized, and directed by S. H. O. members. The only federal requirement was that money for the surveys channeled thru medical schools or hospitals.

"I believe the survey got across what was required and that the contract was fulfilled," Dr. Lashoff said. "The government's regional medical program felt the survey could be helpful in identifying certain programs."

She said students studying medicine, nursing, law, and social work were employed in the 10-week program.

Bryan Lovelace, assistant director of the Illinois Regional Medical program of HEW said he did not know anything about the survey report. However, Marilyn Voss, a public information specialist in the office, said that the report is in the process of being printed.

STUDIED BY 24 DEANS

When it is printed, the survey will be studied by 24 deans of medical schools and teaching hospitals which compose the board of the regional medical program, she said.

Officials in Washington contend that the surveys have turned up information that would not otherwise be available. One official in the health services and mental health administration said "the regional medical programs will know how to use the survey information."

It was also noted in a lengthy Washington report on the summer health project surveys that "it was readily obvious that such information could not be obtained thru traditional channels [formal surveys]."

PERTURBED BY AMBIGUITY

In the S. H. O. survey report, which was obtained for study by THE TRIBUNE, it is noted that "many students conducting the survey were perturbed by the ambiguity of their roles and complained that they did not know exactly what to do."

The report continued, "Part of this uncertainty was due to the deliberate attempt by the staff to avoid stifling student's creativity by a strict guidelining of their roles, thinking that the summer's experience would be more productive if students were independent to design their own activity."

Another chapter in the survey deals with interviews conducted in the Pilsen community by S. H. O. members. It was pointed out that students selected persons to be interviewed by chance and haphazardly. According to the report:

"We would walk thru the streets of the area and approach anyone we saw who was out on the sidewalk or on their front porch and appeared not to be doing anything pressing. We would then present ourselves.

INEXPERIENCE AND RELUCTANCE

"Our reasons for not using a more rigorous sampling procedure was our inexperience and our reluctance to engage in house-to-house canvassing."

Altho the survey report was to concern itself with health needs, it also devoted a section to attacking the Rev. Francis Lawlor and his southwest side block clubs.

"We do not wish to discount blatant racism as a force in the community," it said. "There are John Birchers, white supremacists, and nazis in some neighborhoods, but most of the people subscribe to the tried and true racial misconceptions pervasive in America."

Miss Voss said that the S. H. O. survey was responsible for the opening of a free inner-city medical clinic on the west side in an area which has had little previous medical care. The clinic was opened in September with a government grant of $71,400.

The survey also proposed several amendments to the state's medical assistance programs.

[From the Chicago Tribune, Dec. 8, 1969]

HOW U.S. PAY AIDED 1968 RIOTERS—FOUR STUDENTS GET WAGES IN HEALTH STUDY—THEY HELP PUSH CITY DISORDERS

(By Ronald Koziol)

Four student radicals helped organize demonstrations against the Democratic national convention last year while being paid by the federal government to conduct a health survey in the city, THE TRIBUNE has learned.

The four are listed as members of the Student Health Organization [S.H.O.]. THE TRIBUNE disclosed yesterday that the S.H.O. received more than 1 million dollars in federal funds in the last two years, altho it openly supports the Communist party in Viet Nam and thruout the world.

CLOSELY LINKED TO S.D.S.

S.H.O. is closely linked to the Students for a Democratic Society [S.D.S.] and other radical and militant groups which have staged riots in Chicago at the 1968 convention, and in October, and last month in Washington.

The four are Marsha Steinberg, Barbara Britts, Mark Simons and James Pinney. Miss Steinberg was indicted by a county grand jury on charges of mob action and aggravated battery stemming from the Sept. 24 disturbances and attacks on police near the Federal building.

She has also been charged with mob action and disorderly conduct as a result of the S.D.S.-Weatherman faction rampage thru the near north side on the night of Oct. 8.

Miss Steinberg and Pinney are listed in the survey report as area coordinators. In this capacity they received a salary of $1,200 for the 10 weeks the survey was in progress. Miss Britts and Simons were participants in the survey-taking and received $90 a week for 10 weeks.

Investigators said that during the convention week Miss Steinberg was observed in several demonstrations and was also active in recruiting S.H.O. members into the S.D.S.

WRITES POSITION PAPER

Pinney is a leader of the R.Y.M. II or Revolutionary Youth Movement faction of the S.D.S. He was repeatedly seen during convention week at one of the S.D.S. prime movement centers at the Church of the Three Crosses, 1900 Sedgwick st.

Pinney recently wrote a position paper with four other activists which stated that R.Y.M. II should form a Marxist-Leninist organization. The paper noted:

"We must prepare ourselves and the masses for an armed struggle. People in our organization should be prepared to defend themselves and to use all the weapons necessary for revolutionary struggle."

NEGOTIATORS FOR COMMITTEE

The names of Miss Britts and Simons appear in testimony presented to the House internal security committee in hearings in October, 1968, during its probe into the convention week disorders.

Simons was a negotiator for the National Mobilization Committee to End the War in Viet Nam, the chief planners of the convention week disruptions. In his role as a negotiator, Simon met with city officials in an attempt to obtain permits for different demonstrations.

Evidence was introduced at the hearings showing that Simons attended a planning meeting of the mobilization committee in early August, 1968.

PAID DURING RIOTS

Also in attendance at the planning session was Miss Britts, who served as the liaison between the S.H.O. and the Medical Committee on Human Rights, a group that furnished medical aid to convention week rioters.

Investigators said she played an active role in organizing first aid stations and mobile first aid teams, and in training marshals in first aid.

Dr. Joyce Lashoff, of Presbyterian-St. Luke's hospital who served as faculty adviser for the 1968 survey said records showed that the four students were paid for the entire summer, including the months of July and August and during the convention week riots.

Presbyterian-St. Luke's hospital assumed responsibility for the federal funding for the survey in Chicago. The department of health, education and welfare in making the money available for the S.H.O., insisted that it be channeled thru a hospital or medical group.

The S.H.O. role in the convention week disorders was brought out in the congressional testimony by James L. Gallagher, an investigator for the House committee.

SET UP STATIONS

Gallagher in a memo to the Cleveland chapter of S.H.O. noted that its responsibility in convention week would be to set up first aid stations and give medical attention to injured persons in jail. Medical supplies would also be collected in Cleveland in the preconvention period. He said:

"This I think is noteworthy because it implies an intention of creating a confrontation. Its members were informed that a camera crew would be set up to take pictures of alleged police brutality and arrests in Chicago."

The Tribune disclosed yesterday that S.H.O. chapters in New York City, Philadelphia, Colorado, California, Wisconsin, and New England received government funds to conduct health surveys.

---

## MANAGEMENT OF FISH AND RESIDENT WILDLIFE ON FEDERAL LAND

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the pending business be temporarily laid aside and that the Senate turn to the consideration of Calendar No. 546, S. 1232, which, to the best of my knowledge, has been completely cleared all the way around.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 1232) to declare and determine the policy of the Congress with respect to the primary authority of the several States to control, regulate, and manage fish and wildlife within their territorial boundaries; to confirm to the several States such primary authority and responsiblity with respect to the management, regulation, and control of fish and wildlife on lands owned by the United States; and to specify the exceptions applicable thereto; and to provide procedure under which Federal agencies may otherwise regulate the taking of fish and game on such lands.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the bill.

Mr. MOSS. Mr. President, it is most important that this bill be passed as it will clarify and remove points of friction between the Federal Government and the various States on their role in the management and protection of resident fish and game on Federal lands.

Historically, the States, as successors to the British Crown in America, have held and exercised the right to control resident fish and game within State boundaries. For a number of years, however, there has been a growing controversy between the States and the Federal agencies as to who has the jurisdiction over resident wildlife species on Federal lands.

This bill would assign the primary authority for the control, regulation, and management of these species to the States. The exceptions would be migratory, endangered, and Indian, game and fish. The bill would not, of course, disturb the present rights and powers of Congress to control and regulate the taking of fish and wildlife under any international treaty or convention of which the United States is a party.

This measure was first proposed in the 90th Congress by Senator BIBLE, with similar legislation introduced by Senator FANNIN. Both bills were widely cosponsored. I was one of the cosponsors of the Bible bill.

It was my privilege to conduct hearings for the Senate Commerce Committee during the 90th Congress on both bills in Washington, D.C., Salt Lake City, Utah, and Miami, Fla. I am the principal sponsor of the present bill, with Senators BIBLE, CANNON, and CHURCH as cosponsors. I also conducted hearings on this bill in Cleveland, Ohio, in April of this year.

In all of these hearings I have made every effort to develop a complete and detailed record, giving all interested parties ample opportunity to testify. The State fish and game commissioners have all been contacted, and many of them have appeared personally in behalf of the bill. They unanimously endorsed its principles in 1967. S. 1232 has been specifically endorsed by the National Governor's Conference, and it is supported by the International Association of Game, Fish, and Conservation Commissioners.

The Wildlife Management Institute, the Izaak Walton League, and the National Wildlife Federation appeared at the hearings in support of S. 1232, although they stated they were hopeful that the differences between the State and Federal agencies could be settled through meetings of the aggrieved parties.

However, the hearings have proved rather conclusively that legislation is needed to clarify the specific roles of both the State and Federal governments, and I feel that an irrefutable case was made for the passage of this bill.

It will do what we all want to see done—provide for the management of our fish and game population in a way that they can exist at the maximum level with the forage, habitat and protection they must have.

I ask that the bill be passed.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

S. 1232

A bill to declare and determine the policy of the Congress with respect to the primary authority of the several States to control, regulate, and manage fish and wildlife within their territorial boundaries; to confirm to the several States such primary authority and responsibility with respect to the management, regulation, and control of fish and wildlife on lands owned by the United States; and to specify the exceptions applicable thereto; and to provide procedure under which Federal agencies may otherwise regulate the taking of fish and game on such lands

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That, as used in this Act, the term—

(1) "fish and wildlife" means all vertebrates (including mollusks and crustacea);

(2) "States" means the several States of the United States;

(3) "land owned or controlled by the United States" includes buildings, and structures, trees, crops, or any flora or plants growing thereon;

(4) "department or agency of the United States" means any department, agency, entity or bureau, commission, or any other official or body created by an Act of Congress having charge over the management or control of lands of the United States Government; and

(5) "State agency" means the department, commission, agency, officer or official which is authorized by State law or constitution to regulate, control or manage fish and wildlife in such State, including an interstate compact body authorized to regulate, control or manage any fish or wildlife.

SEC. 2. The Congress of the United States hereby recognizes—

(1) the necessity and importance of conservation programs of the several States in the management, preservation, and regulation of fish and wildlife therein;

(2) that under well-established law set forth in many court decisions, including the Supreme Court of the United States, that the authority to control, regulate, and manage fish and wildlife resides and rests in the several States in trust for the benefit of their people independent of jurisdiction over or ownership of land and that it is the primary duty of the States to conserve and protect these resources;

(3) that unless the several States have the unquestioned right and power to manage, control, and regulate fish and wildlife within their respective boundaries, the revenues from the sales of licenses or permits now or to be received by the States for the hunting, taking, capturing or seizing of fish and wildlife will be considerably diminished and conservation programs of the States seriously impaired thereby;

(4) that Congress has in the past vested certain departments or agencies, of the United States with responsibilities to conserve and develop natural resources, including fish and wildlife on certain federally owned lands, but that such responsibilities should be exercised in recognition of the State's authority with respect to fish and wildlife; and

(5) that it is in the best interest not only of the States but also of the Nation that the States have the sole, exclusive, and undisputed legal right to manage, regulate, and control fish and wildlife in accordance with State laws and regulations notwithstanding the ownership or control of the lands by the Government of the United States within the boundaries of the respective States.

The Congress further declares it to be in the public interest that authority to control, regulate, and manage all fish and wildlife in or on any land or water within the territorial boundaries of the respective States, including lands owned or controlled by the United States, continue to be vested in the several States.

SEC. 3. The exclusive right and power of the States to conserve, control, and manage fish and wildlife in or on lands and waters within their territorial boundaries for public use and benefit in accordance with applicable State law, or subject to the provisions hereof, recognized, confirmed, established, assigned, granted, and transferred to the respective States.

SEC. 4. This Act shall not be construed as affecting the responsibilities and rights of departments or agencies of the United States to conserve and develop, subject to the provisions of this Act, the natural resources, including fish and wildlife, on lands owned or controlled by the United States within the territorial boundaries of any States or as depriving the United States of the right to protect and preserve its lands from destruction or depredation by wildlife to the same extent and in the same manner permitted to any owner of land by the laws of the State in which such land is located. There is hereby specifically reserved and excepted from the operation of this Act:

(a) All rights and powers of the Congress of the United States to control and regulate the taking of fish and wildlife under any international treaty or convention to which the United States is a party but only with respect to those species of fish or wildlife expressly named in said treaties or conventions.

(b) Any Indian reservation and any right, privilege or immunity vested in or reserved to any Indian tribe, land, or community or any individual Indian or any tribe, band, or community of natives of Alaska, or any individual member thereof, with respect to hunting, trapping or fishing or the control, licensing or regulation thereof.

(c) All rights and powers of the United States in and on areas over which the States have ceded exclusive jurisdiction to the United States.

(d) All rights and powers over any species of fish and wildlife ceded or granted to the United States by any State.

SEC. 5. No department or agency of the United States shall promulgate or enforce any rule or regulation with respect to the taking of fish and wildlife within the several States unless such rule or regulation is in compliance with, and under authority of, the laws and regulations of the State wherein such rule or regulation is applicable.

SEC. 6. Notwithstanding anything contained in any Act of the Congress or in any rule or regulation promulgated by any Federal department or agency it is hereby declared to be the intent of the Congress that no provision of any Act shall be construed or implemented in any manner as to displace, preempt, or deprive the several States of their primary and historically recognized authority to control, regulate, and manage fish and wildlife in or on any lands or waters within their territorial boundaries, including all lands and water owned by the United States or in which the United States Government has an interest.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–551), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of S. 1232 is to resolve a long-standing controversy which has existed between the States and certain Federal administrators particularly within the Department of the Interior concerning extent of Federal authority over fish and resident wildlife on federally owned lands. To many observers, recent incidents indicate an alarming trend toward Federal involvement in areas traditionally considered areas of State responsibility and jurisdiction. Broad assertions of Federal authority appear to be culminating in the notion that, unlike other landowners, which land is owned by the U.S. Federal administrators possess authority over wildlife which is seemingly superior to State authority. Federal administrators have thus claimed authority to take wildlife in disregard of State law, the only requirement apparently being that a "Federal purpose" be involved. The States have unanimously rejected such assertions. Attempts to arrive at an administrative solution, though diligently pursued, have not proved successful with the result that an important facet of this Nation's conservation effort, depending in large measure on close Federal-State cooperation, has been measurably impaired. It is the purpose of S. 1232 to resolve this dispute by legislation confirming the historic patterns that have evolved in this country in connection with fish and resident wildlife and to require that, with certain exceptions, taking of fish and resident wildlife on federally owned lands be accomplished within the framework of State law.

It is not the purpose of S. 1232 to open Federal lands to public hunting or fishing where such is not now permitted. The bill in no way affects the authority of Federal administrators to limit or prohibit altogether hunting and fishing on Federal lands if such limitation or prohibition has been otherwise authorized by Congress. Nor does the bill alter the authority of Federal administrators, if otherwise authorized, to manage fish and wildlife habitat on its lands. The bill instead confirms the primary role of the States with respect to fish and resident wildlife within their borders and requires that taking of fish and resident wildlife, whether by the public or by Federal personnel in pursuance of a Federal project, be accomplished in compliance with State law.

As stated above, this legislation is an attempt to resolve the controversy which has existed over whether Federal activities in connection with the wildlife resource on lands owned by the United States should be carried on within the framework of State law. The bill, S. 1232, and its predecessor, S. 2951, were introduced with the sponsorship of the International Association of Game, Fish, and Conservation Commissioners, an association of the fish and game agencies of all 50 States.

SECTION-BY-SECTION ANALYSIS

Section 1 contains definitions of various terms utilized in the bill.

Section 2 contains congressional findings recognizing the importance of the programs of the States in the management, preservation, and regulation of fish and wildlife within their borders; that primary authority to manage fish and wildlife resides in the States in trust for the benefit of their people independent of jurisdiction over or ownership of land; that it is essential to the conservation programs of the States that primary authority over wildlife not be eroded and that the responsibilities of Federal departments and agencies with respect to conservation and development of natural resources, including fish and wildlife on federally owned lands, should be exercised in accordance with State laws and regulations.

Section 3 recognizes and confirms to the States the exclusive right and power to conserve, control, and manage fish and wildlife within their territorial boundaries for public use and benefit in accordance with applicable State law.

Section 4 would make clear that the bill is not intended to affect the responsibilities and rights of departments and agencies of the United States to conserve and develop natural resources, including fish and wildlife, on federally owned lands but that such rights and responsibilities should be exercised in accordance with State law. This section also refers to the rights of the United States to protect and preserve its lands from destruction or depredation by wildlife. Thus Federal departments or agencies may protect lands ad-

ministered by them from injury caused by overabundant or harmful populations so long as destruction of fish and wildlife for this purpose is accomplished in the manner prescribed by State law.

Section 4 also excepts from operation of the bill four situations where other rights with respect to fish and wildlife within a State's territorial boundaries are superior to those of the States: (*a*) rights and powers of Congress under international treaty or convention; (*b*) rights, privileges or immunities vested in or reserved to Indian tribes, bands or communities or an individual thereof or vested in or reserved to any tribe, band, or community of natives of Alaska or an individual thereof pursuant to Federal statute or treaty; (*c*) rights and powers of the United States in and on areas wherein the Federal Government exercises exclusive jurisdiction; (*d*) rights and powers over any species of fish and wildlife ceded or granted to the United States by any State.

Section 5 prohibits the promulgation by any department or agency of the United States of any rule or regulation concerning the taking of fish and wildlife within the several States unless in compliance with and under authority of State law and regulation. This section recognizes that Federal departments and agencies may adopt their own regulations concerning taking of fish and wildlife on federally owned lands so long as such regulations are not in violation of State law.

Section 6 provides that no act of Congress or any rule or regulation promulgated by a Federal department or agency shall be construed or implemented so as to displace, preempt or deprive the States of their primary authority to control, regulate, and manage fish and wildlife within their territorial boundaries.

## MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had disagreed to the amendments of the Senate to the bill (H.R. 14751) making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. SIKES, Mr. MCFALL, Mr. PATTEN, Mr. LONG of Maryland, Mr. MAHON, Mr. CEDERBERG, Mr. JONAS, Mr. TALCOTT, and Mr. BOW, were appointed managers on the part of the House at the conference.

## S. 3219—INTRODUCTION OF A BILL TO PROVIDE FOR SPECIAL PROJECT GRANTS FOR THE PROVISION OF FAMILY PLANNING SERVICES

Mr. JAVITS. Mr. President, I send to the desk a bill which implements the administration's message delivered here today on family planning services. I introduce the bill for myself and the Senator from Colorado (Mr. DOMINICK), who is the ranking minority member of the Subcommittee on Health, and the Senator from Vermont (Mr. PROUTY).

The bill inaugurates—I want very much to see it passed—a program of family planning services throughout the United States, but without making it as a condition of the receipt of any welfare or other acceptance or in any coercive way requiring or compelling any person to have the benefit of these services. I ask unanimous consent that the bill be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3219) to amend the Public Health Service Act to provide for special project grants for the provision of family planning services and related research, training, and technical assistance, introduced by Mr. JAVITS (for himself, Mr. DOMINICK, and Mr. PROUTY), was received, read twice by its title, referred to the Committee on Labor and Public Welfare, and ordered to be printed in the RECORD, as follows:

S. 3219

A bill to amend the Public Health Service Act to provide for special project grants for the provision of family planning services and related research, training, and technical assistance

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "Family Planning Services Amendments of 1969".

SEC. 2. Part B of title III of the Public Health Service Act (42 U.S.C. 243 et seq.) is amended by adding after section 315 the following section:

"FAMILY PLANNING SERVICES

"SEC. 316.(a)(1) The Secretary is authorized to make grants to or contracts with public or nonprofit private agencies, institutions, and organizations for projects for the provision of family planning services. Except in cases in which the Secretary determines a higher percentage is necessary to carry out the purposes of this section, no such grant or contract may provide for payment hereunder of more than 90 per centum of the cost of the project.

"(2) Grants may be made and contracts entered into under this subsection only upon assurance satisfactory to the Secretary that:

"(A) priority will be given in the furnishing of such services to persons from low-income families;

"(B) no charge will be made for services provided under the project to any person from a low-income family except to the extent that payment will be made by a third party (including a government agency) which is authorized or is under legal obligation to pay such charge;

"(C) acceptance of any service provided under the project will be voluntary on the part of the person to whom such service is offered and will not be a prerequisite to eligibility for or receipt of any other service or to assistance from or participation in any other program or project of the grantee;

"(D) there will be appropriate coordination of services provided under the project with, and utilization of, other related Federal, State, or local health or welfare programs; and

"(E) the project will comply with such other terms and conditions as the Secretary may prescribe to carry out the purposes of this section.

(b) The Secretary is authorized to make grants to public or nonprofit private agencies, institutions, and organizations, and contracts with public or private agencies, institutions, or organizations, for graduate or specialized training of physicians, nurses, other health personnel, social work personnel, and subprofessionals to improve their ability to provide family planning services and to do so more effectively.

"(c) The Secretary is authorized to make grants to public or nonprofit private agencies, institutions, and organizations, and contracts with public or private agencies, institutions, or organizations, for projects for research into or demonstration of new or improved techniques for the delivery of family planning services, with particular attention given to development of methods or techniques for making such services available to persons from low-income families.

"(d) For purposes of this section, what constitutes a low-income family shall be determined in accordance with criteria prescribed by the Secretary.

"(e) The Secretary is authorized to provide, or to make contracts for the provision of consultative services and technical assistance to public or nonprofit private agencies, institutions, and organizations providing or planning to provide family planning services.

"(f) Payments under this section pursuant to a grant or contract may be made (after necessary adjustment, in the case of grants, on account of previously made overpayments or underpayments) in advance or by way of reimbursement, and on such conditions, as the Secretary may determine.

"(g)(1) There are authorized to be appropriated for the fiscal year ending June 30, 1971 and each of the next 4 fiscal years such sums as may be necessary for grants and contracts under this section.

"(2) Such portion of any appropriation pursuant to paragraph (1) as the Secretary may determine, but not exceeding 1 per centum thereof, shall be available for evaluation by the Secretary (directly or by grants or contracts) of the program under this section.

"(h) The Secretary shall submit to the President and the Congress annually a report on the activities of the various executive departments in the field of family planning services, including his estimate of the extent to which the purposes of this section are being carried out."

## REQUEST FOR AUTHORIZATION FOR THE COMMITTEE ON THE JUDICIARY TO MEET TOMORROW—OBJECTION

Mr. BAYH. Mr. President, I have been in discussion with the distinguished chairman of the Committee on the Judiciary, and as a result of that conversation, and with his blessing, I ask unanimous consent that the Committee on the Judiciary be permitted to meet tomorrow during the forenoon period.

The PRESIDING OFFICER. Is there objection?

Mr. THURMOND. Mr. President, the tax bill will still be up tomorrow, as I understand, and I would like to be on the floor as much as I can, and I would object to the committee meeting while the Senate is in session.

Mr. BAYH. Mr. President, the Senator from South Carolina has every right to object, but I think the RECORD should show that the subject matter which all members of the committee realize is going to be discussed tomorrow is electoral reform. This measure has been the pending order of business before the Judiciary Committee since before the fall recess—in other words, since the middle of August.

As the primary sponsor—not the only sponsor—of that measure in the committee, I have tried my best to assume a position which would permit the flow of business through that committee and permit as much convenience to every Senator as possible. But I think the record should show that the same criteria which the Senator from South Carolina

used to prevent this committee from meeting and to prevent electoral reform from being discussed in the committee applied today. It applied Saturday. This is not the first time that efforts have been made to prevent the Judiciary Committee from discussing this important matter.

The fact is that the President of the United States has heartily endorsed electoral reform. The fact is that, by a vote of 339 to 70, the House of Representatives passed an electoral reform measure. I think it is most unfortunate that the Senate and the Judiciary Committee do not have a chance to work their will on this proposed legislation.

Mr. THURMOND. Mr. President, the electoral college reform bill would change the entire structure of this Government, and when that bill comes before the Judiciary Committee, I want to be there, and I want to be there every minute. The Senate is now working on a very important tax bill. A Senator cannot be in two places at once.

The distinguished Senator from Indiana went off to India for 3 weeks. If he was so interested in the electoral college reform bill, he could have stayed here and tried to have gotten it up at that time.

I do object to the committee meeting while the Senate is in session, and I reiterate my position in that matter.

Mr. BAYH. I think it is most unfortunate that the Senator from South Carolina suggested in any way, without directly alleging, as he did, that my membership in the congressional delegation to the IPU Conference was responsible for this matter not being considered. The fact is that it is patently untrue, and the Senator from South Carolina knows that, or ought to know it, because the agreement that was reached before the recess specified exactly what order of business would be considered. This is not the case. The fact is that the Senator from South Carolina is opposed to this measure and is using his rightful opportunity—I certainly respect it.

Mr. BAYH subsequently said: Mr. President, I would like to state for the RECORD that the Senator from Indiana in no way was suggesting that the senior Senator from South Carolina was taking unfair advantage of his parliamentary right. Indeed, I think he had a right to do what he did.

If this is the way the game is played, perhaps some of the rest of us should take advantage of this opportunity. I do not like to do that.

The senior Senator from South Carolina was not interested enough in the tax bill this morning to prevent the committee from meeting in connection with an important drug bill; and he was not interested enough in the tax bill this morning to take issue with the consideration of the omnibus crime bill, which has far-reaching implications.

If we are going to set one rule for the crime bill we should set the same rule for the electoral reform measure. But the Senator is preventing us from taking up that question. I want the RECORD to show the reason, so the public can be apprised of what is involved.

## TAX REFORM ACT OF 1969

The Senate resumed the consideration of the bill (H.R. 13270), the Tax Reform Act of 1969.

Mr. GORE. Mr. President, the Committee on Finance, unfortunately, upon the recommendation of the Assistant Secretary of the Treasury, has approved large new loopholes in the tax law if the committee bill as it now stands should become law. It provides for syndicate financing which, if approved, will allow tax avoidance of enormous proportions. It will permit the formation of syndicates to purchase and deal in tax deductions with respect to railroad boxcars, with respect to locomotives, rolling stock of all kinds, certain housing costs, pollution and pollution control equipment.

I will discuss the matter in more detail in a few moments but now I wish to extend the courtesy to the distinguished chairman of the committee to make a statement with respect to this subject.

The PRESIDING OFFICER (Mr. HOLLINGS in the chair). The Senator from Louisiana is recognized.

Mr. LONG. I thank the Senator.

Mr. JAVITS. Mr. President, will the Senator yield briefly?

Mr. LONG. I yield.

Mr. JAVITS. Mr. President, I am concerned about the impact of the bill on "learned societies"; organizations whose activities are involved in scholarly research in the humanities. While I am confident that it was the intention of the drafters of the bill to exclude such organizations from the defined category of "private foundations," I would appreciate the Senator's views concerning the bill's treatment of some specific situations.

The distinguished Senator from Rhode Island (Mr. PELL) has graciously allowed me to ask these questions for both of us because I am a lawyer and he felt it might be more fitting for me to do so.

The first situation I am concerned with involves an organization of the above type which derives more than one-third of its normal support from sources consisting of membership dues—either from other organizations or individuals—and subscription proceeds arising from the publication and sale of a scholarly journal. The remainder of its support comes in the form of grants from a private foundation that has consistently supported the organization. While I recognize that under certain circumstances a private foundation will be considered a substantial contributor and its grant cannot be used in determining whether one-third of the support comes from the public, I assume nonetheless, such an organization would meet the "public support" test that the bill imposes and therefore be excluded from "private foundation" treatment.

Mr. LONG. The Senator is correct. Where more than one-third of an organization's normal support comes from sources such as membership fees—whether from individuals or member organizations—and gross receipts from organization activities which are in furtherance of its exempt purposes such as the sale of its scholarly journals—and assuming that it receives no more than one-third of its support from gross investment income it will be treated as one of the broadly, publicly supported organizations that has been excluded from the definition of private foundations. The remaining sources of the organization's support are not relevant to the statutory test of section 509(a)(2).

Mr. JAVITS. I am also concerned with the situation which arises where a membership organization of the type described above falls short of meeting the public support test. This may occur in the case of organizations which are regularly funded with large grants from substantial contributors or, occasionally, in the case of an organization that receives an unusual grant or bequest from a source. While I recognize that the Finance Committee expects appropriate provisions to be incorporated in the Treasury's regulations which will prevent organizations that find themselves in the latter situation from being treated as private foundations, it appears the statute also provides another type of solution. As I read proposed section 509(a)(3), I wonder whether membership organizations which fail to qualify under the public support test because they have insufficient public support as compared to support from qualified persons, may nevertheless remain outside the definition of private foundation. Section 509(a)(3) states that an organization which is operated exclusively for the benefit of or in connection with a public charity and is not controlled by disqualified persons will also be excluded from private foundation status.

Would not this section be applicable if an organization with two sources of support—say, membership dues and other income from public sources amounting to 25 percent of its total support and grants from disqualified persons amounting to 75 percent—were to transfer the activities that were normally funded by the membership dues and other public sources into a separate charitable organization which would thereafter be the recipient of all such grants? Assuming that neither organization is controlled by disqualified persons and that the new one is operated in connection with and to carry out the same purposes as the original organization, both organizations would literally be excluded from the private foundation definition—the new organization because all of its income would be from public sources—membership dues—and the original organization because it has been organized and operated to carry out the same purposes as the new organization.

Mr. LONG. Mr. President, I assume that the organization that would receive the membership dues and income from public sources would be, in effect, the parent organization. In such a case, the organization that would be expected to receive grants from disqualified persons should be the newly created organization. It would be operated exclusively for the benefit of what I have called the parent organization and would be operated by or in connection with that organization. Then, if none of the disqualified persons controlled the organization receiving the grants from disqualified persons, that organization would appear to

meet the tests you described in section 509(a)(3) and would not be a private foundation. It should be added that the public support test which the membership organization will have to meet will undoubtedly be set out in detail in Treasury regulations. Under those circumstances, it is not precisely clear how new organizations will be required to demonstrate their "normal" sources of support. With this caveat, however, I see nothing about your proposal which offends the intent of the proposed legislation. Indeed, as long as the parent organization is publicly supported, its subsidiary will not be considered a private foundation.

Mr. President, I believe I should state briefly for the RECORD—and I believe the Senator from Tennessee will explain his side of the argument in greater detail this evening—why the committee voted for the 5-year amortization provision involving railroad equipment.

The largest tax reform in this bill is the repeal of the investment tax credit. As we reported it from the committee we estimated it would raise for the Government about $3.3 billion a year in full operation. To achieve this, however, we felt we must resist industry amendments that would exclude first one industry and then another industry from the repeal of the credit. As a result, the Finance Committee finally voted against all industry exemptions.

It was our feeling that, once we agreed to make one exception, then other exceptions would follow. What has subsequently happened on the floor of the Senate is a good example of what I had in mind.

Although in committee we were successful in voting down other proposed exceptions, we initially could not defeat a provision which would have continued the investment tax credit for railroad rolling stock. The reason we could not do that was the critical shortage of railroad rolling stock and necessity that it be remedied as soon as possible.

Many of us knew that once that exception for railroad rolling stock was voted, the truckers would demand similar treatment, the airlines would demand similar treatment, and then the entire transportation system would demand similar treatment. Next, we would have others who have need of equipment press their dire need of modernization and expansion, with the result that soon we would have repeal of the investment tax credit dismantled item by item.

The administration recognized the same problem. It negotiated with representatives of the railroad industry and reached an agreement whereby the Treasury would support a proposal—the provision in this bill—to remedy the shortage of railroad rolling stock, instead of an exception from the repeal of the investment credit. This provision allows 5-year amortization of railroad rolling stock, including locomotives.

While this provision may seem generous with regard to railroads, the fact is that the equipment is badly needed. There should be incentive of some sort to help alleviate the shortage of railroad rolling stock in this country.

The provision for 5-year amortization for railroads will cost approximately $125 million in the first year, and will cost about $185 million by 1974. In addition, it would have continued indefinitely into the future. The provision voted by the committee, however, will terminate in 1974.

As a matter of fact, the provision in the bill also provides that the 5-year amortization would not be continued after 1972 for any class of rolling stock if the Secretary of the Treasury should find that the shortage of that class of railroad rolling stock had been corrected.

One might ask why we went beyond simply providing that the allowance for railroad rolling stock would be accorded to a railroad itself—that is, why we also allowed it to those who lease rolling stock to railroads. The problem here is that there are a lot of railroads that are not making a profit. Those railroads which are having difficulty financially and are not earning profits, and, therefore, are not paying taxes to the Government would not be in a position to take advantage of rapid amortization. It was pointed out to the committee that the incentive sought for the profitable railroads also could be made available to those railroads that are in a loss position by making the amortization available to persons who lease to railroads.

In other words, by making it possible for someone to buy railroad rolling stock and then lease it to a railroad not making a profit at a reduced rental reflecting the benefits of the amortization, the railroad would be able to obtain the equipment and the benefits of the amortization. The rental would reflect the tax savings and the railroad would be able to obtain equipment cheaper than it otherwise could.

Thus, in order to extend the same benefits to railroads losing money, the bill allows a person who leases rolling stock to a railroad to obtain the amortization. Thus, the railroad can lease the equipment from someone in a position to buy it who can pass on the benefits of amortization to the railroad.

This is the way the committee sought to see that both railroads losing money as well as those making money could benefit from this provision that is designed to alleviate the railroad rolling stock shortage.

Now I have no doubt in my mind that in the committee, and I believe on the floor, an amendment would have been agreed to, to make an exception from the repeal of the investment credit in the case of the railroads, if something of this sort had not been agreed upon. Under the circumstances, we had a bill that had no exemption for any particular industry. We were successful in defeating an amendment offered by the Senator from Nevada (Mr. CANNON) which would have exempted the entire transportation industry from the bill.

In my judgment, had we not agreed upon the amortization provision, we would have had the exemption voted first for the railroads, and then an exemption for the truckers, and then an exemption for the airlines, and ultimately for the entire transportation industry. Then there would be little left of the $3.3 billion revenue increase proposed to be achieved. We have seen how difficult it is to defeat some of the amendments which have popular appeal.

Already, there have been two amendments voted that have reduced what he hoped to gain in the bill by over $1 billion; namely, the amendment offered by the Senator from Indiana (Mr. HARTKE), the so-called small business amendment, at a cost of $720 million, and the amendment offered by the Senator from Alaska (Mr. STEVENS) to help depressed areas, at a cost of about $300 million. Had we not done something of this sort, I suspect by now that there would have been nothing left worth repealing with regard to the investment tax credit and no savings would have been achieved.

Let me read one paragraph of the committee report:

It is also provided that the Secretary of the Treasury (with the assistance of the Secretary of Transportation) is to issue regulations indicating particular classes of cars or locomotives which are not considered to be in short supply. Rolling stock in these specific classes of cars or locomotives which is placed in service after 1972 is not to be eligible for the 5-year amortization writeoff.

In other words, the effect of the provision is terminated once it is determined that there is no longer any shortage of this kind of equipment. In addition to that, there is also a provision in the bill which requires the reconsideration of the entire provision in 1974.

I believe that under the circumstances, faced with the practical situation, the committee handled it about as well as it could to deal with the problem. I would hope that on tomorrow, the Senate, in its judgment, will see fit to support the position of the committee in this matter.

Mr. PELL. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I am happy to yield to the Senator from Rhode Island.

Mr. PELL. I have one question in connection with railroads and the use of the investment credit for purchase of new equipment. What portion of that will be used for freight hauling equipment and what portion for passenger equipment?

Mr. GORE. There is no requirement in the bill. The benefits here will be available for syndicates who wish to purchase or lease any sort of railroad equipment and locomotives, passenger cars, or freight cars, and I suppose will use the date to work out the question of the portion of railroad business which is freight—and that most of it would be freight.

Mr. PELL. That is my understanding. I understand that this measure is of very little assistance to the passenger railroad business, but I want to be sure of my facts. I am asking for enlightenment.

Mr. GORE. I thank the able Senator from Rhode Island.

Mr. LONG. Mr. President, will the Senator from Tennessee yield to me in that respect?

Mr. GORE. I am happy to yield to the Senator from Louisiana.

Mr. LONG. The Senator is most gracious.

Mr. President, this provision does cover passenger equipment and, insofar as it is needed, passenger equipment would

be allowed the same liberal amortization. But after 1972, there would have to be determination that there remains a shortage of that specific class of equipment. So that if by 1972 the shortage had been rectified—which I doubt will have occurred—then that class of equipment no longer would be allowed rapid amortization.

Mr. PELL. As I understand it, today there are very few, if any, passenger railroad cars being built, except the new ones like the Metroliner, the Turbotrains, and very few others. In fact, the estimated benefits of this provision will be 99 percent or 98 percent enjoyed by freight railroad as opposed to passenger railroad. Would that be correct?

Mr. LONG. We expect that it would be overwhelmingly to the advantage of the freight aspects of industry because the railroads find that more profitable than they do passenger service. As the Senator well knows, the railroads are trying to get rid of their passenger service, I regret to say. If they had their choice, I believe they would probably like to have antiquated equipment as an excuse to discourage the public from using it, so that they could have a better opportunity to persuade the Commission to go along with discontinuing that service, in many instances. But I would hope that in the metropolitan areas, including that so ably represented by the Senator from Rhode Island (Mr. PELL), we will see more of these Metroliners, and more of the modern equipment that is bringing some passengers back to the railroads.

I rode the Metroliner for the first time a couple of weeks ago, and I was very much impressed with it. It was good service. It offers some hope for the future.

Mr. PELL. I completely agree with the reactions of the Senator in charge of the bill, my good friend from Louisiana (Mr. LONG). The railroads would much rather haul things rather than people because they make more money hauling things, freight. I am sure that they would be overjoyed if their passenger equipment all fell apart. The Senator is absolutely right.

Mr. GORE. Mr. President, all of the sins of the provision are being committed in the name of rolling stock. All I can hear about this provision is the need for rolling stock, the emergency there is for rolling stock. But this is only part of the provision.

Since we have heard so much about rolling stock, I shall begin with rolling stock.

The bill gives a 5-year amortization period for rolling stock; and rolling stock includes locomotives. We see pictures showing wheat being piled on the ground in Kansas, but wheat has been piled on the ground in Kansas for many years. We could double the amount of rolling stock and it could not roll the wheat to market the first week.

But granted that there is a need for rolling stock, I have heard no suggestion that there is a shortage of locomotives. Yet this measure gives rapid amortization for locomotives.

But it also specifically makes the tax advantages available to investment syndicates who purchase and lease boxcars, and become recipients of the tax deduction provisions.

Moreover, the measure provides a double benefit for locomotives and railroad cars—freight cars and passenger cars—to the extent that those facilities are now on order and eligible for the investment credit. It would allow the double benefit of an investment credit and rapid amortization for the same boxcar, the same locomotive. The railroad lobbyists have certainly performed well from the standpoint of their employers. Let me say to the distinguished Presiding Officer that this measure permits the railroads to start amortizing the grade for the Golden Spike. They have never had an opportunity before to amortize a roadbed or a tunnel, but though a tunnel was built 100 years ago, this bill permits a railroad now to start amortizing the tunnel the railroad has been using for 100 years—in the name of rolling stock.

Under this bill, the Pennsylvania Railroad could start amortizing the roadbed from Washington to New York. It has been in use quite a few years, and never before has Congress allowed a roadbed or a tunnel to be amortized. But this bill does—in the name of rolling stock. That is what we have all heard about—the shortage of rolling stock. There is no shortage of tunnels.

Mr. President, this is an enormous new loophole. In a bill of 500 pages, primarily for the purpose of tax reform, to strike down tax inequity, we open up a large new loophole for wealthy investors in high-income brackets to take advantage of the tax deductions provided herein.

Mr. President, each Senator knows that an investment credit or a tax deduction is worthless to a person or a company that has no tax liability. The railroads that need equipment most are those losing money. What is a tax deduction worth to a railroad losing money? It will not be worth anything to that railroad, but it will be worth a great deal to the investing syndicates, and the syndicates will reap a big profit.

Mr. President, the following example shows how an investment syndicate would profit under the provisions of this bill.

The railroad arranges for a syndicate of wealthy individuals to purchase the boxcars. The purchase price is put up entirely with a loan from the railroad's financier.

The "rent" paid by the railroad is exactly set to retire the loan and pay the interest thereon. Usually the rent never goes through the hands of the lessors at all. Indeed the financing institution generally looks only to the credit of the railroad to pay off the loan.

There is no cash-flow benefit to the lessors. Their sole profit comes from the rapid amortization that they use to offset their other taxable income. The "profit" is the amount of the tax reduction resulting from the artificial amortization deductions.

Mr. President, this applies not alone to railroads, this is a syndicate tax loophole being created in this bill. It applies also to cost of renovating of certain housing.

We have talked a great deal about the loophole of the hobby farmer. We have talked a great deal of the Wall Street cowboy and how he was converting high tax dollars to low tax dollars through losses from a horse or cow or citrus orchard.

We have now before us a new provision to create Wall Street railroaders, Wall Street remodeling investors, Wall Street pollution investors, because the same rules which the Senator from Delaware (Mr. WILLIAMS) and I have offered an amendment to strike provide that the tax benefit can go to investment syndicates for these purposes also.

But to continue, Mr. President, with respect to railroads, this measure grants amortization for gradings and tunnels regardless of when they were built.

Amortization and depreciation are supposed to be based upon the length of life of a facility. How long will a tunnel through the Rocky Mountains last? They have been lasting for perhaps 100 years. Nobody indicates they will not last another 100 years. Yet this provision permits its amortization in 50 years. In other words, it permits the railroads to start deducting from their taxes for tunnels that were built 100 years ago or 150 years ago—whenever it was. And yet all we have heard about is rolling stock.

How much will these provisions cost with respect to railroads? An estimated $185 million a year. That is a good sized loophole.

And yet in the committee report it was called tax reform.

Now let us talk about the rolling stock, which the investing syndicates are to provide.

I am advised that the average useful life of railroad freight rolling stock is about 14 years.

But the committee provides that this equipment can be depreciated in 5 years. So you see Mr. President we are permitting a tax deduction through amortization of the entire cost in about one-third the period of time that the rolling stock will be useful.

This rapid writeoff will be of no benefit to a railroad that has no profit. A railroad in South Carolina operating just on the edge may be badly in need of a new locomotive or some new freight cars. This gives them a rapid writeoff which means of course that they can deduct the cost from their taxes more rapidly than the railroad car or the locomotive will wear out.

But I repeat that is of no benefit unless that railroad has a profit. Who is going to get that benefit? Some high bracket taxpayers who will enter into a syndicate to execute a purchase and lease of the equipment. And what happens? We have seen copies of this kind of contract. The amount of the rent and the amount of the amortized loan exactly equal up; and who gets the benefit? A group of doctors or Wall Street investors in the 70-percent bracket.

POLLUTION CONTROL FACILITIES

The committee bill also provides 5-year rapid amortization for certain pollution control facilities.

The Finance Committee considerably tightened the House version. However, the fact remains that we are utilizing the tax system to grant $120 million to cor-

porations to clean up pollution created by processes on which they have been making profits for the past 100 years or more. This expenditure is inefficient and may well run counter to the most effective means of achieving pollution control.

In 1967 a working committee on economic incentives submitted a report concluding that tax writeoffs are not needed nor are they desirable for achieving pollution control. This working group was made up of representatives of the Bureau of the Budget, the Treasury, the Council of Economic Advisers, the Water Resources Council, the Office of Science and Technology, the Department of the Interior, Department of Commerce, HEW, and Resources for the Future.

I set forth pertinent parts of the report:

COST SHARING WITH INDUSTRY?

(Summary Report of the Working Committee on Economic Incentives (Revised), the Working Committee is one of several Committees under the direction of the Federal Coordinating Committee on the Economic Impact of Pollution Abatement, November 20, 1967)

* * * * *

*Proposals for assistance*

Various proposals for additional assistance to industry beyond obvious improvements or expansion of existing Federal programs were evaluated as follows. Across-the-board assistance for capital investment such as tax writeoffs (credits or accelerated depreciation) and grants are unnecessary because the burden of pollution abatement is estimated to be only moderate. Also, this form of subsidy is inefficient because such assistance provides an incentive for excessive use of capital and practically excludes similar assistance to process changes that jointly reduce pollution and increase productivity. Moreover, such aid is likely to be an undesirable precedent for using tax writeoffs for other programs (e.g., education, training, housing, etc.).

* * * * *

*Recommendations*

* * * * *

4. Across-the-board cost-sharing in the form of tax writeoffs is not recommended because it distorts the tax structure, causes the total cost of pollution abatement to rise significantly, promotes excessive use of capital equipment and waste treatment facilities, and discourages selectivity in environmental quality management. Across-the-board use of grants and loans is similarly handicapped and, in addition, is subject to fluctuations in Congressional appropriations.

POSSIBLE ADDITIONAL FEDERAL SUBSIDIES

*Introduction*

It was noted that the Federal Government is now spending $\$\frac{1}{2}$ billion per year for both air and water pollution abatement and this amount is forecast to increase markedly during the next five years. The largest proportion of these funds are now funneled through municipalities. Industry also receives considerable assistance from the 7% investment tax credit and allowances for accelerated depreciation—perhaps as high as $50 million annually. The size of current annual expenditures by industry for water pollution abatement is roughly estimated at $\$\frac{2}{3}$ billion for water and an unknown amount for air—or perhaps roughly equal to the current Federal Government expenditure and subsidy for this area. The Government is already carrying a large part of the burden.

The requirement for additional expenditures is a function of water and air quality standards, plant location, topography, stream capacity, meteorology, production processes, and pollutants. Before all of these factors are weighed, only some rough estimates of additional annual cost and burden for manufacturing can be made: $275 million and 0.13% of value-added by manufacturing for water and $354 million for air—or $629 million and 0.29% of value-added for both air and water (excluding thermal-pollution abatement). For individual industries, firms and plants the burden is likely to vary widely.

Finally, it is not clear that pollution abatement need affect the firms' rate of profit insofar as individual firms have considerable flexibility to shift the small increase in the costs from themselves to the purchasers of their products. It is with this summary and introduction in mind that the possible Federal subsidies will be examined.

TAX WRITEOFFS

Numerous proposals in Congress have been made for offering greater assistance to industry through increasing the investment tax credit or accelerating the depreciation allowances on capital expenditures for pollution abatement. Proposals range from increasing the investment tax credit from 7% to 14% or 20% and/or from allowing depreciation allowances normally scheduled over 15 years to be scheduled over five, three or even one year. The additional capital subsidy would range from 7% for raising the investment tax credit to 14% to 33% for implementing a 20% tax credit and a one-year accelerated depreciation schedule. (See Table X). The subsidy would total roughly $296 million for water and $75 million for air for the three-year accelerated depreciation allowance if applied to an estimate of the additional capital required to meet the hypothetical standards considered in this report.

However, the subsidy is in a small part illusory because the assistance would be given for a higher level of expenditure caused by the subsidy creating an incentive to over-use capital to the neglect of operating and maintenance expenditures. This would arise because capital costs are made artificially cheaper by virtue of a tax writeoff. Tax writeoffs are handicapped because they are incapable of providing assistance to all of the costs of abatement. The capital cost accounts for roughly one-third of the total cost for water pollution abatement and one-eighth for air pollution abatement. Of course, with subsidies given to capital alone, the capital cost proportion will tend to rise and unnecessarily consume more resources. The addition of chemicals or supervisory personnel often times is less costly than building additional capacity in order to treat larger waste loads. Fuel substitution alone is estimated to be the least-cost alternative in over 60% of the cases involving air pollution abatement.

Moreover, tax writeoffs are difficult to apply to many changes in the production process which reduce the actual generation of waste loads but which also add to the output of plants. Other studies have shown that some industries find that over 50% of the least-costly opportunities for reducing waste load discharges are found in such process changes.* The Treasury Department would be faced with the difficult task of certifying the proportion or the cost attributable for pollution abatement or disallowing any assistance for this kind of improvement. To the extent of the proportion disallowed, plants would be given an incentive to *ignore* many improvements which have been shown to be least costly.

Also, the implementation of selective writeoffs for pollution abatement opens the door for other programs to receive similar treatment. Proposals for tax writeoffs for training, education, mining, transportation, housing and others have already been made. The snowballing effect for industry could be, conceivably, a necessary increase in the corporate tax structure or lag in the long-run reduction of corporate tax rates and thus no net benefit to firms facing pollution abatement expenditures. Moreover, public accountability of such subsidies are difficult and would probably create an annoying problem in its removal once social policy dictates a change.

TABLE X.—COMPARISON OF THE ADDITIONAL SUBSIDY TO INDUSTRY THROUGH ALTERNATIVE FORMS OF FEDERAL ASSISTANCE [1]

| Type of assistance | Subsidy as percent of capital cost | Subsidy as a percent of annual cost [2] | | Rough estimate of likely assistance to industry for capital expenditures to meet hypothetical standards in 5 years 1969–73 [3] (millions) | |
|---|---|---|---|---|---|
| | | Water | Cost | Water [4] | Air [5] |
| Accelerated: 5 yrs. | 13 | 5 | 2 | $241 | $61 |
| Depreciation: | | | | | |
| 3 yrs. | 16 | 6 | 3 | 296 | 75 |
| 1 yr. | 20 | 9 | 4 | 370 | 94 |
| Additional (7 plus 7) | 18 | 2 | 1 | 130 | 33 |
| Tax credits (13 plus 7) | 25 | 5 | 2 | 251 | 61 |
| Accelerated depreciation and tax credit combined: | | | | | |
| 14 percent credit and 3-yr. accelerated depreciation | 35 | 10 | 5 | 426 | 108 |
| 20 percent tax credit and 1-yr. accelerated depreciation | 46 | 17 | 8 | 611 | 155 |
| Reduced interest loans: [6] | | | | | |
| 6 percent (3 percent below discount rate) | 11 | 4 | 2 | 204 | 52 |
| 4 percent (5 percent below discount rate) | 17 | 7 | 3 | 315 | 80 |

[1] Assume 48 percent effective tax rate, 15-year functional life (straight line) for pollution abatement facilities and 9-percent discount rate. Excluding accelerated depreciation now available in existing tax laws; e.g., sum of digits or double declining balance.

[2] Includes annual capital cost (amortized) and operation and maintenance expenditures, increase in total cost of abatement because of excessive use of artificially cheaper capital costs.

[3] Assuming all capital expenditures are subsidized whether to industry or households. *Capital costs* would undoubtedly drop after the initial investments are made to achieve standards.

[4] Based on industrial profiles: $1.15 billion additional investment plus $0.7 billion replacement investment which equals $1.85 billion for BOD and suspended solids for hypothetical standard of 85 percent treatment of industrial wastes.

[5] Assuming 20 years of additional capital investment is made in 5 years. The total capital as indicated by the "typical city" study should be $470,000,000 to achieve a hypothetical standard of reducing human exposure by 60–75 percent of SOx and particulates.

[6] 15 years, straight reduction loan, 9 percent discount rate for industry (if assume 6 percent then zero gain for 6 percent interest loan and 7 percent or $71,000,000 gain for 4 percent interest loan).

In summary, clearly tax writeoffs are not needed nor are they a desirable form for offering further assistance to industry.

Mr. President, it is sometimes argued that industry cannot afford to make the expenditures required for pollution control. However, the report shows that the additional cost of achieving Government standards of pollution abatement would

* For example in the case of water, see Kneese, Allen and Lof, George. *The Economics of Water Utilization in the Beet Sugar Industry,* Manuscript, Resources for the Future.

only amount to $0.5 billion for all manufacturing concerns annually, or one-half of 1 percent of the value added by manufacturing. The report points out that there are already many Government programs to reduce the cost of pollution control. Indeed, we have recently passed in the Senate a $1 billion anti-pollution measure. As the report concludes, tax incentives simply are not needed, especially when they produce the unfairness and inequity in the tax system that they in fact do.

HOUSING REHABILITATION

The committee bill provides that rehabilitation costs of certain low- and middle-income housing can be amortized over a 5-year period.

As the committee report itself shows, fast depreciation for real estate is an unjustified tax preference.

Rehabilitation of low- and middle-income housing apparently has such a low priority in our national housing policy that HUD does not even request funds for it. Yet in a tax bill, the tax-writing committees of the Congress—which have no expertise in real estate or housing matters—are providing $330 million for a purpose on which no data is available to indicate the effectiveness or desirability of the expenditure.

This provision is unfair from the standpoint of tax policy. The effect of the 5-year writeoff is to provide an interest free loan to the slumlord in the amount of the taxes he otherwise would have paid had proper depreciation been allowed. The benefit of this interest free loan is far greater to the 70 percent taxpayer than for the 20 percent taxpayer. For example, if a 70 percent taxpayer makes expenditures that have a useful life of 20 years, and he would otherwise earn 10 percent on his money, the effect of the Government loan in the amount of his tax savings is to reduce his interest costs by 5 percentage points, from say 8 percent to 3 percent.

However, a 20-percent bracket taxpayer making the same rehabilitation expenditures would get a reduction of his interest costs of only 1 percentage point.

If HUD proposed a Government assistance program to rehabilitate low- and middle-income housing that provided for direct loans at a 3-percent interest rate to 70-percent bracket taxpayers and a 7-percent interest rate to 20-percent bracket taxpayers, the responsible congressional committees would quickly throw the proposal out. Yet that is exactly the system that has been adopted by the Finance Committee in the bill.

I refer Senators to a statement submitted by Prof. Charles Davenport to the Finance Committee which substantiates the analysis I have just made. Mr. Davenport was formerly with the Treasury, is now a professor of law at the University of California at Davis, and is an expert in tax depreciation matters. His statement appears in volume 5 of the Finance Committee hearings, page 4903.

SPECIAL PROVISIONS IN THE TAX REFORM ACT OF 1969

Mr. KENNEDY. Mr. President, the Tax Reform Act of 1969 is designed, says the committee report accompanying it, to meet the "common goal of a fair and more efficient tax system." The report further states:

> In the long run, tax reform should also lead to simplification by redirecting effort from tax avoidance to productive economic effort.

The single most significant element in developing public support for this tax reform bill was the disclosure earlier this year that in 1966, 21 individuals with incomes of over $1 million a year paid no income tax at all. We heard much, shortly after this disclosure, of what came to be known as the "taxpayer's revolt." This revolt revolved around a single concept—equity. How could we have constructed a system, American taxpayers wondered, which lets the rich and clever escape taxes but severely crimps the budgets of the not-so-rich?

The committee report phrases a general answer to this question:

> From time to time, since the enactment of the present income tax over 50 years ago, various tax incentives or preferences have been added to the internal revenue laws. Increasingly in recent years, taxpayers with substantial incomes have found ways of gaining tax advantages from the provisions that were placed in the code primarily to aid limited segments of the economy. In fact, in many cases these taxpayers have found ways to pile one advantage on top of another.

The report adds:

> This fact has seriously undermined the belief of taxpayers that others are paying their fair share of the tax burden. It is essential that tax reform be obtained not only as a matter of justice but also as a matter of taxpayer morale.

The Committee on Finance has adopted a number of significant provisions to restore some measure of equity and to restore some measure of taxpayer confidence. A few of these provisions have been strengthened by amendments on the Senate floor, and the long-range effect, I think, will be beneficial to public confidence in the tax system itself.

One issue, however, has not yet been discussed in any detail, in the committee report or on the floor. This is the issue of special provisions inserted in the tax code for the benefit of a particular individual, a particular corporation, or a particular industry.

I would point out that special provisions have been a part of the tax laws ever since we have had tax laws. One of the most long lived of all—known technically as the "unlimited charitable deduction for individuals" and colloquially as the "Philadelphia nun provision"—is virtually eliminated by the present bill, after being in the tax law since 1924. There are hundreds of others, and I have prepared an illustrative listing as exhibit 2.

These special provisions, though they have been a part of nearly all of our tax bills, are generally hidden from public view. As this has been the case historically, it is also the case with the bill before us.

Mr. LONG. Mr. President, will the Senator yield at that point?

Mr. KENNEDY. I yield to the distinguished chairman.

Mr. LONG. All the Senator has to do is read the newspapers. Many of the provisions in this bill have to do with the problems of some particular group.

I noticed the press release of the Senator yesterday referred to Loyola University, operated by the Catholic Jesuit order, which very much needs what it can earn from a pioneer radio station that has resulted in their presently having a television station, for the education of children in New Orleans.

When that provision was voted on in committee, it was the result of the fact that Father Jolley, the president of Loyola University, and others came and asked for the right to be heard before the committee and testified before the committee in the presence of a filled committee room, and explained how adversely the House language affected Loyola University.

When the committee subsequently voted to give the kind of relief for which Father Jolley and those who accompanied him had testified, I was present, I believe, when we announced that matter to the press; and before announcing the amendment, we said, "Here is an amendment that was sought by Loyola University with regard to the problem that the Jesuit order has there, in trying to educate the young people at Loyola University. It involves Station WWL–TV and Loyola University."

I do not call that any sneak procedure—the matter was testified about in open session, in the committee room, and everyone knew about it.

I have discussed this matter with the press, and they have told me there has never been a major revenue bill where the press was so completely alerted, and where items were so fully explained, and where who was requesting the tax relief was so well identified, as this one. So if the Senator wants to find fault with this committee in that it does not write the names of everyone affected into the report, I suggest that he would direct his criticism against every Senator who has served on this committee since it was established more than 150 years ago.

I regret that we did not identify the Western Massachusetts Electric Co., in case the Senator from Massacusetts was interested in that. We adopted the principle, and we thought it was fair, that if it appeared that general tax language could be drafted to meet the problem that should be corrected, as well as that of someone else who might meet the same general standard. But I believe if the Senator will go back and read the Washington Post and the Washington Evening Star accounts of the committee sessions, amendment by amendment, he will find that the committee identified amendments quite generally and what industrial interest or what university or what particular group it was that was affected by the particular problem to which the section was addressed.

It was rarely that we would draft a section which was not applicable to someone else whose situation is generally the same. Since that is the way it has always been done with reference to both the committee and the Senate, it would seem that it would not be incumbent upon us to start a precedent; and if the Senator wanted to do business that way,

the Senator should have suggested it to us, rather than attack us for doing something sneaky when, in most instances, I submit, the people affected came before the committee and testified, "Here is our problem, and we urge that it be considered."

Mr. KENNEDY. Mr. President, I will explain the full purport of the reasons have I raised these questions. It is really a question of the procedures which are followed.

The Senator mentioned the fact that a number of the amendments were reported in the Washington newspapers, and he referred specifically to the Post and the Evening Star.

It so happens that in the research for this speech, we did review the newspapers. A number of different amendments were accepted which were not reported in the newspapers.

I hope the Senator will give me a chance to run through these remarks, because there is in them no accusatory finger pointed at the chairman of the committee or at the committee itself. However, we are talking about the degree of public confidence in a reform measure. And when we have in the legislative background of the measure the special provisions which were included and which were eliminated under the leadership of the chairman in closing many loopholes, I think it is useful, and does help to provide a greater degree of public confidence, particularly when these matters are laid out on the public record.

I know that the chairman of the committee has been on the floor day after day explaining the various provisions of a very complex and far-reaching measure. I am not saying that the chairman of the committee or the members of the committee are trying to act in secrecy, and are trying to keep these matters from the public. I never made that suggestion in my remarks. I have suggested, however, that they have not been as readily available to the public—as I will develop—in the report or in the bill, and I think it is useful in terms of public confidence to have it known. So, this is really the basic reason for my pointing this matter out.

Mr. LONG. Mr. President, was the Senator correctly quoted this morning in the Washington Post which said:

> Kennedy did not imply there was any wrongdoing in any of the 15 instances. But he did object to "legislating these special provisions in secrecy."

Mr. KENNEDY. That is correct.

Mr. LONG. Will the Senator tell me what if any committee ever holds its executive sessions in public?

Mr. KENNEDY. I know of no committee that holds executive sessions in public.

Mr. LONG. Well, what is so secret about the committee holding executive sessions?

Mr. KENNEDY. Mr. President, if the Senator will be kind enough to let me continue with my remarks, I will try to explain my thinking. I then will be delighted to respond to the other inquiries of the distinguished chairman.

Nowhere in the 352-page report, or the 585-page bill, is there any indication of these special provisions, with the exception of a few for industry groups.

I see no reason for legislating these special provisions in secrecy. If an explanation of them is made part of the official legislative history of this tax reform bill, I think that public confidence in the Government process will be enhanced. Furthermore, administration of the law by the Internal Revenue Service will be strengthened.

Consequently, I will list those special provisions in this bill which have come to my attention. Undoubtedly, there are additional special provisions, of which I am not aware. It is my intention to add to the list I have today, when and if others come to my attention, because of my belief that they should be made part of the public record of the bill.

Mr. LONG. Mr. President, will the Senator yield at that point? I will have to leave the Chamber shortly.

Mr. KENNEDY. I yield.

Mr. LONG. Mr. President, with regard to a great number of provisions in the bill, I, like most Senators, did not ask who might be affected or who might not be affected by this or that provision. A great many of the suggestions came from the Treasury Department after they had studied the matter. In many instances it arose because they were studying problems affecting many people. In some cases, one taxpayer might have been involved or perhaps to have initiated action on a provision. However, as the Washington Post correctly pointed out in this regard, insofar as these suggestions were agreed to by the committee, they were applicable to all similarly situated people.

I voted on some of the measures to which the Senator refers without regard to who was involved. With regard to the Cafritz matter, it made no difference to me who was involved. A valid problem existed and we felt it should be corrected, not just for that particular situation, but for like situations. We knew it would have wider application and would apply to other people.

There are at least 100 amendments in the bill, probably nearer to 200, with respect to which the staff and the Treasury were aware of the tax problems existing for American taxpayers. They had been studying these matters since tax reform first came under consideration in the House, and perhaps even before that.

The staff and the Treasury had hundreds of recommendations and suggestions about things that we might be disposed to do or might not want to do.

I believe that in the case of about 90 percent of them, neither I nor anyone else had knowledge as to who the taxpayer was that might be involved in the matter, if, in fact, a particular taxpayer was involved. Most of them involved limited situations. But they appeared to be right. We voted on that basis.

With regard to one of the 15 examples the Senator picks out that involves me, that situation does involve Loyola University and the Jesuits. It involves New Orleans and it involves Louisiana. It involves WWL–TV and WWL radio.

If the Senator had presented that matter to the committee and said he wanted information about the matter, I am sure the matter would have been explained to him. There was testimony on behalf of Loyola University on the problem involving these people.

I explained it the best way I knew how and explained that the provision was apparently drafted to cover that situation. Later, it was reported to the press, and again the name of the case was mentioned.

It was not intended to be limited in principle. If someone else had a similar situation, that would have been covered. The Senator from Iowa (Mr. MILLER) found a State-supported university in Iowa where it was also made applicable.

Mr. KENNEDY. It was extended by a technical amendment to that university on Friday last.

Mr. LONG. Mr. President, if the Senator said that he knew of a State university that had this same problem, I would be happy to accept the amendment and say that it applied to the State-supported college.

I submit that insofar as the Senator's press release implies that there is anything wrong or improper about anything in the bill, particularly about the fact that the committee met and did not publish the name of every taxpayer involved, I submit that there is no way on the good Lord's green earth that we could have done otherwise.

If the Senator had inquired, he could have asked about any provision in the bill, and I would have been glad to have identified for him any taxpayer who expressed any interest in the bill.

So far as I am concerned, certainly those the Senator mentioned in the press release, most of them had testified in the public hearings on the bill. And everyone should have been on notice that they were matters that the committee would consider.

In most cases, I think the chairman assured those witnesses that their problems would be considered before we disposed of the bill.

Mr. KENNEDY. Mr. President, as I get farther into my remarks, I point out that I do not reach any kind of judgment whether anyone should be condemned. As a matter of fact, I say specifically that the situation is not to be condemned out of hand.

I prefer to complete my remarks, which respond to many of the points the chairman has raised. I do not try to reach any kind of moral judgment as to whether this is right or wrong. I point out that it is a fact that these special provisions are not really developed in the report of the committee itself, and that, as the Senator has just mentioned, a particular provision accepted within the Finance Committee was expanded to meet a situation in Iowa.

I think taxpayers are aware of the special provision included in the 1924 act, which was then raised for very legitimate reasons. Yet it has become one of the great tax loopholes of all time. We are fortunate that it was closed by the members of the Finance Committee in this bill.

What I am trying to do, by these remarks, is to inform the Members of this body in an organized way, although

probably not in as comprehensive a way as could be. There probably will be other examples. I am sure the distinguished chairman of the committee wants as complete a framework of discussion laid out as I do. I know, as he has stated, that there was no effort on his part to conceal on these questions. The fact remains that they are not in the record or in the official legislative history.

Mr. LONG. Does the Senator's conscience bother him that he asked the committee to look at the problem of the Western Massachusetts Electric Co.?

Mr. KENNEDY. I am just at the point of starting off on the list of special provisions. As a matter of fact, I lead off with Massachusetts. I would like to raise that, and discuss it as I do in my remarks.

Mr. LONG. If the Senator's conscience troubles him about that matter, I would like to know, because we could perhaps unburden him of that problem. I assume he wants to strike it out of the bill, having asked to put it in.

Mr. KENNEDY. If the Senator will remain in the Chamber, and will hear the description. I believe that the Senator will believe that that case, as well as other cases, had merit, and that the committee decided it on that basis.

As I start off with Western Massachusetts Electric, I explain that I do believe there were legitimate reasons for its inclusion, as with many of the others. But I did raise the Massachusetts case in this. There is nothing in the Massachusetts case that ought to receive special consideration, outside of the merits. The Massachusetts company had changed its various accounting procedures, had not yet been cleared by the State regulatory agency, was attempting to live up to its requirements, and certainly should have been included.

I want to proceed at this time, and I will proceed; and if the Senator has additional questions, I will be delighted to respond to them.

A technical listing of these provisions appears as exhibit 1. It includes both the special provisions for particular corporations, as well as selected special provisions for particular industry groups. I will not read exhibit 1, because of its technical nature, but instead only summarize it. In addition, I will suggest a number of possible solutions to the difficult problem of treating the special provisions, by way of general policy in the future.

LIST OF SPECIAL PROVISIONS

First. I would like to point out, first, that the committee adopted, partially at my request, a special provision which benefits the Western Massachusetts Electric Co. The provision would permit this company to change its method of accounting; the generally applicable provision in the bill would prohibit it.

Second. The Benwood Foundation, of Chattanooga, Tenn., would be permitted to continue ownership of the stock in a number of unrelated businesses. Under the generally applicable provision in the bill, the foundation would otherwise be forced to sell the bulk of this stock.

Third. The Morris and Gwendolyn Cafritz Foundation of Washington, D.C., would be exempted from the imposition of certain immediate stock divestiture requirements, which would otherwise be imposed under the generally applicable rules.

Fourth. The El Pomar Foundation, of Colorado Springs, Colo., would not be subject to the general divestiture requirements in its ownership of stock in the Broadmoor Hotel, under a special exception to the general rules.

Fifth. The Olin Foundation of New York City would receive similar treatment on its 100-percent ownership of the Federal Cartridge Corp., under the same exception.

Sixth. The Herndon Foundation of Atlanta, Ga., would not be subject to the general divestiture rules in its ownership of a number of insurance companies, under a similar exception.

Seventh. The James Irvine Foundation of San Francisco would be forced to dispose of most of its stock in the Irvine Co. on an accelerated basis, under a special restrictive provision.

Eighth. Loyola University, in New Orleans, La., would be exempted from the unrelated business income tax on CBS-radio affiliate WWL, which it owns, under a special exception to the general unrelated business tax rules in the bill.

Ninth. Litton Industries executives would be excepted from a new, generally applicable, tax on stock options, under a special provision.

Tenth. The Transamerica Corp. would be permitted the existing rapid depreciation of a new, nonresidential building, which would be unavailable to the corporation under the general provision in the bill.

Eleventh. Taxes on bonds benefiting the University of Virginia would not be subject to the generally applied new rules applied to arbitrage bonds, under a special provision.

Twelfth. The Mobil Oil Corp. would be saved $12 in taxes under a special exception to the repeal of the investment credit.

Thirteenth. Uniroyal, Inc., would be saved $3 million under a similar provision.

Fourteenth. The Lockheed Aircraft Corp. would save $14 million under a similar provision.

Fifteenth. The McDonnell-Douglas Corp. would be saved $6.5 million under a similar provision.

These 15 provisions are, broadly speaking, limited to the specific corporations or foundations or cases I have mentioned. In addition to these very specific provisions, there are others which benefit specific industry groups. These include:

First. Nineteen oil pipeline companies, permitted to change their methods of accounting for depreciation; most other regulated industries are not permitted to change.

Second. Oil pipeline companies and coal producing companies generally are exempted from the repeal of the investment credit, if they meet certain criteria.

Third. Companies which must acquire barges to service oceangoing "mother ships" are also excepted from the general repeal of the investment credit.

As I said earlier, I am sure this does not exhaust the list of special provisions. But it does give some idea of their number and their breadth.

One of the most serious problems with them is their unintended beneficiaries. The example of the Philadelphia nun is a good one. It was originally enacted in 1924 to cover the case of a wealthy Philadelphia woman who entered a religious order. The provision insured that her wealth went to charity virtually untaxed.

But down through the years, other taxpayers with substantial incomes have found ways of gaining tax advantages from this specific provision. The latest complete statistics are for 1966, and they reveal the following information:

Roughly 100 taxpayers used the provision that year, all of whom had yearly incomes in excess of $1 million.

This provision was the major factor in eliminating taxes for 49 of the 154 individuals with incomes over $200,000 who paid no taxes in 1966.

In one specific case, an individual had a net income of $9.7 million. Because he qualified for this provision, he paid no tax on his $9.7 million income, but had it free to spend, and paid no tax on the rise in market value of the securities.

This provision costs the Treasury $25 million a year in lost revenues.

To summarize, the provision put into the tax code to take care of a specific case, the Philadelphia nun, subsequently became available to hundreds of other wealthy individuals who rearranged their financial affairs to qualify for it.

POSSIBLE SOLUTIONS

As I earlier pointed out, this is not a new situation. Neither is it a situation to be condemned out of hand. There are, many times, particular individual circumstances of a specific situation which merit special attention. But I see no reason for legislating these special provisions in secrecy. There are three principal reasons I feel this way:

First, the problem of unintended beneficiaries. As the case of the Philadelphia nun illustrates, a provision designed for one situation can readily become available to other individuals who tailor their own stituations to take advantage of it. By revealing the genesis of these special provisions, it may be possible to prevent them from becoming provisions of general application, in appropriate cases.

Second, the problem of a shorter and simpler tax code. Were all the special provisions somehow treated differently than they now are—either as private tax bills, or listed in a separate appendix to the code—administration and understanding alike would be enhanced. It is difficult to estimate what part of the present code could be separated out under this theory, but it is without doubt appreciable.

Third, the problem of public confidence in public processes. It is not a secret that special provisions find their way into the various tax bills passed by the Congress, and signed by the President. But it usually is a secret which groups or individuals benefit from them. And this aura of secrecy generates an impression that the provisions are hidden because their sponsors have some-

thing to hide. I do not believe this to be the case. Anything given the force of Federal law should—indeed must—be able to stand the test of public scrutiny if we are to expect the public to have continuing faith in our government processes.

These, then, are the principal reasons for listing the special provisions. I had given some thought to offering an amendment to this bill requiring the Internal Revenue Service to furnish the appropriate congressional committees with a list of the special provisions, both in this bill as it is finally approved, and now in the code. This list would serve as a basis for cleaning up the present code, and helping to prevent the special provisions in this bill from becoming generally applicable provisions.

I have considered two other amendments to treat this problem.

An amendment to the Legislative Reorganization Act, authorizing private tax bills, similar to the private immigration and private relief bills. A number of private tax bills have in the past been approved by the Congress under the guise of private relief bills, the precedent, consequently, is firmly established.

An amendment to the present tax bill, which would utilize various technical devices to limit general application of the special provisions. An example of these technical devices would be effective date limitations.

But because this problem has not been examined by the Treasury Department, nor the appropriate committees in sufficient detail, I do not plan to offer the amendments at this time. Rather, I intend only to raise the general problem for discussion. I am sure that expert commentators will have many constructive suggestions, and I am also sure that the appropriate committees will give their attention to them.

It may well be, in the interim, that the Internal Revenue Service will have its hand strengthened in attempting to limit the spread of preferences, now that the legislative history of the bill lists at least a portion of them.

Our tax system is largely voluntary, insofar as the burden is on the individual to report his income, annually assess his tax, and then pay it. It is reassuring that the vast majority of Americans are scrupulous in adhering to the laws and regulations, and it is a signal of the strength of our democratic system.

But if we do not guarantee the law's equity and uniformity, then we will erode public confidence in it and in our system of government. That is why I feel the secrecy traditionally surrounding these special provisions serves no useful purpose.

Mr. President, I ask unanimous consent to have printed in the RECORD a document entitled "Technical Explanation of Special Provisions in the Tax Reform Act of 1969," and a document entitled "Illustrative Exhibit of Special Provisions Now in the Tax Code."

There being no objection, the documents were ordered to be printed in the RECORD, as follows:

TECHNICAL EXPLANATION OF SPECIAL PROVISIONS IN THE TAX REFORM ACT OF 1969

I. Tax treatment of private foundations:

A. Stock Ownership Limitation (Sec. 101 (b) of the bill, pages 38–45 of the report, and sec. 443 of the code).

1. Benwood Foundation. Discussed in the second full paragraph on p. 41 of the report. Benwood owns a number of Coca-Cola Bottling Company franchisors.

2. Cafritz Foundation. Discussed in the first full paragraph on p. 43.

3. El Pomar Foundation and Olin Foundation. Discussed in the third full paragraph on p. 44. El Pomar owns the Broadmoor Hotel in Colorado Springs; Olin owns the Federal Cartridge Corporation.

4. The Herndon Foundation. Discussed in the fourth full paragraph on p. 44. Herndon owns a number of insurance companies.

5. The James Irvine Foundation. Discussed in the first full paragraph on p. 45. Irvine owns 53 percent of the Irvine Company, which in turn owns 88,000 acres of land in Orange County, California. This is nearly 20 percent of the county.

Effect: Generally speaking, if these foundations were forced to dispose of all but 20 percent of their stock in the unrelated businesses they own, as the general rule in the bill requires, then they would both lose control of the businesses and lose the income from them.

II. Other exempt organizations:

A. Extension of Unrelated Business Income Tax to all Exempt Organizations (Secs 121(a) (b) and (f) of the bill, pages 67–71 of the report, and secs 511 and 512 of the code.)

1. Loyola University. Discussed in paragraph 6 on p. 70. Loyola owns radio station WWL in New Orleans, a CBS-affiliate.

Effect: Generally speaking, the bill extends the income tax due from tax-exempt organizations on the income from their unrelated business operations to *all* tax-exempt organizations. Loyola, however, will be exempted.

III. Restricted property:

(Sec. 321 of the bill, pages 119–124 of the report, and secs. 83, 402(b), and 403(c) of the code).

1. Litton Industries. Discussed in the fourth full paragraph on p. 124 of the report.

Effect: Generally speaking, the operation of stock option plans is greatly restricted under the bill, eliminating a tax advantage presently available to corporate executives. Litton executives have until 1973 before the new rules take effect; the general rules apply as of June 30, 1969.

IV. Depreciation allowed regulated industries: (Sec. 441 of the bill, pp. 17–176 of the report, and sec. 167(1) of the code).

1. Oil pipeline companies. Discussed in the second full paragraph on p. 174.

2. Western Massachusetts Electric Company. Discussed in the third full paragraph on p. 175. Western Mass. seeks to change its method of tax accounting for depreciation, having filed for permission to do so with the state regulatory agency before the cut-off date in the bill.

Effect: Generally speaking, regulated Utilities are prohibited from changing their method of accounting for depreciation, because a recent trend in the industry will, if allowed to continue, generate a tax revenue loss of about $1.5 billion. Those companies and particular industries permitted to change their method, despite the general rule, will effectuate tax savings.

V. Real estate depreciation: (Sec. 521 of the bill, pp. 211–215 of the report, and secs. 167 and 1250 of the Code).

1. Transamerica Corporation. Discussed in the paragraph beginning at the bottom of p. 213. Transamerica had filed for what amounts to a building permit, the cut-off date of the bill, for construction of a new plant.

Effect: Generally speaking, the bill eliminates certain types of accelerated depreciation on new, non-residential construction, because continuing it would continue a widespread tax shelter abuse. This abuse is available only to those individuals or corporations with substantial incomes against which to offset the depreciation. Exceptions to this general rule continues this offset factor.

VI. Tax treatment of State and municipal Bonds:

A. Arbitrage Bonds (Secs 601 and 602 of the bill, pp 217–220 of the report and secs 103(a), 6056, and 6685 of the code).

1. University of Virginia. Discussed in the first full paragraph on p. 220. The University seeks to apply the income from arbitrage bonds in its control to the construction of new residential facilities.

Effect: Generally speaking, the bill imposes a new tax on arbitrage bonds (bonds issued for the purpose of acquiring funds with which to purchase other securities), because often the Federal government loses the opportunity to tax the income on its own taxable securities when various kinds of complicated procedures are adopted. Exceptions to this general rule continue the present practice.

VII. Repeal of the investment credit: (Sec 703 of the bill, pp 223 to 248 of the report, and Secs 46, 47 and 49 of the Code).

1. Mobil Oil Corporation. Discussed in the third full paragraph on p. 235. Mobil is constructing a new $180 million refinery in Joliet, Ill. The company had begun preliminary work leading to construction of the refinery, but had not actually signed a contract for construction before the cut-off date.

2. Uniroyal, Inc. Discussed in the third full paragraph on p. 239. Uniroyal is constructing a $73 million new plant in Ardmore, Oklahoma. While no construction contract had been signed in this case either, the company had filed a description of the new plant with the SEC and had entered into a lease for the plant with the City of Ardmore.

3. Lockheed Aircraft Corp. and McDonnell-Douglas Aircraft Corporation. Discussed in Paragraph XIII on Page 244. Both corporations; had undertaken to produce aircraft of new design, and had signed contracts to do so prior to the cut-off date in the bill. But they had not contracted to buy the machinery with which actually to produce parts of the new aircraft.

4. Oil pipeline companies and coal companies. Discussed in the 5 paragraphs beginning at the third full paragraph on P. 240.

5. Barges for ocean-going vessels. Discussed in XII paragraph on P. 243.

Effect: Generally speaking, the 7 percent investment credit against taxes due is no longer available for machinery and equipment purchased, or property constructed after April 18, 1969. Exceptions to this general rule are a direct tax benefit to those who qualify for the exceptions.

---

ILLUSTRATIVE EXHIBIT OF SPECIAL PROVISION IN THE TAX CODE

1. Sec. 1240. (Enacted in 1951.) This special provision, tailored to the situation of Louis B. Mayer, former head of MGM, saved him $2 million in taxes.

2. Sec. 512(b)(13). (1958). This special provision was tailored to the situation of Charles E. Merrill, former partner in Merrill Lynch Pierce Fenner & Smith, the stock brokerage partnership, who left an interest in the partnership to a charitable trust. The trust, under this provision, was exempted from taxes on its share of the partnership's income which would otherwise have been due.

3. Sec. 2055(b)(2). (1956). This special provision was tailored to the situation of Mr. and Mrs. Gerald Swope. Mr. Swope was former Pres. of General Electric. This provision saved her estate $4 million in taxes,

through specially-tailored exceptions to the general rules.

4. A provision in the 1962 tax bill contained a provision for the Twin Cities Rapid Transit Company of Minneapolis-St. Paul, Minn., which make available to them $5 million in tax losses otherwise unavailable.

5. The same bill contained a provision for Howard F. Knipp of Baltimore, Md., which overruled an opinion handed down by both the Tax Court and the Appeals Court.

(Note: Items numbered 4 & 5 just above were vetoed by the President when passed as separate bills; they were approved when made part of the 1962 general tax bill.)

6. Congress adopted in 1961 a provision granting special tax treatment to the sale of $3 billion worth of General Motors stock by owners of DuPont Company stock. The sale was ordered by the courts, as part of an anti-trust decree.

7. In the Revenue Act of 1951, a provision was adopted which gave Wesleyan University, Middletown, Conn., an exception to taxes on unrelated business income. Wesleyan had purchased a publication for school children which earned about $1 million a year, and the university was given a grace period from taxation to adjust the income appropriately.

Mr. WILLIAMS of Delaware. Mr. President, I wish to ask the Senator if he is going to introduce an amendment to correct these matters?

Mr. KENNEDY. No, I am not. I mentioned in my remarks what I thought would be two possible amendments, but I mentioned them very briefly. I would hope we would have some discussion or comment on it some time in the future, but I am not prepared at this time to offer such a solution.

Mr. WILLIAMS of Delaware. Why not? The reason I made my suggestion is that I opposed these same measures in committee and would welcome his support in correcting them. But there is nothing secret about it; I thought everybody knew what they were doing when it was announced. I had understood the Senator was going to introduce an amendment, and I was looking forward to having his support. I know two or three more special exemptions he missed, and I believe that working together we could accomplish something. If the Senator introduces an amendment to carry out his point, perhaps we can pass it.

Mr. KENNEDY. The objective I had, as I stated in my remarks—I am not sure the Senator was in the Chamber at that time—was a belief that in many of these instances there were very legitimate reasons for the inclusion of the special provision. I reach no kind of judgment, not having been on the Committee on Finance and not having heard the testimony that was before it.

There probably are legitimate reasons for many of these provisions being included and I reach no conclusion about them. My only purpose in making these remarks is that I would have hoped that perhaps, although it has not been done in the past, there would be a description of these matters in the report; that is, a public review of those kinds of decisions made available.

I find it extremely difficult to try to locate those provisions in the report. In some instances they are mentioned by name but it is not developed in full detail.

I feel concern that potentially perhaps some of these matters—perhaps they do not—bear the same kind of problem suggested by the 1924 nun amendment which would lead to a loophole, and in the atmosphere of what has been done by the committee in eliminating the loophole. So I would think there would be no real objection to the points made.

Mr. LONG. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. LONG. Can the Senator tell me what good it would do me to know the name of that Philadelphia nun? I understand she was an heir of——

Mr. KENNEDY. Drexel.

Mr. LONG. The Drexel family. That is one provision that was expanded into a loophole and continued to be a loophole until we, in the committee in this bill, sought to close it. What good would it do to know the name of the lady? What is the difference?

Mr. KENNEDY. I suppose if there had been a full description of that provision in 1924, if there had been elaboration of it in the course of the official discussion, and there had been a thorough testing of that concept—and the potentiality of such a provision was visualized at that time in 1924—I suppose both the Senate and the members of the committee would have been a good deal more reluctant in providing that special provision as an item of general application. As I understand it the special provision was a special provision to apply only to that particular case. But during the intervening years, the word, so to speak, got around and more and more people took advantage of it.

With the full examination the Finance Committee has undertaken, in the course of the hearings, and with the full discussion, dialog and examination which have been given by the members of the Committee on Finance to this particular matter, I feel that when this bill becomes law the public will feel that there are no "nun" provisions in it. I do not believe there are, and I am sure the chairman of the committee does not believe there are.

Mr. LONG. There are a lot of things one can do in revenue legislation which are unfair. But nowhere in the bill does there appear the name of the principal beneficiary of the various provisions. It would be useless to state that one provision affected the Lockheed Co. or that that one affected the McDonnell-Douglas Co., or that another is especially applicable to Massachusetts Electric Co., because they might also apply to many other companies.

Mr. KENNEDY. I would hope that would not be in the bill, but in the report there could have been this kind of discussion.

I understand the House bill and the Senate bill included a special provision for the Hershey Trust, which was mentioned in the House report but not the Senate bill. The distinguished minority leader came down here and had a dialog with a member of the Committee on Finance, and elaborated and discussed those provisions to make the legislative history "crystal clear," as he put it. They wrote it into the House report. As I understand it, that was the only special provision which was included. I might be wrong on that, but that was the only one.

Mr. LONG. May I say to the Senator that as a matter of interest and of news, and as a matter of reporting and curiosity, it is fine to know that a provision in the bill might affect this taxpayer or it might not affect that taxpayer over there. I personally, however, cling to the same old concept of justice as the lady who stands there blindfolded and holds the scales of justice. She does not know who has an interest on the left side or who has an interest on the right side. She just tries to do what is right on the matter that is involved. That is how we should do these things.

Personally, I will fight as long as I am here to see that the code of ethics which operates for judges does not apply to legislators, because a legislator is intended to be an advocate. He speaks out for what he believes to be good for the people he represents. He is also an advocate of what is good for the whole country, but he represents the people of the State who sent him here. The laws of our country are so drafted and so intended. He speaks for the people he represents who elected him to Congress and sent him here.

When one of us becomes a judge, where some things do not particularly affect those of our State, I would like to see us look upon that impartially. It would not make any difference whether it would involve someone named Drexel or someone named Smith. The question is what is right and what is wrong.

As chairman of the committee, all I want to know is, one, what are the merits, and two, how much is involved. It is very nice, sometimes, to do things that way, but it costs the Treasury so much money that the Government cannot afford it. Under those circumstances, one would feel that it would be better to treat those problems in some other way than considering the potential revenue effect. But where someone raises a problem and says, "I am treated unfairly under the bill"—and also anyone else who is similarly situated and is treated unfairly—why should he be singled out for notoriety if we think he is right? He should be able to communicate with us even by writing an anonymous note and saying that it is not fair or right.

When we deal with a taxpayer who thinks he has been treated unfairly and believes that his case merits some legislation to correct that problem, why should the Treasury tell us that the taxpayer who says his name is Adam Jones and someone else is named Bill Smith, have similar problems, when there are other people who would be similarly affected and who are entitled to the same consideration?

For instance, this Lockheed provision was not inserted in the bill by the committee at all. That is a provision that the House sent to us. I took it on the floor prior to the time we ever conducted hearings. The problem was that the House had looked at a certain tax problem involving the Lockheed Corp., a tax problem involving the investment credit, and it had legislated in such a fashion that

the hardship, involving the existence of a contract, would not be imposed upon Lockheed.

Then, after they did that, someone pointed out that the Douglas Co., now the McDonnell-Douglas Co., was similarly affected. Now technically the problem seemed different, but as a practical matter it was the same problem. It had to do with binding contracts to build aircraft, and the aircraft were entitled to come under the investment credit. They needed to acquire the machinery and other equipment to build the aircraft. The only difference between the two cases is that the contracts were slightly different.

So it was felt that if we were going to provide this treatment for Lockheed, we had to provide equally for both. Here was a new test being put on Lockheed, and they said it was unfair to do it to them because they had a binding contract. We could either strike out what we had done for Lockheed or do the same thing to McDonnell-Douglas. So far as I was concerned, we could go either way. We considered the matter, and after we considered it and discussed the various aspects of the arguments, the committee decided that both should be relieved of the hardship imposed on them.

There is a provision that relates to ocean-going barges, which is also a House provision. While the Senator is finding fault with people, he should include the Ways and Means Committee. No one yet tried to find out who had the contract. We could find it out easily enough. Someone had a firm contract for the ships that would carry the barges. The firm had a contract for the ships at the time the President made his statement announcing that the repeal of the investment credit would be effective as of April 18, but it had not signed the contract for the barges that go on the ships. A barge-carrying ship is useless without the barge. In view of the fact that they had an obligation to build the ship they would have to build the barges as well. So the barges would have to come within the contract on the ships. The House did that. If the Senator finds fault with it, blame the House committee as well as the Senate committee. Their procedure has been the same as our procedure.

We do not make a point of identifying the taxpayer in general legislation. Where anyone is so affected, he could claim the same benefits if he had the same problem. In the accounts we gave to the press, in the news conferences we held day by day, after our executive sessions, in some instances, before we even said what the section is, we identified the taxpayer who had been asking for relief.

That was the case with Loyola University and in other cases. Whenever someone asked who might be affected by this, or did we have knowledge of the taxpayer affected by that, staff identified whoever the taxpayer was. And now it would seem to be that if the Senator wants to protect the right to be informed, he could do so and I would have no objection, day after day, asking that any provision affecting a taxpayer should identify all taxpayers insofar as we know who they are.

But I have served here a long time, with the Senator's two brothers, and neither one of them ever suggested, as the Senator is suggesting here, that a revenue bill should reveal the name of every taxpayer that would be affected by the bill we have drafted. That would be a new procedure, if we did that.

Mr. KENNEDY. The only point I would make, in responding to the Senator from Louisiana, is that I think the Senator has, by his description of the ocean-going barges case and the various aircraft corporation cases, given an explanation which, perhaps in those cases, was given in the course of the committee's consideration, the taking of testimony, and was described in the journals of our country. But there were other provisions which were included in this bill which were not so described. I am sure they were put in there perhaps for very sound and legitimate reasons.

But the point raised here is that there is no place within the report itself which provides the kind of description that the distinguished chairman of the committee has given in describing the legitimate reasons for the inclusion of those special provisions.

It is my position that public confidence would be strengthened if it had such a description. It in no way reaches the question about the legitimacy——

Mr. LONG. Is the Senator aware of the fact that there is not 1 percent—in fact, not one-tenth of 1 percent—of the people in the District of Columbia who read the bill or who read the committee report? What they read is what appears in the newspapers.

The newspapers had the names of everybody who was asking for any particular provision as written in the bill. Talk about public confidence, as to who might or might not be affected by the bill. The question is, Does the public know? Well, the public knows. We told them, and it was printed in the newspapers.

If we are going to inform the public, will the public learn it from the volume we have here on our desks, or from a newspaper which probably has a circulation of half a million copies? It seems to me the public is better informed if it is printed in the newspapers from coast to coast.

Mr. KENNEDY. The point I was trying to make is that without the kind of notice the Senator refers to, I doubt if it ever would have reached the newspapers. When one hears that there have been special provisions and then goes to the report and cannot locate it, he feels perhaps there may be other reasons for such inclusion. The Senator knows there was not. I believe there was not. I really believe this is the reason for putting all the material on the public record.

Mr. LONG. Mr. President, if I may just make this comment, I will then be ready to yield the floor as far as my part of this colloquy is concerned. One of this Nation's newspaper reporters who covers the U.S. Senate for many newspapers in this country said to the Senator from Louisiana in connection with this matter—I will not identify that person for the reason that it would be unfair to quote him unless he authorized it—that there has never been a time in the Senate to his knowledge when everything in a tax bill had been explained to the press in such detail or so promptly, when every provision that related to a taxpayer had been so quickly relayed to that taxpayer who requested the knowledge with respect to the bill. This was the high point with regard to which the public had been informed as to everything in the bill, why it was there, and who might be affected by it.

Mr. KENNEDY. Mr. President, will the Senator yield?

Mr. LONG. I yield.

Mr. KENNEDY. I think the Senator should be congratulated for what he has done in this area, and for the representations he has made and the presentations he has made and the job he has done with the bill. I would hope the Senator would not feel that these observations are directed at the distinguished chairman of the committee. There is no such intention. If I were to be critical, it would be of the procedures which perhaps have been in existence for a long period of time. As the Senator has said, reasons have been given for the provisions to which I have referred this evening. What the newspaperman to which the Senator refers was provided with was expansive, and the Senator deserves great credit for it.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. WILLIAMS of Delaware. I speak as one who tried to strike out the special exemptions in the House bill to which the Senator has referred. I was unsuccessful. I opposed the inclusion of all the provisions the Senator from Massachusetts mentioned along with some he missed, which I will mention in a moment.

I have been on the Finance Committee a number of years, and in all fairness to the chairman and the other members of the committee, it should be pointed out that I do not know of a single amendment that was offered in the committee by any member that was not identified by name. Both the committee and the press knew for whose benefit it was intended. It was described by name and the exact case. For example, the chairman of the committee advised the full committee he wanted to bring up the amendment dealing with the Loyola University. There had been public testimony; but he knew I was opposed to it, and he carried it over for 1 or 2 days. I met Father Jolley. While he had a persuasive argument, I could not go along with him, as the Senator knows; but when we voted every committee member knew what we were voting on, and our decision was announced to the press by name of the university. The same was true of the other amendments.

Naturally we did not always name every individual affected by every amendment because we did not believe in publicity for publicity's sake.

I cite a case in point. The House included a provision incorporating a 7½-percent tax on investment in-

come of all foundations. I was very strongly in favor of that proposal. I still am. I thought it was no more than fair that these foundations should pay some tax. I was sorry that a majority of the Finance Committee decided to eliminate that feature.

Nevertheless, when the committee acted to delete that section of the House bill, we did not name the foundations that were thus exempted from tax liability, and I do not think we should have. Everybody knew—at least I thought everybody knew—the effect the committee action would have even thought we did not name the foundations that will escape from paying any income taxes as the result of this loophole.

The committee did announce that a rejection of the House amendment would cost the Treasury about $100 million a year in revenue. Under the bill as passed by the House, the Rockefeller Foundation would have paid $1,800,000 in income taxes. The Ford Foundation would have paid $7,300,000. The Duke Foundation's tax liability would have been $1.3 million. The Lilly Foundation would have paid $1.2 million in taxes. The tax liability was estimated at $874,000 for the Pew Foundation under the House bill. Under the language of the House bill the Kennedy Foundation would have paid in taxes of $630,000. The action of the Finance Committee exempted all these foundations of any tax liability; but should they have been named as the beneficiaries of special tax privileges when it was a broad, general provision of law?

Not a single one of these foundations was named, but the total amounted to $100 million. I do not think anything would be achieved by publicizing the names of these foundations as being a part of a special interest group even though some of us think they should pay taxes the same as all other American citizens.

I realize there are those who feel the foundations should not be taxed. I do not question their sincerity, but I feel they should be taxed. I wonder why the Senator from Massachusetts eliminated this special group from his list.

The committee by rejecting the House amendment in effect gave complete tax exemptions for the group I have named. Should we have named them in the report as the beneficiaries of a $100 million windfall? I do not think so.

By the same token, last Saturday we had before us the Stevens amendment, which the Senator from Massachusetts supported. It passed by a margin of 1 vote. The purpose of the Stevens amendment was to reinstate the 7-percent investment tax credit to all depressed areas. That sounded nice, but it so happens that all of the State of Alaska is a depressed area along with many other areas scattered throughout the country. Under that amendment Atlantic Richfield and Standard Oil of New Jersey will get investment tax credit on their $900 million pipeline in that State. That amendment was supported by the Senator from Massachusetts. Should the Senator have said that this was an amendment providing a $63 million tax credit for Atlantic Richfield and Standard Oil of New Jersey? The Senator mentioned Mobil and others. Why did he not include this item in his tabulation? Under the amendment supported by the Senator last Saturday, all the major oil companies operating in the Alaska area would get the 7-percent investment credit on their investments there. That same pipeline provision was rejected by the House. Our committee rejected this proposal as an unwarranted windfall. I do not question the sincerity of my friend from Massachusetts who supported that amendment, which passed by 1 vote. A change of 1 vote would have defeated it. I do not say everyone who supported it knew he was giving $60 million to Atlantic Richfield and Standard Oil of New Jersey, but that is what they did. Was that legislation for a privileged group?

Perhaps the public ought to know who got these benefits. I opposed that amendment last Saturday. It was a glaring loophole. I think it was unfortunate that the Senate adopted that amendment. But if Senators are going to name names where do we start and where do we stop?

I congratulate my friend from Massachusetts for bringing up this question. I am a great believer in the public's right to know, and I think this rule should apply in all categories. I hope the Senator will offer an amendment to correct all so-called abuses that have been outlined in his speech, and I will join him in trying to get correction. In addition, I will join him in supporting the provision of the House bill which will reinstate the tax on foundations. They should be taxed. I would not want to impose this tax by name, but I have no objection if he wants to name the various foundations.

Was the amendment adopted last Saturday an amendment for the relief of Standard Oil of New Jersey and Atlantic Richfield? They will get at least $63 million in tax credits on the pipeline, and they will get more for their machinery used in the exploratory wells.

Let us not just pin these down as special amendments, because every business interest in the State of Alaska likewise will now receive that same investment tax credit. A grocery story or a filling station buying some item that is eligible for tax credit will now get it. The amendment did not apply to just one company. It was in broad, general terms, and under its terms the whole State of Alaska is classified as a depressed area. Everyone in the country in such an area will now automatically become eligible for the 7-percent tax credit. The Senator from Massachusetts voted for that amendment. Is this not another $300 million loophole?

Mr. KENNEDY. Mr. President, I think the point has been made on this. I do not wish to interrupt the distinguished Senator from Delaware, but I intend to yield the floor forthwith; I would simply say that I think I have handled the matter in the main part of my remarks, which express my opinion about this question. They also distinguish between the kinds of examples that have been suggested by the Senator from Delaware, and those I mentioned here this afternoon.

Mr. President, I ask unanimous consent to have printed in the RECORD two law review articles which discuss the problem of special provisions in the tax laws. This matter was the subject of the dialog a few minutes ago between the distinguished chairman of the Committee on Finance, its ranking minority member and myself.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Harvard Law Review, Vol. 68, March 1955]

PRESSURE GROUPS AND THE REVENUE CODE: A REQUIEM IN HONOR OF THE DEPARTING UNIFORMITY OF THE TAX LAWS

(By William L. Cary*)

I. INTRODUCTION

The genesis of this paper is the casual remark of a Washington lawyer who asked, "What is the point of litigating a tax case when we can have the statute amended for the same outlay of time and money?" Probably his statement was inaccurate, and certainly it was extreme, but it comes as no surprise to sophisticated counsel daily studying the tax services to identify new patchwork stitched upon the internal revenue quilt. Pressure groups appear to be active, and effective, in the constant alteration of our tax laws. Whether their efforts take the form of new sections, or euphemistically called "technical changes,"[1] there is today an accelerating tendency away from uniformity and toward preferential treatment. The Internal Revenue Code of 1954 does not alter this trend.

Some very admirable counsel have commented that my concern should not be with pressure groups in principle but with the effectiveness of the "wrong" groups as distinguished from the "right" ones. They would examine each new amendment and ask whether it is good or bad. Their approach is of course subjective, depending upon one's views as to what is socially and economically desirable tax policy. It is probably true that no one can be completely objective and that some bias will be inevitable. Yet the attempt here is considerably broader: it is an attack, or rather, a modest foray, upon the whole movement toward preferential and specialized amendments, irrespective of what group is preferred.

The root of the evil is not easily identified. Neither capital nor labor, neither the Democratic nor the Republican party, is alone at fault. It is unhappily true that the trend toward special treatment has not been arrested by the Eisenhower administration or its predecessors. In all probability the basic trouble lies in our political system as a whole and in Congress particularly. Perhaps, then, it is a futile pursuit to raise any doubt about current developments in tax legislation. Dr. T. S. Adams recognized years ago that "modern taxation or tax-making in its most characteristic aspect is a group contest in which powerful interests vigorously endeavor to rid themselves of present or proposed tax burdens."[2] But one need not repudiate the democratic process to deplore certain abuses which creep into it.[3]

If this article sought to settle the basic issues of taxation, such as the selection of the rate structure and the choice between more excise, individual income, or corporate taxes, it would indeed be taking sides in what Dr. Adams referred to as "class politics."[4] For our purpose let us accept the existing structure of tax laws and focus

Footnotes at end of article.

upon the preferential treatment and inequities within them. Thus the topic has been narrowed substantially. Though it may still be argued that this paper is unrealistic—an effort to take politics out of politics—I venture that this introduction of a quixotic approach to revenue legislation is no more bizarre than the enactment of certain amendments to the Code recently introduced and adopted by Congress.

We have reason to be concerned about the future of taxation and tax administration. One economist has argued that when tax revenue exceeds 25 per cent of national income, the danger point has been reached.[5] Upon this assumption we already have approached the limits of taxable capacity. Probably the most distinguished writers on economics disagree.[6] There is, however, another limit upon taxable capacity, which is basically psychological and has been too long taken for granted despite its importance. Our fiscal system cannot survive unless the majority of the citizenry retain confidence in the equity and uniformity of our tax laws and their administration, and will not countenance tax evasion. Stated in other words, the tendency toward preferential treatment breeds disrespect for the tax laws, and without respect there will be no effort made to abide by them.

The initial objective of this paper will be to demonstrate specifically the trend toward special legislation in the revenue laws. Principal reliance will be placed upon the Revenue Acts of 1951 [7] and 1954,[8] which afford an extraordinary range of examples illustrating the history of pressures upon tax legislation. As will become quite clear from their provisions, Congress has responded to pressures for the benefit of specific individuals, industries, and economic groups. Following the analysis of particular amendments, a comparison will be attempted of the forms of relief currently available under the Code for some of the major economic classes in our society: investors, owners of businesses, corporate executives, organized labor, farmers, and professional persons.

## II. RESPONSE TO PRESSURES FROM INDIVIDUALS AND SPECIAL GROUPS

### *A. Retention of old relief provisions*

Special relief provisions for individuals and private groups contained in the preceding law have been re-enacted and are firmly embedded in the 1954 Code. Probably the finest demonstration of legislative tenacity, and of human incapacity to weed out laws once on the books, is section 1240, popularly known as the "Mayer Provision" in honor of the alleged principal beneficiary under it.[9] Originally introduced in the Revenue Act of 1951,[10] the provision bears the deceptively general title of "Taxability to Employee of Termination Payments." As a general rule, except in the case of qualified pension and like plans,[11] any lump sum distribution upon retirement is taxable to the employee and bunched in one year as ordinary income.[12] Yet to resolve this predicament in the case of one movie executive, the bill provided for capital gains treatment where the taxpayer had been employed for more than 20 years, had held his rights to future profits for 12 years during his term of employment, and had the right to receive a percentage of profits for life or for a period of at least five years after the termination of his employment. How many persons could such a restricted provision cover? Perhaps an averaging system is needed for bunched income generally, or for retiring employees,[13] but is there any sound basis for the relief of one executive through capital gains treatment? It is especially noteworthy that counsel did not even trouble to present this amendment, and another involving personal holding companies, to the House Ways and Means Committee, but took all the matters which he sponsored directly to the Senate Finance Committee. Apparently pressure upon members of one house sufficed to ensure enactment of both measures.[14] In 1954 the question arose as to how this provision should be treated in the new Code. Presumably because of its narrow scope it was omitted in the House bill. However, in the hearings before the Senate committee, the proponent pointed out that "No explanation of the omission is contained in the Ways and Means Committee report, and it is believed that the omission was inadvertent." [15] He urged not only that the bill should incorporate the existing provision but also that the provision should be extended to cover the few cases where the taxpayer has rendered personal services under an agency contract involving receipt of profits after its termination. The argument was made that so long as relief was available to corporate employees under the original statute, there was no reason why it should not be amended to cover comparable agency situations. The plea was effective to achieve the reacceptance of the 1951 provision by the Senate,[16] though it did not succeeed in expanding its coverage.

In this case, as in the case of the personal holding company amendment,[17] there may be nothing alarming about the particular relief which the taxpayer received. However, the result was that a few persons were allowed special treatment, while others undoubtedly have suffered from comparable restraints.

### *B. New Relief Provisions*

The 1954 Code has not only incorporated the special relief provisions contained in preceding acts, but has also added new ones. Perhaps the most amusing addition is section 6073(b), where—thanks to prevailing pressures along the coastal areas—the extra time given farmers to file a declaration is stretched by the parenthetical phrase "(including oyster farming)." [18]

A new case of congressional generosity in the 1954 Code seems tailored to the needs of certain commission merchants in the South. Whether by custom or rules of the trade, a few of them are required to do business as partnerships although for tax purposes their preference would be in favor of operating in the corporate form. Their problem was considered by the Treasury, and received serious attention in connection with the Administration's stated policy of favoring small business. In his budget message of 1954 the President said that small firms should be able to operate under whatever form of organization is desirable without being influenced by tax considerations, and then recommended "that cooperation with a small number of active stockholders be given the option to be taxed as partnerships and that certain partnerships be given the option to be taxed as corporations." [19]

Provisions implementing this recommendation did not appear in the 1954 House bill (H.R. 8300) but were incorporated in the later Senate version. Section 1351 of the latter provided that corporations could elect to have the tax status of partnerships under specified conditions, and section 1361 gave an option to partnerships where capital was a material income-producing factor to be taxed as corporations. The latter was described in the Senate Report as "complementary to the similar option granted certain corporations." [20]

The first and more important section, section 1351, was eliminated in conference, but—though few were affected—the momentum behind section 1361 was enough to effect its retention, thus putting the cart before the horse. In other words, two provisions linked together by the President and Senate were separated, and only the minor one—benefiting a handful—was ultimately enacted. At this point it may be asked why these partners should not be permitted to be taxed as if incorporated when they are not allowed to operate in the corporate form. But if this is the case, should they be singled out or should the same relief be available to all the professions as well? They too are required to practice as partners. The facts are that the statute is carefully drafted to exclude lawyers, doctors, and all types of partnerships in which capital is not a material income-producing factor.[21]

A major example of largess in 1954 was in favor of inventors and persons financing them in section 1235. Under the preceding law the controversy whether th. sale of a patent should receive capital gains treatment involved two questions: was the originator an amateur or a professional, and did he receive for his patent installment payments or royalties taxable as ordinary income? [22] To obviate existing uncertainty and "to provide an incentive to inventors to contribute to the welfare of the Nation," [23] these considerations were eliminated. The House bill restricted the relief to the "first and original" inventor [24] and to cases where the sales price was not dependent, for more than five years, upon the productivity, use, or disposition of the patent in the hands of the buyer.[25] The Senate, however, concluding that the House bill had not "accomplished its objective of stimulating inventions," [26] extended preferred treatment to anyone not a close relative or employee of the inventor who purchased the rights or an undivided interest in the invention before it was reduced to actual practice, and removed the five-year proviso. [27] It should be noted, however, that the wishes of the patent lobby have not been fully satisfied. In the 1953 hearings the president of the National Patent Council urged that patents receive percentage depletion on the ground that "The depletion allowance is based on the fact that the supply of oil or minerals in a given area will eventually be exhausted. However, not one penny is given to an inventor for depletion, although a patent can last only 17 years." [28]

The benefits conferred upon inventors and their financial angels should be contrasted with the treatment of artists, authors, and composers under the current tax law. While many groups within our society (including a single movie executive) have become beneficiaries of amendments converting income into capital gains, the Revenue Act of 1950 administered the *coup de grace* to literary, musical, or artistic compositions by expressly excluding them from the definition of capital assets subject to favorable treatment.[29] Why should the disposition of books and symphonies not enjoy capital gains treatment, while the sale of patents, livestock, and coal and timber royalties do? Is it because America tends to favor material success at the expense of developing the arts? Surely it cannot be that our critics abroad speak the truth. Most of us believe that this is not a conscious policy of discrimination against nonmaterial values. On the narrow issue of the 1950 amendment, the favorable ruling and the unfavorable publicity received with respect to the sale of the Eisenhower book may have been responsible for congressional action.[30] In general, however, the reason why professional men and artists are not receiving favorable treatment is probably a pragmatic one. They are individualists, too scattered to represent an effective political force, and without a lobby dedicated solely to the cause of obtaining special tax advantages. For example, while three representatives of two separate patent organizations appeared before the Senate committee on the 1954 act,[31] only one representative of the Mystery Writers of America, Inc., was present.[32] Upon the conclusion of her testimony, the chairman asked, "Why shouldn't we give these people some relief?" and received the reply that "We looked into

Footnotes at end of article.

this, and it is just a question of how far we want to go in extending capital-gains treatment." [33]

Although the foregoing illustrate, without exhausting, the special relief provisions enacted in 1954, brief reference should be made to the amendment of old estate tax section 811(g). The 1954 Code excludes life insurance proceeds from the gross estate, whether decedent paid some or all of the premiums, so long as he retained no "incidents of ownership." [34] Even before the new section was six months old, it was said that the administration might seek its modification: some Treasury officials have discovered that the life insurance industry has been strenuously selling the new provision, telling clients that only through insurance policies can they completely escape tax liability.[35]

*C. Special provisions for charities*

Lest it be thought that the only person seeking special treatment are individuals or groups having a profit motive, attention should be directed to provisions dealing with charitable donations and organizations. One of the earliest relief provisions, first enacted in 1924,[36] is the so-called "Philadelphia Nun" provision, which permitted unlimited deductions if contributions plus taxes during the ten preceding taxable years equalled more than 90 percent of taxable income.[37] Because the provision appeared "unduly strict," [38] Congress provided in the 1954 Code that the 90 percent test must be met in only eight of the ten years.[39] Even with this new relaxation the section still appears to be tailored to the problem of only a handful of ascetics.

In the Revenue Act of 1951 [40] a special statute was passed for the relief of Wesleyan University, which had purchased a publication for elementary school children, then earning a million dollars a year.[41] Under the 1950 act income of a charity over $1,000 derived from unrelated business became taxable; [42] the 1951 act provided a three-year period of grace to tax-exempt organizations to readjust outside businesses which they had purchased—but relief was limited strictly to the publishing field. The proponent of the measure, Senator McMahon, indicated that Wesleyan planned to integrate the publication into the university; but since it was circulated in primary schools only, Senator Kerr intimated that the real object must be to integrate the million dollars per year, as in the case of any other profitable investment.[43]

Under the 1954 Code an extra 10 per cent charitable deduction is provided to individuals if the contribution is made to churches, schools, or hospitals,[44] while the regular 20 per cent may be paid to the broad list of tax-exempt organizations.[45] Possibly the selection of these three classes of charities for special treatment may be justified on logical grounds. However, let us compare the selection with the provision denying tax exemption to institutions engaging in prohibted fiancial transactions: [46] there exceptions are made not only for churches, schools, and hospitals, but also for organizations engaged in medical education or research.[47] To increase the diversity, the junior senator from Kansas pointed out on the Senate floor how appropriate it is that "research in the field of agriculture be placed in the same administrative position with respect to the Revenue Code as medical research," and no one objected.[48] Thus by a grant of special treatment to a few organizations, any possibility of maintaining some uniform pattern among the charitable provisions of the Code has been shattered without a moment's reflection.

*D. Forthcoming legislation*

Full comprehension of the pressure for preferential treatment cannot be conveyed without consideration of forthcoming tax legislation, in all probability the Technical Changes Act of 1955. Even before the President had signed the 1954 act, another tax bill had been referred to the Senate Committee on Finance, and was reported favorably.[49] Congress adjourned before it could be passed. The amendments included by the Senate committee furnish examples of what may be proposed this year, and provide relief to one railroad (retroactive to 1941),[50] certain charitable organizations,[51] the estates of certain persons who died from 1948 through 1950 without releasing powers of appointment,[52] farmers selling livestock on account of drought,[53] and other random beneficiaries.

One of the amendments is an attempt to extend existing special legislation. During the war years there was a statute which freed the estates of veterans dying in action from income tax for the year of their death.[54] The self-evident purpose of the law was to lessen the burden upon families whose financial security might be impaired by the loss of the serviceman. When relief has become available, there is always a next step in the quest for special treatment: why tax the estate of a deceased serviceman who was the beneficiary of a trust under which income was accumulated for his benefit while he was in the service? In 1951 an amendment was adopted to have such trust income treated as if it had been distributed to the veteran in the year of his death and thereby render it wholly tax-exempt.[55] The proposal now has been made to accord the same treatment retroactively to trusts where refunds already were barred.[56] Thus relief, originally limited to the personal income of the veteran, is to be stretched to cover the undistributed income of any irrevocable trust under which he was the beneficiary.

*E. The excess profits tax*

Perhaps at this point inquiry may be raised why no mention has yet been made of the excess profits tax provisions. Among them are numerous glaring examples of special relief plainly tailored to a single company or at the most for the benefit of a few.[57] Typical illustrations are provisions which to the best of the writer's knowledge were applicable to one or two television manufacturers [58] or a single paper company.[59] One of the baldest instances of preferential legislation is a section of the 1951 revenue act providing for an alternative average base period net income with respect to any taxpayer which was engaged primarily in the newspaper publishing business and which after the middle of its base period and prior to July 1, 1950, consolidated with another newspaper published in the same locality.[60] We may well ask how many newspapers of a size subject to excess profits tax possibly underwent a consolidation during the very brief period specified. Obviously one concern was singled out.

The fact is that relief from the excess profits tax was almost inevitable. Both in theory and in practice, the problem of defining what are "excess" profits is insoluble.[61] It is in fact one of the main reasons why the tax itself has been so unpopular. With rates above 80 per cent, there would be instances of oppressive hardship if an excess profits tax law were enacted which afforded no possible escape. For this reason there was in World War II a so-called "general relief" statute entitled section 722, and the Excess Profits Tax Council was estabilshed to administer it.[62] Because of congressional dissatisfaction with the handling of section 722, relief provisions were specifically written into the new Excess Profits Tax Act of 1950.[63] In effect, Congress took unto itself the role occupied by the Excess Profits Tax Council, and granted statutory relief almost upon a case-by-cae basis.[64] Thus if the 1950 excess profits tax law had still be in effect in 1954, provisions allowing special relief might have been expected because no one can say with any certainty what profits are "normal" and what are "excess." It is still true, however, that the taxpayers havig the most effective lobbies received relief and the less fortunate did not.

*F. Preliminary generalizations*

Before analyzing further instances of congressional response to outside pressures, we should arrive at some preliminary generalizations from the preceding examples of relief to individual taxpayers and private groups. In each instance the character of the relief afforded is so technical as to make a simple explanation impossible. Being obscure or incomprehensible to the layman, it is not recognized as an outright favor to one individual or a highly selective group. Moreover, the relief is not palpably unwarranted. The case involving the retiring movie magnate demonstrates one of the basic weaknesses in the tax system, namely, the taxing of bunched income where no averaging system is available. But this inequity affects a multitude of taxpayers: artists, writers, athletes, and all persons retiring under similar circumstances. The movie executive here is probably not injured as much as the actors who work for the same company. By the same token, the inventor has received favored treatment without any congressional notice of others engaged in creative work. In this respect charitable organizations are equally vulnerable. Perhaps all these cases warranted relief, but is it not true that the tax laws work hardship in an infinite number of transactions? Can relief be scattered sporadically among a few individuals—whose only common characteristic is access to Congress—without making a mockery of the revenue laws? For every person who successfully argues that he is discriminated against there are thousands of others, inarticulate or ineffective, who are suffering the same fate in silence.

III. RESPONSE TO PRESSURES FROM INDUSTRY GROUPS

The Code has not only scattered largess among specific individuals and private groups who requested relief but has also shown some evidence of responding to pressures from several industry groups. In general, it appears that the extractive industries are the principal beneficiaries, and as a whole they are gaining an increasingly strong position in our tax structure.

Of this group, the oil industry has been the most frequently commented upon, principally by reason of the 27½ per cent deduction allowed against gross income for depletion.[65] No attempt will be made here to repeat the criticisms levelled at the favored status which the oil group enjoys.[66] Only a handful of senators venture to oppose it. In fact, one senator urged his colleague, Senator Douglas, to withdraw a controversial amendment by saying, "I am simply trying to keep [him] . . . from committing suicide." [67] The industry now regards percentage depletion as a sacrosanct, almost constitutional, prerogative, but still not enough. Other advantages have been sought. One already obtained is the privilege of writing off intangible drilling costs as expenses rather than capitalizing them and perhaps losing them as deductions.[68] In 1950 the oil industry also succeeded before the Senate committee in having inserted a new provision which would convert the assignment of so-called "in-oil payments" from an ordinary income transaction into capital gain. Although the conference committee rejected the change,[69] it should be recognized that a matter once raised is not finally disposed of, but will recur as an issue in hearings on subsequent revenue acts.

Several other extractive industries appear to have profited recently from effective lobbying: coal in 1951[70] and in the same year, sand, gravel and stone.[71] With respect to coal, the percentage depletion deduction was increased from 5 to 10 per cent on the ground,

Footnotes at end of article.

stated in the committee report of 1951, that the coal mining industry was peculiarly in need of more favorable tax treatment because of the inroads which alternative sources of energy, particularly oil and gas, had made on the potential markets for coal.[72] It is interesting to note the inconsistent theories upon which the percentage depletion deduction is granted. On the one hand, the intention is to stimulate development and wildcatting by awarding such a tax advantage to the oil industry.[73] On the other, it is to furnish relief to an industry which has suffered by reason of the increasing use of oil and gas. If percentage depletion has any function in our tax structure, should it be used to encourage development of one group and "bail out" another at the same time?

As a supplement to the additional percentage depletion upon coal, the 1951 act conferred preferential capital gains treatment upon royalties received by lessors.[74] The Senate committee report expressed solicitude for the industry and for the leases originally drawn on coal property. It pointed out that most of them are long-term and call for royalty payments in cents per ton; hence the lessor does not receive the automatic adjustment for price changes which occurs when a royalty is expressed as a percentage of the value of the coal extracted. Further, the report stated, many of the existing coal leases were old and royalty payments therefore small.[75] But it should be noted that capital gains treatment was given to coal royalties on both past and future leases. Congress apparently decided to confer a subsidy on the coal industry through the revenue laws. Of course, the argument can be made that the 1951 provision[76] merely extends to the coal industry what the timber industry had already received.[77] The next question, then, will be why the coal industry should benefit if the oil industry does not, and why capital gains treatment should not be available with respect to oil or many other royalties in areas which might deserve positive encouragement instead of subsidies for their declining status.

It should be noted further that according to the Senate committee the lessor of a coal property "as a practical matter" is not likely to benefit from the increased percentage depletion provided.[78] Thus since the latter allowance would be of material aid to only one group (the operators), another group (the lessors) must receive some compensating form of special treatment, such as capital gains. Once a policy of relief has been adopted, the consequence is that all participants, operators as well as lessors, must obtain a subsidy lest there be discrimination among them.

The iron ore industry in 1954 sought and almost obtained the capital gains treatment now available to owners of timber and coal. By an amendment to the Senate bill, tax relief was expanded to include the disposal of iron ore,[79] but the amendment was subsequently eliminated in conference.[80] However, continuing pressure upon the Senate is strong enough that the possibility of capital gains treatment cannot be deemed a dead issue.

Iron ore is already receiving substantial benefits under the tax laws. Percentage depletion of 15 per cent[81] has long been available to it, and the Revenue Act of 1951 permitted the expensing of all items incurred for the development of a mine or deposit.[82] Similar benefits are provided with respect to the write-off of mine exploration expenditures to the extent of $100,000 in the 1954 Code.[83] The reasons given in the Senate committee report for permitting both deductions are much the same. The report points out that where the depletion allowance is a percentage of the gross income of the property it is the same whether a large or small outlay is necessary to explore and develop the mine, with the result that mines having relatively large exploratory and development costs are subject to unfair discrimination.[84] Thus it would appear that the largess of percentage depletion in turn generates an inequity which must then be remedied.

Another group which has been satisfied, after years of clamor over "discrimination," may be referred to loosely as the "sand and gravel lobby." In 1951 almost every known building material received a 5 per cent allowance for depletion.[85] When Senator Douglas moved unsuccessfully to strike out clam and oyster shells on the ground that he did not regard them as necessary to the national defense, Senator Connally said in debate, "The Senator from Illinois is greatly concerned about clam shells. He does not have many in his district."[86] In 1954, allowances for granite, marble, slate, and other stone, when used as dimension or ornamental stone, were raised from 5 to 15 per cent.[87] In order to draw some line, however remote, Congress in the new Code expressly stated that percentage depletion does not apply to soil and water, or minerals from sea water, air, or similar inexhaustible sources.[88]

One of the most troublesome issues in 1954 arose over limestone. The general policy of of the statute appears to be that minerals used for road material, concrete, or similar purposes shall receive only a 5 per cent allowance. However, two senators on the Senate floor pointed out that this would give higher grade limestone unfair treatment when used or sold competitively with items such as rock asphalt, which under section 613(b)(3) receives 15 per cent even though used on roads.[89] The statute therefore was amended specially to provide 15 per cent depletion where a mineral is sold "on bid in direct competition with a bonafied bid to sell a mineral" bearing the higher rate.[90] Thus the gates have been opened to permit even road-building materials to receive further tax relief.

The next step can be best visualized through the testimony of the chairman of the Taxation Committee of the National Sand and Gravel Association before the Senate Finance Committee in 1954. He pointed out that the House bill at the time proposed a 15 per cent allowance for limestone for whatever purpose used, and expressed the hope that "the wisdom and justification of the proposal will be recognized by your committee."[91] He further testified that the same considerations which led to this decision by the House apply with equal force and logic to the sand and gravel producers, who are in competition with producers of crushed limestone all over the United States.

If the oil industry receives percentage depletion,[92] why should not other extractive industries? One theory advanced for percentage depletion, that the owner is losing his "capital" which should be valued at some figure approaching discovery value,[93] is applicable to all extractive industries. Probably the strongest argument made by the oil industry is that the predominant importance of oil in our economy, particularly in connection with any war effort, constitutes a justification for benefiting taxpayers risking their capital in discovering and developing new sources of supply.[94] The argument is particularly applicable to the independent oil wildcatters engaged in sinking holes which may be and often prove to be dry. Undeniably the risks they run are enormous. On the other hand, critics have noted that the chances taken by the major oil firms are within the range of normal business activity, and therefore query whether such largess is warranted.[95]

Even if we are willing to accept these arguments, it does not follow that percentage depletion at present rates is relief solely for the loss which the owner would otherwise suffer. When available to all substances save earth, air, and water, the depletion allowance quickly becomes an outright subsidy. The defense argument for percentage depletion in the oil industry may apply in the case of uranium, but it certainly does not exist in connection with sand, gravel, and like materials. Are there not in fact many other industries where further development should be encouraged? What accounts for legislation favoring sand and gravel firms is the continued political pressure of the firms affected and the argument that, as compared with the oil, coal, and timber industries, they are being discriminated against.

The foregoing illustrations of congressional responses to pressure from industry groups point toward the basis upon which tax relief has been granted. As already noted, the extractive industries have been the principal beneficiaries.[96] How have they succeeded so admirably, when in fact the coal industry's plea rests upon its depressed condition, while the oil industry bases its claim upon the importance of stimulating exploration and developing reserves? The formula in most cases appears to be the discrimination argument, the demand for tax equity. As one author has indicated, tax equity is achieved when the same load is placed on different persons who are in similar economic positions.[97] With respect to percentage depletion the coal industry sought to be placed in the same favorable position as the oil group, and the sand and gravel spokesmen felt they were being discriminated against if they did not receive treatment similar to that already available to the oil, coal, sulphur, and mining industries. And now that timber and coal royalties are afforded capital gains treatment, the lever of discrimination can again be used most effectively by the iron ore and oil men to claim similar advantages for royalties and "in oil payments."

### IV. RESPONSE TO PRESSURES FROM ECONOMIC GROUPS

In moving from the privileged tax treatment accorded to specific individuals and industries, I next shall attempt a brief survey of some of the important economic groups in our society and how they are faring in the race for special benefits. To a large extent favored treatment is being conferred in a sporadic manner, without regard to what privileges are available to one class and withheld from another. Cases evoking sympathy and a desire to provide benefits are individually brought to the attention of Congress, and treated upon an ad hoc basis.

#### *A. Investors*

Those individuals who are well advised, or especially fitted by occupation, training, and background, are likely to be able to realize fully the opportunities for minimizing their tax burdens. Today the large investor probably constitutes the most important beneficiary of preferential treatment. A Harvard Business School study has reached the opinion that much of the income received by upper bracket individuals appears to avoid the full impact of the income tax.[98] One chart indicates that in 1946 there was little or no progression in effective tax rates beyond the $50,000 income level, and the maximum average tax rate was less than 50 per cent, despite the fact that theoretical effective rates ranged as high as 85.5 per cent.[99]

The difference in effective tax rates on individuals with large incomes can be attributed in major part to capital gains. There is undoubtedly a segment among the investor group whose whole attention is directed toward transactions which ultimately might yield return of a capital nature. Some of the available media are marketable common stocks, new ventures, real estate, oil properties, and closely-held concerns. Since the war there has been considerable activity in the purchase and sale of appreciated prop-

Footnotes at end of article.

erty, sometimes following the acquisition of the stock and liquidation of a family or close corporation. Another opportunity available to those in control of operating companies is to ensure the retention of corporate earnings and continuous expansion until the owner can realize upon the correspondingly enhanced value of stock or assets at capital gains rates.[100] Furthermore, the area of capital gains has been growing to include timber royalties and, most recently, coal royalties.[101] But the capital gains rate of 25 per cent seems to reduce the effective tax rates upon certain persons with large incomes without affecting taxability of others at all.[102] Thus there is created disuniformity in the rate structure even among wealthy investors. Pressure to expand the scope of capital gains, and to reduce the rate and required holding period, is a hardy perennial in congressional hearings, and cannot be discounted as a source of additional benefit to the high-bracket taxpayer in the future.

Another, quite different, way of reducing the effective rate of taxation is through the purchase of tax-exempt securities and of insurance.[103] Persons of wealth interested in capital preservation or security, as distinguished from capital appreciation, have bought substantial amounts of municipal and similar types of bonds. In this instance exemption is not due primarily to political pressure from the large investor. Its origin rests in the desire of states and municipalities to issue securities at a very low rate of interest.[104] Yet this tax exemption feature represents at the present time a substantial inequity in favor of persons in high income tax brackets. There has been also a tendency among the same group to invest in other low risk investments having tax advantages, such as life insurance policies. The freedom from income tax of the investment increment in life insurance is probably the major factor which renders life insurance attractive to the tax-conscious investor. The fact that the interest element is not subject to tax during the investor's life or at his death is but one of the special favors enjoyed by life insurance over other investment media.[105] For individuals in very high tax brackets the after-tax yields on common stock may be reduced below those available from tax-exempt securities and certain life insurance policies. And conservative investors may not regard the higher income (if any) as adequate compensation for the risk of capital loss inherent in stock ownership.

Another grant available to the large investor, namely, percentage depletion, has already been discussed at length.[106] Investment in oil royalties from proven fields offers one means of utilizing this tax advantage.[107] Oil drilling syndicates financed by persons of wealth have now become commonplace. They frequently invest a portion of their funds with the expectation of writing off intangible drilling costs immediately as an expense against high income and taking the additional 27½ per cent deduction in the event that drilling is successful.[108]

Perhaps the most obvious benefit to the investor group is the new dividend credit provision of the 1954 act.[109] Besides the agrument of alleged double taxation, probably the major reason given for the relief is that the tax burden on distributed corporate earnings "has contributed to the impairment of investment incentives." [110] The Senate committee report pointed out that capital which would otherwise be invested in stocks is driven into channels involving less risk, restricting the ability of companies to raise equity capital and forcing them to rely too heavily on borrowed money.[111] Thus in part the credit for dividends can be described as an inducement to counteract the existing tax exemption of insurance and municipal bonds.

Footnotes at end of article.

*B. Corporate executives*

Another group which has been substantially favored by the income tax laws is the executives of established corporations. For some time, since the enactment of old section 165(a), now section 401, this group has shared the advantages of pension and profit-sharing plans available to employees of such companies generally.[112] In order to qualify, such plans must be drawn in such a way as not to discriminate in favor of employees who are officers, shareholders, or supervisors.[113] At the same time the group covered can be severely limited under the 1954 Code, and there is no objection to providing ultimately for substantial remuneration to top employees after retirement. The basic difference between executives and other employees is that the former benefit in a larger dollar amount.[114] The new Code has taken an additional step favorable to employees having sizable estates by excluding from the estate tax any annuity or other payment receivable by a widow or other beneficiary under a qualified plan. [115]

Question might be raised as to the pressures which were responsible for the original enactment of pension and profit-sharing legislation. Here, as in the case of municipal bonds, the reason for enactment did not stem from the beneficiaries, the executives. It lies in a public policy favoring the assumption of responsibility by companies for their employees after retirement. In other words, the executive group is a by-product beneficiary of a broad policy favoring employees as a class. Yet thanks in part to federal tax policy the amounts received after the retiring age can be so bountiful that the time may come when the estate tax and income tax benefits enjoyed by management will be subjected to congressional review.

One benefit available to corporate executives does not arise from a special provision in the Code, but rather from a judicial definition of when income becomes taxable. Deferred compensation plans are common today, pursuant to which executives receive some of their increased compensation in the form of payments after retirement in return for acting as consultants.[116]

The trend in the direction of favoring corporate executives is perhaps demonstrated most clearly by the stock option provision enacted in 1950.[117] It has been broadened in several respects under the 1954 Code. Having the alleged objective of providing an incentive for executives to obtain a stake in the enterprise,[118] this provision nevertheless favors officers who are recipients of options, if they sell the shares they obtain more than two years after the grant of the option and more than six months after the transfer of the stock. Under these circumstances they are permitted to realize the profit upon their "stake" at capital gains rates.[119] The corporate law cases which have arisen since the enactment of the stock option provision indicate that a consideration in the form of services should be exacted for such options.[120] They also demonstrate that such options are basically for services rendered and therefore compensation, which in the case of other classes in our society is treated as ordinary income, not as capital gain.[121] An interesting facet of the stock option law is that it rarely provides relief for employees of small businesses because of the ten percent stock ownership limitation and the difficulty of ascertaining the value of the stock at the option date.[122] This result is directly in conflict with the incentive rationale underlying the stock option law, for the efforts of the management of a small concern seem more likely to be reflected in its success and the value of its shares than the efforts of employees of public corporations, where the price rise may represent stock market trends or extrinsic conditions such as the Korean War.

Though not related to special legislation, a further avenue for privileged treatment of corporate executives is through perquisites of office, which are becoming increasingly accepted among corporations. The allocation of automobiles to executives for personal use, an executive lunch room with meals at cost, club membership, entertainment and expense accounts are probably the least objectionable of many benefits which today are available to many company officers.[123] Most of them are actually income to the person, but are difficult for the Internal Revenue Service to detect. In fact, any strict application of the principle of taxing all of them would undoubtedly be regarded as an attack on a customary method of doing business in this country.

*C. Owners of family businesses*

The owners of family businesses today are probably in a position even more favorable taxwise than that of corporate executives. This is especially true when they are operating through a corporation rather than a partnership. In general theirs are the same opportunities available to the large investor. Under the corporate method of doing business the owners are in a favorable position to build up the company by accumulating profits which may be realized at capital gains rates through ultimate sale or liquidation.[124] The cost involved is payment of the corporate tax and an ultimate capital gains tax upon earnings which, if distributed as dividends, would have been taxable to the owners as income. The accumulation of profits, on the other hand, is not readily available to the owners of family businesses operating in partnership form, where earnings must be reported in the individual return. However, anyone operating a business as a partnership likewise has the ultimate advantage of disposing of his interest at capital gains rates under existing law.[125] Moreover, one of the most important tax advantages to the owners of family businesses today, whether in the corporate or partnership form, is the facility to charge off substantial amounts of personal expenditures as business expenses.[126] And it should be noted that the proprietors of closely-held concerns have an extraordinary opportunity to benefit through a profit-sharing and pension plan in their capacity as employees of their own companies.[127] In these respects they can have many of the advantages available to the executives of public corporations, and yet do not lose any possible opportunities to realize on their profits through ultimate sale or liquidation at favorable rates.

The owner of a family business, like the large investor, can spread the total earned income of the business over the family group to obtain tax advantages. This may be done in the corporate field by the distribution of shares to members of the family or to trusts for their benefit. Largely because such a benefit was available to persons operating in the corporate form, the same kind of relief was made available in the Revenue Act of 1951 to family partnerships.[128] Passed after years of litigation, the act provided that for federal income tax purposes a person must be recognized as a partner if he owns an interest in which capital is a material income-producing factor, whether the capital interest was acquired by purchase or gift. A gift of a share in a family partnership is henceforth to be respected regardless of the motives which actuated the transfer. Thus in the case of both corporate and partnership firms where capital plays some part, owners are able to spread among their family groups income derived in large measure from their own efforts.

*D. Organized labor*

The tax benefits derived by organized labor under the Internal Revenue Code are not yet on a par with those of the investor, corporate executives, or business owners. The capital gains provision, for example, is of less advantage to the average worker since

his income is relatively low and consists of earnings exclusively. Also, no opportunity is afforded for taking generous deductions, since under the withholding process the employer furnishes a statement showing total wages and the tax withheld. As a consequence, it is not surprising to find that organized labor has opposed as "loopholes" many of the provisions which Congress has enacted favoring other economic groups: percentage depletion, capital gains, and the like.[129]

At the same time labor can scarcely be described as unrealistic. Tax considerations have played a part in the current shifting of bargaining from wages alone to payments in the event of retirement, accident, or sickness. Perhaps ultimately labor will resort to the same arguments that have been relied upon by business owners and executives. Already the tax position of organized employees in established firms is much more favorable than that of workers as a whole. The former may be said to receive preferential tax treatment through pension and profit-sharing plans, under which contributions are exempted from tax in the hands of the trust and until actually received by the employee.[130] The 1954 Code further provides that total distributions paid to the employee within one year on account of his death or other separation from service shall be considered capital gain.[131] The Code has carried over, and in some cases broadened, previously enacted exclusions from income in the case of contributions by employers to health plans,[132] compensation for injury and sickness,[133] wages continued in such event,[134] and $5,000 of insurance paid by reason of the employee's death.[135]

A movement seems to be growing to bargain for broader fringe benefits, which might be treated as falling under a comprehensive definition of income. These benefits take innumerable forms, such as free meals, medical service, summer vacations, purchase discounts, and insurance. They have grown from $8.8 billion in 1952 to $9.6 billion in 1953.[136] One office equipment company has stated that its fringe benefits amount to about $550 per employee, or a total of over $7 million per year for its 14,000-person work force.[137] Yet there is some doubt whether it is administratively feasible to tax them.[138]

The political and economic bargaining power of strong unions raises the question whether, in the light of the growing demand for revenue from low-bracket taxpayers, it is not inevitable that the responsibilities of the employer will be expanded to include not only safer working but also better living conditions for the worker, and that pressure will be exerted to render such improved conditions, these "fringe benefits," tax free. In essence the argument is that the Government cannot tax a clerk working in well-lighted, air-conditioned surroundings more than a steel worker earning the same salary. Hence taxes should not be imposed upon the perquisites furnished some elements of labor by reason of their stronger negotiating position. But then the problem is whether the perquisites available to management are any different in principle, though more elaborate in kind, from those enjoyed by labor. It is conceivable that in terms of taxation the objectives of management and of organized labor in bargaining with corporate organization today actually coincide, to the joint detriment of the federal revenue.

Perhaps by reason of taxes our society is moving back to the status of a barter economy. As one author has said, "we are going through a development which is just the opposite of that which marked the end of the feudal period when wage payments were being commuted into money. Now many wages are being commuted into tax-free services. Perhaps the time will come when the individual unfortunate enough to receive all of his wages in money will have an impossible tax burden!" [139]

*E. Farmers*

It is perhaps never fully appreciated that one class of persons profiting extensively from the present tax laws is the farmer. In general the benefits he receives do not flow from special legislation. Part of the farmer's tax advantage seems to stem from three facts: farmers' lodging (like that of all home owners) is not treated as income; none of the fuel or food, if the farm is self-supporting, is included in income; and there is much careless reporting, perhaps even deliberate omission.[140] As a practical matter, is there any real way of enabling the Government to realize upon any one of these sources of income? Much of the benefit farmers receive can be attributed to the impossibility of administering a tax law which could include, or even discover, all items that might in theory be treated as income in the farmer's hands.

At the same time it cannot be said that farmers as a class are resting on their existing favorable tax status. The Revenue Act of 1951 provided that income derived from disposition of livestock should have the benefits of capital gains treatment.[141] At one point in the history of the bill turkeys, but not chickens, were included.[142] Both were finally eliminated. But now that favorable treatment has been accorded to quadrupeds, the question may arise whether similar advantages should not be accorded to poultry, and ultimately to crops.

*F Professional people*

One element in our society which may be regarded as orphaned under the Internal Revenue Code is the professional class. Although lawyers and doctors are said to enjoy their peak earnings during the 20-year span from the age of 40 to 60,[143] there is no opportunity to average that income throughout their working lives. It is true that lawyers, writers, and other professional men have the opportunity to spread an extraordinary amount received in any one year over a longer period if the services rendered cover more than three years, but the privilege is a limited one.[144] There is little tax relief and no pension plan available to professional people, though bills are now pending which may afford them the opportunity to deduct a portion of their income provided it is irrevocably set aside until their retirement.[145]

The status of actors, athletes, and artists is even worse. The span of their earning power frequently is a period of less than ten years. They are probably the worst victims of the principle that income must be computed upon an annual basis and taxed in the year of receipt. Although authors, artists, and musicians share the privilege of spreading the income received from work involving prolonged effort, they too may fairly claim to be victims of discrimination. Why should not the disposition of books and symphonies enjoy the capital gains treatment that the sale of patents, livestock, and interests in coal and timber now receives? [146]

V. GENERALIZATIONS AND CONCLUSIONS

Perhaps the general conclusion can now be ventured that the tax laws represent a patchwork of special legislation awarded on a random basis. It may be too late for thoroughgoing reform, but there may yet be time for occasional improvements. At this point, therefore, let us attempt to restate some of the dangers arising out of these deepening inequities in the Code. The United States has operated under a system of self-assessment of taxes, which of necessity assumes strict adherence by the great majority of people. As indicated at the outset, if the average taxpayer finds our tax laws more and more checkered with special legislation, the danger is that disrespect will spread and make enforcement impossible. Whatever may be the economic limit upon taxes, there is a practical and psychological limit which is probably short of it.

Part of the problem today is the general acceptance of a philosophy of taxation which attempts to justify a system of disuniformity. In the words of George O. May, the revenue process might be looked upon as a football game: "If you try to stop all the plays in the line, you won't have a game. You have to let someone get through the line and score a touchdown occasionally or you won't have a game." [147] This homely argument of a distinguished accountant in favor of capital gains is another way of saying that with rates as high as they are, holes in the Code must be available so that someone can make money. But should these holes be drilled for the benefit of those who can exert the most pressure? And if many such escapes are provided, doesn't tax collection then become a process of "dipping deep with a sieve," to use a phrase of Henry Simons? [148]

It may be said in rebuttal that virtually every provision in the Code is preferential to some more than others—which no doubt is true. Yet within broad classifications there can still be some restraint upon special provisions and some effort to cling to uniformity. Otherwise the law, already hopelessly complicated, will soon approach the ridiculous.[149] It is also true that there are other objectives in the tax law than fairness. In some instances, as in the case of the imputed income of home and farm owners, it may not be administratively feasible to achieve absolute equity. Furthermore, if percentage depletion or capital gains were necessary for the purpose of maintaining incentive or in order to prevent the total disappearance of capital formation, there might be logical justification for some overall (as distinguished from ad hoc) modification of the tax structure. Nevertheless, each time an amendment is sought, Congress should go back to fundamentals: What, for example, is the function of capital gains? Is it to relieve against taxing bunched income in one year, or is it to provide a needed incentive, or both?

Without such restraint, it is difficult to see where the accelerating pattern of preferential treatment can stop. The likelihood of continuing special legislation is demonstrated by the number of pressure groups which appear in every hearing on revenue measures before Congress. According to one writer, at the 1947 hearings approximately 150 organized groups were represented, all but twelve of which clearly represented business, labor, agriculture, or professional interests.[150] The complexion of the hearings held in 1951 by the Ways and Means Committee is similar to that of those held in 1942. The four volumes of testimony preceding the latest general revision, from June to August, 1953, demonstrate the current zeal of hundreds of interested groups and their representatives to be heard.

Many of the special provisions owe their existence to the discrimination argument. Perhaps the principal point made before Congress is that, since one group in our society has received a benefit the complaintant deserves like treatment. The more preferential the legislation written into the Code, the greater the opportunity for others to claim they are being discriminated against. The difficulty lies in finding, first, some logical basis for drawing a line, and second, some political groups supporting the policy of drawing it. There are very few organizations before Congress opposing further extension of capital gains treatment. Perhaps we are gradually approaching the taxpayer's millenium, when all citizens have available the benefits of converting ordinary income into capital gains.[151] As one writer has indicated, the preferred political way of reducing inequities is to extend an existing privilege to new groups, instead of withdrawing it from the present holders.[152]

Footnotes at end of article.

A final danger, already self-evident, is the increasing complexity of the tax laws. Only counsel spending the majority of his time in minute examination of the tax laws is competent to assure his client that he has taken full advantage of the existing benefits under it and avoided the pitfalls. "Every word added to the Code for the benefit of some particular taxpayer my well prove a trap and a very costly one for some other unsuspecting taxpayers." [153] It is ironic to recall the statement which appeared in the minority report on the Revenue Act of 1943: "We should develop as soon as possible a long-range, integrated, well-balanced, equitable, and simplified scheme of taxation, and we of the Republican minority propose to do all in our power to bring about such a plan." [154]

The recitation of dangers arising out of preferential legislation poses the final question: What correctives are available in a political society? Frequently one hears the suggestion that the pressures exerted and special favors sought are all due to current tax rates, and there would not have to be relief provisions if the rate structure were not so high. As a rough generalization this is partially true, though there would still be persons seeking percentage depletion and other deductions, and even lower capital gains rates. At any rate it is undeniable that the intensity of the efforts to obtain special treatment would slacken if rates were lower. And if we could be sure that some reduction would satisfy existing pressure groups, it is certainly worth serious consideration on the part of Congress. But so long as international tension exists and the budget remains unbalanced, one obviously cannot expect revenue receipts to be reduced substantially. Politically, as well as economically, high taxes and some progression in rate appear to be a part of the facts of life.[155]

It may be asked whether the developing pattern of preferential legislation can be arrested by the change of administration. Illustrations from the 1954 Code demonstrate the contrary. Furthermore, such a transformation would be too much to expect from any President's office, whether Republican or Democratic. As a previous writer has indicated, the executive plays an important but subordinate, role in the revenue field. [156] Developments of tax policy originate in proposals for change emanating from outside and backed by pressures which the lawmakers cannot ignore. In theory, legislation originates in the House, but in reality the Senate is engaged in developing, modifying, and choosing among proposals brought before it. Probably the baldest examples of congressional politics in action involved the passage of tax legislation where the Ways and Means Committee was bypassed entirely. In these cases the proponent's counsel went directly to the Senate Finance Committee, before which they were in a better position to secure a favorable hearing and an amendment to the bill. [157]

Since they must seek re-election, it may be too much to expect representatives to ignore the pressures exerted upon them. But lest our system of taxation break down, a presumption should exist in the mind of every Congressman against enacting tax legislation for the benefit of one individual or company or even of special groups. In each case the question should be raised whether the proposed bill will generate as much inequity as it is supposed to remedy. The decision before Congress on revenue bills differs radically from that on subsidies in general. In many instances the parties involved have first attempted to secure relief through the Internal Revenue Service or the courts, and failed. Under any circumstances, Congress should try to resolve tax issues in a judicious manner, determining whether relief is justified in view of the hardships inevitably imposed by a uniform revenue statute. For every one who obtains relief on the ground that he has been the victim of discrimination, there are thousands of others who are suffering the same fate in silence.

There are inequities in the tax law which warrant further study. The taxing of bunched income is among the foremost. It is one of the strong reasons for adopting a system of averaging or even conferring capital gains treatment as a rough way of levelling off a lump sum receipt representing years of effort or capital accretion.[158] The essential question is why remedial legislation should be extended to one or two selected persons and not, for example to athletes and artists, who suffer most from a brief period of spectacular earnings. In plain words, a systematic rather than hit-or-miss approach to relief must be the basis for future tax policy.[159]

In an attempt to apply the basic presumption against preferential treatment, several possible ways may be suggested to focus congressional attention upon proposed legislation. None of them, of course, is a remedy in itself, but they may serve to alleviate the problem. As a general rule, regardless of which party is in power, the views of the Treasury should receive more consideration from Congress on questions of uniformity and fairness in tax bills. Much of the special legislation which appears in the revenue acts represents congressional action taken against the advice of the Treasury. By and large it is in a stronger position than is Congress to represent the public interest because each senator and representative is subject to pressure from constituents and special groups.

The Treasury, however, can scarcely be vested with further authority if it maintains an uncompromising attitude against relief provisions. In general, from the Revenue Act of 1942 until 1954, it has appeared reluctant to initiate legislation even in cases of egregious hardship. Though its function is to protect the revenue, such a policy, whether or not theoretically sound, nevertheless seems politically unrealistic. If the Treasury had undertaken to sift out and submit certain justifiable grievances which came to its attention, as it did in 1942, there might have been a stronger basis for resistance on the part of Congress to pressures overwhelming it. Still, it seems improbable that the relief of a few would have sated the ardor of the many.

More information should be available to Congress itself, in the hope that it might act more responsibly. To reach individual congressmen more effectively there might be separate technical staffs for the House Ways and Means and the Senate Finance Committees, as well as the Joint Committee staff. For some years the latter has been directed by its able chief of staff, who, being the agent of both the Senate and the House, cannot always take a position strongly opposing provisions personally sponsored by leading members of either. In view of the fact that senators and representatives have differing objections to legislation before them, it is possible that each committee's staff might screen bills proposed in the other house and keep members advised of any evidences of special favor. Thus a system might ultimately become established for checkmating undesirable measures introduced by legislators overwhelmed by pressure from a constituent or an organized group in their districts.

A further suggestion stems from the fact that in congressional hearings there is practically no one, except perhaps the Treasury, available to represent the public. Perhaps the reason is that all of the pressure group proposals are of such character that no one of them would have a large adverse effect on the tax bill of any individual. Hence counter-pressure groups seldom develop. One exception is the National Tax Equality Association, which opposes cooperatives and the tax advantages they are said to enjoy. A second reason why the public is not more frequently represented is the difficulty of forming pressure groups around general interests. The concentration of business organizations on appeals brought to Congress and the emphasis placed on specific and often very technical provisions make it difficult even for the members of the tax committees to secure a balanced view of what is in the general interest, what the public wants or, indeed, what the public would want if it were informed as to the facts.[160] In order to obtain such a balanced view, therefore, it is suggested that several leading tax experts throughout the country be invited and retained to make a presentation before the Ways and Means or Finance Committee. Because they may be restrained by loyalty to private clients, these lawyers could indicate the provisions in the bill on which they could not render an unbiased opinion. At the same time some of the craftsmen of the tax bar might, as a public service, be willing to call Congress' attention to particular provisions in which special legislation is creeping into a pending tax bill. Many of them have served willingly as advisers upon the American Law Institute project to revise the tax laws.

What is the responsibility of the bar in connection with pressure legislation? While the general trend in tax administration has been toward decentralization, many lawyers have suddenly become aware of the fact that important tax issues are not necessarily decided in the field or in the courts, but may finally be resolved in Washington by Congress. To most lawyers outside the District of Columbia this seems to be a regrettable development. There has been criticism of the tax section of the American Bar Association on the ground that it is being operated primarily as a pressure group seeking to further the interests of individual clients. This is an extreme view, to which I do not subscribe. However, it can be said that the bar as a whole has taken no position with respect to halting the trend away from uniformity in the tax laws. In their capacity as individual lawyers it may well be that tax experts should serve their clients' interests before Congress as vigorously as they do before the courts. But through our professional organizations, and as citizens, we have duties of a broader scope. Furthermore, as one writer has said, over a lifetime each practitioner has a greater interest in a fair and symmetrical body of tax laws than any group has in special legislation in any single year.[161] Why, for example, does not any bar association formally deplore the "Mayer Provision"? This may not be a question of ethics, but at least it offers an unprecedented opportunity for service. And it is not too much for the public to expect of us. Today we are drawing many of the most brilliant graduates from law schools into the lucrative tax field and are developing the greatest masters of needlepoint in the history of the law. Unfortunately, however, we have become so engrossed in detail that we are unaware of the distorted pattern upon which we are jointly working. Technical skill, in other words, is being developed at the expense of breadth of understanding.

The late Justice Jackson pointed out that the United States has a system of taxation by confession, and "That a people so numerous, scattered and individualistic annually assesses itself with a tax liability, often in highly burdensome amounts, is a reassuring sign of the stability and vitality of our system of self-government." [162] Let us safeguard the uniformity of our taxes lest this system become undermined and collapse.[163]

[3] Inquiry may arise whether this paper is an ambitious crusade against subsidies of all kinds authorized by Congress, such as parity for the farmers, bonuses for veterans, and tariffs upon imported goods. The answer is clearly negative. True enough, there are pressure groups behind them, but at least the subsidies themselves are generally open and aboveboard. In contrast, preferential tax treatment is often hard to detect and becomes apparent only after careful scrutiny. Secondly, and more important, the main thrust of the tax laws must be to raise revenue, and not to satisfy political pressures by indirect grants-in-aid fostering disuniformity and inequity. For analyses of pressure groups primarily outside the tax field, see Wirtz, *Government by Private Groups*, 13 LA. L. REV. 440 (1953); SCHRIFTGIESSER, THE LOBBYISTS; THE ART AND BUSINESS OF INFLUENCING LAWMAKERS (1951); CRAWFORD, THE PRESSURE BOYS (1939).

[16] S. Rep. No. 1622, 83d Cong., 2d Sess. 115, 444 (1954) (hereinafter cited as S. REP. No. 1622). "Your committee agrees with the objective of removing this provision prospectively but took that action in such a way as not to affect individuals who prior to 1954 entered into employment contracts relying on the application of this provision." *Id.* at 115.

[17] Under § 349 of the Revenue Act of 1951, 65 STAT. 519, relief was granted in 1939 to a Canadian personal holding company which was subject to tax because it had been unable to distribute its net income without violating the Trading With the Enemy Act, 40 STAT. 411 (1917), as amended, 12 U.S.C. § 95a (1952). See JOINT COMM. ON INTERNAL REVENUE TAXATION, SUMMARY OF PROVISIONS OF THE REVENUE ACT OF 1951, at 44 (1951) (hereinafter cited as SUMMARY 1951 ACT). Apparently upon the theory that profits would have been distributed in the absence of such restraints, the statute provides for a deduction in computing the concern's undistributed net income to the extent of sums which it was prevented from disbursing. In this connection attention should be drawn to the fact that no corresponding section was enacted providing that the income deducted "as if" distributed should be taxed as constructively received by the stockholders in 1951 or at any other time.

[18] "Declarations of estimated tax required by section 6015 from individuals whose estimated gross income from farming (including oyster farming) for the taxable year . . . may . . . be filed at any time on or before January 15 of the succeeding taxable year." § 6073(b).

THE CONGRESS AND THE TAX LOBBYIST—HOW SPECIAL TAX PROVISIONS GET ENACTED†

(By Stanley S. Surrey*)

The development of a proper tax structure for an economy as large and as complex as ours is a task of the first magnitude. Given the dimensions of the task and the political arena in which it must be undertaken, the Congress has performed the essential work successfully. It has shown remarkable collective wisdom in shaping our federal tax structure, and its accomplishment in this field may be measured favorably against the tax systems of other countries. Since we live in an era when both professional learning and public opinion regard a progressive income tax as the most appropriate method of raising governmental revenue,[1] and since the progressive income tax is the mainstay of our tax structure, this accomplishment is remarkable. For a progressive income tax is also the most complicated and difficult of taxes to maintain. It places a premium on sensitivity to economic changes and to public attitudes. It demands high technical skills on the part of those who shape the legislative structure, who administer and interpret its provisions, who advise the public how to order its business and family affairs under the tax. It requires a literate citizenry with a repect for law and a willingness to shoulder fiscal burdens. Our over-all successful record in relying on the progressive income tax is thus a noteworthy achievement in public finance.

The continuation of this success with our federal-tax structure demands, however, constant alertness to the correction of faults as they appear. Recently there has been considerable criticism directed against the existence in our tax laws of provisions granting special treatment to certain groups or individuals. This criticism is aimed at both the increasing number of new provisions of this kind and the continuation of old provisions the significance of which has become far more important with passage of time. Some, it is true, have irresponsibly resorted to criticisms of this character as a justification for discarding the income tax.[2] But nearly all who have voiced objections to special-treatment provisions have done so in the hope that a consideration of the problem would result in a strengthening of the income tax.[3]

The criticisms on the whole involve these

---

Footnotes at end of article.

assumptions: (1) that it is essential under a progressive income tax, and also progressive estate and gift taxes, to adhere as far as possible to the criterion of equity or fairness. Stated simply, this criterion demands that the income-tax burden should as far as possible apply equally to persons with the same dollar income; (2) that the Congress has not always followed this criterion in tax legislation; and (3) that there are a good many instances in the income, estate, and gift taxes in which the failure to follow this criterion is not properly justified by the requirements of other criteria. As illustrations, the critics point to such matters under the income tax as the present exceedingly preferential treatment of capital gains and especially its application to employee stock options, pension-trust terminations, coal and timber royalties, patent royalties, growing crops, livestock, and so on; percentage depletion; the exemption of interest on state and local obligations; the continual expansion of deductions for personal expenses unrelated to profit-seeking activities; the provisions for the blind and the aged; and the exemption of certain fringe benefits. In the estate-tax area, reference is made, for example, to the exemption of employee annuities and of transferred life insurance. In addition to these provisions involving certain groups in our society, the criticisms are of course directed against these special provisions which can affect only a handful of taxpayers, or even only one or two, such as the so-called "Louis B. Mayer amendment." [4].

Often these provisions are spoken of as "loopholes" or "special tax privileges." Of course, the use of the appellation "loophole" is a matter of viewpoint. What is a "tax loophole" to a CIO or an ADA meeting is merely "relief from special hardship or intolerable rates" to an American Bankers Association or NAM meeting—and vice versa. Obviously we do not all feel the same way about each of the examples mentioned above. But despite an absence of consensus on any particular list of provisions there seems to be considerable agreement that Congress in its tax legislation has adopted provisions favoring special groups or special individuals and that these provisions run counter to our notions of tax fairness. Moreover, the tendency of Congress to act this way seems to be increasing.

Against this background, the purpose of this article is to consider the question of why the Congress enacts these special tax provisions, to use a fairly neutral term. Not being a congressman, I cannot of course really answer the question. Nor can I hope to enumerate all of the factors that might influence a congressman in this area. But it may be useful to speculate about some of these factors and to see if there are ways in which the consideration of tax legislation could be altered for the better. It may help first to sketch some of the major factors that are operative in tax legislation. I propose to do this only briefly, since these factors are generally well recognized.

### I. SOME MAJOR FACTORS

(1) *High Rates of Tax.*—The high rates of the individual income tax, and of the estate and gift taxes, are probably the major factor in producing special tax legislation. This is, in a sense, a truism, for without something to be relieved of, there would be no need to press for relief. The point is that the average congressman does not basically believe in the present rates of income tax in the upper brackets. When he sees them applied to individual cases, he thinks them too high and therefore unfair. Any argument for relief which starts off by stating that these high rates are working a "special hardship" in a particular case or are "penalizing" a particular taxpayer—to use some words from the tax lobbyist's approved list of effective phrases—has the initial advantage of having a sympathetic listener. Put the other way around, an advocate of the "Louis B. Mayer amendment" would simply make no headway with a congressman who firmly believed in a ninety-one-per-cent top tax rate. But most congressmen apparently do not believe in such a rate—certainly not in the concrete and perhaps not even in the abstract. Since they are not, however, willing to reduce those rates directly, the natural outcome is indirect reduction through special provisions.[5]

The United States is not unique in this regard. Students of the British tax system, for example, state that the very high rates of that system are considerably ameliorated in a number of ways through which the wealthy can escape the full impact of those rates.[6] The exclusion of capital gains is one broad method. The estate tax offers a number of avoidance possibilities. Indeed, it may be said that both here and abroad, as various pressures have driven tax rates to top levels, the refuge of the wealthy has been in the brains of their tax lawyers and in the technicalities of the tax law. Governments are generally aware of these escape routes but are reluctant to close them and enforce with vigor the excessively high tax rates. In effect, a sort of political paralysis appears to be forming in countries relying strongly on income taxation, under which no clear way has appeared to move away from the combination of high rates tempered by many avoidance possibilities. The obvious solution would seem to be simultaneous lowering of the rates and closing of the escape routes. But conservative governments fear the political consequences of the rate reduction for the wealthy although their effective tax burden would not be lessened. They may also fear that, once the system were tightened and stabilized at a lower tax-rate level, political pressures might drive the rates up again, this time with a much more severe effect. Liberal governments fear that they cannot persuade their supporters to accept tax-rate reductions for the wealthy in such clear terms as reduction of a ninety-per-cent rate to fifty per cent or sixty-five per cent, especially when the starting rates are high and the conpensating factor is merely the closing of a number of loopholes which the public cannot understand. This is obviously a dilemma which the income tax must solve in the years ahead.[7]

(2) *Tax Polarity.*—The existence of two rate structures in the income tax and of two types of taxes on the transfer of wealth permits a congressman to favor a special group by placing its situation under the lower rate structure or the less effective tax. Thus, the presence of the twenty-five-per-cent capital-gains rate enables Congress to shift an executive stock option from the high rates applying to executive compensation to the lower capital-gains rate. If there were no special capital-gains rate, or if we did not tax capital gains at all, this shift could not be made, since a congressman would not completely exempt the stock option. Similarly, the presence of a gift tax permits certain transfers of wealth, since as transferred life insurance, to be shifted from the higher estate tax to the lower gift tax. As a consequence, given this congressional tendency, we reach the paradox that having a gift tax as well as an estate tax may, given the present lack of proper co-ordination of the two taxes, result in less effective taxation of certain transfers of wealth than if we relied only on an estate tax.

(3) *Technical Complexity.*—The high rates of tax, the complexities of modern business, the desires of the wealthy and middle-income groups for clear tax charts to guide their family planning, the Government's need for protection against tax avoidance, the claims of tax equity, and various other factors have combined to make the income, estate, and gift taxes exceedingly complex in technical detail. These technicalities involve the drawing of countless dividing lines. Consequently, a case on the high-tax side of a line may closely resemble the cases on the other side receiving more favorable tax treatment. The result is a fertile ground for assertions of inequity and hardship as particular taxpayers desire legislation to bend the dividing lines and thereby extend the favorable treatment to their situations. Also, faulty tax planning, ill-advised legal steps, or transactions concluded in ignorance of tax law can produce severe tax consequences. These "tax penalties" could have been averted under an informed tax guidance that would have taken the taxpayer safely through the technical tax maze. In these circumstances, the taxpayer facing severe monetary hurt because of a "mere technicality" (to use the phrase that will be pressed on the congressman) is quite likely to evoke considerable sympathy for his plight.

(4) *History and Politics.*—The accidents of tax history also play a major role in the existence of special provisions. Tax-exempt securities in large part achieved their favored status through the vagaries of constitutional interpretation and not through any special desire to relieve the wealthy. Percentage depletion for oil and gas and the deduction of intangible drilling expenses have their roots in legislative compromises and administrative interpretation which for the most part do not appear to have been planned as special-interest relief.[8] It is only later that the extent of the tax generosity inherent in such provisions is comprehended. But by then they are in the law, the problem of the group benefited is one of defense rather than attack, and the strategic advantages are all with that group. This is especially so when the area involved touches on major political matters, as in the case of percentage depletion and tax-exempt securities.

Political considerations naturally overhang this whole area, for taxation is a sensitive and volatile matter. Any major congressional action represents the compromises of the legislator as he weighs and balances the strong forces constantly focused on him by the pressure groups of the country. Many special provisions—capital gains, for one—are caught in these swirling pressures. The response of the legislator to issues raised by these provisions is, like his response to the general level of tax rates or to personal exemptions, a political response of considerable significance. It is an important part of the fabric of political responses which determines whether he will remain a congressman and whether his party will control Congress. In this group of provisions highly affected by political considerations are those "tax relief" provisions which have a broad public appeal and are thus likely to be regarded by the congressman as useful "vote-getters"—a "baby-sitter" deduction, the exclusion of "retirement income," or an extra exemption for the "aged." The political appeal of favorable action on these issues is quite likely to outweigh what a congressman would regard as "technical" tax arguments to the contrary.

(5) *Separation of Executive and Legislative Branches of Government.*—But many of the tax provisions we are considering do not lie at this political level. They are simply a part of the technical tax law. They are not of major importance in their revenue impact. But they are of major importance to the group or individual benefited and they are glaring in their departure from tax fairness. The inquiry, therefore, must here be directed toward some of the institutional features in the tax-legislation process which may be responsible for special provisions of this technical variety. Lacking direct knowledge, I must leave to others the task of describing the types of pressure from constituents or other groups which may be operative in a particular case. While these pressures may explain why the congressman who

Footnotes at end of article.

is directly subject to the pressures may act and vote for a special provision, they do not explain why other congressmen, not so subject, go along with the proposal. We must look for reasons beyond these pressures if we are to understand the adoption of these special tax provisions. A number of these reasons lie in the institutional aspects of the tax legislative process.

Basic to a consideration of these institutional aspects are the nature of our governmental system and the relationship between the Congress and the executive. A different governmental structure might give the legislator little or nothing to say about tax provisions. Under a parliamentary government, the revenue department retains tight control over the statutory development of tax law. It is responsive only to the broad political issues that require decisions of a party nature. Beyond these, the governmental tax technicians mold the structure, so that the tax lobbyist pressing for special legislative consideration or the legislator seeking to ease a constituent's problem by special tax relief is not a significant part of the tax scene. Thus, under the British practice, finance bills are framed by the Treasury and the Board of Inland Revenue. The bills are debated in the Committee of Ways and Means—the entire House of Commons sitting under another name and with different rules of procedure. Here is an opportunity for anyone sufficiently concerned, who can persuade a Member of Parliament to voice his proposals, to have these proposals considered in the debates on the bill. Such discussion may focus attention on weaknesses in the bill or law, and if the proposal is considered meritorious by the minister in charge of the bill a change will be made. But if the government does not accept a member's amendment, party discipline is such that the minister is always supported and the amendment defeated. In practice, consequently, finance bills generally emerge in about the same form as introduced.[9]

The United States picture is quite different, for here Congress occupies the role of mediator between the tax views of the executive and the demands of the pressure groups. This is so whether the tax issue involved is a major political matter or a minor technical point. The Congress is zealous in maintaining this position in the tax field. A factor of special importance here is article I, section 7, of the Constitution, which provides that "All Bills for raising Revenue shall originate in the House of Representatives." The House Committee on Ways and Means jealously guards this clause against possible inroads by the Senate. It also protects its jurisdiction over revenue legislation from encroachment by other House committees. When senators and other congressmen must toe the line, the executive is not likely to be permitted to occupy a superior position. Further, a legislator regards tax matters as politically very sensitive, and hence as having a significant bearing on elections. It is no accident that the tax committees are generally strong committees, whose membership is carefully controlled by the party leaders.

The Congress, consequently, regards the shaping of a revenue bill as very much its prerogative. It will seek the views of the executive, for there is a respect for the sustained labors of those in the executive departments and also a recognition, varying with the times, of the importance of presidential programs. But control over the legislation itself, both as to broad policies and as to details, rests with the Congress. Hence a congressman, and especially a member of the tax committees, is in a position to make the tax laws bend in favor of a particular individual or group despite strong objection from the executive branch. Under such a governmental system the importance to the tax structure of the institutional factors that influence a congressman's decision is obvious.

II. SOME INSTITUTIONAL FACTORS

(1) *The Congressman's Desire To Be Helpful.*—A congressman's instincts are to be helpful and friendly. If it were otherwise, he would not be in Congress. When a constituent, or some other person who is in a position to claim attention, seeks legislative action, the congressman likes to respond within reason. If the proposal presented to him is at all rational he will, in all probability, at least introduce it in bill form so as not to offend the constituent. If the congressman is not a member of one of the tax committees, that may end the matter—but it may not, for the proposal has been launched and lies ready to be pushed ahead by whatever pressures may be generated in its behalf.

The desire—sometimes the need—of a congressman to be useful often places a congressman who sits on one of the tax committees, the House Committee on Ways and Means or the Senate Committee on Finance, in a difficult position. A fellow congressman who sits on the Public Works Committee, for example, can respond to constituent pressure by approving the project involved; a member of the Appropriations Committee can respond by a favorable vote on a specific appropriation. But a congressman on a tax committee can respond only by pushing through a special tax provision. His legislative stock in trade, so to speak, is special tax treatment. This difficulty is especially acute in the case of those congressmen who come to sit on a tax committee only after they have been members of other committees and have become so accustomed to using their committee powers in helpful ways that the habit persists. And after all, the congressman who sits on a tax committee is frequently regarded as a powerful personage at home, in part because the fact of membership is often used by the congressman as an argument to support continued re-election. The congressman must be able to live up to this stature and obtain successful action on a proposal—as a senator on the Senate Finance Committee once put it, "What's the good of being on this committee if you can't get through a little old amendment now and then?" Sometimes, however, a senior congressman on a tax committee has enough influence and personal friendships around the Congress so that he can, when necessary, take care of his constituents in legislative ways other than tax proposals; if so, he is more likely to be quite objective when it comes to tax problems.

In view of all this, it is a credit to the congressmen on the tax committees that our tax laws are not in far weaker shape. Congressmen have withstood political pressures more staunchly than most people assume. Knowing the intensity of these pressures, the party leaders have tended to appoint members from relatively safe districts to these committees. But the institutional factors are such that some yielding to pressure must occur, and there is concern that the situation is slowly worsening. I believe that this concern is present inside the Congress as well as out, and that those congressmen subject to pressures would welcome re-examination of the institutional aspects of tax legislation if it would lead to a lessening of these pressures.

(2) *Lack of Congressional Appreciation of Departure From Fairness.*—In many cases the congressman considering a special tax provision may not realize that tax fairnesss is at all involved. He sees only the problem of the particular constituent or group concerned. The case in this focus may be very appealing, for human beings are involved with human problems. The income tax, always an impersonal, severe, monetary burden, becomes an oppressive force bearing down on men in difficulty. The congressman may therefore not even appreciate that arguments of over-all fairness and equity have any relation to the question, or may very well think them too intangible and remote. Provisions for the relief of the blind and the aged are perhaps illustrations. Or the congressman, moved simply by a desire to help a constituent, may not understand the ramifications of the proposal. He is not a tax technician and he may view the proposal in isolation rather than perceive its relationship to the intricate technical structure of the revenue code. The proposal, so viewed, becomes merely a "little old amendment" which helps a constituent and does no harm. His brother congressmen are quite willing to be good fellows and go along, especially if the congressman urging the proposal is well-liked. After all, they too from time to time will have "little old amendments" to propose. Thus, in 1955 the Ways and Means Committee decided that in the initial consideration of members' bills dealing with technical matters it would allow each member one bill to be considered and then reported by the full committee if the bill met with unanimous agreement.

The attitude that the proposal does no "harm" needs explanation. "Harm" to most congressmen considering a tax proposal means "revenue loss"—if the provision is enacted it will cost the "Treasury" so many dollars in revenue. (Note that the cost is to the "Treasury" and not the United States or the public. This attitude, which views the bureaucratic Treasury as the obstacle, is quite important, and I shall consider it later.) If the dollar cost is high, the proposal faces a severe obstacle. The friendly congressman can now say to his constituent that the proposal is fair, that everyone agrees it has merit and that it is appealing, but that it simply costs too much at this time when the federal budget is so large and so on. But for a great many special proposals the cost is not high, perhaps at most a few millions. Therefore in these situations no "harm" is done. For "harm" does not include the fact that special treatment is afforded, that special treatment here breeds special provisions elsewhere, that once a foothold is obtained the special treatment expands and becomes costly. All this can seem quite remote to the congressman when measured against an appealing situation. When the immediate cost is high but the special provision has a reasonably broad application—the aged, the blind, and the like—the immediate-loss-of-revenue argument is far less persuasive and the result will depend on other considerations. These considerations may be difficulties of governmental administration or, more important, of securing taxpayer compliance, the potentialities for greater revenue loss if the provision is likely to be expanded, and even the merits of the proposal as a tax matter. But when a limited special provision is involved, the absence of "cost" gives the provision a significant advantage.

(3) *The Treasury Department's Presentation.*—The congressman's failure to recognize that tax fairness is at all involved may often be due to the inadequacy of the Treasury Department's presentation of the issues. This is not said critically, but by way of explanation. The problem facing the Treasury in these matters is formidable. The interested constituents or groups are generally skillful in presenting their cases in appealing form. Their energies are concentrated on one matter; they have time and money to devote to it; they may have the advantage of personal acquaintance, directly or through intermediaries, with the congressman; they can obtain skilled counsel informed on the ways of the Congress. The Treasury's tax staff must tackle all of these problems; its members are usually not chosen for skill in the presenta-

Footnotes at end of article.

tion of issues or in handling congressmen; although on the whole remarkably good, considering the compensation, they are rarely among the ablest in the tax field, nor do they usually have the needed experience.

Further, private groups concentrate on making the best case possible and in so doing gloss over or forget the unfavorable aspects. They present the proposal in its simplest form and often avoid the complications involved in embodying the proposal in statutory drafts. At times a congressman is misled by this simple but convincing presentation and commits himself before he is aware of the full implications of the proposal. The treasury staff, on the other hand, feels compelled to present the pros and cons and to point out the complications. It is both explaining and criticizing—not just attacking—and its presentation may seem confusing rather than informative to the congressman. When he compares the complex, technical, "on the one hand, but on the other hand" explanation of the treasury staff with the deceptively simple and certainly forceful description of the problem presented by the private group, the latter is bound to achieve a considerable advantage. Congressmen, and even most congressmen on the tax committees, are laymen in tax matters; they are not tax technicians. Again this is not said critically. A congressman has a great many tasks to perform and decisions to make, so that he cannot—and really should not—be immersed in the technicalities of everything. After all, how skillful in tax law is the average lawyer?

Under these circumstances, the treasury type of explanation may at times be not really helpful. Yet if the treasury staff resorts to oversimplification, it is subject to the criticism from the committee members that it is not performing its proper role. This is especially so when the oversimplification may appear to be a one-sided attack on the proposal; the treasury staff is there to advise and inform, not to decide. The term "treasury staff" in this context refers to the treasury tax technicians. Their stock in trade before the committee is fairness and completeness of explanation—they are the "tax experts." If there are any departures from integrity in this regard, then the expert's usefulness is ended. The function of a top treasury policy-maker, usually an under or assistant secretary, is quite different. He is there to present the policy point of view of the executive branch and to use what talents he has to persuade the Congress to accept that point of view. The committee members can take his view or leave it, and their attitude toward the policy-maker depends on the imponderables of personal reactions and the ponderables of political forces. While the newspapers and the party news releases may praise this treasury official as a tax expert, he is not so regarded by the congressmen. He is operating at their level and not the technical level, and the congressman can readily appreciate the difference.

The treasury tax technicians are the "treasury experts." But as any skilled lawyer knows, it is not easy for an expert to explain complex matters to the uninitiated. Any tax lawyer who has faced the task of presenting extremely technical material to a tax-institute audience of nontax lawyers will readily appreciate the problem. Even this analogy is far from complete, for the treasury expert faces an audience which is sympathetic to the proposal under discussion, demands a complete presentation of the issues, and establishes standards under which any departure or even suspected departure from fairness is well-nigh fatal. Under these conditions, it is understandable that the explanation of an expert who values his integrity is often in the end likely only to confuse and not to enlighten. In this setting, the congressman struggling to perform his legislative task will often find the way to a decision lighted only by his sympathies.

Also, the treasury staff is usually not well known to the congressman. Its members, not being political, ordinarily do not mix with him at the same level, nor do they meet him socially. Hence the congressman is generally not in a position to act on the assumption that, although he doesn't fully understand all of what they say, he knows them to be good fellows and they are probably right. Nor do they spend with an individual congressman the amount of time needed to develop the problem fully. Thus in a committee meeting, the congressman must often decide an issue after only a minimum amount of discussion and before his biases and preconceptions have been replaced by a real understanding of the issues. The interested groups and the tax lobbyists, on the other hand, have the time to brief the various congressmen on their proposals. They are pushing one proposal and can concentrate on it. The treasury staff is faced with considering all of the proposals, and the time and personnel needed for an adequate informal discussion on each proposal with the necessary congressmen are not available.

Of course, if the interested group does not carry out its lobbying task carefully, the treasury staff has an easier time. It may point out that the proposal, especially if it is in legislative form, gives unintended benefits—will open up a "loophole." While this may be only the result of faulty drafting and could be corrected, it may be enough to stop the proposal at the time. Thus, it has been said that the tax lobbyist's task is to prepare a draft of an amendment simple enough so that a person who is not a tax expert can understand it, yet sufficiently precise that the treasury staff cannot demolish it. Or the congressman explaining a proposal in committee executive session may not have been briefed on the arguments involved or on the details of the proposal. Perhaps the lobbyist failed to point out how far the proposal really goes, so that the proposal if enacted would have a considerably greater effect than the congressman thought. If so, the Treasury's task—and its application of the term "loophole"—is considerably eased. Or the tax lobbyist may have failed to explain his proposal to enough congressmen on the committee or to the "key members," so that the particular congressman pushing the proposal is left without friendly support from other members. But all of this simply means a less-than-skillful lobbying performance. Just as cases can be lost in court through inadequately prepared briefs or poorly developed oral arguments, so can they be lost before the legislature.

(4) *Lack of Omniscience on the Part of the Treasury.*—The treasury tax staff is not omniscent. Yet understanding approaching omniscience is needed to do its job. A lack of knowledge on any particular matter, a failure of skill at any moment, can be fatal. The approach of the average congressman is to hear the private group, find out in general what it wants, react sympathetically for a variety of reasons, and then ask the Treasury whether there is any objection to the proposal. If the Treasury is off its guard and acquiesces, the proposal becomes law. If the Treasury is unprepared and presents a weak case, the proposal becomes law. Equally serious is the in-between situation in which the Treasury acknowledges that some hardship is present in the particular situation, but points out that the difficulty is but a phase of a general problem and that it has not yet been able fully to analyze the general area. It therefore urges that the particular proposal be postponed until further study is given to the whole matter. But recognition of some hardship and of some merit in his particular proposal is all that the congressman needs. His constituent wants relief from that admitted hardship now, and not years later when the whole matter has been thought through and his case fitted into a solution appropriate for many cases. Hence the congressman will seek approval of the proposal in the limited form necessary to solve the particular problem presented to him—and a special tax provision is thereby born.

It is obvious, given the vast number of proposals to which it must react, that the Treasury must sometimes fail. The failure rate will vary with the competence of the treasury staff at any particular time, and there is a considerable variation in that competence. It will vary, moreover, with the degree of importance which the treasury policy-makers attach to research on tax matters, and here also differences in attitude are marked. But even when competence is at a high general level and there is a proper appreciation of the need for extended staff research, errors in judgment or gaps in knowledge are inevitable. The whole matter of capital gains for pension-trust terminations,[10] for example, started with an error in judgment on the Treasury's part in 1942 when is acquiesced in capital-gain treatment as a solution for the bunched-income problem present in this area. It so happened that the problem was presented in the context of a pension trust in which only the lower-bracket taxpayers received lump-sums distributions, and as an *ad hoc* solution the result was not too objectionable. But there was a failure to think through the problem, a failure caused by lack of time and lack of knowledge about the provisions respecting termination of pension trusts. Thus the provision got its start—and the rule of the camel's nose is cardinal in the field of tax privileges.[11]

Lack of omniscience may disclose itself in the drafting process. Inadequate drafting can result from lack of knowledge of the ramifications of the problem, from failure to analyze the problem in detail, or from failure to scrutinize closely the words used. The effect, again, may be that a special benefit is unintentionally granted. In the process of time, however, rationalizations as to the "intent of Congress" gradually transform this drafting carelessness into a major tax policy which the special-interest group benefited will defend with a loftiness or argument far removed from the origins of the benefit. There is much of the Daughters of the American Revolution in tax privileges.

An example of this phenomenon is the Western Hemisphere-trade-corporation provision.[12] The application of that provision to simple export operations, its principal application today, resulted from insufficient knowledge on the part of the draftsmen of the general tax background for this area, and lack of recognition of the problem to be covered and of the significance of the words used in the draft. Yet the provision has traveled far from this humble origin.

Many special provisions represent acute instances of a general difficulty. If there has been adequate study of the general problem, the Treasury is then in a position either to solve the general problem as well as the aggravated example or to demonstrate convincingly that the general problem cannot be solved by means consistent with the larger demands of our tax structure so that relief for a particular taxpayer alone is unfair and undesirable. But unless the Treasury has had the time or made the effort to study the problem as a whole it is in a difficult position to deal with the particular situation. For, as stated earlier, the congressman is faced with the issue of relief now for a particular hardship. Consequently, the Treasury, once it sees defeat ahead on the issue of relief for the particular constituent or group involved, will then, in self-defense and fear of the unknown, attempt to reduce the problem to its narrowest boundaries. Generally these boundaries are determined simply by what is needed to meet the particular situa-

---

Footnotes at end of article.

tion presented to the congressman. He will scarcely object to having only his case solved, and both sides will therefore acquiesce in a legislative solution confined in terms to that case. This is in large part the explanation for many of the special provisions that clutter up the tax law. Sometimes the general problem is later solved, and the special provision disappears. In other instances the special provision remains, its immediate task accomplished and the revenue cost and administrative difficulties that are involved in a solution of the general problem avoided. Sections 1301–04 of the Code, relating to bunched income attributable to prior years, are an example of a general solution growing out of a special provision previously adopted,[13] and even they represent instances of the unsolved broader problem of averaging. Section 303, removing dividend taxation from corporate distributions in redemption of stock to enable the payment of death taxes by the estate holding the stock, is another example.[14] The "Mayer amendment" in the field of deferred compensation, the various *ad hoc* benefits in the capital gain field, and section 1342 in the transactional-accounting field,[15] remain as isolated resolutions of particular situations in areas in which the general problem has not yet been faced.

(5) *Lack of Opposition Apart From the Treasury Department to Proponents of Special Tax Provisions.*—The critical importance that attaches to the level of treasury competence and the fatal consequencs of any slip on its part derive from its unique position in tax legislation. The question, "Who speaks for tax equity and tax fairness?," is answered today largely in terms of only the Treasury Department. If that department fails to respond, then tax fairness has no champion before the Congress. Moreover, it must respond with vigor and determination, and after a full explanation of the matter it must take a forthright stand on the issues. A Treasury Department that contents itself with explaining the issues and then solemnly declaring the matter to be one for the policy determination of Congress abdicates its responsibility. The congressman understands aggressiveness and a firm position. He is often in the position of the small boy inwardly seeking parental bounds for his conduct while outwardly disclaiming against them. He may not accept policy guidance from the treasury policy spokesman, but he wants it presented. He will invariably interpret a treasury statement that the matter is one for his own policy decision as a victory for the seeker of the special provision.

Thus, in the tax bouts that a congressman witnesses the Treasury is invariably in one corner of the ring. Assuming the Treasury decides to do battle, which is hardly a safe assumption at all times, it is the Treasury versus percentage depletion, the Treasury versus capital gains, the Treasury versus this constituent, the Treasury versus that private group. The effect on the congressman as referee is inevitable. He simply cannot let every battle be won by the Treasury, and hence every so often he gives the victory to the sponsors of a special provision. Moreover, the Treasury is not an impersonal antagonist—it is represented before the Congress by individuals. These individuals are constantly forced to say that enactment of this proposal will be unfair, and the same of the next, and the next. The congressman, being only human, is bound from time to time to look upon these individuals as the Cassandras of the tax world. To avoid this dilemma, the Treasury in a close case will sometimes concede the issue if the proposal can be narrowly confined. It feels compelled to say "yes" once in a while simply to demonstrate that it maintains a balanced judgment and possesses a sense of fairness. A special provision is thus enacted simply because it happens to have somewhat more merit than the numerous other special proposals before the committees and because an affirmative answer here by the Treasury will protect negative responses to the other proposals.

At another level, what should the Treasury reply to a congressman who says, "I have fought hard in this committee for your position on all of the major issues. Yet when I introduce a minor amendment to take care of a problem of one of my constituents, you take a self-righteous stand and tell me and the committee that the amendment is inequitable and discriminatory. Is that any way to treat your real friends on the committee?" Faced with such a protest, a treasury policy official with a major program hanging in the balance before the committee may well look the other way when a special provision comes up for discussion. Once again a dilemma is raised by the fact that to the congressman the Treasury appears as one protagonist before the committee rather than as a representative of taxpayers in general.

But all this really takes us to the question why the Treasury, representing the executive branch, stands in the open before the Congress virtually alone as the champion of tax fairness. The main reason is obvious. When the issue is a special provision for one group as against the taxpaying public as a whole, what pressure group is there to speak for the public? Other legislation—labor laws, natural-gas prices, farm legislation—brings forth strong and opposing pressure groups. But what pressure group fights against capital-gain treatment for employee stock options? Which group sees itself harmed by a "Mayer amendment"? When the tax issues are at a major political level, as are tax rates or personal exemptions, then pressure groups, labor organizations, the Chamber of Commerce, the National Association of Manufacturers, and the others, become concerned. But when the tax issues are technical, the pressure groups act only as proponents and not as opponents. Since most special provisions benefit the wealthier taxpayers, labor should certainly take a more direct interest. But labor is largely uninformed in these matters, and its presentation stereotyped and unskilled. Moreover, some special provisions are to its own benefit, such as the exclusion of fringe benefits. In sum, there are no private pressure groups actively defending the integrity of the tax structure.

As a consequence, the congressman does not see a dispute over a special provision as one between a particular group in the community and the rest of the taxpaying public. He sees it only as a contest between a private group and a government department. He begins to think of the government department as representing only itself and as having no identification with the public and with taxpayers in general. Far too often this picture passes swiftly into that of a hard-pressed, struggling group of citizens engaged in worthy endeavors only to be opposed by an unsympathetic bureaucracy. When this image appears, victory for the special tax provision is inevitable.

(6) *The Congressional Tax Staff.*—The description of the Treasury as the principal and often the sole defender of tax fairness calls for a consideration of the role of the congressional tax staff. Most of the congressional tax technicals are members of the staff of the Joint Committee on Internal Revenue Taxation and as such serve both the House Ways and Means Committee and the Senate Finance Committee. There are a few technicians attached to the separate committees, and the clerks of the committees can play a very important role if they are personally so inclined. But institutionally the chief guidance given to Congress by its own employees comes from this joint committee staff.

The members of this staff work closely with the treasury tax technicians. Their work on the details of proposals and drafts is highly important, but the task of policy formulation and policy guidance to the congressmen appears to be reserved exclusively to the chief of that staff. His role is a difficult and unenviable one. Many congressmen pass along to him the tax proposals that they are constantly receiving from their constituents. Undoubtedly, the Chief of Staff discretely but effectively blocks many of these proposals from proceeding further. But he also, whatever his inclinations may be, cannot in his situation always say "no." Perhaps inevitably on the crucial issues his role tends to be that of the advocate of the congressman advancing a particular proposal on behalf of a special group. The special-interest groups cannot appear in the executive sessions of the committees, and the congressman sympathetic to their point of view is not technically equipped to present their case; he tends to look to the Chief of Staff to assume that task. Further, he looks to the Chief of Staff to formulate the technical compromises which will resolve the dispute between the special-interest group and the Treasury. The Chief of Staff must therefore work closely with the congressmen and be "brilliantly sensitive to their views."[16] He must necessarily be able to gauge the degree of interest that a congressman may have in a proposal and weigh that in the consideration of the guidance he will give.

Because of these institutional pressure the Chief of Staff is very often the opponent of the Treasury Department before the tax committee. As a result, the difficulties for the average congressman on the tax committees become even greater. The issues get more and more complex as the "experts" disagree, and the congressman can hardly follow the technical exchange. He is quite often content to fall back on the comfortable thought that, since the congressional expert appears to disagree with the treasury experts, there is adequate technical justification for voting either way. Hence the congressman is free to be guided by his own sympathies and instincts. Since generally these sympathies are in favor of the private groups, their proposals obtain his vote.

Unfortunately agreement between the congressional Chief of Staff and the Treasury can sometimes present just as difficult a problem. When the two disagree, at least the congressman who is seeking to discover the real issues may find them exposed at some time through this disagreement of experts. But if the experts agree, the effect is often to foreclose any real committee consideration of the issues. The congressman may be lulled into thinking that no significant issues are involved, and the proposal therefore become law. But if the government experts have erred, or if they have incorrectly gauged the congressional sentiment, special benefits may well result which the congressman would not have sanctioned had he understood what was involved. Many of the proposals in the 1954 House bill appear to have had their origin in this situation. It was largely the response of the bar and accounting groups which saved the Congress—and the government experts—from much unsatisfactory legislation.

The staff arrangements for the tax committees of Congress and the procedures of these committee do not seem well adapted to acquainting the congressmen with the facts of tax life. The recent hearings by the Subcommittee on Tax Policy of the Joint Committee on the Economic Report[17] are in sharp contrast to the usual procedure. At these recent hearings the proponents of special legislation were in effect pitted directly against economists and lawyers, mostly from the universities, who presented their individ-

Footnotes at end of article.

ual views and did not represent any pressure group. The congressmen present thus had an opportunity to test the assertions of those favoring special legislation, an opportunity not usually available to the members of the tax committees. The usual hearings of those committees consist of an almost endless parade of witnesses seeking tax benefits for themselves or the groups they represent. There is no effective analysis or rebuttal at the time this special pleading takes place, no questioning by committee counsel to develop a rounded picture of the issue. This is not to say that the committees should hear only the professors and other testifying *pro bono publico*. Certainly the proponents of particular legislation and their supporters from the ranks of business, labor, farming, and the like are entitled to present their case before the legislature. But the committees, in turn, must have procedures adequate to a full exploration of the issues thus presented. Moreover, it is not sufficient that the pros and cons be debated only in executive sessions. The various faults should be developed as far as possible in the public hearings so that the congressman at the outset obtains an appreciation of both sides of the problem and does not leave the hearings with only a hazy impression of a situation sympathetically presented.

It is also debatable whether reliance on a single staff is preferable to the more usual arrangement under which the corresponding Senate and House committees each has its own staff. The Joint Committee on Internal Revenue Taxation is composed of five members from the Senate tax committee and five from the House tax committee, selected by party seniority on the respective committees. This Joint Committee, apart from controlling the staff and its studies and considering refund claims agreed to by the Treasury but required to be presented to the Joint Committee, has little to do.[18] Its members act on substantive tax matters in their capacity as members of the House and Senate committees. Since the Joint Committee is composed of the most senior members of those committees its membership is less responsive to the electoral swings which affect the composition of the tax committees. As a consequence, the scope and course of the staff activities are less affected by changing political considerations. The more traditional system of separate staffs does not involve this situation to the same degree. Further, the absence in the tax field of separate staffs makes it difficult for the tax committee of one chamber to question as closely as is desirable the work of the tax committee of the other. The separate staff work in other legislative areas appears to produce a greater exploration of the issues, more research activity, and a resulting diversity of considerations likely to achieve better legislation.

Some, however, believe that the present unified character of Joint Committee staff work tends better to control the demands for special tax legislation. They feel that separate staffs for the tax committees would simply tend to give the proponents of such legislation more chance of finding support within the Congress. At the very least, however, reconsideration of the present institutional arrangement in the tax field would seem to be warranted, especially since that arrangement is a departure from the usual pattern. Moreover, the idea of a joint committee exercising jurisdiction over administration of the tax law was adopted in 1926 as an *ad hoc* solution to the problem of sidetracking a special investigating committee, the Couzens Committee, whose continuing activities were not viewed favorably by some senior congressman. But all this occurred before the present-day concern with the problems of staffing congressional committees and concentration on administrative supervision by all of the regular committees. Hence the solution of 1926 should be reexamined in the light of subsequent developments in the functioning of congressional committees.

(7) *Lack of Effective Aid From the Tax Bar.*—The lack of any pressure-group allies for the Treasury in its representation of the tax-paying public could have been remedied in part by effective aid from the tax bar. Yet for a good many years the vocal tax bar not only withheld any aid but very often conducted itself as an ally of the special pressure groups. Many a lawyer representing a client seeking a special provision could without much difficulty obtain American Bar Association or local-bar-association endorsement for his proposal. He could then appear before Congress and solemnly exhibit the blessing of the legal profession. In fact, the activity of the Bar Association in this respect became so obvious that it seemingly boomeranged—many a congressman began instinctively to smell mischief when presented with a Bar Association tax proposal or endorsement.

The pendulum is beginning to swing, however, and there is some hope for a more objective attitude on the part of the bar. The Council and the committees of the Tax Section of the American Bar Association are becoming far more appreciative of the public interest.[19] The signs of a growing maturity in the Tax Section on these matters are constantly increasing. But so far this change in attitude has been negative and limited to self-restraint and refusal to join with the proponents of special tax provisions. The change has not carried the Tax Section to the point of appearing affirmatively before Congress to oppose the particular proposals of special-interest groups or to urge the elimination of existing provisions. The Tax Section is becoming less and less a protagonist against the Treasury Department, especially on the more extreme proposals, but it has not yet become a vocal ally of the Treasury in defending the integrity of the tax system before the tax committees. In this respect it appears to be lagging behind the other chief professional group in the tax field, the accountants. Over one-third of the items in the 1955 statement of tax proposals of the American Institute of Accountants are recommendations urging the elimination of tax provisions which it considers to constitute unjustified favoritism for special groups. Yet one can scan report after report from the American Bar Association without finding a single similar recommendation.

This does not mean that the bar will not some day provide objective guidance to the Congress in these matters. In this regard the corporate provisions of the House version of the 1954 Code may be a harbinger. For perhaps the first time we find bar associations going before Congress and pointing out that proposed legislation will open up unjustified tax loopholes. True, the bar, and also the accountants, were not opposing other special groups, but they were seeking to save the Congress from the weaknesses of the particular measures. The bar in this instance deserves much credit for its affirmative guidance on the side of intelligent and fair tax legislation.

There are obvious obstacles to affirmative action by the legal profession in opposing special tax provisions. The Council of the Tax Section of the American Bar Association can speak publicly only on matters which have been approved by votes at annual meetings held in different geographical areas. The absence of a continuous group, with the consequence of shifting viewpoints and the lack of opportunity for sustained and informed consideration over the years, injects considerable instability and fortuitous results into the formal actions of the Tax Section. For, as discussed later, lawyers as a group need considerable discussion and education on these matters before objectivity replaces biases. Further, matters approved by the Tax Section must in turn be approved by the House of Delegates. A body that has regularly approved a proposed constitutional amendment to limit income-tax rates to twenty-five per cent[20] is not likely to understand the problems of special tax provisions. The Council of the Tax Section, whatever its inclinations might be, is thus largely circumscribed by the institutional framework of the American Bar Association. The accountants, on the other hand, are able to speak through their Committee on Federal Taxation of the American Institute of Accountants, a group free from corresponding institutional forces. This may well account for the more aggressive stand against special tax provisions taken by that Committee.

One of the chief problems here is that most tax lawyers have hardly any conception of what is involved in approaching a tax issue from the over-all legislative standpoint. They can readily perceive the adverse effect of the tax laws upon a particular client or transaction. They can then phrase the legislative solution they think necessary to remove the claimed tax obstacle or burden. But they are usually quite incapable of standing off from the problem and their proposed solution and viewing both from the perspective of the general public interest. The difficulty is largely one of lack of experience, not lack of judgment or moral values.

Moreover, policy insights in the tax field are hard to come by. Here a large responsibility rests upon the Treasury. Unless its technical tax staffs are charged with utilizing their experience and information by engaging in research on current tax issues, and unless that research is made public, those interested in tax issues face great difficulties in obtaining the full picture. The government tax experts, both in the Treasury and in the Congress, must also be encouraged to write for the professional journals and to make available the insights they have reached through experience. The papers and hearings presented recently by the Subcommittee on Tax Policy of the Joint Committee on the Economic Report are another excellent illustration of what can be done to increase understanding of tax issues.[21] The professors of tax law and the tax economists in the universities also bear a responsibility here, for they have more freedom from the pressures of time and situation which the bar faces. There is significance in the fact that when the Subcommittee on Tax Policy of the Joint Committee on the Economic Report desired objective analyses of various tax issues it went for the most part to the economists and law professors in the universities.

After all, most members of our tax bar are really opposed to special privileges." They have a respect for the tools of their trade. They know that in the long run the pendulum may swing and that a "loophole" may be closed with a vigor that pushes the cure too far. Even when their legal business requires them to lobby directly for a special tax favor for their clients, I doubt that most lawyers relish the task. The door may open for them, but it may open wider for the next attorney, and who knows where the game will end? Hence a bar association's advocacy of any particular special tax provision is in most cases traceable to the lawyer's sympathy for the welfare of his clients and to a lack of understanding of the basic tax issues involved. If the lawyer is exposed to those issues and if he is not acting simply as an outright advocate for a particular client—that is, as a tax lobbyist on the particular measure—he will generally emerge with the correct answer. Hence the importance of forcing a bar association to see the issues and face up to them.[22]

Tradition also plays a role. Lawyers as a profession are deeply conscious of a duty of

Footnotes at end of article.

loyalty to their clients. In his day-to-day relations with other lawyers and with the business world a lawyer does not act contrary to his clients' interests. These attitudes of loyalty and protection are ingrained in the profession; their roots lie deep in the past. Can they be reconciled with speaking out in the public interest against special tax provisions? The problem is of course more acute as the particular provision comes closer to the client's situation. But it must have been presented in one way or another to almost every lawyer who has considered the situation. The same problem arises in a different form when a client asks his lawyer to seek a legislative change in favor of the client. Should the lawyer apply different standards to his client's case in deciding whether to represent him before a tax committee than he does in deciding whether to represent him in litigation? Must a lawyer seeking a legislative change believe the change to be in the public interest? And if he does not, should he still represent his client before the legislature? Or need the lawyer as legislative advocate have no more belief in the fairness of his client's cause than when the matter is in litigation? In short, how does a lawyer adjust the considerations of private interest and public interest in the area of legislation? Clearly, these matters are difficult. Some lawyers manage to find a way through the difficulties and speak openly and positively against special provisions.[23] Others write, or speak in bar-association meetings. Others meet the situation by neither publicly opposing special provisions nor seeking them on behalf of clients; in effect, they turn away from the problems entirely and simply practice law. And others act as legislative advocates, with varying degrees of belief in the proposals they present and with stress on the view that a person is entitled to have his case presented to the legislature just as he is entitled to his day in court.

Given these problems, it is hard to say whether the tax bar can take a position of leadership in this area. Yet here also there is room for development. The work of the American Law Institute in its Tax Project has had a significant effect in educating a number of tax lawyers to the many facets that must be examined in the legislative exploration of a tax proposal.[24] Further, its drafts of proposed solutions to technical tax problems stand as a benchmark against which to measure other proposals. It is significant that much of the criticism of the corporate provisions of the House bill in 1954 was based upon the inadequacy of those provisions when measured against the standards hammered out in the work of the Institute. Moreover, the close co-operation between the Institute and the American Bar Association Tax Section has had an important effect on the content of tax legislation in a number of areas, for it represents a genuine working merger of the criteria of tax fairness and practical sense.[25] The most significant consequence of the Institute's Tax Project is the demonstration that lawyers working under procedures such as those of the Institute can on most technical tax matters develop constructive proposals which balance fairly the interests of the "Government" and the "taxpayer."[26]

*(8) Lack of Public Knowledge of Special Tax Provisions.*—Perhaps the most significant aspect of the consideration of special tax provisions by the Congress is that it usually takes place without any awareness of these events by the general public. Almost entirely, these matters lie outside of the public's gaze, outside of the voter's knowledge. The special provisions which are enacted lie protected in the mysterious complex statutory jargon of the tax law. This technical curtain is impenetrable to the newspapers and other information media. The public hears of debate over tax reduction or tax increase and it may learn something about the general rate structure. But it seldom learns that the high rates have no applicability to much of the income of certain wealthy groups. Nor does it understand how this special taxpayer or that special group is relieved of a good part of its tax burden. All of these matters are largely fought out behind this technical curtain. Hence the congressman favoring these special provisions has for the most part no accounting to make to the voters for his action. He is thereby much freer to lend a helping hand here and there to a group which has won his sympathy or which is pressing him for results.

It is true that under our governmental system we have given to the Congress, subject to presidential veto, the responsibility of deciding what is "fair" in the federal sphere from our collective standpoint. Its decision is our democratic answer. But all this presupposes that the congressman's decision will be known to the voters and that he will have to account to them for his view. In the tax field this accounting does not exist, so that the presuppositions that on most matters stamp final congressional action as "fair" in a democratic sense are here lacking.

The task of educating and informing the public is formidable. To begin with, the educators are a very limited group. Most of them are in the executive branch, and hence perhaps the prime responsibility should fall on them. The treasury officials and technicians, as stated earlier, should be charged with continued research on these issues and, more important, with making public their observations. The Treasury Department has published—in the 1940's especially—many useful research papers. But in recent years that department has shown little disposition to inform the public about tax problems or to engage in continuous and far-ranging research inquiries. Some of the prospective educators are in the universities. But academic knowledge and learned writing are not the keys to public education of this nature—more writing at the public-information level is clearly needed. Beyond this there is the matter of leadership and the stamp of importance. Here again the major responsibility should rest with the executive branch. A vigorous program directed to meeting these problems, led in public by the President or the Secretary of the Treasury, with whatever aid can be obtained from the Congress, is perhaps the only effective answer. But one does not yet see this on the horizon.

*(9) The Relationship of Special Tax Provisions to Private-Relief Bills.*—Some of these special provisions represent simply private-relief claims for the particular individual benefited. While phrased as amendments to the tax law, they are only money claims against the Government based on the equities asserted to exist.[27] Thus, it is said of a senator skilled in congressional ways that he would ask the legislative draftsman preparing the draft of a particular tax provision to make the amendment as general in language and as specific in application as was possible. The tax committees and the Treasury have not solved the problem of how to handle these special bills. Curiously enough, some tax situations do come through the judiciary committees as private-relief bills along with other private-relief bills involving claims against the Government. These bills may involve, for example, a removal of the barrier of the statute of limitations in cases thought equitable, or the recovery of funds spent for revenue stamps lost in some fashion.[28] Here they are subject to the criteria developed over the decades by those committees in the handling of private claims bills.[29] The criteria are reasonably strict, and few of the bills pass the Congress. Of those that do succeed, a number are vetoed, and a veto is customarily regarded as a final disposition of the bill.

Many situations come before the tax committees that are quite comparable, in that the tax proposal is equivalent to a money claim against the Government, equal to the tax to be saved, sought for a specific taxpayer on equitable grounds. This is especially true in the case of proposals of a retroactive character.[30] In the tax committees these special proposals tend to take on the coloration of an amendment to the tax code of the same character as all the various substantive tax matters before these committees. In essence, all amendments to the tax laws that private groups push on their own behalf are designed to lower taxes for the proponents and thereby relieve them from a tax burden to which they are subject. The special proposals thus become simply one more amendment in the long list of changes to be considered. The proponents of these special proposals are thereby able to cloak the fact that they are presenting private-relief claims against the Government. This is especially so when the proposal is considered as merely one more item in a general revenue bill. Here it is also protected from the threat—and fate—of a presidential veto. Even when the proposal is considered as a separate bill, the fact that it is merely one of the bills before a tax committee that is considering a great many substantive bills involving amendments to the tax code generally produces the same result. The committee will tend to focus on the proposal as curing a substantive defect in the law and lose sight of the fact that the special proposal is essentially a private-relief bill.

The tax laws are not perfect and cannot be. They will affect some taxpayers more seriously than others, and hardships and inequities will certainly occur. But every hardship and every equity cannot be corrected; and this is even clearer when the correction must be retroactive. Some standards must be evolved against which a claim for relief may be judged, or chaos will result. Tax lobbying will grow by leaps and bounds—it is already doing that. But what standards may be formulated, what procedures should be adopted, what institutional changes may be necessary—these are still unstudied topics.

There is another curious but highly important aspect of casting private-relief claims as amendments to the tax code. In the case of most other private-relief bills involving claims against the Government, the Congress is concerned with the amount of the fee paid to the attorney representing the claimant and the relationship of that fee to the services performed by the attorney. Often the bill when passed will carry a proviso that no part of the amount awarded be paid to the attorney for his services, or that the amount so paid be limited to 5 per cent or 10 per cent of the sum awarded.[31] But there is no such concern when the tax committees are passing on special tax provisions. The legal fees involved in legislation of this character can be quite large, especially when the special provision operates to open the way for a successful refund claim. Yet the services performed may be far less demanding that would be required if the same fee were earned in other phases of legal work. This would seem to be a matter requiring exploration along with those suggested earlier.

At present, under the Legislative Reorganization Act, the House and Senate Judiciary Committees have jurisdiction over all "measures relating to claims against the United States." It may not be appropriate to have special tax measures presented to these committees, since these measures should be coordinated with the rest of the tax code. But it would seem proper for the Congress to require that all retroactive tax proposals limited in application to one person or to a small group be presented as private-relief bills to be considered by the tax committees. The bills would name the individuals concerned and specify the amounts involved. The re-

Footnotes at end of article.

ports on the bills would state the equities present and the reason for granting relief, if that is the action urged. Each matter would be handled as a separate bill, subject to presidential veto. The amounts granted need not be the complete tax to be saved by retroactive change, since the equities may point to a lower figure. The tax committees would have to develop procedures and criteria for handling these measures—presumably they would go to special subcommittees. Rigorous standards would have to be evolved lest the committees be engulfed. It may be that naming the particular individual involved will result in congressional action on some measures being influenced one way or the other not so much by the merits as by an identification with the particular individual. Hence, it might be thought that these special bills should be anonymous as far as possible. Yet the beneficiaries of other relief bills are identified. Anonymity would only provode intense curiosity on the part of the press and others, and probably could not be preserved. Thus, despite the disadvantage indicated, identification of the beneficiary would seem proper.

If the above procedure were adopted, it may well be that it could be extended to those special provisions for a particular person or a limited group which are prospective in operation. After all, a proposal that for the future a cousin in a mental institution who was formerly in the taxpayer's household,[32] or a child adopted in the Philippines by an army officer,[33] be classified as a dependent, is really a petition for a private-relief bill. Nor is there any reason why the "Louis B. Mayer amendment" should not have been handled as a "bill for the relief of Louis B. Mayer" and the amount of the relief stated in a precise dollar figure. If the particular proposal presented is only an example of a general problem, it should be handled as such and relief denied if the general problem is not to be solved, unless the equities for special treatment are overwhelming. If it is an isolated situation, its equities could be judged in that light. If special relief were granted, and the consequent publicity indicated that others were similarly situated, then the relief could be extended. But the particular claim would be highlighted for what it is—an appeal to the generosity of the Congress to be exercised in the particular situation. In time, experience may indicate that certain of these matters may be handled by the Treasury Department, perhaps with the assistance of a special board of advisors.[34] The essential task is to separate special situations from the broader substantive problems that represent the basic work of the tax committees, and thereby to judge them on their particular merits. Also, and equally as important, treatment as a private bill would permit full public understanding of the particular case and an awareness of the relief involved. The technical curtain referred to earlier would thus be lifted to a considerable extent from legislative consideration of special provisions.

### III. CONCLUSION

The consideration of any legislation is a complex matter and tax measures are no exception. But the institutional factors in the tax legislative process do differ from those in other legislative areas, and the differences have affected the end product. The growing concern with the integrity of our tax system may well force a substantive re-examination of many of the special provisions now in the law. This concern should also extend to the tax legislative process itself. The situation is a serious one, and the solutions are far from clear.

It is suggested that the executive branch take affirmative action to attack the problem through a strong program led by the President or the Secretary of the Treasury designed to focus public consideration on special provisions and their interaction with the rate structure. The Treasury's tax officials and technicians should engage in intensive research on these matters and the results of their studies should be made public. In the Congress, consideration should be given to changes in the methods of obtaining information on tax problems, to improvements in the conduct of hearings, and to a re-examination of the staff arrangements. Procedures should be adopted under which proposals for amendment of the tax laws limited in application to a single person or a small group, especially when retroactive in nature, would be treated as private-relief claims. These claims should be considered by the tax committees under special procedures similar to those applicable to private-relief bills generally. In respect to the bar, both bar associations and lawyers generally should consider how, consistently with the traditions of the profession regarding the protection of a client's interests, the wisdom and experience of the tax bar can be made available in the public interest to aid the Congress by objective guidance. The sum total of these suggestions is that the Congress, the Treasury Department, and the tax bar equally bear a responsibility to reappraise their roles and activities in the tax legislative process.

### FOOTNOTES

†This article grew out of a talk delivered before the Round Table on Federal Taxation at the Chicago meeting of the Association of American Law Schools, December 28, 1955. I am indebted in thinking about these matters to the other two panelists, Charles W. Davis of the Illinois Bar, formerly Chief Counsel, Bureau of Internal Revenue, and Clerk, House Committee on Ways and Means, and William M. Horne, Jr. of the Massachusetts Bar, formerly Staff Member congressional Joint Committee on Internal Revenue Taxation, for the views of this general topic which they expressed in their panel talks.

[4] Int. Rev. Code of 1954. § 1240. Sections of the 1954 Code will hereinafter be cited only by section number. The history of § 1240 is related in Cary, *supra* note 3 at 747–48. Under this provision amounts received from the assignment or release by an employee of over twenty-years employment of his rights to receive, after termination of his employment and for a period of not less than five years, a percentage of future profits or receipts of his employer are taxed at capital-gains rates if the employee's contract providing for those rights had been in effect at least twelve years. Clearly the blueprint for compliance with this section is quite detailed. It is generally assumed that the amendment at the time covered only two persons, Louis B. Mayer, retired vice-presiednt of Loew's, Inc., and one other executive in the company, and that the amendment saved Mayer about $2,000,000 in taxes. Mayer, as a vice-president, had been in charge of Metro-Goldwyn-Mayer motion-picture studio for many years. He had received a compensation contract under which he was to receive 10% of the net proceeds from every picture made at that studio between April 7, 1924, and the day he left the company. On his retirement in 1951, Mayer released his rights under the contract in return for, apparently, $2,750,000. The 1954 Code, while continuing the provision, which had been adopted in 1951, underscored its special character by restricting its application to contracts entered into prior to the 1954 Code.

For other highly personalized provisions, see Cary, *supra* note 3, at 749–54. See also the following recent provisions:

(a) Section 2055(b)(2), added by Pub. L. No. 1011, 84th Cong., 2d Sess. (Aug. 6, 1956), treats as an exempt transfer to charity by a decedent property later transferred to charity by the spouse of the decedent under a power of appointment given to her by the decedent and exercisable at her death, subject to such conditions as that the spouse must be more than eighty years old at the decedent's death and must have executed an affidavit under certain conditions one year after his death proclaiming her intention to exercise the power in favor of charity. The provision was enacted August 6, 1956, but made retroactive to August 16, 1954.

(b) Section 106 of the Internal Revenue Code of 1939, as amended, 70 Stat. 404 (1956), applies a 30% income-tax rate to amounts received under a claim against the United States arising under a contract for the installation of facilities for any branch of the armed forces, remaining unpaid for more than five years from the date of the claim, and paid prior to January 1, 1950. The conference report stated that "it is the understanding of all the conferees that the action taken with respect to this amendment is not to be considered a precedent for future legislative action." H.R. Rep. No. 2253, 84th Cong., 2d Sess. 5 (1956). Apparently the provision was designed solely to cover the taxpayer involved in Sanders v. Commissioner, 225 F.2d 629 (10th Cir. 1955), *cert. denied*, 350 U.S. 967 (1936), since the facts of the case fit precisely under the provision.

(c) Section 1342, added by 69 Stat. 717 (1955), provides for retroactive exclusion of damages received under a court decision in a patent-infringement suit and later repaid because of the subsequent reversal of the court decision on the ground that it was induced by fraud or undue influence. Apparently, this provision grew out of the litigation reported in Universal Oil Products Co. v. Root Refining Co., 328 U.S. 575 (1946).

(d) Section 152(a)(10), relating to the deduction for "dependents," covers a cousin receiving institutional care for physical or mental disability if prior to being institutionalized the cousin was a member of the same household as the taxpayer. Section 152

(b)(3) excepts from the exclusion of noncitizens a child born to or adopted by a member of the armed forces in the Philippine Islands before January 1, 1956. See Act of Aug. 9, 1955, c. 693, 69 STAT. 625, making this provision retroactive to 1946 and substituting the January 1, 1956, date for the July 5, 1946, date formerly contained in § 152 (b)(3).

(e) Section 24(c) of the Internal Revenue Code of 1939, as amended, 67 STAT. 617 (now § 267(a)) allowed the deduction of an accrued expense if the related payee included the amount in income within two-and-one-half months after the close of the year and applied the change retroactively to 1946. The retroactive aspect, and perhaps the proposal, appear to be a consequence of the litigation in L. R. McKee, 18 T.C. 512 (1952), *rev'd per curiam*, 207 F. 2d 780 (8th Cir. 1953), in which the taxpayer had been unsuccessful in the Tax Court under the previous provisions.

(f) Section 2053(d), added by 70 STAT. 23 (1956), was enacted February 20, 1956, but was made retroactive to cover decedents dying after December 31, 1953. It allows charitable deduction from the gross estate for the amount of state inheritance taxes imposed on a bequest to charity. This provision reportedly was adopted to affect the problem of a particular estate under the interaction of the Pennsylvania tax laws and the federal estate tax.

(g) Section 166(f) treats as a business-bad-debt loss a payment by the guarantor of a noncorporate obligation. The provision reportedly was designed to meet the problem of a Texas father who had made advances to his son's business. This *ad hoc* amendment obviously does not fit with the rest of the provisions respecting losses and bad debts, as is evidenced by the difficulty which it gave the Supreme Court in Putnam v. Commissioner, 352 U.S. 82 (1956). The dissent there labors long to gather an intelligible legislative history from the provision, but fails to realize that the provision has all the earmarks of an *ad hoc* resolution of a particular situation.

(h) Section 1235(d) provides that capital-gain treatment on the sale of a patent shall not apply to a sale between an individual and a related person, but then excepts brothers and sisters. Apparently this was inept phrasing to exclude a sale to a corporation owned by a brother, since the JOINT COMMITTEE ON INTERNAL REVENUE TAXATION, PROPOSED TECHNICAL AMENDMENTS BILL OF 1957, § 28 (CCH Stand. Fed. Tax Rep., Oct. 26, 1956), and the accompanying summary involve an amendment to make it clear that the protection was intended for the brother's corporation. For a statement by a taxpayer's representative questioning the justification for this special treatment for a brother, see *Hearings on Technical Amendments to the Internal Revenue Code Before a Subcommittee of the House Committee on Ways and Means*, 84th Cong., 2d Sess. I (1956).

(i) Section 1361, a complicated provision with many problems unsolved, which permits a proprietorship or partnership to elect corporate tax treatment, apparently received its main impetus and perhaps the only real reason for its existence from the situation of a particular Georgia partnership.

[6] The text statements are based on impressions obtained from a conference to the British tax system held in New York on January 4–5, 1957, under the joint auspices of the Harvard Law School Program in International Taxation, and the American Branch, International Institute of Public Finance. See also Wheat croft, *The Anti-Avoidance Provisions of the Law of Estate Duty in the United Kingdom*, (paper to be published in NAT'L TAX J. (1957)). Professor Carl Shoup, an informed observer of the Japanese tax system, asserts that the same trend is evident in that country.

[7] Spokesmen on this subject in both political parties appear to recognize the need for solving the dilemma. As regards the Democrats, see Stevenson, *The New America, Where is the Money Coming From?*, N.Y. Times, Oct. 29, 1956, p. 22; U.S. News & World Report, July 27, 1956, p. 68 (remarks of Congressman Wilbur D. Mills). As regards the Republicans, see 103 CONG. Rec. 697 (daily ed. Jan. 17, 1957) (statement of Secretary of the Treasury Humphrey); 102 CONG. REC. A3699 (daily ed. May 8, 1956) (remarks of Congressman Daniel A. Reed); *Hearing on H.R. 4090 and H.R. 4091 Before the House Ways and Means Committee*, 85th Cong., 1st Sess. 4, 7–9 (1957) (testimony of Secretary Humphrey).

The dilemma should not be solved solely in the context of the income tax, but must be considered in the light of the entire tax structure. Thus, those who believe that stabilizing the income tax at levels of 50–65% does not leave a sufficient over-all burden on the wealthy would urge a concomitant strengthening of taxes on capital. In other countries this may mean a resort to net-worth taxes restricted to the upper levels and further development of estate taxes. In this country constitutional requirements may restrict the effort to a strengthening of the estate tax. Looking further ahead, there may be experimentation with expenditure taxation for the upper brackets, as contrasted with the current sales taxes that reach all levels but with greater impact at the lower ranges.

[8] For the history of these provisions, see Freeman, *Percentage Depletion for Oil—A Policy Issue*, 30 Ind. L.J. 399 (1955).

[9] These statements are not the result of any intensive examination of the British procedure, but are based on correspondence and discussion with British officials and practitioners.

[10] §§ 402(a)(2), 403(a)(2). These sections were derived from Int. Rev. Code of 1939, § 165(b), added by 56 STAT. 863 (1942).

[11] In a sense the "Mayer amendment," see note 4 *supra*, is traceable to this type of error.

[12] Now § 922. Its legislative history and current application are described in Surrey, *Current Issues in the Taxation of Corporate Foreign Investment*, 56 COLUM. L. REV. 815, 834–38 (1956).

[13] These sections are a good instance of how tax law grows: A lawyer who works years on a case receives a large fee in one year, so that most of the fee goes in taxes in contrast to the result of spreading the fee over the years worked. A sympathetic Congress in 1939 adopts a provision to cover the situation, confined to bunched income from employment. Int. Rev. Code of 1939, § 107, added by 53 STAT. 878 (1939) (now § 1301). An author, said to be Ernest Hemingway, runs into a similar problem with respect to the royalties on a book which has taken a number of years to write, and Congress in 1942 adds a provision to spread back royalties from both artistic works and patents. Int. Rev. Code of 1939, § 107(b), added by 56 STAT. 837 (1942) (now § 1302). Parenthetically, Hemingway's royalties over several years were so large that it was said he could not come within the conditions of the sections. Some Ford Motor Company employees receive a large back-pay award under the National Labor Relations Act, again a bunched-income situation, and Congress in 1944 adopts a throwback provision to meet this situation. Int. Rev. Code of 1939, § 107(d), added by 58 STAT. 39 (1944) (now § 1303). In 1955 Congress adds a limited provision to cover another bunched-income situation, compensatory damages for patent infringement. § 1304, added by 69 STAT. 688 (1955). The American Law Institute has recommended extension of these provisions to cover back interest, back dividends on cumulative preferred stock, back rent, and damages for loss of profits and earnings. ALI FED. INCOME TAX STAT. § X350(c) (Feb. 1954 Draft). And, of course, lying ahead are the suggestions from various sources for an over-all averaging system.

[14] This provision appeared in its original form as Int. Rev. Code of 1939, § 115(g)(3), added by 64 STAT. 932 (1950). It was apparently adopted to meet the problem of the *Boston Post* and to make unnecessary the sale of that paper by an estate in order to meet estate taxes. Interestingly enough, the paper was nevertheless sold not long afterward. Section 472, relating to the last-in-first-out inventory method, as another example of a general solution replacing a special provision. See Int. Rev. Code of 1939, § 22(d), 53 STAT. 11, which originated in a limited form in the Revenue Act of 1938, § 22(d), 52 STAT. 459.

[15] Added by 69 STAT. 717 (1955). As originally introduced, this provision had a broad and sensible application to the transactional situations involving the inclusion of an income item and its later repayment. The provision was, however, confined to the particular case treated in § 1342 at the Treasury's request, since it had not yet studied the basic problems. Section 1304, added by 69 STAT. 688 (1955), relating to a throwback for compensatory damages recovered in a patent-infringement suit, is another illustration of a provision specially limited at the Treasury's request.

[16] Darrell, *Internal Revenue Code of 1964—A Striking Example of the Legislative Process in Action*, in U. of So. CALIF. SCHOOL OF LAW, 1955 TAX INST. I, 6.

See also JOINT COMMITTEE ON THE ECONOMIC REPORT, FEDERAL TAX POLICY FOR ECONOMIC GROWTH AND STABILITY (1955), the accompanying volume of papers on which these hearings were based.

[18] For its organization and powers, see § 6405; §§ 8001–05; §§ 8021–23, as amended, 69 STAT. 448 (1955).

[19] The Federal Income Tax Committee of the Association of the Bar of the City of New York has also made helpful analyses of technical matters.

[20] See *Hearing on S.J. Res. 23 Before a Subcommittee of the Senate Committee on the Judiciary*, 84th Con., 2d Sess. (1956). See also Cary, *The Income Tax Amendment: A Strait Jacket for Sound Fiscal Policy*, 39 A.B.A.J. 885 (1953); Dresser, *The Case for the Income Tax Amendment: A Reply to Dean Griswold*, 39 A.B.A.J. 25 (1953); Griswold, *Can We Limit Taxes to 25 Per Cent*, Atlantic Monthly, Aug. 1952, p. 76, reprinted in Mass L.Q., 1952, p. 50.

[21] See JOINT COMMITTEE ON THE ECONOMIC REPORT, *op. cit. supra* note 17.

[22] The task here, however, lies mainly with the members of the tax bar themselves rather than the law school professors. I am sufficiently realistic to understand that an academic tax professor talking "equity" and "loophole" and "special privilege" rarely if ever sways a bar association meeting. "He doesn't have any clients!" But nothing is more effective in bringing up short the advocates of a special proposal than to hear other lawyers, whose fees are as high as theirs and whom they otherwise respect, point out that the proposal is an unwarranted special privilege. The arguments used may be no better than those of the professor, but they sound infinitely more persuasive when presented by a lawyer with clients—and this is proper and understandable.

[23] The late Randolph Paul was a shining example. But his outstanding position in this respect so approached uniqueness that one is given pause in thinking about the problem. See his reflections on the problem in PAUL, TAXATION IN THE UNITED STATES 771–74 (1954).

[24] See Darrell, *supra* note 16, at 17–25; Sur-

rey, *The Income Tax Project of the American Law Institute*, 31 TAXES 959 (1953). The last article also appears in N.Y.U. 11TH INST. ON FED. TAX. 1049 (1953).

[25] See Darrell, *supra* note 16, at 17, 27.

[26] Recently the Subcommittee on Internal Revenue Taxation of the House Ways and Means Committee has sought the aid of the tax bar through special advisory committees selected by it to present proposals for changes in various parts of the Code. While there are facets of the present situation which have led to this *ad hoc* solution, it is doubtful whether it represents an appropriate line of growth. At the very least, reliance on such advisory committees calls for sustained and informed government technical activity so that short-run solutions do not distort long-run developments. Further, there are many fortuitous elements in the process, as the selection of the particular members of the advisory committees, the time available, and the like. The procedures of the American Law Institute, and in some respects those of the Tax Section of the American Bar Association, have the merit of a wider participation in and testing of new changes as they pass through the various stages of their formulation.

[27] See, for example, the discussion in 102 CONG. REC. 13395 (daily ed. July 26, 1956), of an amendment designed to relieve a particular individual in Vermont from an asserted tax hardship growing out of the conjunction of the severity of Vermont winters and the vagaries of § 270, the hobby-loss provision. The senator pressing the amendment stated that while it was basically designed for the relief of a particular individual, he had originally hoped to generalize the language but the Treasury had pointed out defects in the generalization. The amendment did not prevail, the chairman of the Senate Finance Committee solemnly stating that "it would establish a very dangerous precedent, and we would be attempting to pass a general law for one specific purpose." The day before, the chairman had reported out the bill allowing an estate-tax deduction in a situation involving an eighty-year-old widow who had taken certain action specified in the bill. See note 4, para. (a), *supra*.

[28] The following private-relief bills involving tax situations were enacted by the 84th Congress.

(a) Priv. L. No. 206, 84th Cong., 1st Sess. (July 14, 1955). This act reimbursed the taxpayer for the $900 he lost when his beer-tax stamps were stolen or lost. See H.R. REP. No. 259, 84th Cong., 1st Sess. (1955); S. REP No. 484, 84th Cong., 1st Sess. (1955).

(b) Priv. L. No. 661, 84th Cong. 2d Sess. (May 19, 1956). This act granted $1620.09 to a taxpayer who had paid a tax on alcoholic products which were exported and for which drawback claims were rejected because the products were not originally bottled for export. The taxpayer had been ignorant of the requirement and the government representative who supervised the packaging had acquiesced in the manner in which it was done. See H.R. REP. No. 1715, 84th Cong., 2d Sess. (1956); S. REP. No 1948, 84th Cong, 2d Sess. (1956).

(c) Priv. L. No. 663, 84th Cong., 2d Sess. (May 22, 1956). This act permitted the taxpayer to file an election to claim the benefit of Int. Rev. Code of 1939, § 112(b)(7), as amended, 67 STAT. 615 (1953) (now § 333), which he had originally filed one day late due to inadvertence arising from the pressure of taking office as Mayor of Houston. See H.R. REP. No. 263, 84th Cong., 2d Sess. (1956); S. REP. No. 1957, 84th Cong., 2d Sess. (1956).

(d) Priv. L. No. 728, 84th Cong., 2d Sess. (June 29, 1956). This act granted $6896.14 plus interest to the estate of a deceased member of the armed services after the estate had sued for that amount under the forgiveness provisions of Int. Rev. Code of 1939, § 421, added by 57 STAT. 149 (1942), repealed by 64 STAT. 947 (1950), and had lost, Allen v. Bickerstaff, 200 F.2d 181 (5th Cir. 1952). The Supreme Court had overruled that decision in a subsequent case, Marcelle v. Estate of Lupia, 348 U.S. 956 (1955), *affirming* 214 F.2d 942 (2d Cir. 1954). The Treasury stressed that its favorable report on this private bill should not be regarded as precedent for a policy of changing the result of decided cases by legislation. See H.R. REP. No. 1914, 84th Cong., 2d Sess. (1956); S. REP. No. 2202, 84th Cong., 2d Sess. (1956).

(e) Priv. L. No. 764, 84th Cong., 2d Sess. (July 11, 1956). This act permitted the taxpayers to file refund claims involving an amount in the vicinity of $380,000, although the period of limitations had expired and an agreement with the Government had been executed. The committees appeared to be convinced that the taxes and penalties involved had been erroneously paid. See H.R. REP. No. 2127, 84th *Cong.*, 2d Sess. (1956); S. REP. No. 2277, 84th Cong., 2d Sess. (1956).

(f) Priv. L. No. 800, 84th Cong., 2d Sess. (July 24, 1956). This act granted to an estate a refund of $1793.10 representing a credit for death taxes paid to the state, although the period within which a claim for such a refund must be filed had elapsed. The executor had relied on an erroneous statement in a letter from the district director as to the permissible filing period. See H.R. REP. No. 2224, 84th Cong., 2d Sess. (1956); S. REP. No. 2499, 84th Cong., 2d Sess. (1956).

The Treasury Department had objected to the bills involved in Private Laws 663 and 764, but not to the other bills; all bills were approved by the President.

[29] See Gellhorn & Lauer, *Congressional Settlement of Tort Claims Aagainst the United States*, 55 COLUM. L. REV. 1 (1955); Note, *Private Bills and the Immigration Law*, 69 HARV. L. REV. 1083 (1956). See also HOUSE COMMITTEE ON THE JUDICIARY, 85TH CONG., RULES OF SUBCOMMITTEE NO. 2, WHICH HAS JURISDICTION OVER CLAIMS (1957).

[30] See, *e.g.*, Code sections cited note 4, paras (a)–(f), *supra*. See also Pub. L. No. 901, 84th Cong., 2d Sess (Aug. 1, 1956); Pub. L. No. 414, 84th Cong., ad Sess. § 4 (Feb. 20, 1956).

One recent special provision, Act of Aug. 12, 1955, c. 878, 69 STAT. A166, took in part the formal course of a private-relief bill but proceeded in a somewhat unusual fashion. On July 30, 1955, Congressman Curtis of Missouri introduced a private bill for the relief of the Cannon Foundation, which had been established by Congressman Cannon of Missouri. H.R. 7746, 84th Cong., 1st Sess. (1955). That foundation was established in 1950 as a charitable foundation, but its charter, though apparently not its activities ran afoul of § 503(c). The bill, as passed, made this provision inapplicable for 1950–56, and apparently charter amendment in 1955 took care of future years. The bill had originally been referred to the Ways and Means Committee, but on August 1, 1955, it was referred to the House Judiciary Committee, and then reported and passed that day. It was reported by the Senate Finance Committee the same day, S. REP. No. 1283, 84th Cong., 1st Sess. (1955) (which does not explain the particular problem involved—in fact it is not explained in any of the public documents), and it then passed the Senate on August 2, 1955, with an amendment concurred in that same day by the House. The Congress adjourned on August 2, 1955.

[31] See HOUSE COMMITTEE ON THE JUDICIARY, 85TH CONG., *op. cit. supra* note 29, rule 16; NEWMAN & SURREY, LEGISLATION: CASES AND MATERIALS 156 (1955). For a summary and discussion of statutory and administrative restrictions on practitioners' fees, see Committee on Administrative Practitioners, Administrative law Section, A.B.A., *Report*, 8 AD. L. BULL. 137 (1956).

[32] See § 152(b)(3).

[33] See § 152(b)(3), as amended, 60 STAT. 626 (1955).

[34] The British have a system of "extra-statutory concessions," adopted and made public by the Board of Inland Revenue, which represent in effect administrative relief granted when the statutory law is working in an unintended way with harsh effect. There are between fifty and one hundred of these concessions outstanding; they are generally used when the matter is minor and often when it also would be difficult to draft a complete legislative solution. There are also unpublished "office practices" under which the rigor of the law is not pushed too far. In effect, the more important of these office practices are published as extra-statutory concessions.

## TAX CREDIT FOR POLITICAL CONTRIBUTIONS

AMENDMENT NO. 409

Mr. KENNEDY. Mr. President, on behalf of myself and the distinguished Senator from Kansas (Mr. PEARSON), I offer for the consideration of Members of the Senate an amendment to H.R. 13270, the Tax Reform Act of 1969. The amendment proposes a tax credit for political contributions. In the past, Senator PEARSON has played a leading role in our bipartisan efforts to reform the election process, and I am pleased that he has consented to join me in offering this amendment.

Mr. President, the primary purpose of this amendment is to provide a strong new incentive for both of our major political parties to broaden their base of political support. In recent years, we have become well aware of the serious problems that are caused by excessive reliance by candidates for public office or large contributors. By encouraging candidates, political committees, and political parties to seek support from small contributors across the Nation, we will be able to take a major step toward avoiding even the appearance of impropriety or undue influence that flows from the existence of large campaign contributions. By doing so, we will encourage broader participation in the political process, and we will restore new confidence to our democratic system.

The amendment I have proposed is essentially identical to the tax credit proposal favorably and unanimously reported by the Committee on Finance in November 1967, at the conclusion of comprehensive hearings on a variety of proposals to reform the financing of political campaigns. It is also very similar to legislation recently proposed by Senator PEARSON.

The bill reported by the Finance Committee in 1967 contained certain other provisions—including a controversial provision for direct public financing of campaigns—which would be inappropriate for consideration by the Senate at this time as part of the pending tax reform bill. The tax credit proposal, however, is entirely appropriate for consideration as part of this bill.

In brief, the amendment offered by Senator PEARSON and myself would provide a tax credit for one-half of a taxpayers' political contributions, up to a maximum credit of $25. It is a broad-based amendment. Contributions qualifying for the credit could be made to candidates for either Federal, State, or local office, to political committees supporting particular candidates, or to na-

tional political parties. In addition, contributions could be made in connection with either general, special, or primary elections.

According to the revenue estimates made by the Committee on Finance in 1967, the revenue loss produced by the proposal would be modest—$50 to $60 million in presidential election years, and probably substantially less in other election years.

Mr. President, we are thoroughly familiar with the difficult problem of escalating campaign costs. I believe that the amendment I have proposed will provide a significant and effective step to alleviate the problem. I intend to call up the amendment for consideration at the appropriate time, and I ask unanimous consent that the text of the amendment be printed in the RECORD at this point.

The PRESIDING OFFICER. The amendment will be received and printed and will lie on the table; and, without objection, the amendment will be printed in the RECORD in accordance with the Senator's request.

The amendment (No. 409) is as follows:

At the proper place insert the following new section:

"SEC. ——. INCOME TAX CREDIT FOR POLITICAL CONTRIBUTIONS

"(a) Allowance of Credit.—Subpart A of part IV of subchapter A (relating to credits allowable) is amended by renumbering section 41 as 42, and by inserting after section 40 (as added by section —— of this Act) the following new section:

"'SEC. 41. POLITICAL CONTRIBUTIONS.

"'(a) GENERAL RULE.—In the case of an individual, there shall be allowed, as a credit against the tax imposed by this chapter for the taxable year, an amount equal to one-half of so much of the political contributions as does not exceed $50, payment of which is made by the taxpayer within the taxable year.'"

"'(b) LIMITATIONS—

"'(1) MARRIED INDIVIDUALS.—In the case of a joint return of a husband and wife under section 6013, the credit allowed by subsection (a) shall not exceed $25. In the case of a separate return of a married individual, the credit allowed by subsection (a) shall not exceed $12.50.

"'(2) APPLICATION WITH OTHER CREDITS.—The credit allowed by subsection (a) shall not exceed the amount of the tax imposed by this chapter for the taxable year reduced by the sum of the credits allowable under section 33 (relating to foreign tax credit), section 35 (relating to partially tax-exempt interest), section 37 (relating to retirement income), and section 38 (relating to investment in certain depreciable property).

"'(3) VERIFICATION.—The credit allowed by subsection (a) shall be allowed, with respect to any political contribution, only if such political contribution is verified in such manner as the Secretary or his delegate shall prescribe by regulations.

"'(c) DEFINITIONS.—For purposes of this section—

"'(1) POLITICAL CONTRIBUTION.—The term "political contribution" means a contribution or gift of money to—

"'(A) an individual who is a candidate for nomination or election to any Federal, State, or local elective public office in any primary, general, or special election, or in any National, State, or local convention or caucus of a political party, for use by such individual to further his candidacy for nomination or election to such office;

"'(B) any committee, association, or organization (whether or not incorporated) organized and operated exclusively for the purpose of influencing, or attempting to influence, the nomination or election of one or more individuals who are candidates for nomination or election to any Federal, State, or local elective public office, for use by such committee, association, or organization to further the candidacy of such individual or individuals for nomination or election to such office;

"'(C) the National committee of a National political party;

"'(D) the State committee of a National political party as designated by the National committee of such party; or

"'(E) a local committee of a National political party as designated by the State committee of such party designated under subparagraph (D).

"'(2) CANDIDATE.—The term "candidate" means, with respect to any Federal, State, or local elective public office, an individual who—

"'(A) has publicly announced that he is a candidate for nomination or election to such office; and

"'(B) meets the qualifications prescribed by law to hold such office.

"'(3) NATIONAL POLITICAL PARTY.—The term "national political party" means—

"'(A) in the case of contributions made during a taxable year of the taxpayer in which the electors of President and Vice President are chosen, a political party presenting candidates or electors for such offices on the official election ballot of 10 or more States, or

"'(B) in the case of contributions made during any other taxable year of the taxpayer, a political party which met the qualifications described in subparagraph (A) in the last preceding election of a President and Vice President.

"'(4) STATE AND LOCAL.—The term "State" means the various States and the District of Columbia; and the term "local" means a political subdivision or part thereof, or two or more political subdivisions or parts thereof, of a State.

"'(d) CROSS REFERENCES.—

"'For disallowance of credits to estates and trusts, see section 642(a)(3).'

"(b) CLERICAL AND TECHNICAL AMENDMENTS.—

"(1) The table of sections for such subpart A is amended by striking out the last item and inserting in lieu thereof

"'Sec. 41. Political contributions.

"'Sec. 42. Overpayment of tax.'.

"(2) Section 642(a) (relating to credits against tax for estates and trusts) is amended by adding at the end thereof the following new paragraph:

"'(3) POLITICAL CONTRIBUTIONS.—An estate or trust shall not be allowed the credit against tax for political contributions provided by section 41.'

"(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years ending after December 31, 1969, but only with respect to political contributions payment of which is made after such date."

## ADJOURNMENT UNTIL 10. A.M. TOMORROW

Mr. KENNEDY. Mr. President, if there is no further business to come before the Senate, I move, in accordance with the previous order, that the Senate adjourn until 10 a.m. tomorrow.

The motion was agreed to; and (at 7 o'clock and 41 minutes) the Senate adjourned until tomorrow, Tuesday, November 9, 1969, at 10 o'clock a.m.

## NOMINATIONS

Executive nominations received by the Senate December 8, 1969:

IN THE ARMY

The following-named person for reappointment in the active list of the Regular Army of the United States, from temporary disability retired list, under the provisions of title 10, United States Code, section 1211:

*To be lieutenant colonel*

Harris, Arthur C., Jr., [redacted].

The following-named persons for appointment in the Regular Army of the United States, in the grades specified, under the provisions of title 10, United States Code, sections 3283 through 3294 and 3311:

*To be major*

Bates, William R., [redacted].
Beltran, Gilbert, [redacted].
Boyd, Eugene T., [redacted].
Champlin, Donald A., [redacted].
Josh, Joseph A., [redacted].
Madole, James E., [redacted].
Marelli, Lee R., [redacted].
Stanton, Harold M., [redacted].

*To be captain*

Atseff, Vladimir, [redacted].
Bessler, Robert M., [redacted].
Bratisax, Roland J., [redacted].
Childers, Charles K., [redacted].
Crouch, James E., [redacted].
Culley, Harold E., Jr., [redacted].
Gilbert, Johnnie R., [redacted].
Haselgrove, Leighton, [redacted].
Kraft, Reinhold J., [redacted].
Laslo, George S., [redacted].
Lewis, Gerald H., [redacted].
Prados, Alfred B., [redacted].
Roscelli, Joseph J., [redacted].
Russell, Nancy A., [redacted].
Shuler, Brigham S., [redacted].
Simpson, Samuel M., [redacted].
Smith, Floyd D., [redacted].
Stockton, Patrick D., [redacted].
Strong, William R., [redacted].
Townsend, Kenneth L., [redacted].
Ullman, Cornell L., [redacted].
Wagner, Jerry T., [redacted].
Wilson, James C., [redacted].

*To be first lieutenant*

Ackels, Alden D., [redacted].
Babich, James M., [redacted].
Beaty, James H., [redacted].
Burrow, Troy E., [redacted].
Carlson, Jack S., [redacted].
Carney, Marilyn M., [redacted].
Catalano, Thomas S., [redacted].
Clark, Philip E., Jr., [redacted].
Colie, Dennis G., [redacted].
Colliton, Jeffrey, [redacted].
Cook, Jeffrey M., [redacted].
Culver, Lyman C., [redacted].
Donovan, John J., [redacted].
Dragoo, Robert E., [redacted].
Eberlin, Lawrence J., [redacted].
Eiland, Lewis K., [redacted].
Esmay, Jerry D., [redacted].
Etzel, Stephen L., [redacted].
Evans, Larry D., [redacted].
Finegan, Ray D., [redacted].
Green, Herbert J., [redacted].
Haddick, John A., [redacted].
Harville, Jerry L., [redacted].
Hendrix, Kenneth N., [redacted].
Herrmann, William G., II, [redacted].
Howard, Duane L., [redacted].
Johnson, Harold L., [redacted].
Jones, George B., III, [redacted].
Junk, Robert J., Jr., [redacted].
Kelleher, Thomas J., Jr., [redacted].
Lewis, John C., [redacted].
Martin, John J., Jr., [redacted].
May, Jordan H., [redacted].
McHugh, Thomas J., [redacted].
Mihnovets, Nicholas, [redacted].

Smith, Mason E., xxx-xx-xxxx

The following-named scholarship student for appointment in the Regular Army of the United States in the grade of second lieutenant, under provisions of title 10, United States Code, sections 2107, 3283, 3284, 3286, 3287, 3288, and 3290.

Santiago Rijos, Juan G.

# HOUSE OF REPRESENTATIVES—*Monday, December 8, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

*The name of the Lord is a strong tower; the righteous man runs into it and is safe.*—Proverbs 18: 10.

Almighty God, who art a strong tower of defense to all who put their trust in Thee, we, Thy children, come to Thee with gratitude for Thy steadfast love and praying that Thou wilt continue to be our refuge and strength in every hour of need. Grant us insight and courage to shun the voice of moral compromise and to shy away from all that is morally questionable.

In hours of decision, during times of temptation, through days of responsibility, and amid periods of suffering may we have the royalty of an inward peace that comes to those whose minds are stayed on Thee. Teach us to value a clear conscience, a clean mind, a pure heart, and a sense of Thy presence before all the honors earth can bring to us.

In thought, word, and deed may we glorify Thy holy name as we seek the good of all mankind. Amen.

## THE JOURNAL

The Journal of the proceedings of Thursday, December 4, 1969, was read and approved.

## MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 2325. An act to amend title 5, United States Code, to provide for additional positions in grades GS–16, GS–17, and GS–18; and

S. 2869. An act to revise the criminal law and procedure of the District of Columbia, and for other purposes.

The message also announced that the Presiding Officer of the Senate, pursuant to Public Law 115, 78th Congress, entitled "An act to provide for the disposal of certain records of the U.S. Government," appointed Mr. McGee and Mr. Fong members of the Joint Select Committee on the Part of the Senate for the Disposition of Executive Papers referred to in the report of the Archivist of the United States numbered 70–2.

## ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. The Chair desires to announce that pursuant to the authority granted him on Thursday, December 4, 1969, he did on that day sign the following enrolled joint resolution of the House:

H.J. Res. 1017. Joint resolution making further continuing appropriations for the fiscal year 1970, and for other purposes.

And on Friday, December 5, 1969, signed an enrolled bill of the Senate as follows:

S. 118. An act to grant the consent of Congress to the Tahoe regional planning compact, to authorize the Secretary of the Interior and others to cooperate with the planning agency thereby created, and for other purposes.

## EQUAL RIGHTS FOR MEN AND WOMEN

(Mr. VAN DEERLIN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. VAN DEERLIN. Mr. Speaker, I am today introducing an amendment to the Constitution to provide for the equal rights of men and women.

I understand that 199 of our colleagues have already offered this resolution, and it is a distinct pleasure for me to join this distinguished and rapidly growing company.

An old and dear friend of mine, Miss Louise McLean, of San Diego, has been among the stanchest advocates of this amendment. Miss McLean, who is 88, came naturally by her concern for the rights of women. Her late mother, Sally Hart, was a lifelong fighter for women's right to vote, and is well remembered for her struggles on behalf of working women in Cincinnati.

Adoption of the equal rights resolution would not only be an act of simple justice; it would also be a fitting tribute to the many who, like Louise McLean, have labored so long in this worthy cause.

## IS THE PAST PROLOGUE?

(Mr. ANDERSON of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ANDERSON of California. Mr. Speaker, when looking to the new year, I want very much to be optimistic. I would like to think that the economic picture will get brighter.

I then remember the statement etched in the granite of the National Archives Building here in Washington. The words are simple—"The Past Is Prologue."

It is depressing to think that the past months reflect what is in store for the Nation's economy in 1970. Prices have risen to an unacceptable level; interest rates are exorbitant.

The administration's "fight" against inflation has resulted in the highest interest rates in our history. These high rates have proven a severe blow to certain segments of the economy; namely, the home buyer and the small businessman and the consumer. The only institutions that stand to gain by the exorbitant interest rates are the big Wall Street banking conglomerates.

The cost of living is increasing at a rate no one can afford. If the consumer price index continues to rise at the present rate, the average consumer, already facing difficulties in the marketplace, faces a gloomy 1970.

I join with a vocal majority in again urging the administration to make a new year's resolution to initiate measures designed to lower interest rates, and to reduce prices.

## JUVENILE CRIME

(Mr. KLEPPE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KLEPPE. Mr. Speaker, juvenile crime is the most pressing and threatening aspect of the crime problem. The arrests of juveniles has increased 78 per cent from 1960 to 1968, while the under-18 age group has only increased by 25 percent. With the alarming increases in crime statistics, it is disturbing to know that the juvenile statistics represent only the beginning of a career in crime for many young offenders.

I have joined in cosponsoring legislation which, I believe, attacks the root causes of juvenile crime. The legislation, if approved, will create the Institute for Continuing Studies of Criminal Justice.

The Institute will serve as the focal point for the dissemination of information and knowledge throughout the country in juvenile treatment and control.

In addition, the Institute, modeled after the highly successful FBI Academy,

will offer training by experts for local law enforcement officers, judicial personnel, welfare officials, correctional officers, probation officers, and others connected with the treatment and control of juvenile offenders.

Failure to deal effectively with criminals and failure to deal effectively with the causes of crime has become a near disaster for this country.

The legislation I have cosponsored is designed to strike at the very heart of crime before the statistics climb even higher.

## PERMISSION TO SUBCOMMITTEE ON PUBLIC WELFARE, COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, TO SIT DURING GENERAL DEBATE TODAY

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Subcommittee on Public Welfare of the Committee on Interstate and Foreign Commerce may sit during general debate today.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

## CALL OF THE HOUSE

Mr. MONTGOMERY. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 304]

| | | |
|---|---|---|
| Abbitt | Evans, Colo. | Michel |
| Anderson, Ill. | Farbstein | Minish |
| Andrews, N. Dak. | Fascell | Morton |
| | Findley | Murphy, N.Y. |
| Barrett | Fish | Nichols |
| Beall, Md. | Foley | Nix |
| Bell, Calif. | Frelinghuysen | O'Hara |
| Betts | Fulton, Tenn. | O'Neal, Ga. |
| Bingham | Galifianakis | Ottinger |
| Blackburn | Gallagher | Patman |
| Blatnik | Gettys | Pepper |
| Boland | Giaimo | Poage |
| Brademas | Green, Oreg. | Podell |
| Brotzman | Green, Pa. | Powell |
| Brown, Calif. | Griffin | Price, Ill. |
| Buchanan | Gubser | Reid, N.Y. |
| Burton, Utah | Hagan | Reifel |
| Bush | Halpern | Robison |
| Button | Hammer-schmidt | Rodino |
| Cahill | | Roe |
| Carey | Hanley | Rogers, Colo. |
| Casey | Harrington | Rooney, Pa. |
| Celler | Hays | Rosenthal |
| Chisholm | Hébert | Ruppe |
| Clark | Heckler, Mass. | Ryan |
| Clay | Helstoski | St Germain |
| Conyers | Horton | St. Onge |
| Corbett | Hosmer | Sandman |
| Cowger | Jones, N.C. | Scheuer |
| Cramer | Jones, Tenn. | Smith, Iowa |
| Daniels, N.J. | Kirwan | Staggers |
| Dawson | Koch | Taft |
| Delaney | Landrum | Taylor |
| Dent | Lipscomb | Tiernan |
| Diggs | Lukens | Tunney |
| Dingell | McCarthy | Ullman |
| Eckhardt | McClure | Utt |
| Edmondson | McKneally | Weicker |
| Edwards, Ala. | Macdonald, Mass. | Whalley |
| Edwards, Calif. | | Wright |
| Edwards, La. | Mailliard | Wydler |
| Eilberg | Meeds | Young |

The SPEAKER. On this rollcall, 310 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

## NATIONAL FOOTBALL CHAMPIONS—UNIVERSITY OF TEXAS

(Mr. PICKLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PICKLE. Mr. Speaker, the University of Texas fans everywhere—when we won the national collegiate football championship Saturday—have accepted the praises of the football world in typical Texan modest fashion. We did not chant "We're No. 1," at least for the first three quarters of the game on Saturday. At the finish we were so elated that we realized we were fortunate to just "cool it"—until now, that is. The Razorbacks have a tremendous team and deserve great praise. But I do not think they figured our Longhorns would go for broke or could save that game. It just shows you what a lot of Longhorns can do under the leadership of the best football coach in America, Coach Darrell Royal. The game was a great credit to college sports everywhere, and it will live forever as one of the best college games ever played.

The University of Texas, which is in my district, is proud to be No. 1; and we are doubly proud that we do not have to play Arkansas again until next year. Meanwhile, we are honored to lay claim—no matter what Pennsylvania might say—to the No. 1 collegiate football team in America today, and at least until next year we can savor the sweetness of that claim—how sweet it is.

Mr. WAGGONNER. Mr. Speaker, will the gentleman yield?

Mr. PICKLE. I yield to the gentleman from Louisiana.

Mr. WAGGONNER. The gentleman has taken the typical winner's attitude. I wonder why he did not take the microphone and make his talk with confidence before the ball game. I readily admit you have a great football team and I will be pulling for them New Year's Day.

Mr. PICKLE. I was making those statements before the game. In fact, I was talking louder about it before the game than I was after the game.

Mr. DERWINSKI. Mr. Speaker, will the gentleman yield?

Mr. PICKLE. I yield to the gentleman from Illinois.

Mr. DERWINSKI. I would recommend that the gentleman wait until the New Year's Day Cotton Bowl when the Fighting Irish of Notre Dame and their Polish stars come down to show which team is No. 1.

Mr. PICKLE. I will say to the gentleman it will take more than prayer to win that game, but by that time we will have had all of the bad habits out of our system and we will be ready.

Mr. GONZALEZ. Mr. Speaker, will the gentleman yield?

Mr. PICKLE. I yield to my colleague from Texas.

Mr. GONZALEZ. I thank the gentleman from Texas. He ought to have the support of every other Texan here at this crucial moment. I will say categorically now beforehand what will happen to the Fighting Irish when the Texas Longhorns meet them: We will "hook them."

Mr. PICKLE. Indeed we will. I thank my colleague.

## SUPPORT OF LEGISLATION TO REVISE AND UPDATE IMMIGRATION AND NATIONALITY ACT

(Mr. DERWINSKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DERWINSKI. Mr. Speaker, I was pleased to join as a cosponsor of the bill introduced on December 4, by Congressman MICHAEL A. FEIGHAN, to improve the Immigration and Nationality Act. My cosponsorship is basically intended to help bring the bill to the floor where the House can work its will in taking into account the complications that we recognize are inherent in the present law.

Having voted for the 1965 act, I believe that the intent of Congress was to update immigration procedures but not to interfere with the historic immigration pattern to the United States. I believe the law as interpreted and implemented and the results we now perceive were not those truly envisioned by Congress.

It is my hope that the Judiciary Committee will give this matter priority attention and the Congress can act on this measure some time in 1970.

## THE GREAT PENN STATE FOOTBALL TEAM

(Mr. FULTON of Pennsylvania asked and was given permission to address the House for 1 minute.)

Mr. FULTON of Pennsylvania. Mr. Speaker, we have many outstanding football teams this year in the United States, and are proud of the many teams at the top with records of many victories and high sportsmanship. We from Pennsylvania think that we have the championship team of the country at Penn State. Pennsylvania State University football team has the longest string of victories of any major college or university in the country against top-flight competition. Texas and Arkansas are good teams, too, and I congratulate them both on a fine game. I would suggest to the gentleman from Texas that they might sometime come around to the State of Pennsylvania and see how many more Pennsylvania fellows you have on your Texas teams than you have come up to our State and recruited.

Likewise, another team, Notre Dame, I believe, is doing pretty good, too, and we have a lot of Pennsylvania boys on that team, too. I think we in Pennsylvania have been supplying most of the country with good football material, from New England to Miami, from the Midwest to the Southwest to the west coast.

Mr. HUNGATE. Mr. Speaker, will the gentleman yield?

Mr. FULTON of Pennsylvania. I yield to the gentleman from Missouri.

Mr. HUNGATE. I suggest to the gen-

tleman from Pennsylvania that he may think that Penn State has the No. 1 team in the Nation and will so demonstrate, he thinks, but wait until Missouri finishes with them January 1.

Mr. FULTON of Pennsylvania. I hope the gentleman will be down in Miami at the Orange Bowl on January 1. Last year we at Penn State were counted out with Kansas State until the last minute of play. But it turned out to be Penn State again, with a fine victory over a really top-flight team.

Mr. KAZEN. Mr. Speaker, will the gentleman yield?

Mr. FULTON of Pennsylvania. I yield to the gentleman from Texas.

Mr. KAZEN. I appreciate the fact that the gentleman did not state that Penn State was No. 1.

Mr. FULTON of Pennsylvania. I thought I had said that Penn State was football champion this year. We do not win our championship games 15 to 14, I would like to point out to my good friend. When we win them, we really win them in Pennsylvania.

Mr. KAZEN. What was the score of the Syracuse game?

The SPEAKER. The time of the gentleman from Pennsylvania has expired.

## GODDARD ROCKET AND SPACE MUSEUM

(Mr. FOREMAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. FOREMAN. Mr. Speaker, America today enjoys the honor of placing the first men on the moon, thanks to many early, historic developments by men who faced the unknown in rocketry. Such a man was Dr. Robert H. Goddard, who conducted his experiments in my home State of New Mexico. The city of Roswell has tried to advance the knowledge and awareness of the contributions of Dr. Goddard. A new high school is named in his honor, and in April 1959, the Goddard Rocket and Space Museum at Roswell was dedicated. Recently added was an exact replica of Goddard's workshop and a fine new Goddard Planetarium.

Dr. Wernher von Braun refers to Dr. Goddard as the "Father of the Rocket." Mr. Rogers Aston, Curator of the Goddard Museum says:

> The fact that old Glory waves proudly on the face of the moon is due in large part to the pioneer work of Dr. Goddard in Roswell from 1930 to 1941.

Mr. Speaker, I am introducing legislation today which provides for congressional recognition of the Goddard Rocket and Space Museum. This legislation provides that the Congress recognizes the museum as a fitting memorial to Dr. Goddard as an appropriate and outstanding institution for the collection, preservation, and display of the works and memorabilia of Dr. Goddard. The resolution follows:

H. CON. RES. 464

*Resolved by the House of Representatives (the Senate concurring)*, That the Congress hereby recognizes the Goddard Rocket and Space Museum of the Roswell Museum and Art Center, Roswell, New Mexico, as a fitting memorial to Doctor Robert H. Goddard, who pioneered in rocket experimentation and contributed to America's success in landing men on the moon, and who is known as the "Father of the Rocket," and as an appropriate and outstanding institution for the collection, preservation, and display of the works and memorabilia of Doctor Goddard.

## DEPARTMENT OF DEFENSE APPROPRIATIONS, 1970

Mr. MAHON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 15090) making appropriations for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes; and pending that motion, Mr. Speaker, I ask unanimous consent that general debate be limited to not to exceed 3 hours, the time to be equally divided and controlled by the gentleman from Ohio (Mr. MINSHALL) and myself.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER. The question is on the motion offered by the gentleman from Texas.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 15090, with Mr. ROSTENKOWSKI in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the unanimous-consent agreement, the gentleman from Texas (Mr. MAHON) will be recognized for 1½ hours and the gentleman from Ohio (Mr. MINSHALL) will be recognized for 1½ hours.

The Chair recognizes the gentleman from Texas.

Mr. MAHON. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, we come now to the consideration of the largest money bill of the session, and we approach the end of the appropriation business of the session insofar as House consideration of appropriation bills is concerned. This is the 19th appropriation bill or resolution presented to the House at this session.

I might say that in respect to the appropriation bills considered by the House thus far this year, dealing with the fiscal year 1970, the House is about even with the President's budget—below in some and above in others. But the reduction in the budget for defense is $5.3 billion in appropriations requested, which translates into a reduction in outlays or expenditures of approximately $3 billion. So, when we take into consideration this bill—and if it passes in this form—we will be about $5.3 billion below President Nixon's April budget in appropriations, and we will be approximately $2.8 billion below his April expenditure estimates insofar as action in the appropriation bills is concerned.

FUNDS PROVIDED

Self-preservation, as I think we all know and believe, is the first law of nature and the first law of nations. One of the important elements in self-preservation of a nation is military power. It is a vital element but, of course, not the only element.

In this bill today we are providing for the survival and strengthening of the Nation the sum of $69.9 billion in new spending authority for defense. When we compare this sum to that of prior years, we find that the bill this year, as it is being presented to the House, is below last year and below the year before. But to get a better comparison, we would have to add to the $69.9 billion in this bill, about $2.1 billion, which we will have to provide in a supplemental bill next session for the pay increase money for the military and for all the civilian employees of the Government. So, if we consider the roughly $2.1 billion now expected to come later, the appropriation for defense for this year would be about $72 billion.

In comparison, for fiscal 1969, the total appropriated in all the categories covered in this bill was $74.4 billion, so we are below that for last year, very decidedly.

For the prior year, fiscal year 1968, the total appropriation was $74.1 billion, so on the present basis the fiscal 1970 total will be below that year also.

On the same basis, we will be about on a par with the fiscal year 1967.

If we go back to about 10 years ago, fiscal year 1960, we then appropriated about $40 billion for defense.

If we go back to the fiscal year 1956, we appropriated about $31 billion for defense.

These quick comparisons put the total of today's bill in some better perspective.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I am glad to yield to my friend from Iowa.

Mr. GROSS. The gentleman gave a figure of $69,960,000,000; in other words, a round figure of $70 billion, which does not include the pay increase. Did the gentleman put a cost on that of approximately $2 billion?

Mr. MAHON. About $2.1 billion. That is the estimate.

Mr. GROSS. About $2.1 billion?

Mr. MAHON. Yes.

Mr. GROSS. I thank the gentleman.

Mr. MAHON. That would be the total for pay increases.

Mr. GROSS. That will come in the supplemental to be considered later this week or next week.

Mr. MAHON. No. This would be considered probably late in the spring of next year.

Mr. GROSS. A supplemental next year?

Mr. MAHON. Yes. It will not come at this session because these funds are not required until much later in the current fiscal year. The services have ample funds to pay military and civilian personnel in keeping with the increased pay scales until we are well into the next calendar year.

Mr. GROSS. I thank the gentleman.

CARRYOVER FUNDS

Mr. MAHON. In prior years we have had numerous supplemental bills as the war escalated. Now the war is deescalating. Unless it is again escalated, there is no thought that there will be a supplemental in the sense that we have had Southeast Asia supplementals in prior years.

Of course, we are already well into the current fiscal year. By the time this bill is signed into law, about half the fiscal year will have elapsed.

While we are talking about the $69.9 billion available to the Defense Department—and this does not include certain other items of defense such as military construction—there was a carryover into this fiscal year from the last fiscal year of about $39 billion of unexpended funds. These are funds appropriated in prior years for such things as Navy ships, aircraft, and long leadtime items generally. These types of funds do not spend out in the year for which they are appropriated.

So while the Defense Department will not be entirely happy with the reductions made in this bill, officials will have available for all purposes during the current fiscal year, if this bill is approved, the total sum of about $109 billion.

This gives us a little better view of what this massive, this monumental, this unbelievably big job of defense really is.

I yield to the gentleman from Ohio.

Mr. VANIK. I thank the gentleman for yielding. The gentleman in the well, the distinguished chairman, has answered the question I had in mind, and I thank him very much.

STRATEGIC ARMS LIMITATION TALKS

Mr. MAHON. Mr. Chairman, I believe all of us feel, in view of the heavy demands on the taxpayer for various Federal programs—heavy demands for defense and nondefense—there is an urgent need to slow down the arms race, if this is reasonably possible. Certainly we must try and try with our might to slow down the arms race.

As Members know, in Helsinki, Finland, talks between our country and the U.S.S.R. have already begun looking toward a reduction in strategic weapons. They are preliminary in nature. This is called the strategic arms limitation talks, SALT.

I cannot help believing that the Soviet Union, which is lacking in so many consumer goods and so many domestic programs, would like to slow down the arms race.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. MAHON. Mr. Chairman, I yield myself 10 additional minutes.

Of course, the Soviet Union has Red China on its border and the Soviet Union must consider in its defense plans and weapons programs its status in western Europe and its status vis-a-vis Red China. However, it would seem to me there ought to be some possibility that these SALT discussions could prove to be productive. It is encouraging to note that as of the present, apparently, the Soviet Union has not tried to make a lot of international propaganda out of these talks.

Of course, the Government of the United States and the people of the United States want to slow down the arms race if there is some foolproof, absolutely reliable system whereby this objective can be achieved. I think it must be said, though, that, if we have to have a continuation of the arms race, then the United States is far more able to participate in it than the Soviet Union. We are reducing the percentage of our gross national product that we are applying to the defense budget this year. Defense spending in fiscal year 1970 is approximately 8 percent of our gross national product. The percentage of the gross national product of the Soviet Union devoted to defense is much, much higher than that of the United States.

I think we all, as we appropriate these funds today as one of the elements in the survival of our free society, can look hopefully to the possibility of achieving some sort of accommodation which may permit us to level off the arms race to some degree.

Mr. Chairman, we all recognize that various civilian programs, domestic programs, are claiming more and more of the funds which are available for expenditure. At a later point, I would like to present to you a statement in regard to the business of defense spending vis-a-vis domestic spending.

ADVANCES IN TECHNOLOGY—THE PROBLEM OF OVERRUNS

Mr. Chairman, in considerable measure, cost overruns in defense programs have resulted from the almost unbelievable advances which have been in technology in the past 20 years. Original cost estimates cannot be considered as anything but hopeful guesses when they relate to the development and procurement of weapons which are on the borderline or beyond the state of the art in technology at the time the estimate is made. When engaged in pushing forward the frontiers of knowledge, it is impossible to make accurate cost predictions. Each item is unique. No one ever built one before. Adequate experience is not available upon which to make precise cost estimates.

In addition, development programs require years for completion. Unforeseen problems arise. If there were no problems, a development program would not be required. When original cost estimates for weapons or equipment include production costs as well as development costs, the problem is further complicated.

Both government and industry people are notoriously optimistic in calculating the cost of a project and the time required to complete it. Inflation is an important factor in the equation. Often innumerable changes and improvements are made in the original project and this adds to the cost. If a weapon system is urgently required, and if there is no graft or fraud, or misrepresentation and if the Government gets a dollar in value for each dollar expended, the fact that a cost overrun occurs is not of overriding importance. This is not said to excuse poor estimating or bad management.

We have produced many amazing new weapons since World War II, such as the ICBM and the Polaris submarine, and the advances in technology are continuing.

In the late 1950's, when the intercontinental ballistic missile, which was itself one of our most notable technical achievements, appeared upon the scene, it was referred to by many as the ultimate weapon. It was widely believed that no defenses could prevent an ICBM from striking its target and perhaps no reasonably adequate defense can be perfected. Yet at this time, only ten years later, the Soviet Union has developed and deployed an anti-ballistic-missile system of sorts around Moscow and the United States has fired defensive missiles at incoming ICBM's at the Kwajalein Island complex in the Pacific with what appears to be some degree of success. We are now starting the deployment of a limited ABM system. Just how effective the U.S.S.R. and the U.S. systems may become is a matter of conjecture. But the effort to find a defense against the intercontinental ballistic missile must be made.

Government and industry are stretching the state of the art in seeking to make more effective our aircraft, ships, tanks, missiles, radars and multitudinous other facets of defense and offense. One of our problems is that many weapons are becoming so complex they are too difficult for field personnel to operate. Greater reliability under field conditions is urgently needed.

We can hardly complain that the military seek to accomplish in weaponry what may appear to be the impossible. This is the road—the difficult and expensive road I should say—to advancement and to making our country more secure.

There was a tendency to look with dismay upon the feat of the Cuban defector flying a Mig fighter from Cuba into Homestead Air Force Base near Miami without early detection. As of this time, there simply is no fully acceptable and reliable way to make an early detection in every instance of the approach of an aircraft which skims the surface. Of course, if we blackened the skies with aircraft all the way around the perimeter of the United States, a reasonably early detection of any low flying aircraft could be made.

In considering the matter of cost overruns, it is well to keep in mind that this problem is not confined to the Department of Defense. Almost every agency of the Federal Government has been hit hard by the same problem. Take our space program, for example, where we have had spectacular success in the last couple of years. The lunar module, which so magnificently landed and removed our brave astronauts from the surface of the moon, was originally estimated to cost $387 million. Its currently estimated cost is $2.1 billion, a 500 percent increase. And there are others. Here in the Nation's Capital, for instance, the John F. Kennedy Center for the Performing Arts was estimated to cost $46.4 million. Its presently estimated cost is $66.2 million, a 46 percent cost overrun. Our Interstate Highway System, which involves almost every State in the Union, was originally estimated to cost $27.6 billion for the 41,000 mile interstate system. To-

day, the cost estimate for the same number of miles is $56.5 billion, a 104 percent increase.

In 1965, when medicare was enacted, hospital insurance benefits were estimated at $2.9 billion for calendar 1970. The latest estimate for 1970 is $5.6 billion, an increase of 93 percent.

I call attention to the committee report in regard to cost overruns. On account of the increased emphasis on this problem, this year, there is a sound basis to hope that a better job will be done in the future and the Committee on Appropriations will continue to move toward that objective.

A special word of caution is in order with respect to possible future overruns. It is inevitable that some cost overruns will occur—in aircraft programs, ship programs, and other programs.

In the ABM program, the complexities are so great one must not be surprised if overruns occur. Additional costs are bound to arise as we move forward with this highly complex and expensive effort to protect our people against the threat of the intercontinental ballistic missile and the sublaunched ballistic missile.

DEFENSE VERSUS NONDEFENSE SPENDING

While on the subject of expenditures, now generally called outlays, I believe it is important to note that, from 1964 to 1970, defense expenditures have increased by $27 billion and this is mostly explained by the war. During this same time period, however, other agencies of the Federal Government have increased their expenditures by over $47 billion.

Let me try to bring this expenditure picture into better focus by looking at the last couple of years. From fiscal year 1968 to fiscal year 1970, defense expenditures actually declined slightly, while the other agencies of the Government increased their expenditures by $12.4 billion.

It is also interesting—as I have noted—that military outlays, as a percentage of the gross national product, are estimated to be 8.1 percent in fiscal year 1970 as compared with 9.5 percent in fiscal year 1968. The 8.1 percent estimated is below the pre-Vietnam year of 1964, and well below the levels of the 1950's and early 1960's.

My purpose in citing these statistics is to make it clear that the Defense budget alone has not been responsible for our inflationary trend in recent years. We need to look at both sides of the coin. It has been alleged that the needs of the domestic front are being neglected in our effort to maintain a strong military posture. The facts do not support this premise.

The CHAIRMAN. The time of the gentleman from Texas has again expired.

Mr. MAHON. Mr. Chairman, I yield myself 10 additional minutes.

VIETNAMIZATION PROGRAM

We are all interested, of course, in the Vietnamization of the war—and in what this bill does to bring the war in Vietnam toward a conclusion. I think it would be well to consider that in this bill we are providing more than one-half billion dollars to accelerate the Vietnamization program.

The Vietnamization program has been going on throughout the war in Vietnam. We have supplied the South Vietnamese with vast quantities of fighting equipment and provided training. It is the policy of the Government to accelerate the Vietnamization program.

President Johnson in making the speech on March 31, 1968, in which he announced that he would not seek reelection, made this statement:

> Our presence there—

And he was referring to Vietnam—

> has always rested on this basic belief: The main burden of preserving their freedom must be carried out by them—by the South Vietnamese themselves. * * *
>
> That has been the philosophy of our government in the past. It is the philosophy of our government at this time.

Continuing to quote from President Johnson's speech:

> We and our allies can only help to provide a shield—behind which the people of South Vietnam can survive and can grow and develop. On their efforts—on their determinations and resourcefulness—the outcome will ultimately depend.

Quoting further from President Johnson's speech of March 31, 1968:

> We shall accelerate the reequipment of the South Vietnamese armed forces in order to meet the enemy's increased firepower. This will enable them progressively to undertake a larger share of combat operations against the Communist invaders.

The Vietnamization program is one which we have supported in the past and, of course, it is a program which we are supporting today. We want to achieve the Vietnamization of the war to the greatest possible extent and as rapidly as we can.

We have provided vast sums for ammunition, for weapons, for rifles and for modern equipment for the South Vietnamese. This program has been financed in prior bills, often in supplemental bills, and it is being further financed in this bill.

While we cannot predict when the war will end and we cannot predict whether the Vietnamization of the war will succeed, it is a continuing program of the Government and we propose to give this program every opportunity to succeed.

Later I shall ask permission to add in the RECORD certain additional information in regard to what this bill contains for the Army, Navy and Air Force and for the various forces. But I feel I should conclude presently in order to leave time for others who wish to speak.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Illinois.

Mr. PUCINSKI. The chairman has made an excellent statement. I desire to pursue, if I may briefly, his remarks about overruns. It is my understanding that in this bill an amount of about $7 billion is necessitated by overruns. The gentleman has said that if there is no waste and no fraud, an overrun is acceptable. I was wondering what is the legal position of the second lowest bidder? What is the legal position of the second lowest bidder defense contractor if the lowest bidder subsequently comes in with an overrun claim? We seem to be, I gather from the gentleman's remarks, too tolerant of overruns. I gather from the gentleman's remarks that he is very tolerant of overruns, and I am wondering—this whole practice of accepting revised costs of defense contracts as additional costs, which the gentleman said is precipitated by inflation—I am wondering if this acceptance of overruns does not make a fraud of the whole competitive bidding system on defense contracts. I wonder if the gentleman has a comment he could make on that?

Mr. MAHON. I will be glad to comment on that. The position of the second lowest bidder, of course, is this: if the bidder with the lowest bid is a responsible bidder, he, of course, gets the contract. The trouble on so many defense contracts is that the trend of the development program is rather unpredictable, and it is true that certain defense contractors undertake to bid as low as possible with the thought that the revisions and additions which may upgrade the weapon, or changes which may be made upon the recommendation of the Defense Department will enable the contractor to protect himself economically by the additional funds which are provided for upgrading the program. This, of course, is a practice which must certainly be discouraged. I do not condone cost overruns at all. I do not mean that. I am trying to get the problem in a better focus.

A cost overrun does not indicate that there has been dishonesty or fraud, perhaps not even deceit.

Mr. RHODES. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Arizona.

Mr. RHODES. I believe the chairman would also agree with me that most of the items which the military buys are not "off the shelf" items. In other words, you do not make a Spartan missile every day, and you do not have any experience from someone else who has made one. The point that the gentleman from Illinois made is a good point, because the Department of Defense does find itself in a position of not only trying to get the lowest responsible bidder but it has to be sure also, that he did not bid so low as to be an unconscionable bid, with the hope of buying in on the contract later on. This is the tightrope which the Department of Defense has tried to walk. The gentleman's point is well made.

Mr. MAHON. I would like to say in connection with this bill that we have had excellent cooperation from the Department of Defense. Our former colleague, Secretary Laird, has cooperated with the committee very well indeed. And this can be said of the service Secretaries and the members of the Joint Chiefs of Staff.

It should be said that not all our reductions have been approved by defense officials but many have been. No doubt changes will be sought in the Senate version of the bill.

We have tried to put the imprint of the Congress on this bill. We think it is a bill that liberals and conservatives, Democrats and Republicans, can all support. I realize we all want to move toward adjournment of this Congress, and passage of this bill is one of the important

requirements before we can conclude. After we pass this bill, we will have the foreign aid bill and a supplemental, and that will conclude the 21 bills and resolutions from the Appropriations Committee for this session of Congress.

APPRECIATION OF SUBCOMMITTEE AND STAFF

Mr. Chairman, I cannot conclude without expressing my deepest appreciation for the fine work which has been performed on this bill by all members of the subcommittee. I take pride in serving on the committee with the gentleman from Florida (Mr. SIKES), the gentleman from Mississippi (Mr. WHITTEN), the gentleman from Alabama (Mr. ANDREWS), the gentleman from Pennsylvania (Mr. FLOOD), the gentleman from West Virginia (Mr. SLACK), the gentleman from New York (Mr. ADDABBO), the gentleman from California (Mr. LIPSCOMB), the gentleman from Ohio (Mr. MINSHALL), the gentleman from Arizona (Mr. RHODES), and the gentleman from Wisconsin (Mr. DAVIS). These men deserve the thanks of the Congress and the American people.

Now let me refer to the staff.

It would be difficult to exaggerate the importance of the staff in the preparation of a bill of this importance and magnitude. Members of the staff have labored through months of hearings, working early and late in the preparation of the material which has been utilized by the committee, in the drafting of the report and the performance of many other important duties too numerous to mention. They are due a special vote of thanks.

I wish to list for the RECORD these able and dedicated men who have meant so much to the subcommittee in the preparation of the pending bill. They are as follows: Robert L. Michaels, Ralph Preston, John Garrity, Peter J. Murphy, Robert B. Foster, and Austin Smith.

The chief staff man on Defense—Mr. Robert Michaels is retiring this year after more than 18 years of distinguished and dedicated service with the Committee on Appropriations. I wish to personally congratulate him for his long and able service and wish him good luck in his future undertakings.

Mr. Ralph Preston who has served with the committee for 18 years—a man of unquestioned talent and ability—will succeed Mr. Michaels as chief of the Defense staff.

SUMMARY OF BILL

Under permission granted to revise and extend my Remarks, I shall include a summary of the details of the various titles of the bill, and include a tabulation:

SUMMARY OF BILL BY MAJOR CATEGORIES

| Functional title | Appropriation, fiscal year 1969 (new budget obligational authority) | Budget estimate, fiscal year 1970 (new budget obligational authority) [1] | Committee bill | Committee bill compared with— Appropriation, 1969 | Committee bill compared with— Budget estimate, fiscal year 1970 |
|---|---|---|---|---|---|
| Title I—Military Personnel | [2] $23,877,103,427 | $24,376,900,000 | $21,057,200,000 | −$2,819,903,427 | −$3,319,700,000 |
| Title II—Retired Military Personnel | ([3]) | ([3]) | 2,735,000,000 | +2,735,000,000 | +2,735,000,000 |
| Title III—Operation and Maintenance | 22,355,818,000 | 21,792,100,000 | 20,878,100,000 | −1,477,718,000 | −914,000,000 |
| Title IV—Procurement | 20,619,500,000 | 20,886,800,000 | 18,092,148,000 | −2,527,352,000 | −2,794,652,000 |
| Title V—Research, Development, Test, and Evaluation | 7,549,828,000 | 8,222,400,000 | 7,197,600,000 | −352,228,000 | −1,024,800,000 |
| Total | [2] 74,402,249,427 | 75,278,200,000 | 69,960,048,000 | −4,442,201,427 | −5,318,152,000 |
| Distribution by organizational component: | | | | | |
| Army | [2] 24,473,208,223 | 23,955,300,000 | 22,348,000,000 | −2,125,208,223 | −1,607,300,000 |
| Navy | [2] 20,698,463,204 | 22,804,000,000 | 20,809,548,000 | +111,084,796 | −1,994,452,000 |
| Air Force | 25,058,824,000 | 23,959,434,000 | 22,359,634,000 | −2,699,190,000 | −1,599,800,000 |
| Defense Agencies/OSD | 4,171,754,000 | 4,559,466,000 | 4,442,866,000 | +271,112,000 | −116,600,000 |
| Total, Department of Defense [4] | [2] 74,402,249,427 | 75,278,200,000 | 69,960,048,000 | −4,442,201,427 | −5,318,152,000 |

[1] January 1969 budget, as amended in H. Doc. 91–100.
[2] Includes amounts warranted by Treasury Department pursuant to P.L. 91–31.
[3] Included under "Military Personnel."
[4] Includes funds for "Retired Pay Defense."

OPERATIONS

Mr. Chairman, operating funds including both military personnel and operation and maintenance, are used to support the everyday operations of our Armed Forces in Vietnam, other areas overseas, and in the United States. The budget request was for a total of $43,434,000,000. The reduction made by the committee is $1,498,700,000. Operating funds recommended in the bill are $41,925,300,000 This amount represents about 60 percent of the total amount recommended in the bill.

The funds included in the bill will support day-to-day operations of our military establishment. Funds are included to support a total active duty military personnel strength of 3,235,100 at the end of fiscal year 1970, a reduction of 216,800 below the revised budget estimate of April 15, 1969. Some of the major military components to be supported include 17 Army and 3⅓ Marine divisions, 11 Army brigades, about 770 ships of the active fleet, 23 carrier air groups, three Marine air wings, 66 Air Force combat air wings, and 118 Air Force support squadrons.

The principal reductions in operating funds relate to the announced decisions by the Department of Defense in such areas as troop withdrawals from Vietnam and Thailand, reduced operations in other areas of the world, reductions in military personnel end-strength, base closures, ship and aircraft deactivations, and cutbacks in other operations. These reductions were made in part to comply with the governmentwide expenditure limitation enacted in the Second Supplemental Appropriation Act, 1969, Public Law 91–47. Total reduction relating to these actions were $920,070,000.

Curtailment of operations in Southeast Asia was initiated by the Department of Defense as a part of the Vietnamization program. The committee has relied heavily on the guidance of officials of the Department of Defense in reducing the funding of items directly related to the war in Southeast Asia. Further withdrawals of U.S. forces may make additional funding reductions possible during the remainder of this fiscal year, but the committee has not deleted funds on this basis. The enemy could again escalate the intensity of combat and the committee does not want American forces to be placed in jeopardy by shortages of needed supplies and equipment if this should occur.

As was pointed out in the hearings, the committee is concerned that too rapid withdrawal of some U.S. forces could imperil the forces which remain. Every precaution must be taken to avoid this situation.

MILITARY PERSONNEL

SCOPE OF THE BILL

The bill includes appropriations totaling $21,057,200,000 for military personnel and $2,735,000,000 for "retired pay, Defense." Appropriations made under listed personnel while on active duty, including such items as basic pay, special pay, quarters allowances, subsistence, clothing allowances, various allowances for duty overseas, separation payments, social security contributions, and various reenlistment bonuses. Also included is permanent change of station travel which provides for such items as the travel of the individual and his family, the shipment or storage of his household goods, the various dislocation allowances, as well as separation travel.

Title II of the bill, covering retired pay, finances pay of retired military personnel, retained pay of the Navy and Marine fleet reserves, and payments to eligible survivors pursuant to the retired servicemen's family protection plan.

Title I of the bill represents a decrease of $3,319,700,000 below the budget estimate of $24,376,900,000. However, offsetting this reduction is the transfer of $2,735,000,000 for "retired pay, Defense," from title I to a new title II. Therefore, the actual committee reduction in the military personnel request is $584,700,000. Of the $23,877,103,427 appropriated in fiscal year 1969 for military personnel, $2,450,000,000 was for "retired pay, Defense." Therefore, the actual reduction below the comparable 1969 appropriation for title I is $369,903,427.

SEPARATE TITLE FOR RETIRED PAY

This year the committee has recommended the creation of a separate title title I, "Military Personnel," finance the pay and allowances of officers and enfor "retired pay, Defense," because of the fact that the cost of retired pay is rapidly becoming a major item of expense in the Department of Defense budget. In addition, funding for this activity is uncontrollable in the usual sense through the appropriation process since the retirees of the Department of Defense and their survivors must be paid as provided for by law. In addition, during the course of the hearings it was brought out by witnesses of the Department of Defense that based on projections of the cost of retired pay, providing for minimal increases in rates over the years, in all likelihood by the year 2000 retired pay will be well in excess of $12 billion a year. Therefore, for the sake of clarity and in order to separate "nonmilitary" from "military" costs, the committee recommends that appropriations for retired pay be established as a separate title of the Defense bill.

PERSONNEL REDUCTIONS

During the committee hearings, the Secretary of Defense testified that the services are planning sizable reductions in end-strength below the revised budget level. The original budget request submitted by President Johnson in January of 1969 provided for 3,455,100 active duty personnel. This figure was amended by President Nixon on April 15, 1969, to a revised total of 3,451,900. Since that time the Department of Defense has announced further reductions in end-strength to a new total of 3,235,100, for a reduction of 220,000 below the January budget and 216,800 below the April budget. Reductions of this magnitude obviously will result in significantly dollar savings to the budget.

The committee has applied the following savings by service:

| | |
|---|---|
| Army | $192,070,000 |
| Navy | 127,200,000 |
| Marine Corps | 34,900,000 |
| Air Force | 110,600,000 |

One of the means used by the Department of Defense to achieve the end-strength reduction has been to reduce draft calls. The first move in this direction was the cancellation of the November and December 1969 draft call which had the effect of not bringing 50,000 young men into the service. Very recently a sizeable cutback in the January draft call was also announced.

TROOP WITHDRAWALS FROM VIETNAM

Another item that allows for significant savings in the military personnel account is the withdrawals of troops from Vietnam. Upon completion of the midway conference on June 8, 1969, the President announced that he was withdrawing 25,000 troops from Vietnam. Since that time, he has announced that an additional 40,000 troops will be withdrawn, for a total announced reduction of 65,000. The reduction is scheduled to be completed by December 15, 1969, and during the period of June 1 to December 1, 1969, the total in-country strength in Vietnam has in fact decreased by approximately 61,000.

Withdrawals from Vietnam do not necessarily result in end-strength reductions. Many of the troops were redeployed to bases within the United States, others were redeployed to Okinawa and some were released from the service. However, a significant dollar savings results simply from the withdrawal of the troops from Vietnam even though they may be redeployed elsewhere. For example, troops in Vietnam receive combat pay, overseas duty pay and some receive separation allowances. In addition there are added costs for combat rations and special tropical clothing.

However, in the case of the Marine Corps, of the 27,000 withdrawn from Vietnam, some were redeployed to Okinawa. In this case, many of the allowances which are drawn in Vietnam are also drawn in Okinawa. Therefore, the total savings, by service, are estimated to be:

| | |
|---|---|
| Army | $30,000,000 |
| Navy | 6,000,000 |
| Marine Corps | 18,000,000 |
| Air Force | 2,500,000 |

SIZE OF HEADQUARTERS STAFFS

The Department of Defense and the military services have their principle headquarters in the Greater Washington, D.C., metropolitan area. In addition, all of the services have personnel assigned to major command and administrative headquarters located in various areas of the country.

When these military and civilian personnel and those assigned to the headquarters of the unified and specified commands located throughout the world are considered, the organization appears to be considerably overstaffed. During the hearings, the committee questioned the Secretary of Defense and the service Secretaries regarding the size of the headquarters staffs. It was pointed out in the hearings that the number of people in headquarters activities in the Washington, D.C., metropolitan area alone was estimated to be 72,893 civilians and 42,029 military in 1970. The committee feels that a Washington area headquarters staff of almost 115,000 is unwarranted and represents topheaviness even for an organization the size of the Department of Defense.

The Secretary of Defense testified that there are plans underway to reduce the Washington headquarters staff by 1,755 military and 1,539 civilians. The committee applauds these reductions as a step in the right direction; however, the committee feels that further review will identify additional areas that are overstaffed within the headquarters operation and has, therefore, made a substantial reduction in both civilian and military manpower on this account. The reduction for civilian personnel is discussed under "Operation and maintenance." The reduction applied to military personnel, by service, is:

| | |
|---|---|
| Army | $1,800,000 |
| Navy | 2,755,000 |
| Marine Corps | 1,300,000 |
| Air Force | 1,880,000 |

PERSONNEL ASSISTANCE PROGRAMS

The committee reviewed the various programs in the services designed to assist military personnel in returning to civilian life or upon entering the military service. Presentations were made by the services and by the Secretary as to the various projects known as Project 100,000; Project Transition; Project Value; and Project Referral. The committee feels that appropriate assistance by the Department of Defense or by the services to men upon entering the service, or about to return to civilian life, is desirable.

All of these programs are very new and their cost has increased at a very rapid rate each year. Because of this rapid acceleration in cost, the committee is of the opinion that reductions in each of these programs would be most appropriate this year and would provide the needed impetus for the Department of Defense to review them and determine the reason for the large increase in cost. Funds for these various projects appear in two places in the budget, title I—military personnel, and title III—operation and maintenance. The committee's reduction, by program, for both titles I and III is:

| | |
|---|---|
| Project 100,000 | $1,735,000 |
| Project Transition | 4,015,000 |
| Project Value | 200,000 |
| Project Referral | 975,000 |

CHANGES IN SUBSISTENCE COSTS AT MESSHALLS

During the course of the hearings, the committee was advised that the services were experiencing significant increases in the absentee rate at their messhalls. The committee has been informed that this increase in absentee rates can be contributed primarily to a new reporting system that the services have implemented during the past year. Because of these adjustments in the absentee rates, the original budget request for each of the services was overstated. However, offsetting the decrease in attendance at mealtime there has been a corresponding increase in the cost of subsistence. The increase in subsistence costs in the case of two of the services, has more than offset the decrease in requirements caused by the decrease in attendance.

In the case of the Navy, the committee added $1,600,000 to the budget request, and in the case of the Air Force, the committee added $2,280,000 to the budget request. However, the Army and the Marine Corps, even with the increased cost of subsistence, are still overstated and reductions can be applied in both cases. In the case of the Army, the reduction amounted to $6,200,000 and in the case of the Marine Corps, a reduction of $3,700,000 was applied.

NEW FOOD ITEM PROGRAM

During the hearings with the Department of the Army, testimony revealed that plans were underway for the testing and production of a new type of food item. In order to evaluate this new food item the Army proposes to procure enough of the item for 1 million meals. While the committee feels this is a worthwhile program, serious question arises as to the need to procure 1,000,000 meals in order to effectively test the item.

It is the opinion of the committee a smaller size sample would serve equally well for evaluation purposes. The committee has, therefore, applied a reduction of $750,000 to the program, which will still provide for a sample size of at least 500,000 meals.

OTHER REDUCTIONS

During the committee's hearings on military personnel and on operation and maintenance, the committee questioned areas such as public affairs, public relations, and public information; and also, the area of automatic data processing. Since the majority of the funds for both of these items appear in the "Operation and maintenance" account, the reductions made in military personnel are primarily to support the major reduction made in the "Operation and Maintenance" account.

However, military personnel are involved in both of these areas and, therefore, it is only appropriate that some reductions be made. In addition, other reductions were made in the "Operation and maintenance" account that require a corresponding reduction in military personnel. One example, is support service contracts, and another example is Operation Deepfreeze carried on by the Navy. All four of these items are discussed in detail in the discussion on operation and maintenance.

In addition, other reductions were made in the "Military personnel" account to cover such items as the shipment of privately owned motor vehicles and the use of commercial air travel. In the case of shipment of privately owned vehicles it was determined during the hearings that the average cost to ship a vehicle had been overstated and, therefore, an appropriate reduction was made in the budget request. In the area of commercial air travel, a modest reduction was made and testimony during the hearings indicated that better utilization could be made of existing Military Airlift Command flights.

RESERVE AND GUARD PERSONNEL

The committee has provided funds for a Selected Reserve of the Armed Forces for a total average strength of not less tha 964,687, as authorized. Modest reductions have been made in the request of each of the Reserve components since the components have failed to meet their programed average strength.

Information provided by the services substantiates the fact that paid drill attendance is at a slightly lesser rate than that programed at the time the budget request was prepared. Therefore, the modest reductions made by the committee are appropriate and in order.

SUMMARY TABLE OF FUNDS PROVIDED

Following is a table of the military personnel and retired pay, Defense funds provided in the bill.

TITLE I—MILITARY PERSONNEL

| | |
|---|---|
| Military personnel, Army | $8,312,000,000 |
| Military personnel, Navy | 4,370,000,000 |
| Military personnel, Marine Corps | 1,518,000,000 |
| Military personnel, Air Force | 5,835,300,000 |
| Reserve personnel, Army | 308,000,000 |
| Reserve personnel, Navy | 131,400,000 |
| Reserve, personnel, Marine Corps | 45,000,000 |
| Reserve personnel, Air Force | 83,400,000 |
| National Guard personnel, Army | 356,800,000 |
| National Guard personnel, Air Force | 97,300,000 |
| Retired pay, Defense | |
| **Total, title I—Military personnel** | **21,057,200,000** |

TITLE II—RETIRED MILITARY PERSONNEL

| | |
|---|---|
| Retired pay, Defense | 2,735,000,000 |

OPERATION AND MAINTENANCE

Funds required for operation and maintenance activities relate to the size of the active forces and the numbers of personnel in the Reserve components; the tempo of operations, the desired degree of readiness, and the deployment of the forces; the training of personnel in the use of weapon systems and equipment; and, the types of military facilities to be operated and maintained. The appropriations for operation and maintenance are directly related to the ability of our Armed Forces to react quickly, deploy effectively, and to maintain their overall state of readiness.

The committee recommends appropriations totaling $20,878,100,000 for operation and maintenance activities. This amount is a reduction of $914,000,000 below the revised budget estimate for fiscal year 1970. The largest single reduction, $217,600,000, relates to the announced reduction in force levels; such as the cutback in military personnel and the deactivation of older ships and aircraft. There are also other reductions in force levels affecting the requirement for operation and maintenance funds. These reductions include the inactivation of the Army's 9th Infantry Division, and the Marine Corps' 3d Division, the phaseout of the B–58's, and many base closures.

Notwithstanding the reductions made for cutbacks in force levels, the services are bringing into the defense force structure several new items and larger quantities of relatively new items for which substantial support funds are required during fiscal year 1970. In the Navy, some 55 new ships are expected to join the fleet as a result of either new construction or conversion. The Air Force will place into service in fiscal year 1970 the C–5A, a few more wings of the F–111, and will also begin deployment of a limited number of FB–111's.

These are but a few examples of new equipment being added to the force structure which will require a sustained level of adequate operation and maintenance funding.

The second largest reduction assigned by the committee was $181,200,000 to the withdrawal of forces from Southeast Asia. Substantial amounts of operation and maintenance appropriations are directly related to the tempo of the war in Vietnam. With these withdrawals less funds will be required for support operations than had been estimated in the revised budget.

The committee reduced the request for communication and intelligence operation by $79,600,000. The Department of Defense estimates that the revised budget includes over $3 billion for these operations. The reason for the committee's reduction was to emphasize to the Department the need for better management. Suggested areas for improvement are spelled out in the committee's report. The committee recognizes the need for reliable communication and intelligence operations and any degree of reliability in either area will be dfficult to attain until such time as the needed management improvements are implemented.

OTHER O. & M. REDUCTIONS

The Department of Defense has announced a reduction of about 48,600 full-time permanent civilian employees. The committee estimated that this reduction will save $140,500,000 in fiscal year 1970. Other major areas the committee has reduced are:

| | |
|---|---|
| Headquarters operation and administration | $58,475,000 |
| Automatic data processing operation | 82,400,000 |
| Public affairs, relations, and information | 2,500,000 |
| Service support contracts | 62,550,000 |
| Pilot training | 33,000,000 |
| Management studies | 6,900,000 |

Headquarters operation and administration were discussed previously under "Title I, military personnel." Of course, there are related reductions in operation and maintenance for the supplies, maintenance, utilities, support services, and other cost incurred in support of these large headquarters operations.

AUTOMATIC DATA PROCESSING OPERATION

The committee is concerned with the rapid expansion of automatic data processing systems in the Department of Defense. Last year and again this year, the committee, in cooperation with the General Accounting Office, reviewed the practices of the various component organizations of the Department in planning, procuring, and installing this new ADP equipment for use in computerized management systems. To say the least, the committee is not pleased.

Last year, the committee found that there was a general lack of coordination and planning within and among the services and/or Defense agencies relating to the adaptability of the various systems to one another. The committee directed last year that a thorough review and analysis of all systems should be undertaken as soon as possible. The committee also believed that a close working relationship should be arranged between the new review offices established in each Service and the new office under the cognizance of the Assistant Secretary of Defense, Comptroller. It was apparent to the committee that only through such a coordinated effort could adequate control be established for the planning, adaptation, coordination, and installation of these ADP management systems. The committee also directed that until such time as these newly established offices have had an opportunity to review various systems in existence as well as those being planned for the future, expansion of all systems should be held in abeyance.

Despite this request, the Services were permitted to proceed with the expansion of many systems without the requisite review. It was evident from the committee's review this year that there is still a need for improved management of these costly systems. It was disclosed that existing systems were still being updated or new systems installed without careful consideration of the product of other systems already in existence or of other parallel systems being developed. For example, the Air Force plans to install a new phase II base level system at many Air Force bases in the United States. The committee is not convinced that this is necessary. It appears that at some bases

the existing second generation equipment provides adequate information, and that third generation equipment is a multi-million-dollar luxury.

The committee will continue to give Defense ADP operations close scrutiny. The General Accounting Office has been directed to continue a comprehensive review in this area.

PUBLIC AFFAIRS, RELATIONS, AND INFORMATION

The Defense budget request for 1970 includes about $30 million for public affairs, public relations, and public information activities. The committee made a direct reduction of $4,955,000 in this request—$2,455,000 in military personnel and $2,500,000 in operation and maintenance. The committee's reduction in civilian personnel employment and headquarters staffs will tend to cause even further reductions. These actions will likely result in an indirect reduction of an additional $5 million, or a total reduction of about $10 million.

It is estimated that in fiscal years 1968 and 1969 the Department of Defense obligated about $28 million and $30 million, respectively, for public affairs, public relation, and public information activities. The committee report on the fiscal years 1968 and 1969 appropriation bills pointed out these activities as an area where reductions could be made.

The committee is of the opinion the Department was not closely managing these activities. Therefore, early last year, the committee ordered its surveys and investigations staff to conduct a comprehensive review of these operations. The staff report pointed out numerous areas of duplication, ineffective utilization of personnel, and a lack of overall control of this operation.

The report was furnished to the Assistant Secretary of Defense for Public Affairs for corrective action. The committee was subsequently advised that management changes are being initiated and operational improvements should be forthcoming in the very near future.

The committee also continued the limitation on legislative liaison activities of the Department of Defense. Section 629 of the bill limits this activity to $1,150,000.

SERVICE SUPPORT CONTRACTS

The committee has noted over the last few fiscal years that the costs of service support contracts have substantially increased in each service. Information provided the committee indicates that a large increase is again intended for fiscal year 1970. The committee recognizes the need for these contracts but the cost of this operation is increasing at a rate which appears to be disproportionate to the need. The committee reduced funding for fiscal year 1970 in this area for each of the services in order to hold the cost of these contracts at about the fiscal year 1969 level. The committee intends to give this matter further attention in its review of the fiscal year 1971 budget request.

PILOT TRAINING

The committee reduced the Navy's request for pilot training by $13 million as a result of an announced cutback during fiscal year 1970.

The committee also directed that fixed wing training for helicopter pilots be discontinued. Both the Navy and the Air Force give helicopter pilots training in fixed-wing aircraft prior to helicopter pilot training. Fixed-wing pilot training is very, very expensive. For several years the committee has discussed with the Navy and the Air Force the need for training helicopter pilots in fixed-wing aircraft. The committee suggested that consideration be given to discontinuing this type of training. This suggestion was ignored. Last year the committee stated in its report that fixed-wing training for helicopter pilots could be dispensed with especially in view of the urgent need for helicopter pilots. The committee pointed out that fixed-wing training could later be provided for those pilots whose subsequent duty would require it. However, the services chose to ignore the report.

This year, both services testified to the fact that they intended to continue to ignore the committee's desires.

It cost on the average about $60,000 per trainee to become proficient in a fixed-wing aircraft prior to helicopter training. Since both Services train approximately 1,000 helicopter pilots each year, the total cost for fixed-wing training is about $60 million in the two services each year. The committee believes that the $60 million expended for fixed-wing training could be used to better advantage for more urgent requirements.

Therefore, the committee directs that the fixed-wing training of helicopter pilots be discontinued. In taking this action, the committee is reducing each services request for pilot training by $10,000,000. With this reduction, sufficient funds will still be available for a gradual phaseout of the program by June 30, 1970.

MANAGEMENT STUDIES

The committee has been critical of consultant management studies made for the Department of Defense for many years. The committee's prior reviews of the requirements for, and utilization of, these studies demonstrated the need for closer overall Defense management of these funds. The review of the 1970 budget request further solidified the committee's position. The committee is of the opinion that the Department of Defense is not exercising proper control over when and what type of studies are made. Therefore, the committee reduced the operation and maintenance funds requested for these studies.

SUMMARY TABLE OF FUNDS PROVIDED

Following is a table of the operation and maintenance funds provided in the bill for each service and/or Defense component:

| *Agency* | *Amount* |
|---|---|
| Army | $7,214,447,250 |
| Navy | 5,037,300,000 |
| Marine Corps | 420,000,000 |
| Air Force | 6,454,500,000 |
| Defense Agencies | 1,074,600,000 |
| Army National Guard | 300,000,000 |
| Air National Guard | 330,534,000 |
| National Board for the Promotion of Rifle Practice, Army | 52,750 |
| Claims, Defense | 41,000,000 |
| Contingencies, Defense | 5,000,000 |
| Court of Military Appeals, Defense | 666,000 |
| Total, operation and maintenance | 20,878,100,000 |

PROCUREMENT

For the procurement portion of the Defense budget, we have provided in this bill about $18.1 billion, which is approximately $2.8 billion less than the request in the amended President's budget for fiscal year 1970, and $2.5 billion below the amount made available for this purpose in fiscal year 1969.

In general terms, the recommended amount will fund a total of 686 fixed-wing aircraft, 1,259 helicopters, construction of 14 new ships, conversion of 17 others, and a classified quantity of Minuteman II, Minuteman III, and Poseidon missiles, as well as various types of military hardware, combat vehicles, and other equipment.

For the Army, the committee recommended an appropriation of about $4.3 billion, a reduction of $787.7 million below the amended budget estimate, and approximately $1.4 billion below the appropriation for fiscal year 1969. The reduction includes $526.1 million which failed authorization of Congress, and an additional reduction of $261.6 million recommended by the Committee. The Army was provided funds for 29 fixed-wing aircraft, the U–21 utility aircraft and its reconnaissance version, the RU–21; and for 972 helicopters of various types, including 170 AH–1G Huey Cobras to fill the void caused by the cancellation of the AH–56A Cheyenne procurement contract. Essentially, the helicopters funded are to replace losses. The largest single item funded, of course, is the Safeguard ABM. The bill also funds quantities of TOW and Shillelagh anti-tank missiles and Redeye and Chaparral air defense missiles. Fiscal year 1970 will complete the planned buy of the Shillelagh missile.

A large variety of ground munitions are funded in order to support the projected reduced levels of combat activity in Southeast Asia. A total of $324.8 million in the Army procurement budget is directly related to the Vietnamization effort. Communications equipment, combat and support vehicles and weapons were funded at a lower level this year than in fiscal year 1969. The last buy of the Sheridan tank will be made with fiscal year 1970 funds. The committee recommended reductions in funding for a number of U–21 utility aircraft, as well as for the Improved Hawk, Chaparral, and Pershing missile systems. Reductions were also recommended in communications and electronics equipment, in ammunition, based primarily on reduced ammunition consumption, and in the modernization of certain facilities.

For the Navy, the committee recommended an appropriation of about $7.2 billion, a reduction of $1.3 billion below the budget estimate, and $677 million below the appropriation for fiscal year 1969. The committee funded a total of 282 fixed wing aircraft, including A–4 attack aircraft for the Marines, A–6 all-weather bombers, EA–6B electronic countermeasures aircraft, A–7 attack aircraft for the Navy, F–4J fighters, and a small quantity of AV–6B Harrier V/STOL fighter aircraft for operational testing by the Marines. In addition, a quantity of P–3C Orion ASW patrol aircraft and a number of training aircraft were also funded. The committee rec-

ommended the deletion of procurement funds for the new F–14 general-purpose fighter-interceptor aircraft and added three such aircraft to the research and development program. The feelings of the committee relative to this aircraft are expressed on pages 55 through 57 of the report which accompanies this bill. The Navy was provided funds for 74 CH–46 Sea Knight and UH–1N Iroquois helicopters. The request for procurement of new RA–5C Vigilante reconnaissance aircraft was denied because losses did not support the need cited. We also denied funds for new KA–6D Intruder tanker aircraft and recommended that the Navy modify existing A–6A aircraft in the inventory to the tanker configuration. The committee funded a quantity of Poseidon missiles, but reduced the request for the AIM–7F Sparrow III air-to-air missile and denied funds for the AGM–54A Shrike antiradar missile.

In the shipbuilding program the committee recommended funding 14 new ships, including the CVAN–69, a third nuclear-powered attack aircraft carrier, plus the second increment of advanced funding for nuclear propulsion spares and fuel for the *Nimitz*-class carriers. Three new SSN–688 class high-speed nuclear-powered attack submarines were provided for, plus advanced funding for five more to be built in subsequent years. A new DLGN–38 class nuclear frigate, formerly called the DXGN, was funded, along with advanced procurement for three more—one in fiscal year 1971, one in fiscal 1972, and one in fiscal 1973. We recommended the appropriation of funds for five DD–963 class destroyers, a new type previously identified as the DX, as well as advanced funding for the procurement of the MK–86 gunfire control system for eight more such ships. The committee also provided for two LHA general purpose assault ships, advance procurement for two more, and two PGM motor gunboats. In addition to the new construction provided for in the bill, a number of new ships will join the fleet during fiscal year 1970, including eight nuclear attack submarines, 15 amphibious warfare ships, and 12 escort ships.

The committee recommended funding 17 conversions; namely, six SSBN Polaris to Poseidon submarine conversions, one DLG frigate conversion, and 10 MSO Ocean Minesweeper conversions. There are also advance procurement funds for 12 more SSBN conversions—seven in fiscal year 1971 and five in fiscal year 1972, and for four more DLG conversions in fiscal year 1971. Of course, the three fast deployment logistic—FDL—ships requested this year failed congressional authorization and were not funded.

The committee reduced the funds requested for the procurement of the MK–48 torpedo, and requested that the Navy complete the test program on both versions of the MK–48 before deciding which model of this weapon will be bought for the fleet. We also recommended minor reductions in the proposed Marine Corps procurement program, primarily related to the redeployment of Marine units from South Vietnam. The total Navy procurement accounts contains $3.4 million directly related to the Vietnamization program.

For Air Force procurement, the committee recommends an appropriation of approximately $6.5 billion, a reduction of about $698 million below the budget request and about $1.8 billion below the appropriation for fiscal year 1969. Funds are provided for the procurement of 375 fixed wing aircraft, including A–7D attack aircraft, F–111D fighter/bombers, RF–5 reconnaissance aircraft, A–37B close-support jet aircraft, O–2A observation aircraft, C–5A and C–130E airlift aircraft, and a quantity of trainer aircraft. Funds were made available for 213 helicopters, including the UH–1 Iroquois and a new search and rescue helicopter. The committee deleted the $52 million requested for advance funding of long lead-time items associated with future procurement of C–5A aircraft beyond the 81 approved through fiscal year 1970 program. The committee recommended that within the funds provided for aircraft procurement, $28 million shall be available to initiate the procurement of a fighter aircraft to meet the needs of free world forces in Southeast Asia. The committee deleted funds for the proposed procurement of RF–4C reconnaissance aircraft and the funding for modification of B–58 bombers which are being retired, and reduced the funding in other areas.

We provided for the procurement of Minuteman II and Minuteman III missiles as replacements for the older Minuteman I missiles. The replacement is required for the continued updating and strengthening of our 1,000 Minuteman force. Funds requested for standard ARM and Shrike antiradar missiles were denied because existing inventories of these missiles are sufficient to meet present needs. The committee also denied funds for the initial procurement of the short-range attack missile—SRAM—because it was felt that it would not be prudent to initiate procurement in fiscal year 1970 in view of the technical difficulties being encountered in the development program. Decreases were recommended in funds for munitions, based on reduced consumption rates in Southeast Asia, in vehicular equipment, in communications and telecommunications equipment, and in other base maintenance and support equipment. The Air Force procurement budget contains $96.1 million directly attributable to the Vietnamization program.

The committee recommended an appropriation of $61.6 million for procurement of supplies and equipment for the Defense agencies of the Department of Defense, a reduction of $16 million below the amended budget estimate, and $20.1 million below the appropriations for fiscal year 1969. The reductions were made in funds for the Defense Communications Agency, National Security Agency, Defense Intelligence Agency, and Defense Supply Agency.

RESEARCH, DEVELOPMENT, TEST, AND EVALUATION

For research, development, test, and evaluation functions, this bill provides a total appropriation of approximately $7.2 billion, which is about $1 billion less than the budget estimtae and $352 million below the appropriation for fiscal year 1969.

Major programs funded this year include the Safeguard ABM system, the Army's Dragon antitank missile, the Navy's F–14 fleet air defense fighter interceptor, and the S–3A—formerly VSX—antisubmarine warfare aircraft. Also included is the Air Force's F–15 tactical air superiority fighter aircraft, the airborne warning and control system—AWACS—and the advanced manned strategic aircraft—AMSA—now known as the B–1 bomber. The committee either reduced or denied funds for various other development programs of the military departments, and reduced funds for missile test ranges as well as in-house research and development activities and facilities because of reductions made in this overall program.

For the Army, the committee recommended an appropriation of approximately $1.6 billion, a reduction of $274 million below the budget estimate and $54.1 million above the appropriation for fiscal year 1969. The funds provided will permit improvement in certain portions of the Safeguard ABM system and the continued development of the Dragon antitank missile, which is nearing completion of development.

Funds requested for the proposed development of the utility tactical transport aircraft system—UTTAS—a new helicopter, were reduced and the funds for the UTTAS engine were denied. The committee reduced funds for Project Mallard, a proposed international development of a major tactical communications system for the field armies of the four participating countries, and recommended termination of the program. We also suggested that the joint international development of the MBT–70 main battle tank be terminated and that the Army proceed to design a tank with far less sophistication and complexity that can be produced at about a third of the cost now estimated for the current design.

The recommended appropriation for the Navy totaled $2 billion, a reduction of $171.1 million below the budget estimate and approximately $100 million below the appropriation for fiscal year 1969. The funds provided will permit improvement to and continued testing of the Poseidon missile. Full scale development of the initial and follow-on versions of the F–14 fleet air defense fighter-interceptor aircraft will be continued, and the committee added three aircraft to the program in order to maintain this aircraft in research and development. The funds made available will also permit the initiation of development of the S–3A—formerly VSX—antisubmarine warfare aircraft.

Funds for the development of the heavy lift helicopter were reduced, and the committee recommended that the Army and Navy proceed with a joint development of such a vehicle. The committee also directed that development of the Condor air-to-surface missile be discontinued because of the increased cost of this weapon system resulting from developmental problems.

For the Air Force, this bill provides for an appropriation of about $3.1 billion, a reduction of $504.3 million below

the budget estimate and approximately $307.8 million less than the fiscal year 1969 appropriation. The funds made available will permit the continued development of the F–15 tactical air superiority fighter aircraft, and the initiation of engineering development on the airborne warning and control system to improve our continental air defense. The advanced manned strategic aircraft—AMSA—now known as the B–1 bomber, will enter design competition in fiscal year 1970. The committee recommended funds for continued development on the C–5A transport and F–111 fighter-bomber aircraft and improvements to the Minuteman missile. A modest amount was provided for development of a new interceptor aircraft for continental air defense against Soviet bombers. The Air Force will continue development of the Maverick tactical interdiction air-to-surface missile system during that fiscal year.

The Air Force terminated the manned orbiting laboratory program earlier this year, and the committee reduced the funds requested for a new A–X attack aircraft, which was considered to be a relatively low priority requirement for this year. We also reduced the requests for the subsonic cruise armed decoy—SCAD—missile for the B–52 and FB–111 aircraft, and the hard rock silo development program for our Minuteman ICBM force. The bill provides only half the funds requested for an advanced airborne command post because the committee felt this requirement should be studied further as to actual need.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio (Mr. MINSHALL).

(Mr. LIPSCOMB (at the request of Mr. MINSHALL) was granted permission to extend his remarks at this point in the RECORD.)

Mr. LIPSCOMB. Mr. Chairman, the pending bill, H.R. 15090, making appropriations for the Department of Defense for fiscal year 1970, is one of the most significant and important pieces of legislation the Congress will act upon during this the first session of the 91st Congress.

This appropriation provides for the protection of the United States and to bring the Vietnam war closer to an honorable peace. In the context of national needs there is no higher priority.

The distinguished gentleman from Texas (Mr. MAHON) who is chairman of both the full Appropriations Committee and the Defense Subcommittee has presented to the House an excellent report on the Defense appropriations bill for fiscal year 1970. I commend the chairman, and also my colleagues on the subcommittee and our able and dedicated staff for the fine job they have done. They have performed a valuable public service to the Nation.

DEFENSE FUNDS INCLUDED IN BILL

Mr. Chairman, H.R. 15090 will provide a total of $69,960,048,000 in new obligational authority for the Department of Defense in fiscal year 1970, including the support of our allies engaged in the conflict in Southeast Asia but excluding other military assistance, military construction and family housing, and civil defense. These latter requirements are considered in other appropriations bills. The bill does not provide for the Department of Defense military and civilian pay increases which became effective July 1, 1969. As has been the custom in recent years, this last requirement, together with other civilian pay increases, will be transmitted to the Congress next January in a Government-wide supplemental.

Barring a drastic change in the situation, a fiscal year 1970 supplemental appropriation request for Southeast Asia is not anticipated at this time. If this assessment should prove to be correct, it will be the first time since the Southeast Asia buildup began that we will not be confronted by such a supplemental.

The $69,960,048,000 recommended is $7,780,152,000 below the amount requested for these purposes in the original fiscal year 1970 budget transmitted to the Congress by the outgoing administration in January, and $5,318,152,000 below the amended fiscal year 1970 budget request transmitted to the Congress in April by the present administration. Indeed, it is $4,362,798,000 below the amount appropriated for the same purposes for fiscal year 1969, including the supplemental provided earlier this year.

The funding provided in this bill is to support a series of military activities which, taken together, add up to essentially the overall military program administered by the Department of Defense.

This includes our strategic forces which are comprised of both offensive and defensive aircraft and missiles and related systems. Another principal military category is the general purpose forces, which includes most of the Army's combat support units, most Navy units, all Marine Corps units, and tactical units of the Air Force. These forces, which require far the greatest single portion of the Defense budget, are for the purpose of performing the entire range of operations short of nuclear war. Airlift and sealift forces are to transport troops, supplies, and equipment in keeping with our national needs.

Other major programs are the Guard and Reserve Forces. Research and development and other programs such as intelligence and communications; central supply and maintenance; training, medical and other general personnel activities; retired pay; administration and associated activities; and military assistance funded by the Department of Defense.

It is for these activities that a total of $69,960,048,000 is recommended in the bill. Measured against the original fiscal year 1970 budget request, the net reduction of $7,780,152,000 is the largest ever recommended by the Appropriations Committee in such a bill since the end of World War II. And, this reduction is recommended at a time when the conflict in Southeast Asia is still unresolved, when Soviet military capabilities are still growing and when the Chinese Communist nuclear weapons program is still advancing. These are major reasons why the markup of the Defense appropriations bill was a most difficult and demanding task.

I can assure the House of Representatives that we did not approach this task lightly. The Defense Appropriations Subcommittee has always considered that its primary duty is to provide for the military security of the Nation. But at the same time we have always recognized that over the long run our military strength depends upon the vigor and growth of our economy and well-being and cohesiveness of our society. Accordingly, the task before us was to strike an appropriate balance between these two imperatives.

The actions taken by the committee reflect its opinion that this bill is consistent with our national objective of maintaining military superiority. Our report states in this regard:

The Committee continues to feel, as it has stated for many years, that this country must maintain its military superiority over any other nation. It is the feeling of the Committee that this country does now have military superiority and that steps must be taken now and in subsequent years to continue to maintain our overall military superiority. The recommendations made are consistent with this objective.

SECRETARY OF DEFENSE

I believe it is most appropriate at this time to commend the Secretary of Defense for his outstanding contribution to our national welfare.

Herculean problems confronted this Nation on every side when the new administration took office last January 20. Nowhere, however, were the problems larger or more formidable than those which faced the Department of Defense.

The membership of this body can be justifiably proud, therefore, of the President's choice in selecting Melvin R. Laird to be his Secretary of Defense.

With many years of service in the Congress, including service as a member of the Subcommittee on Defense Appropriations, Secretary Laird came to his new assignment with a thorough knowledge of defense programs and problems and of their proper place in the Nation's priorities.

I believe I speak for all of the members of the subcommittee when I say that our former colleague cooperated fully and in a sensible and courageous manner has dealt with this very difficult and painful task of cutting Defense expenditures. His knowledge and cooperation have been of great assistance to the committee.

I also want to commend Secretary Laird for his prompt action in establishing a blue ribbon panel to study and make recommendations and improvements in the organization and management of the Defense Department. This is an action that the other minority members of the subcommittee and I, including Secretary Laird when he served with us, have been urging for a number of years. In view of the many shortcomings which have surfaced in recent years, I believe we can all agree that this action is very timely.

OVERALL BUDGETARY CONSIDERATIONS

To the best of our ability, we have taken into account both the favorable and unfavorable developments, at home and abroad, during the past year. On the

domestic side we could not avoid facing up to the critical fiscal, economic, and social problems besetting the Nation at this time, problems which were inherited by the present administration. When President Nixon took office this past January the inflationary spiral had already been underway for 3 or 4 years. From fiscal year 1964 through the original fiscal year 1970 budget submitted by the previous administration in January 1969, total Federal outlays were scheduled to increase by almost $77 billion, about 65 percent. The increase in national defense during this period was estimated at 52 percent but the increase in major social programs was set at 123 percent.

Mr. Chairman, the following table from page 27 of the Budget of the U.S. Government as transmitted to the Congress in January shows the changing structure of Federal budget outlays over these years.

CHANGING STRUCTURE OF FEDERAL BUDGET OUTLAYS

[Fiscal years. In billions]

| Program | 1964 actual | 1968 actual | 1969 estimate | 1970 estimate | Change 1964–70 |
|---|---|---|---|---|---|
| National defense | $53.6 | $80.5 | $81.0 | $81.5 | +$28.0 |
| (Special Southeast Asia support) | | (26.5) | (28.8) | (25.4) | (+25.4) |
| Major social programs: Social insurance trust funds (excluding medicare) | 22.7 | 30.2 | 33.3 | 37.2 | +14.4 |
| Welfare payments and services | 3.4 | 4.6 | 5.3 | 6.1 | +2.6 |
| Education and manpower training | 1.6 | 6.4 | 6.5 | 7.2 | +5.6 |
| Health (including medicare) | 1.8 | 9.7 | 11.4 | 13.0 | +11.2 |
| Low- and moderate-income housing | (1) | 0.9 | 0.9 | 1.1 | +1.1 |
| Community and regional development | 0.8 | 1.8 | 2.4 | 3.3 | +2.4 |
| Subtotal, major social programs | 30.4 | 53.7 | 59.8 | 67.8 | +37.4 |
| Interest | 9.8 | 13.7 | 15.2 | 16.0 | +6.1 |
| Veterans benefits and services | 5.7 | 6.9 | 7.7 | 7.7 | +2.0 |
| All other programs | 22.1 | 28.6 | 25.0 | 24.9 | +2.8 |
| Allowances for pay increase and contingencies | | | .1 | 3.2 | +3.2 |
| Undistributed intragovernmental transactions | −2.9 | −4.6 | −5.1 | −5.7 | −2.8 |
| Total | 118.6 | 178.9 | 183.7 | 195.3 | +76.7 |

[1] Less than $50,000,000.

Although total Federal budget receipts are also expected to increase substantially between 1964 and 1970, they lagged substantially behind outlays through fiscal year 1968, producing a budget deficit in that year of more than $25 billion. This was the largest deficit in the history of our Nation except for the three World War II years, fiscal years 1943–45. In fact, the cumulative deficit in the 8 fiscal years, 1961–68, exceeded $60 billion.

The new administration inherited a fiscal year 1970 budget totaling $195.3 billion in outlays. By the middle of April 1969, it became clear that the programs proposed by the previous administration in that budget would require outlays of $196.9 billion, principally because of increases in interest on the national debt and in farm price support payments. Moreover, in view of the steadily mounting inflationary pressures, President Nixon came to the conclusion that it would be necessary to reduce total Federal spending for fiscal year 1970 by $4 billion below the revised January estimate, to a new total of $192.9 billion. This reduction, it was then anticipated, would produce a surplus of $5.8 billion for fiscal year 1970. A surplus of this magnitude, the President pointed out, "will speak louder than any words to the business and labor communities in this country and to the world that the United States is determined to bring a halt to the inflationary spiral which has seriously affected our economy these last 4 years."

However, by July 22, when the President signed the final supplemental appropriation bill for fiscal year 1969 into law, the budget picture had considerably worsened. Expenditure estimates for such uncontrollable items as interest on the public debt, medicare, social security, and so forth, had gone up by an additional $2.5 billion and congressional actions up to that time had added another $1 billion, making a total increase of $3.5 billion. Together with the $1.6 billion identified in April, the total estimated increase in fiscal year 1970 expenditures amounted to $5.1 billion. In other words, the January budget estimate of $195.3 billion in outlays had, by July, grown to $200.4 billion, excluding the reductions made by the President in April.

Inasmuch as the inflationary pressures were continuing unabated and the Congress had established a new Federal expenditure ceiling of $191.9 billion, plus not to exceed $2 billion in increases in certain uncontrollable budget categories such as interest on the public debt, the President had no better alternative than to hold Federal expenditures to his April estimate of $192.9 billion, $7.5 billion below the newly adjusted January estimate of $200.4 billion.

Because a large proportion of non-Defense expenditures are beyond the control of the executive branch, and the Congress had already made it clear that further substantial reductions should be made in fiscal year 1970 defense program, the President, with the concurrence of Secretary of Defense Laird, decided that Defense should absorb $4.1 billion of the $7.5 billion in gross expenditure reductions, or approximately 55 percent. Since Secretary Laird had already achieved an expenditure reduction of $1.1 billion in his earlier review of the January budget, the remaining amount to be achieved was $3 billion, and this was the new expenditure reduction goal he announced on August 21 of this year.

Mr. Chairman, I believe it is of the utmost importance that the American people clearly understand the reasons which have led both the executive branch and the Congress to decide on substantial reductions in the fiscal year 1970 Defense program at this particular time.

Our economy has been experiencing rapid inflation since 1965. Interest rates, as we all know, have virtually doubled since the summer of 1965.

Certainly, there should be full agreement that the forces of inflation must be brought under control, and promptly. They not only bear most heavily on the people who can least afford them, but they also tend to distort our entire economy and undermine the strength of the dollar at home and abroad. Furthermore, if they are not brought under control soon, the stability of our economy could be gravely endangered.

At the same time, I am well aware that the Nation is confronted with many pressing domestic needs—alleviation of poverty, elimination of urban blight, modernization and expansion of our transportation systems, pollution abatement, and further improvements in health and education. The growth in these domestic needs is outstripping the financial capabilities of individuals, private organizations, and State and local governments, thus adding further to the burdens of the Federal Government.

THE THREAT TO WORLD PEACE—NEED FOR ADEQUATE DEFENSE

While recognizing the pressing need to reduce defense expenditures, the committee was well aware of the fact that we still live in a very dangerous and uncertain world. Aside from the present administration's new approach to the Vietnam problem, which will be discussed in more detail later, and, hopefully, a successful outcome of the strategic arms limitation talks with the Soviet Union, it would be difficult to point with confidence to any change in the international situation or in the size and character of the threat to our security which would, in itself, justify a significant decrease in our defense effort this year.

With regard to the Soviet Union, the strategic balance which has for so long been in our favor is now beginning to turn against us. The Soviets are continuing to deploy ICBM's, including both the large SS–9's and the smaller SS–11's, at a relatively rapid rate. Including those silos still under construction, and it should be noted that the United States has not built any new ICBM silos since 1967, the Soviet Union is now well ahead of us in numbers of ICBM's. And, because of the very large yield of the SS–9, up to 25 megatons for the single warhead version, they are far ahead of us in land-based missile megatonnage.

Moreover, they are continuing to test a version of the SS–9 with three multiple reentry vehicles, each with an estimated yield of 5 megatons and an accuracy sufficient to pose a threat to the survival of our Minuteman force. They are also continuing their tests of a fractional orbital bombardment system on their SS–9's, which could be used to launch a surprise attack on our bomber forces, including even those aircraft on 15-minute ground alert.

Construction of Soviet Y-class sub-

marines, which are similar to our Polaris, is proceeding at a rate which could be as high as eight per year. As Secretary Laird pointed out to the committee, even at a rate of only six per year the Soviet submarine-launched ballistic missile—SLBM—forces could equal our own, in terms of numbers, by 1975. Should the Soviets design their SLBM's for depressed trajectory launch, which we are told is not very difficult to do, these Y-class submarines could pose a severe threat not only to our cities and soft military bases but also to our bombers maintained on 15-minute ground alert.

It was for these reasons that Secretary Laird, earlier this year, reached the conclusion that the Soviet strategic offensive missile forces could well pose a very serious threat to the survival of our own land-based strategic offensive forces by the mid or late 1970's. He pointed out that we would then be dependent upon our Polaris and Poseidon forces, unless we were willing to launch our Minuteman force on warning. While he did not wish to foreclose that possibility, he strongly urged that we not allow ourselves to get into a position where the President would have no other choice.

Secretary Laird expressed the greatest confidence in the survivability of our Polaris/Poseidon SLBM force, at least through the early to mid-1970's. But, he made it very clear that in his judgment it would be entirely too risky to rely upon only one of the three elements in our strategic offensive forces. He pointed out the obvious fact that we cannot preclude the possibility that the Soviets in the next few years may devise some weapon, technique, or tactic which might increase the vulnerability of our SLBM force.

Nor did the Secretary believe that we could preclude the possibility that the Soviet Union might deploy a more effective and extensive ABM defense. Such a defense, in combination with a substantial Soviet hard target kill capability, he noted, could seriously degrade our assured destruction or deterrent capability.

These were the considerations which led Secretary Laird and President Nixon to conclude that at least a start should be made in the deployment of the Safeguard system, initially for the defense of our Minuteman force and later for the defense of our bomber forces should the Soviet threat to those forces continue to develop.

More recently Secretary Laird informed the committee that the Soviets are believed to have begun flight tests of a new medium-jet bomber. This aircraft is estimated to have a combat payload somewhere between the FB–111 and the proposed advanced manned strategic aircraft—AMSA. Like the Soviet supersonic medium-range bomber, the Blinder, it will probably have a standoff air-to-surface missile capability and might also be equipped for inflight refueling. In the latter event it could in time pose a threat to the Continental United States.

I do not want to overstate the importance of this new development, but it is something we will have to watch closely in the years ahead. It could have an important bearing on the future of our air defense program.

With regard to the Chinese Communist strategic nuclear threat to the United States, the events of the last year give us no grounds for complacency. Although the Chinese have yet to launch their first ICBM they are continuing to move forward with their nuclear weapons program, and with their testing of medium-range ballistic missiles. Their progress in nuclear weapons development and testing has been rapid. In a period of 3¼ years, ending in December 1968, the Chinese detonated eight nuclear devices, one of which was delivered by a missile. Five of these eight tests involved thermonuclear materials. Two of them produced a yield of about 3 megatons and are considered suitable for delivery by an ICBM.

During the current calendar year, the Chinese Communists detonated two more nuclear devices, one underground with a relatively low yield, and one in the atmosphere with a yield of about 3 megatons. The latter was the third successful test of a nuclear device in the 3 megaton range.

On the basis of what is known about the Chinese nuclear weapons and ballistic missile testing programs our intelligence community has concluded that China could attain a force of about 10–25 operational ICBM's on launchers by the mid-1970's. It was on the basis of this intelligence judgment that the Nixon administration decided that an option should be included in the Safeguard program to provide protection for our population against the Chinese Communist ICBM threat, if it should emerge.

Although the Soviets have been devoting large amounts of resources to the buildup of their strategic forces, they have by no means neglected their general purpose forces. The latest intelligence indicates that they may have actually increased their land forces, particularly in connection with their problems along the Chinese border.

In Europe, Soviet forces still occupy Czechoslovakia, posing a more forward threat to the Allied central front in Europe than previously. The Soviet leaders demonstrated willingness to use force in maintaining their control over what they call the "Socialist Commonwealth" cannot but have a disturbing effect on the stability of Central Europe. Moreover, their ability to move large forces quickly over long distances came somewhat as a shock to our NATO allies as well as ourselves. How long these forces could have been sustained in combat, however, remains an unanswered question.

Even though the Soviet leaders must now be less certain of the loyalty and support of some of their Warsaw Pact partners, the pact forces, and particularly the Soviet Army and tactical Air Forces still constitute a formidable threat to Western Europe. The reality of this threat has been amply demonstrated in the last year by the extensive maneuvers understaken by Soviet and other pact forces, not only throughout Central Europe but also on the North Sea. And, the Soviets are continuing to develop more advanced tactical aircraft and nuclear armed tactical missiles, as well as more conventional land forces weapons and equipment.

In the Middle East, North Africa, and the Mediterranean the Soviet Union continues to expand its influence and military presence. Whether they have formally established naval bases in the Mediterranean is less important than the fact that such bases are available for their use. President Nixon's initiative in seeking the cooperation of the Soviet Union in ameliorating the Arab-Israel dispute and reestablishing peace in that region has yet to bear fruit. Our Government's efforts to achieve an agreement on the limitation of arms shipments to both sides in that conflict have also been unsuccessful. Meanwhile, the Soviets continue to equip, supply, train, and encourage the military forces of the more radical Arab States in that region. In this environment, the presence of the U.S. 6th Fleet in the Mediterranean is making a major contribution to the stability of the region.

As I have noted in past years, the Soviet Union is definitely becoming a global naval power. During this last year their warships have operated in virtually all of the oceans of the world, and this past summer they deployed a sizable fleet to the Caribbean. Their naval power consists not only of large numbers of submarines but also modern cruisers, frigates and destroyers, as well as large numbers of smaller combatant types.

Also they have decided to concentrate on guided missile ships with both surface-to-surface and surface-to-air capabilities, as well as a land-based naval air arm. The rationale for this policy was explained by the commander in chief of the Soviet Navy, Adm. S. Gorshkov, in an article written in February 1967, pertinent excerpts of which can be found in part 6, pages 642 and 643 of our hearings on the fiscal year 1970 Defense budget. Briefly, the Soviet leaders believe that aircraft carriers, like battleships after World War II, will decline in importance and that submarines and land-based naval aircraft equipped with missiles and nuclear weapons will take their place as the backbone of offensive naval power.

That submarines have a very important place in Soviet naval strategy, we have known for a long time. Several months ago, Admiral Rickover brought our committee up to date on the status of the Soviet submarine program. As of that time they had about 270 attack submarines, of which 20 were nuclear powered. They also had about 60 cruise missile-firing submarines, of which some 30 are nuclear powered. These are in addition to the 45 ballistic missile-firing submarines, about 15 of which are nuclear powered. Thus their total submarine force numbers about 375.

Moreover, the Soviets are introducing several new types of submarines and they have a large organization devoted exclusively to the design and construction of these vessels. As is well known, their submarine construction capability is substantially greater than ours. Admiral Rickover maintains that their submarine yards are the largest and most modern in the world today, and that the Soviets

are now operating their submarines out of area for longer periods, in greater numbers and at greater distances than ever before.

ASIA AND WESTERN PACIFIC

The problem of most immediate importance and gravest concern to the American people is the resolution of the conflict in Southeast Asia. We need not recount the event which led to our extensive involvement in that conflict. Nor would it serve any useful purpose at this particular point in time to pass judgment on the decisions of the prior administration which brought about the situation in which we now find ourselves. As President Nixon said in his speech of May 14:

> . . . the urgent question today is what to do now that we are there, not whether we should have entered on this course, but what is required of us today.

From the point of view of where we go from here, I believe it is fair to say that the Nixon administration has adopted a very responsible and realistic policy with respect to Vietnam and, in fact, the entire region of Asia and the Western Pacific. It will be recalled that both at Guam last July and in his address to the Nation on November 3, President Nixon enunciated three basic principles which would guide our future policy in that part of the world:

First. The United States will keep all of its treaty commitments in the area.

Second. The United States will provide a shield if a nuclear power threatens the freedom of a nation allied with us or of a nation whose survival we consider vital to our security.

Third. In cases involving other types of aggression, we will furnish military and economic assistance when requested in accordance with our treaty commitments, but we shall look to the nation directly threatened to assume the primary responsibility of providing the manpower for its defense.

TROOP REDUCTION

It is within this framework that the Nixon administration has formulated its new policy on the resolution of the Vietnam conflict.

The crux of this policy has become known as Vietnamization; namely, turning over to the people of Vietnam the responsibility for their own defense and the management of their internal affairs. To assist them in assuming these responsibilities, the basic emphasis in our overall effort in Vietnam has been shifted from trying to do the job ourselves to helping them do the job. In the military sphere, the equipping, supplying and training of the South Vietnamese Armed Forces has been significantly accelerated. More important, the goal of this effort has been expanded to include an ability on the part of the South Vietnamese to defend themselves not only against the Vietcong, but against the North Vietnamese as well. This is a very significant change from the objective reflected in the original fiscal year 1970 budget prepared by the preceding administration. Since January, Secretary Laird has added $156 million to the Defense budget for this purpose; $36 million was provided in the fiscal year 1969 supplemental and $120 million is included in this bill. Inasmuch as the original fiscal year 1970 budget request contained $532 million for the modernization of the South Vietnamese forces, the total recommended in this bill for that purpose is $652 million.

Good progress has been made since the beginning of this year in implementing the Vietnamization program. Let me give you some of the specific accomplishments:

The Regular Army demonstrated at Ben Het that it can stand and fight—and win.

Except for U.S. helicopter, engineer, tactical air, and naval support, the Vietnamese have largely assumed responsibility for the war in the Mekong Delta.

The Vietnamese have assumed responsibility for the security of Saigon and the immediate vicinity.

They have met and exceeded the manpower goals they set for expanding regular forces as well as the regional and popular forces.

Volunteers outnumber conscripts by about three to one.

Training is now being carefully reviewed to find those areas which will really count in raising the effectiveness of the Armed Forces of the Republic of Vietnam.

The Vietnamese are making progress in their efforts to neutralize the Vietcong infrastructure. This is a high priority problem.

And, let me point out that Vietnamization means a lot more than the modernization of the South Vietnamese Armed Forces to permit them to assume more of the combat burden. Vietnamization means the progressive transfer to the South Vietnamese of responsibility for all aspects of the war and management of their affairs, including the further development of their governmental institutions, the strengthening of their economy, and the improvement of their internal security capabilities.

Already, President Nixon has found it possible to announce two reductions, totaling 60,000 men, in U.S. military strength in South Vietnam. The first reduction of 25,000 was completed by the end of August, on schedule. The second reduction of 35,000, announced by the President on September 16, scheduled for completion by mid-December, was actually completed 3 weeks ahead of schedule. Since January, the authorized U.S. troop ceiling in South Vietnam has been reduced from 549,500 to 484,000, a drop of 65,500. As of November 22, the actual strength was down to 484,300.

With regard to the future, further reduction in U.S. forces in South Vietnam will be based upon the three criteria set forth by President Nixon in June 1969:

First, progress in negotiations at Paris;

Second, a reduction in the level of hostilities in South Vietnam; and

Third, the increased capability of the South Vietnamese forces.

The reductions announced to date have been based primarily on the last criterion, which is the only one within the control of our side in the struggle. This does not mean that the Nixon administration has lost interest in negotiations, even though the results to date have been very disappointing. A negotiated end to the conflict in Vietnam would, of course, be greatly welcomed. But it takes two to negotiate, and the other side has not evidenced much interest in a realistic and just settlement of the conflict.

Nor can we and our allies in South Vietnam unilaterally reduce the level of hostilities. Indeed, our limited objective in this conflict has left most of the initiative to the other side. They have been able to choose when and where to launch their attacks. We have adopted what Secretary Laird calls a policy of protective reaction, as far as American forces are concerned. This, of course, includes whatever actions are necessary to safeguard the security of our forces in South Vietnam, which must always be foremost in the thoughts of our military commanders there. But if the other side is willing, the new policy of protective reaction does provide a basis for a mutual reduction in the level of hostilities in South Vietnam.

The Nixon administration's new Vietnam policy has already contributed importantly to the reduction in the military and civilian personnel end strengths originally planned for fiscal year 1970—220,000 military and 68,000 civilian. These reductions are reflected in the committee's recommendations for the military personnel and operation and maintenance appropriations. Although further reductions related to additional withdrawals of U.S. troops from Vietnam may well be announced before the end of the fiscal year, the timing and extent of these reductions are not now known. Accordingly, the committee was not in a position to anticipate them in its recommendations on this bill. Moreover, we are greatly concerned that the enemy might suddenly choose to escalate the conflict, and we do not want our forces to be placed in jeopardy because of a lack of readily available support.

KOREA-JAPAN

Elsewhere in Asia, the North Koreans continued to threaten and harass the people of South Korea. The situation on the Korean peninsula remains very precarious. We have significantly improved the readiness of both the South Korean and our own forces there during the last year. But more may have to be done if the North Koreans continue their belligerent attitude.

The reversion of Okinawa to Japan, which the President recently announced, will take place in 1972 and will undoubtedly create some problems for our military forces in the Far East. But this action is consistent with the President's new Far East policy, and sufficient time is available to make the necessary adjustments in our forces there. It is my hope that our allies in that part of the world, particularly Japan, will make good use of that time in strengthening their defenses. President Nixon has clearly put them on notice that they will have to pick up more of the burden of the defense of the region in the future than they have in the past.

ACTION ON MAJOR MILITARY PROGRAMS

It should be stressed once again that the committee had under consideration not the original fiscal year 1970 budget proposed by the outgoing administration but rather the amended budget submitted by President Nixon on April 15, 1969. All of the reductions and the few additions recommended by the committee were taken against the amended budget request.

Also, subsequent to the submission of the amended budget further reductions were made in fiscal year 1970 forces and programs by the Defense Department at the direction of the President, for reasons which were discussed earlier. The section on major military programs contained in the committee report on the bill does not spell out the details of these later changes. Consequently, I believe it would be useful to summarize at this point the major adjustments made in the force levels originally planned for end fiscal year 1970 in the January budget.

Secretary Laird has assured the committee that given the need to reduce Defense expenditures by a total of $4.1 billion within the current fiscal year, the Service Secretaries and Chiefs agree that these force adjustments will have the least adverse effect on our overall military posture. Nevertheless, the committee is aware that reductions of the magnitude recommended in this bill will, in some degree, limit the power and effectiveness of the U.S. Armed Forces. However, it is not believed that they will reduce our military posture below a reasonably acceptable level in the light of all of the circumstances.

In the strategic forces, one of the most significant adjustments is the phaseout of all the B–58 medium range supersonic bombers by the end of the current fiscal year instead of in fiscal year 1974, as planned in the January budget. To offset this reduction, three more B–52 C–F squadrons will be retained in the forces for the strategic nuclear mission. Because of the drop in the B–52 sortie rate in Southeast Asia, from 1,800 per month actually flown in the first half of this calendar year to a new planned rate of 1,400 per month, the number of B–52 C–F squadrons required for that mission has been reduced from five to three. With regard to the FB–111, the amended fiscal year 1970 budget reduced the planned program from six to four squadrons.

The adjustments proposed in the air defense forces for end fiscal year 1970 reflect an acceleration of the phasedown projected in the January budget. These forces as presently constituted are of limited effectiveness. Pending a resolution of the modernization problem, we agree with the Defense Department that some cutback in the lower priority forces is warranted in order to help reduce expenditures. I want to assure the Members, however, that appropriate action has now been taken by the Air Force to maintain a reasonable level of air surveillance over the southeastern part of the United States. Whether this action in itself can preclude another Cuban Mig-type incident remains to be seen. But the Air Force is well aware of the problem and the concern of the Congress in this matter.

In the general purpose forces program, the land forces are being reduced by 1⅔ division force equivalents, one Army and two-third Marine Corps, below the level originally planned for end fiscal year 1970. This reduction was made possible by the withdrawals of U.S. forces from Vietnam already announced by President Nixon. Even so, we will still have a total of 31 division force equivalents at the end of fiscal year 1970, including, of course, the Reserve components.

The adjustments in the general purpose air forces are relatively small since the objective of the Defense Department is to retain as much tactical air power as is feasible under the circumstances. The largest single reduction is in the special operations forces, which will be cut by about 15 percent. These forces have been extensively used in South Vietnam, but the need for them is now less urgent. In contrast, the number of aircraft to be made available to the Air Force Reserve components will be increased somewhat. This is an action which the Committee has long urged on the Defense Department.

One of the most significant reductions in the general purpose forces is in naval vessels. Well over 100 ships will be inactivated in fiscal year 1970. Most of them are older ships which had been scheduled to be phased out over the next few years in any event. Nevertheless, this action constitutes a significant reduction in the size of the active fleet and emphasizes the need to move forward with the new construction program.

Included among the ship inactivations are two antisubmarine warfare—ASW—aircraft carriers. The January budget provided for six ships and five air groups. Under the revised plan we will have at end fiscal year 1970 four ships and four air groups.

The reductions made in the airlift forces are quite small. Because of the delay in the production program, there will be 17 fewer C–5A transport aircraft in the force at end fiscal year 1970 than originally planned. However, as to other transport aircraft, the Air Force will have one additional C–130E squadron because attrition of this aircraft has been less than originally estimated. All of the remaining C–124's in the active force will be phased out in fiscal year 1970 instead of fiscal year 1971, but 18 more C–124's will be retained in the Air Force Reserve in place of some 35 C–119's. The Air National Guard will also retain an additional 18 C–97's in fiscal year 1970, in lieu of two C–141 associate units previously planned for this year.

Finally, some 200 indirect support aircraft will be phased out of the active forces in fiscal year 1970, including 24 WB–47 weather reconnaissance aircraft, with the balance mostly proficiency training aircraft.

The administration plans a sizable overall personnel reduction, currently estimated to be 216,800 military and 48,600 civilians. The details by service are shown in the following table:

CHANGES IN END FISCAL YEAR 1970 PERSONNEL STRENGTHS

| | January budget | Amended budget (Apr. 15, 1969) | Revised plan | Net change: From January budget | Net change: From amended budget |
|---|---|---|---|---|---|
| Military: | | | | | |
| Army | 1,507,900 | 1,509,300 | 1,435,400 | −72,500 | −73,900 |
| Navy | 771,500 | 766,900 | 694,300 | −77,200 | −72,600 |
| Marine Corps | 314,500 | 314,500 | 294,200 | −20,300 | −20,300 |
| Air Force | 861,200 | 861,200 | 811,200 | −50,000 | −50,000 |
| Total | 3,455,100 | 3,451,900 | 3,235,100 | −220,000 | −216,800 |
| Civilian* | | | | | |
| Army | 444,100 | 430,420 | 412,350 | −31,750 | −18,070 |
| Navy/Marine Corps | 403,800 | 395,836 | 380,000 | −23,800 | −15,836 |
| Air Force | 318,200 | 319,814 | 306,800 | −11,400 | −13,014 |
| Defense agencies | 68,900 | 68,930 | 67,250 | −1,650 | −1,680 |
| Total | 1,235,000 | 1,215,000 | 1,166,400 | −68,600 | −48,600 |

*Full-time, permanent civilian employees.

These adjustments have been taken into account in the committee's recommendations. We have also given careful consideration to other budget adjustments proposed by President Nixon and Secretary Laird. Many of them have been fully embraced by the committee and are reflected in this bill.

In making our recommendations to the House, the members of the committee have, of course, relied upon their own judgment. Some of the reductions recommended go beyond those presently being considered by the administration. A number of them have been made in an effort to enforce better economy and better management in the Defense Department as well as in recognition of the urgent need to reduce Federal expenditures. And, as in past years, other reductions have been made to underscore various shortcomings and inadequacies in certain programs. In some cases the committee felt that the programs presented in the budget were not ready to go forward at the rate proposed and reductions were made on that account. Finally, a number of programs were deleted or reduced in scope by the action of the Congress in enacting the authorizing legislation.

SUMMARY OF BILL BY TITLE

TITLE I—MILITARY PERSONNEL

Because retired pay is rapidly becoming a major item of expense in the Defense Department budget and funding

requirements cannot be controlled through the appropriation process since the retirees and their survivors must be paid as provided by law, the committee recommends that this item be deleted from title I and be set out as a separate title. On this new basis, the committee bill provides a total of $21,057,200,000 for title I—military personnel—a reduction of $584,700,000 from the amount requested in the amended fiscal year 1970 budget. The bulk of this reduction, $521,270,000 reflects the troop redeployments from Southeast Asia and the overall military personnel cuts announced by the administration. Another $30,000,000 represents reductions recommended in the Reserve component appropriations, reflecting, for the most part, more realistic estimates of projected drill pay strengths.

The balance of $33,430,000 is made up mostly of selective reductions in overhead items. For example, the committee recommends a reduction of $7,735,000 in funds for military personnel assigned to headquarters staffs. In the Washington, D.C., area alone, the fiscal year 1970 budget provided for a total of 115,000 headquarters personnel, about 73,000 civilians and 42,000 military. In the judgment of the committee, this number is excessive even for so large an organization as the Defense Department, and reductions in civilian as well as military personnel are recommended. In addition, a reduction of $2,455,000 is levied against military personnel assigned to public affairs, public relations, and public information activities.

Because automatic data processing activities have been expanding so rapidly, inefficiency and duplication of effort have resulted. Accordingly, the committee recommends a reduction of $7,300,000 in funds for military personnel assigned to that area.

There are various programs in the Department of Defense which are not strictly military, inasmuch as the results of such programs are not for direct military efforts. Some of these more social-oriented programs are Project 100,000, to upgrade previously disqualified inductees; Project Transition, to prepare men to transfer from military to civilian life; Project Value, to train personnel for employment; and Project Referral, to help find positions for retirees. The cost of just these programs is now approaching $40 million a year and since there is some question as to whether they are entirely appropriate for funding by the Department of Defense the committee recommended a reduction of $6,935,000. Of this amount, $2,260,000 is a reduction in the appropriation for military personnel and $4,675,000 is applied to operation and maintenance.

Other military personnel reductions include $5,300,000 in permanent change of station costs and about $6 million in subsistence. The latter reflects a more realistic estimate of the absentee rates being encountered in mess halls.

TITLE II—RETIRED MILITARY PAY

The committee recommends for retired military pay a total of $2,735,000,000, the full amount requested in the amended budget but $285 million more than the amount appropriated for fiscal year 1969. As pointed out in the committee report, retired pay by the year 2000 could exceed $7.3 billion per annum, assuming a constant active force but no additional pay or price increases. With an annual increase of 3.5 percent in pay and 1½ percent in the price index, retired pay by the year 2000 could exceed $12.7 billion per year, again assuming a constant active force.

TITLE III—OPERATION AND MAINTENANCE

For all of the operation and maintenance appropriations, combined, the committee recommends a total of $20,878,100,000, $914,000,000 below the amended budget estimate and $1,477,718,000 less than the amount appropriated for this purpose in fiscal year 1969.

Of the net reduction totaling $914,000,000, almost $400,000,000 is related to the troop withdrawals from Southeast Asia and the overall reduction in forces and activity rates which I discussed earlier in connection with the military personnel appropriations. About $140,000,000 is related to the reduction in the end fiscal year 1970 civilian personnel strength subsequent to the submission of the amended budget.

For reasons which I have already discussed in connection with the military personnel appropriations, the committee recommends a reduction of $82,400,000 in automatic data processing activities, $55,000,000 in headquarters operations, $4,700,000 in the social type programs such as Project 100,000, Project Referral, and so forth, and $2,500,000 in public affairs activities.

The committee has again spent considerable time this year in reviewing the operations of the various communications systems of the Department of Defense and, again, the committee hearings have disclosed duplication of management responsibilities, ineffective cooperation, duplication of review procedures and inadequate effort directed toward the elimination of so-called dedicated networks. The details of our findings are set forth in the committee report and I will not take the time to repeat them here.

But, needless to say, the committee was not satisfied with the rate of management improvement being made in that area. The committee believes that there is a need for better overall management of existing communication assets; a need for centralization of control of all communications operations including, possibly, the elimination of "strategic," "tactical," and "common user" distinctions among systems; and the need for a single authority for the validation and approval of all communication requirements, including the upgrading of existing systems and the development of new systems.

The committee is aware that all communication operations in the Department of Defense are currently receiving a thorough review by the Deputy Secretary of Defense and his staff. We have also been advised that this is one of the areas which the blue ribbon panel will study intensively.

To underscore the committee's concern in this area we recommend a reduction of about $45,000,000 in the amount to be made available for the operation and maintenance of the communications systems.

The committee has again reviewed the Defense intelligence operations this year. This review has reemphasized the need for tighter top management control over this important operation and improvement in the management of the entire system. The committee has been advised by the Secretary of Defense of the organizational changes he has recently initiated in an endeavor to improve intelligence operations and the intelligence product. Nevertheless, the committee did not see any reason for an increase in funds in fiscal year 1970 and, accordingly, reduced the appropriations for these purposes by approximately $30,000,000.

Another area of concern to the committee has been the substantial increase over the last few years in the cost of service support contracts throughout the Department of Defense. The committee recognizes that benefits can accrue through having various service support activities, such as food services or vehicle maintenance, provided under contract in certain circumstances. The committee recognizes the need for these contracts but believes the rate of growth is disproportionate to the needs of the services. Accordingly, the committee recommends a reduction of more than $60,000,000, spread among the four services and the defense agencies, in order to hold the cost of these contracts at about the fiscal year 1969 level. Moreover, the committee intends to give this area further attention in its review of the fiscal year 1971 budget requests.

The committee also noted that the services and defense agencies increased in fiscal year 1970 their requests for various management studies by independent commercial consultant firms. The committee is still of the opinion that the Department of Defense is not exercising adequate control over these studies and therefore recommends an overall reduction of about $7,000,000 in the funds to be made available for that purpose.

For several years, now, the committee has discussed with the Navy and Air Force the need for training helicopter pilots in fixed wing aircraft. Last year the committee suggested in its report that this type of training for helicopter pilots could be dispensed with, particularly in view of the urgent need for these pilots. The committee pointed out that fixed wing training could be provided later for those pilots whose subsequent duty might require it. The estimated average cost of training a pilot for fixed wing aircraft operations prior to helicopter training is approximately $60,000. Since both services together train about 1,000 helicopter pilots each year, the total cost of this training amounts to about $60,000,000 a year.

The committee believes that these funds could be expended to better advantage for more urgent requirements. Accordingly, the committee recommends a reduction of $10,000,000 each in the budget requests of the Navy and the Air

Force for pilot training. This reduction will still leave sufficient funds to provide for a gradual phaseout of the program by June 30, 1970. In addition, the committee has reduced the Navy request for pilot training by $13,000,000, reflecting the cutback planned by the Navy in its fiscal year 1970 program.

For reasons I have already discussed in connection with the military personnel appropriations, the committee recommends a reduction of $18,000,000 in operation and maintenance funds for the Reserve components. A reduction of $5,000,000 is also recommended in the contingencies, Defense, appropriation inasmuch as the largest amount used by the Department in recent years has been $2.7 million. The $5,000,000 recommended for this purpose should be sufficient in this year of budget stringency.

TITLE IV—PROCUREMENT

For all of the procurement appropriations covered by this bill, the committee recommends a total of $18,092,148,000, $2,794,652,000 below the amended budget request and $2,527,352,000 less than the amount appropriated in fiscal year 1969. About one-third of the reduction from the fiscal year 1970 procurement request is accounted for by the deletions and decreases in the authorizing legislation enacted by the Congress.

In the procurement of equipment and missiles, Army account, the committee recommends the inclusion of $86,000,000 for the procurement of the 170 AH–1G helicopters which were authorized by the Congress to replace helicopter gun ship losses in Southeast Asia and to fill the void caused by the cancellation of the AH–56A Cheyenne procurement contract.

Among the more important reductions recommended by the committee in the PEMA account are the following:

First. A reduction of $16,000,000 in the proposed buy of U–21A utility aircraft. This aircraft is not of sufficiently high priority to fund more than 22 of the 72 requested for fiscal year 1970.

Second. A reduction of $23,400,000 for the procurement of the improved Hawk system, $14,200,000 more than the $9,200,000 which failed authorization. This system is still in the testing stage and the committee does not believe it is ready for full-scale procurement.

Third. A reduction of $13,500,000 in the proposed Chaparral program because of slippage.

Fourth. A reduction of $5,100,000 in the Pershing missile program since these funds are not now required.

Fifth. A reduction of $9,700,000 in missile spares and repair parts, reflecting reductions in the Hawk and TOW missile programs.

Sixth. A reduction of $50,900,000 in communications and electronics procurement.

Seventh. A reduction of $92,800,000 in ammunition, based primarily on reduced consumption.

Eighth. A reduction of $25,000,000 in production base support funds for the modernization of certain Army facilities and ammunition plants.

In the procurement of aircraft and missiles, Navy account, the committee recommends a reduction of $275,000,000 related to the procurement of six production F–14 aircraft. In lieu thereof the committee recommends the addition of $146,000,000 to the Navy R.D.T. & E. appropriation for three additional research and development models, plus tooling and test support. This action will not disturb the existing F–14 contract options, but will avoid committing the aircraft to production at this time. The committee is concerned about the past practice of tieing the various procurement options to fixed calendar dates instead of to the completion of specified milestones. I am pleased to note that this practice is being changed by Secretary Laird. Under past practice, failure to exercise these options by the prescribed dates left the Government with no alternative but to renegotiate the contract on a sole source basis. This practice also gave the Congress very little flexibility in deciding whether and when to fund each increment of the program. For example, in the case of the F–14, the Navy must exercise its option for lot III, involving at least 15 production aircraft, by October 1, 1970, about 3 months prior to the scheduled flight of the first prototype aircraft. This, in the opinion of the committee, is not a prudent way to proceed with a program of such great scope and complexity. We expect the top management of the Defense Department to give this problem close attention in the year ahead, and the committee will review it again in connection with the fiscal year 1971 budget.

Another important reduction in the Navy procurement account is the deletion of $62,400,000 requested for new KA–6D tanker aircraft. The committee believes that the Navy should modify additional A–6 aircraft to the tanker configuration in lieu of buying new aircraft.

The committee has reduced by another $67,100,000 the funds requested for the CH–46 helicopter. Attrition rates do not support the proposed fiscal year 1970 buy of this helicopter. The remaining $25,300,000 plus $5,000,000 of prior year funds will provide for the procurement of 12 such aircraft. The committee also recommends a reduction of $41,900,000 in aircraft spares and repair parts and $12,800,000 in aircraft modifications. Other reductions include $4,500,000 in the Sparrow III missile program and $9,500,000 in the Shrike missile program.

The major change in the shipbuilding and conversion program is the addition of $152,700,000 for a third SSN–688 class nuclear-powered, high-speed submarine which was authorized by the Congress in addition to the two in the amended budget. The committee did not fund the three fast deployment logistic ships which failed to receive authorization from the Congress. The recommended programs will fund a total of 14 new ships and the conversion of 17 others. This compares with a revised fiscal year 1969 program of six new ships and 16 conversions.

The committee is well aware of the need to modernize the fleet. However, the Navy since World War II has built or has currently under construction about 570 new ships plus conversion of some 360 ships. Of these totals, approximately 150 new ships and almost 50 conversions were still in work as of early June 1969. In addition, there were four new ships and 13 conversions yet to be awarded. Accordingly, the committee decided not to fund at this time the total congressional add-on of $351,800,000 to the shipbuilding program proposed in the President's budget.

In the other procurement, Navy account, the committee recommends reductions totaling $560,900,000. Some of these reductions are related to the earlier than planned inactivation of ships during the current fiscal year. Other reductions included $70,900,000 for communications and electronics equipment, $134,800,000 for aviation support equipment, $240,200,000 for ordnance support equipment, and $60,400,000 for civil engineering support equipment.

In the Marine Corps procurement account the committee recommends a reduction of $149,752,000 of which $16,700,000 is levied against the procurement of the improved Hawk missile system which I discussed earlier in connection with the Army program.

In the aircraft procurement, Air Force account, a reduction of $340,500,000 is recommended. Of that amount, $134,500,000 represents deletions and reductions enacted by the Congress in authorizing legislation. Among the other specific reductions recommended are $52,000,000 in advanced procurement funds for the C–5A aircraft. These funds are no longer needed since the Air Force does not now plan to buy any more of these aircraft after fiscal year 1970. Other reductions included $39,200,000 for the RF–4C aircraft, $10,700,000 for aircraft spares and $13,300,000 for war consumables.

Most of the reductions in other procurement, Air Force account, are for munitions and associated equipment and reflect the latest consumption rates in Southeast Asia.

TITLE V—RESEARCH, DEVELOPMENT, TEST, AND EVALUATION

For all of the appropriations encompassed under this title, the committee recommends a total of $7,197,600,000. This is $1,024,800,000 below the amended budget request for fiscal year 1970 and $352,228,000 less than the amount appropriated for this purpose in fiscal year 1969.

This year the hearings held on the various research, development, test, and evaluation appropriations were more detailed than usual, totaling some 1,767 pages, printed in two volumes. Very detailed examinations, supported in most instances by staff investigative reports or reports by the General Accounting Office, were held on the main battle tank, the Sheridan, Project Mallard and the Cheyenne helicopter programs of the Army; the F–14 aircraft program and the Phoenix missile program of the Navy; and the C–5A aircraft, F–111 aircraft, Mark II avionics system, manned orbiting laboratory, Hard Rock Silo, Minuteman missile, and short range attack missile programs of the Air Force.

The amount in the Navy R.D.T. & E. account recommended by the commit-

tee includes the $146,000,000 added for the F–14 as mentioned earlier in my discussion of title IV, procurement. That amount is comprised of $90,000,000 for three additional research and development aircraft, $36,000,000 for tooling and $20,000,000 for test support. None of these funds are to be utilized for hard tooling or for production aircraft, since the committee feels it is premature to commit the F–14 to production at this time.

I also want to point out that the committee's recommendations reflect the reduction of $400,000,000 made by the authorizing legislation in the manned orbiting laboratory—MOL—program.

In the Army R.D.T. & E. program I want to call particular attention to the committee's recommendation on the MBT–70, the main battle tank. The present design, in our judgment, is overly sophisticated, unnecessarily complex and too expensive. We believe the most prudent course at this time would be for the United States to design a tank that could be produced at about one-third the cost now estimated for the current version, even if this should require terminating the joint development program with the Federal Republic of Germany.

The committee has also specified a reduction of $5,000,000 in the Army R.D.T. & E. program for Project Mallard, an international joint development program involving the United States and three other countries. The Mallard project proposes to develop and produce a major tactical communications system for use by the field armies of the participating countries, at an estimated total program cost of well over $1,000,000,000. It is inconceivable that the Department of Defense would embark on an international development program of this nature and magnitude when a militarywide tactical communications system has never been developed for the military services of the United States. As a matter of fact, the Department of Defense inventory is replete with communications equipment having a lack of commonality. Historically, joint international development programs are inherently turbulent and trouble ridden. A good example is the MBT–70 development program; and Mallard involves four participating countries. For these reasons, the committee recommends termination of the Project Mallard program.

The committee also recommends the termination of the Navy Condor air-to-surface standoff missile system. This program has already slipped more than 3 years behind the original schedule because of technical difficulties, and the unit cost of the missile is expected to be almost triple the original estimate. Furthermore, there is a serious question as to whether the size of the proposed Condor warhead is adequate for its intended mission. Accordingly, additional funds for this project have been denied and it is recommended that termination costs be financed through the use of existing prior year unobligated balances.

In the Air Force R.D.T. & E. program, the committee recommends the deletion of all A–X development funds. The authorization act has already reduced the amount from $12,000,000 to $8,000,000. This recommendation would eliminate the remaining $8,000,000. There are already a large number of attack aircraft of various types in the active inventory of the Navy, Marine Corps, and the Air Force. It may be that an aircraft specifically designed for the close air support role would be superior in some ways to those currently available, but the Air Force has not yet demonstrated that the advantages to be gained would justify the cost of developing and deploying the proposed A–X. The committee realizes the importance of the close air support role and expects that at some time a new aircraft for this role will be required.

CONCLUSION

The administration and Secretary Laird are to be commended for the new look imparted to the management of defense matters and the orderly improvements already made in the solution of problems.

And I know I speak for the vast majority of Americans when I state the admiration we hold for the uniformed men of our armed services and especially the admiration we hold for the fine men who have fought and served in Southeast Asia. This Nation is represented and served on the battlefield by a fine group of Americans.

The committee has spent the better part of 1 year in study, scrutiny, and analysis of the Defense Department budget proposal for fiscal year 1970. The committee began receiving testimony on January 29, 1969 and concluded with testimony from the Secretary of Defense on November 17 and markup of the bill on November 20.

Every effort was made to ferret out every savings possible and this involved some very difficult decisions. In my view the amount recommended in the bill represents the minimum level needed for our national security.

I urge the House to pass H.R. 15090. The funds it would provide are needed to fulfill our hopes for peace with honor and freedom.

Mr. MAHON. Mr. Chairman, I yield 15 minutes to the gentleman from Florida (Mr. SIKES).

Mr. SIKES. Mr. Chairman, the distinguished chairman of the committee has given his customarily outstanding discussion of defense funding problems. He has answered many of the questions which may be expected to arise. I congratulate the gentleman from Texas today, as I have previously, upon his leadership.

Before I discuss the bill, let me join my colleagues in the statements which have been made and which are being made about the important services rendered by Bob Michaels to the Committee on Appropriations through many dedicated years. Bob Michaels is a most knowledgeable member of the staff, and he has carried a big part of the load which has had to be borne by staff members on this very important committee. Theirs has been a superhuman responsibility. They have performed their task admirably, and Bob Michaels has been an outstanding leader in their activities. The committee will miss his valuable services.

I believe, Mr. Chairman, the most important question before Congress in matters of defense is that of modernization. The able and great Senator from Mississippi, Senator STENNIS, has stated he fears a second-rate role for the United States in 1975 unless Congress permits new weapons development. I am willing to go a step further: We already are in or dangerously near a second-rate role, because there has not been sufficient modernization of weapons. This applies in so many areas. It applies to the fleet and it certainly includes submarines. It applies to aircraft and includes both the Air Force and the Navy air arm. It applies to nearly every level of equipment funding.

It is understandable that the war in Vietnam has prevented diversion of resources into the development of newer weapons, but this has not been the only problem. There has also been the very serious gap occasioned by the 111 aircraft series—the TFX—in its various categories. Then there have been inexcusable delays in the development of some other new weapons, including tanks. As a result of all this, both we and our allies are using equipment which is not as modern as that possessed by the Russians and their friends, and the situation is going to get worse before it can possibly get better.

This bill does not go far enough to close the gap. Lack of modernization may be the most serious omission in the bill. It is something that deserves much more thought and action than it has received.

There is the matter of cost—and defense is costly. In the midst of all the blame that is being leveled by critics at defense spending, I would like to suggest we take a quiet look at the way in which defense costs have been leveling off.

Take away the cost of the Vietnamese war—and that is very considerable, $25 billion to $30 billion a year—and then compare, if you will, the relative purchasing value of the dollar with its purchasing value 5 to 10 years ago. When these things are done you will find we are getting more defense for a dollar than we have obtained at any time in recent history, and this despite cost overruns, inflation, escalation, high wages and all the other factors which contribute to today's high defense costs.

So it is time, Mr. Chairman, to give some credit along with the blame that presently is being directed at defense spending. Some of both are in order, I do not argue that, but there are two sides to the story.

Considerable emphasis is being placed on the size of the cut inflicted in this year's defense appropriation bill, but what may not have been stated is that this is the deepest cut percentagewise that has been made on any appropriation bill this year. It is also the largest cut percentagewise made on any defense appropriation bill since the end of the Korean war.

Those who have clamored for a reduction in defense and a buildup of other expenditures for domestic needs—and I recognize the pressure of domestic need—those who want less defense and more domestic spending, can take comfort from what is now happening to defense

expenditures. There have been a number of appropriation bills in which amounts have been raised above the budget this year, significantly raised either in committee or on the floor. This one has been deeply cut. As a matter of fact, most of the total of the fund reductions which have been achieved in appropriation bills this year are in defense.

I am not at all certain that cuts of the magnitude shown in this bill can be justified. I know there is a need for modernization of weapons and equipment beyond that which is possible under the terms of the bill. I can even see in the magnitude of the cuts which have been inflicted that we may be embarking on unilateral disarmament, and I trust that the House, which is usually very sensible about these things, fully realizes the danger of unilateral disarmament at a time when we are just embarking on talks with the Russians about mutual limitations on defense programs.

The Russians seem to be more fully informed on some of these things—at least, their government is—than the American people, and they will take advantage, and full advantage, of any reduction in military strength which we inflict on ourselves without requiring a quid pro quo in the negotiations.

The cuts which have been announced by the Office of the Secretary of Defense prior to the markup and reporting of this bill are in general in the same pattern as those in the bill, and that I believe is fortunate.

I do believe that the combined total represents reductions enough to be inflicted on the military establishment during this fiscal year.

I realize that money must be saved and expenditures must be reduced wherever it is possible. I am not sure that the cuts which have been imposed will accomplish the objectives which are desired. For instance there is the matter of reduction in civilian employment. Among the most severe are the reductions in the naval aircraft rework facilities at a number of naval bases. The effect of these severe cuts will be to deprive experienced, capable, and dedicated civilian employees of a livelihood. However, the aircraft rework must still be done. Planes will continue to require repair and rebuilding operations. That means additional contract work will be necessitated. Contract overhaul and repair is not necessarily the most economical. In most instances it is more costly because it is not as dependable and because of miscalculations in contract awards.

I note, too, that, although it is proposed to dismiss American employees at home, the Department of Defense expects to do overhaul and repair operations abroad. That means continued gold flow. It means foreign nationals will receive employment instead of U.S. nationals, and it means that foreign economies will be boosted while ours suffers. This does not make sense to me. I urge that the Department of Defense remedy this situation post haste.

I have also questioned the present practice of the Department of Defense in the use of overtime in large amounts for civilian employees. The use of overtime is a costly procedures. The present very considerable amount of overtime adds materially to the total cost of civilian employment. It occurs to me that there should be reductions of overtime to the greatest extent possible in order to permit more civilians to retain their positions. Those who lose their jobs will be very severely affected and I am convinced that the use of less overtime would permit more civilians to retain their employment. This in itself would be a morale builder and a desirable approach.

Now let me turn to a subject not generally discussed in connection with the bill.

In August, I visited a number of countries which are far off the beaten track to most Congressmen. These are nations in Southeast Asia and in Mediterranean areas where change is in the making and where important decisions affecting their future and ours are in process. Wherever I went, I was struck by the importance of the work done by U.S. training missions overseas and by the valuable results obtained from the training of foreign military personnel in U.S. military programs and schools and in U.S. colleges and universities. Certainly these are an important element of our foreign assistance programs. I am convinced that these programs should be expanded very considerably. The foreign military personnel who train here or who study here learn something about America that is just as important as their military or technical training. The U.S. missions abroad have an opportunity to tell the story of America in a way that is equally as important as to any other phase of their contributions. This interchange of personnel and ideas is too valuable to remain at the current level. While we continue these programs at a comparatively low level, the Russians and the Red Chinese are working vigorously to expand their own mission programs and their efforts are meeting with a measurable degree of success. The same benefits accrue to Russia from these interchanges that I seek for the United States. I can state that nearly every non-Communist country would prefer to have its personnel train in the United States and to have U.S. military missions in their midst. It is our own fault if we do not take advantage of this inexpensive procedure for important missionary work.

You have grown accustomed to my concern about the position held by the Reserve components. I trust you will accord me the right to speak from the standpoint of personal and intimate knowledge of Reserve affairs gained through many years of actual participation in Reserve programs. From that knowledge and from the hearings conducted this year, I am convinced that emphasis, particularly on equipment for the Reserve forces, is lagging badly, and this, in itself, has adversely affected training programs and morale. There is a reason for this situation. The Vietnamese war has required that many Reserve units give up their most modern equipment or that they not receive modern equipment which had been scheduled for delivery to them. As the pressure of the requirements for the Vietnamese war diminishes, there should be renewed emphasis on modernization of the Reserve components. They should not continue to occupy, as one publication has stated, "An ill-outlined, shadowy place in the OSD organizational sun." This bill gives little help.

It will be noted that the National Board for the Promotion of Rifle Practice has been surfaced and restored to a position more in keeping with its importance as an established and responsible board. Let me remind the House that this board has been responsible for the civilian marksmanship program, which was first brought to life by the Congress in 1903. This program, through two World Wars and the Korean and Vietnam conflicts, has assured a civilian army of a needed cadre of trained civilian shooters at a token cost to the Federal Government.

The program of the national board has fallen upon evil times in recent years and was in fact almost destroyed. Apparently the same groups which have sought to take guns away from the law-abiding citizens in America also want to destroy the civilian marksmanship program. To people who know firsthand about weapons and infantry combat and who are deeply aware of the need for better marksmanship for the frontline troops, this threat to a modest national program for civilian marksmen seems almost unbelievable.

However, the fact remains that through the past 2 years the programs for the National Board for the Promotion of Rifle Practice have been reduced to the present token amount of $52,750. This amount is barely sufficient for survival. It does not contain marksmanship funds, which were carried in previous bills, and this would require an additional $171,600. The present request is $203,650 less than the amount actually appropriated for fiscal 1968. Present PEMA funds will permit the free issue of .22 caliber ammunition in the amount of $84,000, the same figure as in fiscal 1969. The present funding level does not provide support of the rifle matches. It is my hope that now that attention has been drawn to the plight of the board and that it has at least been restored to its rightful place in the bill, that the Senate will take a realistic view of the needs of the board and provide funding for the marksmanship program

It is incomprehensible to me that this program which patriotically supports our Government and its objectives should be subjected to a pinch-penny policy while organizations such as the National Student Association has received from the Office of Economic Opportunity and others nearly a million dollars in tax funds with which to oppose the war against communism in Vietnam and to fight military preparedness in the face of world menace. It does not quite add up to common sense standards which inspire public confidence.

I should mention also the work of the Logistics Management Institute, which from its inception 8 years ago, has conducted studies in logistics and related areas directed toward improved readiness and reduction in cost of defense op-

erations. It has been my belief that over the last several years, recommendations contained in LMI reports have resulted in cost savings and management improvements as these recommendations were implemented in the Department of Defense. Cost savings have been initiated. The background and expertise of the LMI staff can provide a basis for additional cost savings through improved management practices. It appears to me that we should think twice before we force the Defense Department to deprive itself of this capability.

Now let me turn to an altogether different subject. It should be a matter of more than a little concern that Red China is, in the view of many qualified observers, now in the midst of preparation for war. Possibly this is because of fear of a Soviet attack. But it is hardly to be anticipated that these two principal Communist powers would reach a falling out of such a serious nature. It is more logical that Red China sees in a military build-up a measure of insurance against a Soviet attack, plus an added capability to exercise aggression upon the weaker neighbors along her border. Whatever the reason, it appears indisputable that Red China has stepped up its war preparedness programs and that it is conducting air raid drills, building air raid shelters, accumulating stockpiles of emergency food rations, plus a buildup in modernization for its forces. This has the effect of disciplining the population and consolidating the Government's grasp upon it, and in sharpening and pulling together the Chinese army. The Red Chinese army has been engaged in many chores during recent years which are not military in nature. These range all the way from running railroads to harvesting crops. Now there is emphasis on the restoration of professionalism to the army. All of this comes at a time when revolutionary activities are being stepped up all along China's borders. Training and equipping of cadres to stir up trouble in other nations is going on constantly, and there is a frequent exchange of personnel between the Red Chinese forces and the revolutionary units which are active among Red China's neighbors.

Let me add this and then I will be through: It should be quite apparent that communism respects strength and only strength. The Communists will not attempt to overrun a country which is militarily prepared to defend itself. We are seeking to extricate ourselves from the conflict in South Vietnam. We must first help South Vietnam to become sufficiently strong to withstand aggression. This is in process and we are making important and valuable progress in that direction. It will not come overnight, but the South Vietnamese are making the most determined effort yet to reach the point where they can stand on their own feet. The House should be encouraged at the progress there.

Communism will in time, regardless of Vietnam, seek other victims. Communist nations today are promoting revolution in every country in the world and particularly those whose borders they touch on. They will even consider direct aggression when it suits their purpose, but keep this in mind: Communist China would not dream of attacking Taiwan, for instance, unless a speedy conquest could be anticipated. North Korea will not attack South Korea unless South Korean equipment and forces are inadequate to cope with the North Korean onslaught. Communist nations want quick conquest in order to accomplish their goals before world opinion sours and before world sentiment can coalesce against their aggression.

It should be very clear that what we now seek is to strengthen friendly countries so that they can defend and protect themselves and so that American forces will not be required for their survival. This is in keeping with the administration's stated aims to reduce our involvement in the affairs of foreign nations and to induce those nations to depend on their own capabilities. Again that is why I have urged modernization. It is much less costly to provide modern weapons than it is to send American bodies. The failure to provide modern weapons for our friends and the failure to develop them for ourselves can, in time to come, require the sending of American bodies instead.

But the immediate objective is an adequate defense for America. There is no substitute for preparedness at home; there is no substitute for the capability to defend ourselves. Those who wear our uniform must have adequate equipment and proper training. This we seek to provide. These are the best guarantees of the survival of this Nation and the survival of the free world.

Mr. MINSHALL. Mr. Chairman, I yield myself 20 minutes.

Mr. Chairman, as usual, my good friend and colleague, the gentleman from Texas (Mr. MAHON), the chairman of our subcommittee, has done, as always, an outstanding job in presenting this bill in a very succinct and very understandable form on the House floor. As the chairman pointed out and as my good friend from Florida, BOB SIKES, has pointed out, the bill that our committee presents to the House represents the greatest dollar reduction proposed since fiscal year 1954 at the end of the Korean war. This is no mean accomplishment at a time when we are engaged in another costly conflict for there is approximately $23.2 billion in this bill alone for Vietnam. Yet I am certain that the remarkable reductions represented in this budget in no way jeopardize a single American serviceman who relies on us for responsible action to assure his ability to defend himself on the battlefield. Nor does it imperil the general security of the United States itself.

The fiscal 1970 defense appropriation calls for $69,960,048,000, a reduction of $4,442,201,427 below the fiscal 1969 appropriation, and I should like to emphasize that this budget is $7,780,152,000 below the recommendation made for fiscal 1970 by the previous administration early last January and $5,318,152,000 under the original estimates submitted by the new administration.

There is not a Member in this House who does not earnestly hope that future events will permit us to bring forth even more drastically reduced military appropriations when we next come to the floor with the 1971 fiscal budget.

I am optimistic on this score on two counts: I think we are at last on the right course, under President Nixon, to disengaging ourselves from the Vietnam war, which will have cost us $104,607,000,000 from its inception to the end of fiscal 1970. And, second, we on the Defense Appropriations Subcommittee look with pride on one of our alumni, our brilliant former colleague, Melvin R. Laird, who assumed the duties of Secretary of Defense last January and who has been sweeping out the skeletons that were hidden in Pentagon closets ever since. He took with him to the Department of Defense the keen and probing mind which served our committee, the Congress, and American taxpayers so well during his years on Capitol Hill.

The committee report quite aptly calls fiscal 1969 the "year of the cost overrun." These overruns, to the tune of $16.2 billion over the last several years are not music to the ears of the much-put-upon taxpayer. Taxpayers can rejoice, however, that Secretary Laird is the man who has ferreted out this information, with the same uncanny faculty for uncovering waste, duplication, extravagance, and clumsy and dubious procurement practices that made him such an invaluable member of the Defense Subcommittee. He and his staff have uncovered laxities—improperly defined specifications, delays in delivering Government-furnished equipment, and an overload of concurrency between research and development and production.

Having his skilled investigative talents at work in the Pentagon has been a boon both to the Defense Subcommittee and to the American taxpayer. Here is the sort of candor he displayed in testifying before our subcommittee—and it is to be found in part 7 of the hearings if any of you would like to read it:

> I am still not convinced that we have uncovered all the deficiencies in our current programs and we will continue to examine them and keep the Congress informed.

And Secretary Laird went on to say:

> I should also note that the cost growth of the 34 major weapons systems on which we are reporting to the Congress is, as shown in table 2, some $16.2 billion over original baseline estimates. This problem will affect our budget planning for some years to come, as is evidenced by the size of the cost growth and the $1 billion near-term financial deficiencies. Hard decisions must be faced as a new system enters the production phase and additional amounts of the $16.2 billion must be provided within limited budget funds in future years.

He said further:

> We will continue to devote top level management attention, as we have since January, to solving our current problems and preventing, to the maximum extent possible, recurrences in the future.

And this I sincerely believe.

At the conclusion of remarks I will include the table to which the Secretary referred in his testimony. It details a June 30, 1969, summary of cost growth on 34 major weapons systems, ranging as high as 443.9 percent over the original plan.

These are outlined in part 7 on page 367.

This is the first we have had a Secretary of Defense who has come before Congress and put all the facts on the line, identifying cost overruns in every major weapons system in all three branches of the service. It was one of the first tasks he had his staff undertake when he assumed his new duties, to identify all of these areas in the Army, Navy, and Air Force so that they are assembled in one place. The overruns were inherited; as a matter of fact the earliest disclosure of a potential overrun was developed right in our committee when Mel Laird was still a member. He went on well equipped to the Pentagon to undertake the gargantuan task of trying to turn it into a tight ship. I think he should be commended for the magnificent job he is doing.

I know that he is looking into and encouraging competitive procurement among the services, something our Defense Subcommittee has urged and insisted upon for years. Competitive procurement has been on a steady decline, although Defense officials themselves have said that experience shows that savings of 25 percent and more can be realized through this procedure.

Just as an example, during our hearings it developed that all three services are procuring survival radios independently of one another and at accelerated costs as a result.

The radio is the small, lightweight affair that I have here, a very lightweight piece of equipment carried on the person of each aircrew member. Should his craft go down, the radio enables rescuing aircraft or ships at sea to "home" on his downed location.

He can pinpoint his whereabouts and "talk in" the rescue plane or helicopter to his precise location. There is no doubt the personal survival radio is a necessary and invaluable device which has saved many lives.

But, testimony developed in our subcommittee and through staff investigations brought to light the fact that the Army, Navy, and Air Force have been going off in all directions in procuring these radios. Unit costs have soared as a result, all the way from $213 per radio for the Air Force to $820 for the Army—and I might add that civilian off-the-shelf radios of the same type and serving the same purpose are even less costly.

There is not a shadow of a doubt that had there been competitive, coordinated procurement these radios would now be produced at a fraction of those costs.

Virtually no effort was made toward acquiring a single standard radio suitable to all branches of the service, since its purpose would be identical to all. This situation has been developing since the early 1960's and right now there are seven different types of sets in DOD's survival radio inventory and an eighth one in the R. & D. oven. The inevitable delays which accompanied development and refinement of these radios, as each service indicated its desires for more elaborate capabilities, resulted in overruns which range from 15 percent to more than 100 percent.

This is a small example, but an expensive one, of the kind of duplication which multiplied many times over gives our citizens good reason to grumble when April 15 comes around. I have said that I am convinced our good friend and former colleague will run a far tighter ship than what he inherited last January. He already has started caulking the seams and he is well aware that this whole area of procurement practices is in dire need of immediate attention. Our committee has asked the Director of Defense, Research and Engineering to report to us at next year's hearings as to what duplications have been uncovered and eliminated. I am optimistic that under Mel Laird's guidance the report will be happy reading for the taxpayer.

Mr. RHODES. Mr. Chairman, will the gentleman yield?

Mr. MINSHALL. I yield to the gentleman.

Mr. RHODES. Mr. Chairman, I thank the gentleman from Ohio for yielding and wish to compliment him on the fine statement that he is making.

I am sure the gentleman would agree with me that Secretary Laird, having tested the water, as he always has tested the water, realized that cuts would be made in the outlays for the Department of Defense for the fiscal year 1970, and he further realized that appropriation bills have been and are in the habit now of being rather late in passage, and if he waited until a bill was actually passed, it would be very difficult then for the Department of Defense to make the total cuts that were necessary, and to make that cut effective in the last part of the fiscal year. As a result, the Secretary actually has instituted many of the cuts which we are now discussing as a prospective matter. Actually they are already being made by the Department of Defense because of the alertness and the knowledge of the Secretary of Defense.

Mr. MINSHALL. My good friend, the gentleman from Arizona, is exactly right. Not only has he made the cuts this year, as were pointed out—but some of the savings especially in the Pentagon procurement—the savings will amount to literally hundreds of billions of dollars in the years to come.

Despite the frustrations of a drawn-out session, with delays in bringing our bill to the floor completely unrelated to our committee, I am pleased with the streamlined budget we are presenting to the House. I am realistic enough to know that it is not beyond criticism, but I think even our severest critic will have to admit that we have achieved a highly creditable reduction. We have cut this budget $4 billion under last year and $7 billion below the amount Lyndon Johnson and Clark Clifford recommended. Those are substantial sums.

As we worked, we were mindful always of our great responsibility to our troops in Vietnam and to our solemn commitment to provide our citizens with a strong defense during these badly troubled times. Simultaneously, we worked aware of the blight of inflation which is increased by big spending, and of the many pressing needs calling to us on the domestic front. And, we were always conscious of the forgotten American, the citizen who foots the bill for every money measure we pass in this House. I think the committee has done a darn good job, working with a keen and conscientious Secretary of Defense.

It is my greatest hope, as I know it is that of this entire House, that both world conditions and a more tightly run Pentagon will permit us to come to this floor in 1970 with a defense bill which will show even greater savings.

Mr. Chairman, I should like to conclude by offering in the RECORD an article which appeared in this morning's Washington Post which states "Congress Leading the Way on Military Cutbacks."

Mr. Chairman, I think it is a very well written article and I just want to say in passing, that any time the Washington Post agrees with a committee and this Congress, we have done a darn good job.

The matters referred to follow:

CONGRESS LEADING WAY ON MILITARY CUTBACKS

(By George C. Wilson)

The House today takes up a defense money bill which reflects the new mood of the Congress toward the military.

The bill, written by the House Defense Appropriations Subcommittee, serves notice that Congress is going to lead the way toward retrenchment of the U.S. military establishment by exercising its power of the purse.

Defense Secretary Melvin R. Laird, the bill says in effect, will have Congress with him rather than against him on money saving schemes.

It was only a few years ago that former Defense Secretary Robert S. McNamara clashed with Congress by refusing to spend money for such projects as the Air Force B–70 bomber.

He made gains for a while against both military leaders and their supporting congressional committees by overwhelming the opposition with facts, figures, color charts, feints, overstatements and strong backing by President Kennedy.

His plan was to accentuate the positive and eliminate the negative.

As it turned out, McNamara got his way most of the time in his first few years as defense secretary.

The TFX airplane contract award, for example, was challenged by Sen. John L. McClellan (D-Ark.), starting in 1963 but did not slow McNamara down for some time.

But by this year the cost overruns on such programs as the TFX fighter, C–5A transport and minuteman missile had shown that McNamara had not been the complete manager after all. Members of Congress had reason to try their own hand at managing the Pentagon.

Such newcomers as Sen. Walter F. Mondale (D-Minn.) saw this right away as he attacked the Navy's most sacred cow, the aircraft carrier. The Navy won, but the political soundness of opposing a pet military project on cost-effectiveness grounds was demonstrated. A politician need not look like a peacenik.

The House Defense Appropriations Subcommittee is made up of old timers who have strongly supported most military projects in the past. The fact that the subcommittee cut $5.3 billion off the Pentagon's fiscal 1970 budget showed that such support has a limit when constituents are demanding a rearrangement of national priorities.

Yesterday, another old friend of the military—Sen. John Stennis (D-Miss.) predicted on the ABC "Issues and Answers" television program that the Senate would go along in "large measure" with the gigantic $5.3-billion House cut. That cut is larger than the annual budget of * * * important to the defense effort as to any other sector of the economy."

That statement takes the words right out of the mouths of several liberals in Congress who have been arguing all year that the nation cannot afford *not* to cut military spending. The fact that the conservative Appropriations Committee both said it and the Nixon defense budget by 5.3 billion represents a trend which cannot be measured alone by recent votes on the attempts to kill specific Pentagon projects.

George H. Mahon (D-Tex.), chairman of the House Defense Appropriations subcommittee as well as the parent appropriations committee, himself said he could not have pushed the full Pentagon budget through the House in 1969 and was responding to what he called the "realities." He announced early in the year that he was going to cut the Pentagon's fiscal 1970 budget by $5 billion. And his old committee colleague, Defense Secretary Melvin R. Laird, scurried around and made as many of his own cuts first as he could. Laird said his cuts will amount to $3 billion in spending. Mahon's cuts are put at $5.3 billion in new money (new obligational authority) some of which would show up as a spending cut beyond fiscal 1970.

With Congress taking the lead in the cuts, the Defense Secretary's job is much easier. "Look, general," the Secretary can say, "the Congress is going to cut your budget by $1 billion. Better we do it ourselves than have them do it for us." McNamara in his early years would cut the general's budget himself and then had to defend the reduction hour after hour before the congressional committees armed with information supplied by the military.

The young people who do not believe the Russians are coming, the Vietnam war, the mess of the cities and the environment all are putting the old hawks on the defensive. The once overly friendly military committees realize they will lose their power unless they approach the military budget more critically.

Mahon said appropriations subcommittee conducted more investigations in 1969 than any other year. Chairman Stennis of Senate Armed Services Committee is reorganizing his operation, replacing some investigators with budget specialists. And while Chairman L. Mendel Rivers (D-S.C.) of the House Armed Services Committee remains four square behind the military, his committee can only authorize how much money should be appropriated. Mahon and Stennis have the most to say about how much will be appropriated.

Military leaders naturally do not like the change in the wind. Many feel the press is at fault for only writing about the projects that go wrong. For example, right after Vice President Agnew lambasted the press, several officers at the Naval War College showed up for classes wearing "We love you, Spiro" buttons.

One hard fact that does not seem to be appreciated by the embittered military leaders under attack is that the Pentagon simply is not a place for good works. Inherently, money for defense is wasted with nothing like a rehabilitated neighborhood to point to after it is spent. Without a war, the money for the military is high-priced insurance—protection money extorted out of the taxpayer, in the extreme view. With a war like Vietnam, the results of the money are not apparent to the critics.

The press aside, Mahon and his committee have a reputation for responsibility and fairness. The military cannot lightly dismiss the committee findings made after hearing 5,947 pages worth of testimony. The findings show—among other things—that McNamara did not master the Pentagon. They also serve notice on Laird that he is under heavy challenge from his old friends in Congress.

TABLE 2.—SELECTED ACQUISITION REPORT ON 34 MAJOR WEAPON SYSTEMS, JUNE 30, 1969, COST SUMMARY

[Dollars in millions]

| | Contract definition plan (Col. 1) | Planned cost current quantity (Col. 2) | Current estimate total program (Col. 3) | Cost growth (Col. 3 minus 2) | Percent cost growth over original plan |
|---|---|---|---|---|---|
| A-7D | $2,012.1 | $2,012.1 | $2,012.1 | $0.0 | 0.0 |

[1] Planning estimates.
[2] Baseline changed to March PSR.
[3] Minuteman II and III counted as 1 weapon system.
[4] Not available.
[5] Not in totals because of lack of definitive cost estimates and status of negotiations.
[6] Not available because of pending litigation.
[7] Not considered as a weapon system.

Note—Numbers represent June 30, 1969, SAR revised through Nov. 14, 1969.

Mr. WHITTEN. I yield myself 10 minutes. Mr. Chairman, with regard to the appropriation bill which is before the Congress today, I would like to join with my colleagues in expressing our thanks for the very splendid help we have had from Bob Michaels and other members of the staff.

I think it has been pointed out by others that this matter of handling appropriations for the Defense Department consists of so much detailed work and covers so many major problems, it is next to impossible to master it. However, Mr. Chairman, in addition to quite a large and fine staff, we have many, many investigations that are in turn carried out by those who are expert in this field and borrowed from other agencies, in most cases.

Mr. Chairman, I take this time to let you know what a terrific job our chairman has had but which he has handled in a very fine manner, supported by the subcommittee this year. There is no way around the fact that we are meeting at a time when we are somewhat in a period of readjustment, realinement, a time of review. As many of you know, through the years I have taken the view that, after World War II, when we had the atomic bomb and other nations did not, we more or less went around the world telling far too many people, "We will take care of you," and we got ourselves injected into the internal affairs of many countries around the world, which in many cases has turned out to be a mistake. Time has shown that we no longer have a corner on many, many things in the way of weaponry. It has also disclosed to us that we cannot exactly run any other country, and we have become a bone of contention in many of those countries. We have reached such a point in so many areas of the world, we now have to bring about a readjustment which raises with us some real serious questions as to how we can do so and at the same time defend our country, maintain ourselves as a free power in the world, a great power for good and a great power for defense in case we need it.

I believe all believe we must bring the war in Vietnam to an honorable end; but, Mr. Chairman, we must ever be cognizant that we must do so with the maximum protection of our men who are there and elsewhere in Asia.

But in the doing of the things I have mentioned, there are some things we should think about. I recall having heard Admiral Nimitz, Chief of the Pacific Fleet, say some years ago, when it was said that the then President was going to turn Okinawa back to Nationalist China—he was talking privately and he said:

What we do not realize is that when we build a big airfield and set up weapons of that type, we cannot destroy them. We may drop bombs on an airfield and make holes in it, but they can fill the holes with dirt and put asphalt on top of that, and you have the airfield ready to operate. We have gone around the world creating weapons that can-

not be destroyed and to talk about turning such weapons over to some country which cannot hold it is foolhardy and dangerous. We had better think of that principle today.

It being true that we are facing an inflation that a few years ago was running at a rate of 7 percent a year, probably more now, when we try to maintain adequate forces during the period while we reassess and, as I have said, review our equipment, certainly we have a real job in keeping a sense of balance within our Committee on Appropriations and in our recommendations to Congress.

I say here that our chairman has done a fine job in that area. We have backed him up. We expect to continue to do so. But in the process we have to think of a variety of things, one of which is that we have our economy in many areas of the country geared up to defense spending. But that is not as disturbing as it might be on the face of it, because, as someone said some years ago, if that same amount of extra effort was put forward in peacetime activities, into our production, that we would have a wealthier country, whereas in time of war and preparation for war we burn our gasoline and destroy our material things and end up a poorer country.

So we are faced here with trying to bring about a financial readjustment, to rearrange our relationship with many countries around the world, and at the same time stay strong and see that we have adequate defense to protect ourselves, not only during this period, but in the years ahead.

I am not going to detail the specific actions that have been spelled out so well by my chairman and by other members of the committee, but I say here that I believe under the leadership of the present Secretary of Defense, a man who has studied this subject matter and has cooperated with our chairman and with the committee through the years, we will have an objective and new look at our defense spending and our commitments, and we can expect full cooperation between him as a representative of the executive department and the House as a legislative body of the Congress.

It has been pointed out there is a substantial cut in the funds of this bill amounting to between $5 or $6 billion. What does not show is that within the last 8 or 10 years many things have crept under the tent designated as defense, which really are not defense spending in the pure sense of the word. Certainly many of those things I do not consider to be real defense in the short range and perhaps not so much in the long range. These things we must pull back, so as to strengthen the dollar which is as important to defense as it is to the domestic economy.

As we read the figures in the bill, they show the result of some major surgery, but that was done with a friendly and intelligent hand, and the total amount of money available is tremendous. I say again for the record that under the policies which have been set up by our chairman and the committee on the matter of reprograming efforts, if there are any places in this bill where funds later are determined could better be used in some other place, all the Secretary of Defense has to do is come up and ask that those funds be reprogramed into those things considered most essential.

The bill before the Members is well prepared and well thought out and tries to meet the problems as we see them now, but we have kept an escape clause, so that we can rearrange the funds as circumstances may require. We are living in a changing world and one in which we will have to change our own attitudes and some of our commitments. While we are at this and while we are discussing some of those subjects today, we should determine whether we have not gone into too many unilateral contracts—under which we have promised to take care of other areas where such area has made no such commitment to us.

As a member of this committee for a long time I think I can say the committee has done a fine job under trying circumstances. But for those who may be worried about the safety of the country, let me say this bill is fully funded to meet the needs as we see them and as the Secretary of Defense sees them. In case we have some funds in the wrong paragraphs, as time unfolds and the situation unfolds, there are ways provided to reprogram and put the funds where they will be most needed to meet the changing needs of the future.

I conclude by saying we must keep up this review on policy, commitments, and other problems, as well as funding.

Mr. MINSHALL. Mr. Chairman, I yield 10 minutes to the gentleman from Arizona (Mr. RHODES).

Mr. RHODES. Mr. Chairman, this is a huge bill, but this time it is not as huge as it has been in years past. As was indicated by the chairman of the committee and by the gentleman from Ohio, much of the credit for the fact that this is a reduction from past years must go to the present Secretary of Defense, a former distinguished Member of this body, and a former member of the Defense Subcommittee of the Appropriations Committee. The fact that we have been able to make these cuts, I am sure, comes largely as a result of the wisdom of the President of the United States in appointing as Secretary of Defense a man who did not have to learn about the Defense Department because he already knew about the Defense Department from long experience on this Appropriations Subcommittee.

As a result, without creating havoc in the Department of Defense, we will reduce the new obligational authority from that suggested by the Nixon budget by approximately $5.3 billion. I think even more importantly in this year of financial inflation, the cash outlay for fiscal year 1970 will be reduced by more than $3 billion.

This was not an easy thing to do. It was not an easy thing for the Department of Defense to advise. It was not an easy thing for the subcommittee to accomplish. As the gentleman from Mississippi has just stated, there is no Member on the subcommittee who is not thoroughly dedicated to the idea that the defense of this country is the highest priority in the business of the Government of the United States.

This bill is a result of a revision of some national priorities. As the Congress well knows, the Nixon administration early made a decision to Vietnamize the war in Vietnam and in so doing to reduce as rapidly as possible and to a figure as low as possible the numbers of American troops who will participate in that war.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. RHODES. I am delighted to yield to my good friend, the Speaker.

Mr. McCORMACK. I hear a lot about the Nixon administration's Vietnamizing the war. I approve of it, and agree, but does not the gentleman agree that President Johnson also did a lot of work in that direction under his administration?

Mr. RHODES. Mr. Chairman, I say to my good friend, the Speaker, it was certainly not any intention of mine to indicate that the opposite was the situation. The fact that the Vietnamization process was undertaken so early in this administration would certainly have to indicate in the mind of any fair individual that a groundwork had been laid, which had to have preceded the inauguration of this administration. There can be no doubt about that.

I thank my friend the Speaker for bringing this up, because there is nothing political about this and there is no desire by anybody to take any political credit for what I believe is a successful program and will be a successful program.

Mr. McCORMACK. I realize there was nothing political. I certainly would not want the RECORD to show I had the slightest thought in that regard, because I know the gentleman is as far removed from politics in his thoughts as I am.

Mr. RHODES. I consider that to be a compliment, Mr. Speaker.

Mr. McCORMACK. I want to make the RECORD clear that this is something other administrations also were carrying out. I support the carrying out of it and the intensification, and I hope it will be very successful, but the history of it goes back to other administrations.

Mr. RHODES. However, I am sure the Speaker would agree with me that the facts do indicate and the figures do indicate that at the time the Nixon administration came into power there were 540,000 some troops in Vietnam and we now have under 500,000 and we hope that the figure is going down.

I believe the Speaker would have to agree with me that the administration which is in power, at the time the actual reduction occurs, would certainly be that administration which should receive the lion's share of the credit.

We have no way of knowing what would have happened under another administration. The plans which they had developed—I presume they had plans because the Speaker says they did—certainly might have continued to lay dormant, as they had prior to the time this administration came into power.

Mr. MINSHALL. Mr. Chairman, will the gentleman yield?

Mr. RHODES. I yield to my friend from Ohio.

Mr. MINSHALL. After listening to this colloquy between the gentleman and my good friend the Speaker, I certainly want to say some of the groundwork as has been pointed out for Vietnamizing the war did occur during the last year of the Johnson administration. I would also like to point out I know the Vietnamization of the war has been intensified and speeded up under this administration, to the tune that today we have 66,000 net less troops in Vietnam than we had when this administration took over January 20.

Mr. RHODES. I think my friend from Ohio will agree, also, as long as we have gotten into a course in history with regard to the war in Vietnam, that it might be well to record right here that in January 1961 when the Democratic administration headed by the late President Kennedy came into power there were some 676 American troops in Vietnam. After 8 years of Democratic administrations there were 540,000 troops in Vietnam.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. RHODES. I am always happy to yield to the Speaker.

Mr. McCORMACK. I was interested in and somewhat intrigued by the observations made by the gentleman from Ohio about the withdrawal of troops. Of course, the withdrawal is based upon circumstances and conditions which permitted it, but they did not arise overnight. The origin of them goes back several years. We all approve of it, of course. However, I do hope that we will never agree on an imposed Communist coalition government in Vietnam. If that day ever arrives, it will be a sad day in ths history of America, because to me that would be a complete capitulation. The observation of my friend from Ohio, of course, is completely free from any political connotation. I know that. However, all I was thinking was to have my friend from Arizona's remarks appear to, as I am sure he wanted them to be, impartial. I know nobody is supporting the President of the United States more strongly than I am, but the history of Vietnamization goes back into previous administrations, also.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. RHODES. I am happy to yield to the gentleman from Iowa.

Mr. GROSS. About as free from political connotation as was the cessation of bombing at the zero hour before the election a little more than a year ago.

Mr. RHODES. I am sure the gentleman is referring to a rather fortuitous circumstance, which was not intended to have any effect on the last election. Will the gentleman agree with that?

Mr. GROSS. No, I would not agree with that at all.

Mr. RHODES. I did not think the gentleman would.

Mr. MINSHALL. Mr. Chairman, will the gentleman yield?

Mr. RHODES. I am happy to yield to the gentleman.

Mr. MINSHALL. So my position is absolutely clear, I want to point out that I merely recounted what the facts are and what the record is, Mr. Chairman, because the facts are that there are 66,000 less troops in Vietnam today than there were last January 20. I should like to point out, also, that this year we are spending nearly $7 billion less in Vietnam than we had in the previous fiscal year.

Mr. ADDABBO. Will the gentleman yield?

Mr. RHODES. I yield to the gentleman.

Mr. ADDABBO. Will the gentleman from Arizona also agree that President Johnson's speech of April 1968 spoke of South Vietnamese assuming a greater responsibility and our subcommittee seeing to it also that the South Vietnamese would be given more modern equipment and arms so that they could effect the present Vietnamization of the war?

Mr. RHODES. I am not familiar with the facts that the gentleman relates, but if the gentleman states them as facts, I will accept them as such. However, I think the gentleman from New York will also agree with me that the process of reequipping and reestablishing South Vietnamese forces was only a dream until the present Secretary of Defense undertook it.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MINSHALL. I yield the gentleman 5 additional minutes.

Mr. RHODES. Until he realized those plans and actually did something about them.

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from Mississippi.

Mr. WHITTEN. My colleague is so gracious in yielding that he has not had a chance to make his own speech. I would like to make a comment that there is enough of a job for all of us to do from now on without arguing too much about who deserves what credit up to date. Will the gentleman agree?

Mr. RHODES. I agree wholeheartedly with my friend from Mississippi.

I remember the remark made by the last incumbent of the Presidency at one stage of the Vietnam war. It went something like this: "If the Vietnamese war comes off well, there will be credit enough for everybody. If it does not come off well, only one person will be blamed, and you are looking at him."

And, of course, this is the situation as it often occurs. As the gentleman from Mississippi well knows, the person who has the ultimate responsibility in any great endeavor is the one who carries the blame if there is to be blame.

Mr. Chairman, I had intended to speak about the ABM. However, it is my opinion that this entire body is very well aware of the facts and figures concerning the proposed deployment of the ABM and I do not intend to get into that subject at this particular time.

However, I would like to say that there are $779.4 million in this bill for the ABM, $400.9 million being for research and development training and evaluation and $345.5 million for procurement.

Mr. Chairman, there are other items which are of a miscellaneous nature.

Mr. Chairman, I am thoroughly sold on the necessity of deploying the ABM system. I think we have waited long enough. We have tested it thoroughly enough. The hardware has been well tested. The radar has been well tested. Now it is time to proceed with deployment. It has been said in our subcommittee, and I think it is true, that you can test a weapons system to death. The time has come for giving it the final test by putting all of the systems together in order to see if it will work. This is the only thing that remains to be done in providing this country with an ABM system which will be meaningful from the standpoint of certain types of attacks.

This is not a full-scale deployment. In fact, our committee has been assured that the amount of funds requested for future ABM sites, if any, will be made each year. So, the Congress of the United States and the President have not wedded themselves to a policy which must proceed willy-nilly to some kind of full deployment of the ABM system. The opposite is the truth.

Mr. Chairman, this bill also funds a nuclear carrier. I have heard many people say that we should not spend more money on aircraft carriers. I do not believe it is true. Let me just quote from Mr. Raymond Blackburn, the editor of Jane's Fighting Ships—and Mr. Blackburn is an Englishman. He does not have any ax to grind insofar as American ships are concerned but he says:

> The nine great American carriers including the nuclear-powered *Enterprise* are the latest and finest instruments of seapower ever devised.

I doubt he would have said this if the aircraft carrier is an antiquated vulnerable instrument of warfare.

As a matter of fact, the modern, up-to-date aircraft carrier is a real miracle of precision, a real miracle of ability to defend itself from practically any threat known to man. It is a very efficient manner of projecting the power of the United States. This country has always been able to project its power on the seas.

Mr. Chairman, I feel very strongly that if and when we ever get into a situation where we no longer have the ability to project our power on the seas, we will then truly become a second-rate nation. I say this with full knowledge of the the fact that the U.S.S.R. thinks well of the necessity of projecting power on the seas. She is building a mighty fleet for the purpose of bolstering the Red Navy. However, she is also building a merchant marine fleet next to none. This is a matter of great interest which this Congress ought not to neglect.

The CHAIRMAN. The time of the gentleman from Arizona has again expired.

Mr. MINSHALL. Mr. Chairman, I yield the gentleman 2 additional minutes.

Mr. RHODES. I think that along with a fighting modern up-to-date Navy there must also be an up-to-date efficient merchant marine. This country at the end of World War II was without peer insofar as a merchant marine capability was concerned.

We now find ourselves where we are probably eighth or ninth in ranking

among the merchant marine fleets of the world. This is a matter which must be faced up to, and which the present President of the United States has agreed that he would face up to. I am sure that he will.

So, Mr. Chairman, as I said at the outset, this is a bill which recognizes national priorities. It does not put as many dollars into the Defense Department, as many people feel very conscientiously are necessary in order to provide the type of defense this country needs and must have in the years to come. However, in the opinion of most of us it is an adequate bill and it does provide for the type of defense which we must have. There are other priorities to which our Nation must address itself. We feel that we are addressing ourselves to those priorities but also to our defense. I think that in a matter of balancing of interest that this is a good bill, an adequate bill, and I hope that the House will support it.

Mr. MAHON. Mr. Chairman, I yield such time as he may consume to the gentleman from New York (Mr. ADDABBO), a member of the Defense Subcommittee on Appropriations.

Mr. ADDABBO. Mr. Chairman, I rise in support of H.R. 15090, the Defense Department appropriation bill for the fiscal year ending June 30, 1970. This bill is the result of extensive work done by the committee in an attempt to strike a proper balance between the desire to maintain a strong defense posture and the need to curtail nonessential military expenditures.

I commend the chairman, the gentleman from Texas (Mr. MAHON), and all of my colleagues on the committee for their great combined effort in developing and bringing forth this bill. I commend and thank the very able staff of the committee for their assistance and dedication especially when our staff of less than 10 has to match the hundreds of backup experts the military services have in presenting their testimony to the committee.

I again take this opportunity to commend our chief staff member, Bob Michaels, on his outstanding and dedicated service and wish him well in his retirement.

H.R. 15090 provides a total Defense appropriation of slightly more than $69,960,000,000, a reduction of more than 10 percent from the January 1969 budget and a reduction of more than $4.4 billion from the last appropriation. This represents the largest cut in Defense spending since the end of the Korean war.

As a member of the Defense Appropriations Subcommittee, I participated in the extensive hearings on this legislation and during the course of those hearings I raised several questions concerning possible reductions in spending. I am pleased with the bill as reported and I believe it is a responsible effort to reduce Defense spending without adversely affecting our national defense present or future.

The major bulk of the reduction comes in the area of personnel but other important areas include additional reductions in chemical and biological warfare and more than $2 billion in procurement. By way of comparison we should remember that this proposal translated into 1964 economics by subtracting the cost of inflation and salary increases is far below the $49 billion appropriation approved in 1964.

I am also pleased that the committee has approved my recommendation that the Navy policy with respect to ship repairs be changed to allow open competition for ship repairs within a 350 mile radius of the home port where repairs cannot be done at home port. This change in policy recommended and discussed in the committee report will result, I believe, in a reduction of repair costs by encouraging competition and will bring some relief to the New York-New Jersey area through a greater distribution of the repair work. With the closing of the Brooklyn Navy Yard several years ago, defense work in the New York area has been limited. Therefore, it is my hope that with this change in policy the New York area will receive its fair share of defense work.

Mr. Chairman, I urge my colleagues to support H.R. 15090 as an important step in achieving a responsible balancing of national priorities.

Mr. MAHON. Mr. Chairman, I yield 10 minutes to the gentleman from Illinois (Mr. YATES).

Mr. YATES. That shows how ineffective and indefinite the proposed safeguard ABM system would be.

In fact, later on there is another program that has been approved by this subcommittee relating to defense against incoming enemy missiles and that is the so-called hard rock silo program.

On page 703 of the hearings, the gentleman from California (Mr. LIPSCOMB), asked this question:

> Mr. LIPSCOMB. Do you think that we need both?
>
> Colonel GROSSMILLER. Until we can positively prove that one is more effective than the other, I believe we do need to test both.

We who are opposed to the deployment of the ABM system favor its continued research. The incongruous part of the action of the committee to me is to read their very eloquent statement in the report in opposition to concurrency in which they stated their opposition to the action of the Department of Defense in deploying a weapons system before the research and development was ready for it.

They objected to that most positively and urged the Department of Defense not to continue.

Well, what did they do in the ABM system? The ABM has $400 million in this bill, approximately, for further research for the safeguard ABM.

There is in prospect within the next few years an expenditure of more than $1 billion to be spent in further research on the ABM.

Why then should we approve of deployment at this time? There is a time for research, there is a time for deployment. This program has not passed the research stage.

I know very well of the threats and tensions in the world today. I know that we must have a strong armed force in order to protect our national security. We must be concerned with our survival in a world in which Winston Churchill has described "Safety is the sturdy child of terror and survival is the twin brother of annihilation." I know there will be some who will arise and say that I and my colleagues who are opposing deployment of the ABM system are threatening to pull the rug out from under the negotiators at the Helsinki talks. Nothing is further from the truth, Mr. Chairman. We do not want to pull out and we do not want to undercut those talks in any respect because we know how very important they are.

Approval of the amendment which I will offer when the bill is read for amendment will show that the Congress does favor curtailment of the nuclear arms race and that there should be no speedup of the race through ABM deployment.

I recall the words of President Eisenhower which were uttered on December 8, 1953 before the General Assembly of the United Nations when he said:

> For me to say that the defense capabilities of the United States are such that they could inflict terrible losses upon an aggressor, for me to say that the retaliation capabilities of the United States are so great that such an aggressor's land would be laid waste—all this, while fact, is not the true expression of the purpose and the hope of the United States. To pause there would be to confirm the hopeless finality of a belief that two atomic colossi are doomed malevolently to eye each other indefinitely across a trembling world. To stop there would be to accept helplessly the probability of civilization destroyed—the annihilation of the irreplaceable heritage of mankind handed down to us generation from generation—and the condemnation of mankind to begin all over again the age old struggle upward from savagery toward decency, and right and justice.

Then President Eisenhower went on to urge the settlement of controversies by peace rather than by bloody conflict—to which all of us subscribe.

Our national security cannot be established and maintained only if the United States buys every new strategic weapon that might possibly work and buys it in greater quantity than the Soviet Union happens to buy it.

Mr. Chairman, those of us who are opposed to the deployment of the ABM believe that the facts elicited in the hearings do not indicate that this system at this time—at this time—when proponents of it are urging deployment, will add anything to the safety or to the national security of the United States. When the appropriate time comes, I propose to offer an amendment to strike out "deployment."

Second, Mr. Chairman, I propose to offer an amendment to strike out the $100 million appropriation for the so-called Tow missile. In conversations with the distinguished gentleman from New York (Mr. STRATTON) who is a member of the Armed Services Committee of the House, and with Members on the opposite side of the aisle who are members of that committee, they say that the appropriation for the Tow missile program is, in their view, totally unneeded. There is in our armament inventory an excellent missile which performs the same purpose, and which can

be purchased for a third of the cost of the Tow.

Mr. MAHON. Mr. Chairman, I yield such time as he may require to the gentleman from New York (Mr. PIKE).

Mr. PIKE. Mr. Chairman, I thank the gentleman for yielding. I have requested this time in order to ask a couple of questions which came to my mind as a result of the language appearing on page 57 of the report. First, in talking about the change in the schedule of procurement of F–14 aircraft, what the committee has done, as I understand it, is change the procurement from the Navy's request of six R. & D. models and six production models to a total of nine, instead of 12, all of which will be R. & D. models. The thing that interests me, however, is this language:

> The committee would like to make it abundantly clear, however, that none of the funds provided are to be utilized for tooling beyond that needed for fabrication of the test aircraft.

I simply find it a little difficult to understand how you can tool up for the test aircraft without tooling up at the same time for the production aircraft, and is there any intention to prevent the tooling which is being used from being used for production aircraft later on?

Mr. MAHON. I think the gentleman has raised a good point. The object of the committee is to avoid a pell-mell approach to production of the F–14 aircraft by accelerating tooling beyond what is necessary for the aircraft needed in research and development. I would assume that tooling up for a research-type aircraft and tooling for the regular production aircraft would be somewhat the same. The tooling would be generally interchangeable.

I think we have to agree that we mean that they would proceed with the tooling to the extent that is necessary to produce the R. & D. aircraft. We would have to realize that, and hope that when we go forward—and I hope we will and expect that we will—with the production aircraft, the tooling used for the R. & D. aircraft can be used for the regular production aircraft. I believe that would be a reasonable interpretation of what the committee has in mind.

Mr. PIKE. I thank the gentleman for his response. I hope that is what the committee has in mind.

Mr. RHODES. Mr. Chairman, will the gentleman yield?

Mr. PIKE. I yield to the gentleman from Arizona.

Mr. RHODES. Mr. Chairman, I think, just to add a little bit to the answer of my chairman, it is true we are not production people. I do not know whether the tooling needed to build nine research and development aircraft would be the same as that needed to build 120 production aircraft. I suspect some of it is not. All we really want to do is to make sure the production tooling which will be built in accordance with this appropriation bill will not exceed those which are absolutely necessary to build the nine research and development aircraft.

The gentleman from New York will recall the experience which this Government has had with the F–111 aircraft. We just do not intend to let that happen again if we can stop it. We want to have these nine aircraft built, tested, and evaluated before we proceed pell-mell on any further orders for the F–14A. As the gentleman knows, the F–14A is only the first version. There will be a followon version with a better engine. We have some worries too about being able to interface the advanced engine with the existing airframe. We do not want the company to proceed with production tooling beyond that needed to fabricate the test aircraft, but at the same time we do not want to inhibit the fabrication of the first nine test aircraft.

Mr. PIKE. Mr. Chairman, I thank the gentleman for his response. I did want to make it clear on the record that there is not going to be any inhibition on using the tooling required to build the test aircraft for the further production aircraft if, in fact, that is subsequently authorized and funded.

Mr. MAHON. Mr. Chairman, if the gentleman will yield further, the gentleman makes a very good point. I believe the gentleman had a reservation or a question in regard to another matter in the report?

Mr. PIKE. Yes. If the gentleman from Texas will permit me a further question, I am curious about the language also as to the KA–6D aircraft, which again is on page 57 of the report. The committee has struck out the sum of $57,600,000 to buy new KA–6D tankers, and the committee says it "recommends that the Navy modify additional A–6 aircraft to the tanker configuration in lieu of buying new aircraft."

That is all very well, but, having taken the money out of the bill for the new one, has the committee put any money in to remodel the old one?

Mr. MAHON. The gentleman's question relates to the report, near the bottom of page 57. The budget itself, as pointed out, does provide for the modification of four aircraft, but there are no additional funds for the modifications of additional aircraft.

Actually, if the funds are to be available, one or more of several processes could be used in seeking to acquire the funds. If the Navy is convinced that the committee has provided insufficient funds in this connection, of course a request can be submitted to the other body, and the funds can be sought in that way.

Another way to make available the funds in many cases is to find funds that are not going to be used for the purposes for which requested or from a program which has slipped or has been abandoned and reprogram them.

Mr. PIKE. Mr. Chairman, I thank the gentleman for his response.

I think it is obvious to those who have listened to some of the debate on the authorization bill that perhaps in the course of preparing this appropriation bill, the committee has found it necessary to gore quite a few oxen, and I do not mind conceding that one of mine got bloodied up a little bit in here, despite all of which I simply want to say I think the Appropriations Committee in general on this bill has done an outstanding job.

I was unable to vote for the authorization bill simply because in my opinion at this stage in our national history it just plain had too much money in it.

I was particularly upset by the $1 billion add-on for ship construction.

In this case I want to commend the chairman and all the members of the committee for a bipartisan effort. Regardless of the fact that this is always a painful process, the committee has done an outstanding job and deserves to be commended.

Mr. MAHON. I thank the gentleman very much for those generous remarks.

Mr. MINSHALL. Mr. Chairman, I yield 15 minutes to the gentleman from Wisconsin (Mr. DAVIS).

Mr. DAVIS of Wisconsin. Mr. Chairman, prior to this year, it was in another decade that I last served on this subcommittee, so I do not presume to talk with the depth of knowledge of my colleagues on this subcommittee, but perhaps a period of absence may help to enhance the perspective I might be able to shed for my colleagues upon this measure.

Probably no other bill which confronts us here in this body entails more responsibility upon our part than does this one. There simply is not anyone else to do it. In many of the domestic programs which we discuss here we can look in greater or lesser degree for assistance in problem-solving and decisionmaking to the States, to the local governments or to individuals. But clearly the defense of our country is entirely a Federal responsibility, and it is one where the center of responsibility lives right here in Congress.

Perhaps nowhere else does the significance of the committee system demonstrate itself more clearly. This matter of providing for the common defense is a massive responsibility, and in today's technology, with the sophistication of our weaponry systems, it is impossible for any of us to be completely an expert. I suppose that applies not only to individual Members of this body and to the members of the full committee but also to the 11 men who serve on this subcommittee.

So, while we cannot claim to be experts in all the areas encompassed in this bill we can but claim to be a group of intelligent, careful, and reasonable men who have arrived at our judgment in order to fulfill the responsibility which has been delegated to us.

This bill does represent our judgment, a judgment based upon diligent efforts to obtain information upon which this bill, and our report are based.

I suppose if we were to single out any as being the architects of this particular measure we would have to include our former colleague the Secretary of Defense, the distinguished chairman of the full committee and of this subcommittee, and the ranking minority member, the gentleman from California (Mr. LIPSCOMB.)

But I submit that every member of the subcommittee has made a contribution to this evidence of our combined judgment that appears before you today.

We cannot assure you completely that this measure is adequate to our times.

We cannot assure you that every dollar here is necessary. We cannot assure you that every dollar will be efficiently spent. We can only assure you that we have applied ourselves diligently to the task to which you, our colleagues, have assigned us.

We have avoided in this measure the extremes of those who believe that we can avoid world problems by dismantling our defenses. We have avoided the extremes of those who clamor for everything that the military might desire as the ultimate in defense capability.

We have pinpointed and eliminated items that we consider to be largely duplicatory and in some cases we have funded research and development efforts which are apparently but not actually duplicatory. For instance, in the Tow and the Shillelagh missile systems some people will claim that we have one and we do not need the other. In fact, they are based on different concepts. One has capabilities not completely present in the other. We have attempted to assure——

Mr. GUBSER. Mr. Chairman, will the gentleman yield?

Mr. DAVIS of Wisconsin. I am happy to yield to the gentleman from California.

Mr. GUBSER. Is the gentleman implying that the Shillelagh missile has not been fired in the ground mode?

Mr. DAVIS of Wisconsin. I cannot answer that specifically as to whether it has been successfully so used or not.

Mr. GUBSER. I might say to the gentleman, if he is, I can show him a movie where the Shillelagh has been fired in the ground mode, and I do not understand why the Army does not admit it.

Mr. DAVIS of Wisconsin. I am not prepared to say what the Army will or will not admit. It is entirely possible. But I am sure the gentleman will concede they are based on different concepts and the capabilities of the two are certainly not entirely coincidental.

We have attempted to assure maximum research and development before funding for procurement but for some sophisticated weapons systems there comes a time when the laboratory and the testing range are no longer adequate: when installation and in-being facilities must be procured and constructed to test under actual operating conditions. This is precisely why the funds for the ABM are included in this bill. The ABM installations we are speaking of in this measure give us prototypes—a phase of a system in being. I suggest ABM in-being is necessary not only as an advanced technology but as an essential element to the success of the pending disarmament discussions. Indeed, rather than detracting from the potentialities of SALT, as the Foreign Affairs Committee effectively reminded us, the implementation of phase 1 of ABM strengthens our hand in these negotiations. I would suggest in that respect—and I believe this is the unanimous opinion of our subcommittee—those of us who heard the hearings arrived at an entirely opposite view from some members of the committee who signed a minority report without appearing at our hearings. I think it is of some significance that while it may be unusual for 10 members of the Committee on Appropriations to sign a minority report, you will not find a single member of the subcommittee which heard the hearings listed among those dissenters.

We have not been insensitive to criticism. We have not been and we are not today spokesmen for the Pentagon. In addition to the seven volumes of hearings that are available to anyone who wishes to be informed on our hearings, there have been numerous informal hearings to discuss matters of expressed public concern, and, in some instances, matters of obvious Defense Department shortcomings. There have been numerous staff investigations. There are numerous staff investigations now pending or to be undertaken before the hearings next year.

There has been, and there will be a great deal of discussion of a number of specific programs.

Now, Mr. Chairman, I want to take just 1 minute to talk a little bit about Sanguine, one of the projects for which money is included in this bill and one which has aroused rather vocal opposition in some areas.

Sanguine is an extremely low-frequency communication system now in the research and development phase administered by the Department of the Navy. It provides worldwide communications potential and particularly so with respect to our Polaris submarines.

Thus far something like $27 million has been invested in its development. It operates best where certain low-conductivity rock conditions exist. So it has been tested in an area in North Carolina and Virginia and in a national forest in northern Wisconsin. These tests have demonstrated some problems such as the ringing of telephones, interference with telephone use, the electrification of long metal objects such as fences and there have been some questions raised relating to plant and animal life. But this is why we are continuing the research and the development in this area, in order to find ways to mitigate these problems.

This will require several small tracts of land where the transmitters will be located. There will be required easements in larger areas of land where the antennas are to be buried.

But we have already learned enough to know that we can use a much smaller area with much less power than had previously been contemplated and that the problems are solvable, that Sanguine is capable of performing its worldwide naval communications mission.

Mr. Chairman, the solution of problems is the purpose of research and development. That is why there is $5 million in this bill.

I hope that some highly vocal organized opposition will not succeed in scuttling this useful program administered by the Department of the Navy.

Mr. MINSHALL. Mr. Chairman, I have no further requests for time.

Mr. MAHON. Mr. Chairman, I yield 7 minutes to the gentleman from New York (Mr. STRATTON).

Mr. STRATTON. Mr. Chairman, I rise at this time to comment on one of the amendments which the gentleman from Illinois (Mr. YATES) is going to offer under the 5-minute rule; namely, the amendment to strike out $100 million for the Tow Army antitank missile.

Mr. Chairman, I believe Members of this body are well aware of the fact that I am not one of the more vocal doves in this House and that I do not have any particular antimilitary bias. As a matter of fact, in the past few weeks I have taken this well on several occasions to fight for programs that the Pentagon has wanted. I think the RECORD also shows, however, that as a member of the Armed Services Committee and as a member of the investigating subcommittee of that committee, one of them on the sinking of the submarine *Guitarro* and one of them on the Sheridan tank program, I try to call the shots as I see them and have not hesitated.

I strongly believe that we should end waste and duplication in the Defense Department and not just talk about it. The Appropriations Committee in its report on the Defense bill indicates that its hearings "reveal instances in which—the military services are pursuing duplicating development efforts" and indicated that as a result of these duplicating developments "procurement costs are needlessly increased over a period of several years." Yet the committee, which usually takes pride in reducing every authorization ceiling, has in this bill fully funded, to the extent of $100 million, a missile program which, although it was included in the authorization bill conference report, was originally knocked out by the House itself on the grounds that it was "unacceptable redundancy." In fact, the authorization conference had included Tow funds with a specific reference to the need for further research and development into the possibility of doing the antitank job the Army wants to do with one weapon system rather than two.

As a member of the conference committee I went along with that $100 million authorization reluctantly, recognizing that we rarely get everything that we authorize fully funded anyway. The authority is now in the law in case subsequent developments indicate it would be wise to undertake full-scale procurement of this weapon. But I think it would be a very serious mistake to fund the full $100 million even before this preliminary testing, and the shootoff between the Tow and Shillelagh directed by the conference committee has taken place.

The other day Senator STENNIS, chairman of the Senate Armed Services Committee, directed his committee to undertake an immediate investigation to "determine whether the military services are building duplicate weapons."

He said:

> In view of the large sums of money involved, a proliferation of missiles capable of carrying out the same missions would represent a waste of funds and resources and must be avoided.

Well right here with the Tow missile, is a classic example of the very thing the Senator is speaking about. If we really want to eliminate waste and duplication, especially where large sums of money are involved in this case, specifically a billion dollars, here is the place for us to start.

In the first place, the Tow and the Shillelagh are almost identical weapons, not in their configuration, as the gentleman from Wisconsin mentioned a moment ago, but they are in their performance, but the Shillelagh is already in mass production, whereas the Tow is still in research and development.

Moreover, the Tow is more than twice as expensive as the Shillelagh. And if we go the full distance on the Tow, as I have already said, it would cost $1 billion.

General Westmoreland, whose desire to get the Tow, is very largely, as I understand, the reason that the committee has put this money in for the full amount, talked with me the other day and urged me to support Tow. I said I checked into some of these things and he gave me a classified fact sheet on Tow and Shillelagh performance. He said:

Sam, you can see from this fact sheet just how different these two weapons are.

But the thing that amazed me when I looked the classified fact sheet over, and saw the performance of these two weapons, was that they are almost absolutely identical with one exception, and that is that the Shillelagh weighs 10 pounds more than the Tow. But half of the extra 10 pounds is because of a heavier and more lethal warhead. Theoretically, the difference between the Tow and the Shillelagh is that the Tow is supposed to be for infantry, as the gentleman from California (Mr. GUBSER), a very capable member of the subcommittee, pointed out a moment ago, and the Shillelagh is supposed to be for tanks. But the fact of the matter is that both of them can already be used in helicopters. And the fact is that the Shillelagh, which the Army claims cannot be used in the infantry mode, was actually fired, as the gentleman from California mentioned a moment ago, in 1962 in the infantry mode. And our subcommittee has in its possession a motion picture to prove it—and incidentally it took a lot of wrangling and arm-twisting to get that out of the Army.

Not only that, but the chief of Army Research and Development, Lieutenant General Betts, who appeared before us as the expert witness in these technical matters, was not even aware of the fact that the Shillelagh had been fired in the infantry mode back in 1962, and had never seen the pictures.

In fact, the Army has long been aware of this potential duplication, and back in 1962 there was an Army staff study made which we also have in our subcommittee. The result of that study is that the most expensive way for the Army to go in antitank weapons would be to go the two separate routes of developing the TOW all the way, and the Shillelagh all the way. Yet that is exactly what the Army is now asking us to do and what the Appropriations Committee proposes to fund.

Earlier this year our investigating subcommittee discovered certain problems in connection with the Sheridan tank program, and those surfaced in the press under the headline of the "billion-dollar boo-boo." And after this case came out, people said to us: Why did not the members of the Committee on Armed Services find out this problem in advance?

The CHAIRMAN. The time of the gentleman has expired.

Mr. STRATTON. Mr. Chairman, could I have 2 more minutes?

Mr. MAHON. Mr. Chairman, may I ask how much time we have left on our side?

The CHAIRMAN. The Chair will state that the gentleman has 8 minutes remaining.

Mr. MAHON. Mr. Chairman, I yield 2 additional minutes to the gentleman from New York (Mr. STRATTON).

Mr. STRATTON. I thank the chairman.

People said to us, Why did not your committee find this out before the billion dollars were spent rather than after the billion dollars had been spent? I had to admit that was a pretty good question. We had not kept in as close touch with this Sheridan tank program as we should have. But here with the Tow missile is a case where we can lock the barn door before the horse is stolen rather than waiting until after the horse is stolen, to issue a report and then complain about the situation.

Here is a perfect opportunity for us to exercise our leadership and prevent the waste of $1 billion, rather than pointing out the error after the taxpayers' money has been spent.

The strongest argument which the Army has for the Tow missiles is that it is urgently needed for ground troops in Europe to protect them against a massive Soviet tank threat. Now one wonders just how serious this threat is since the Army regarded it so lightly only a few years ago that they stopped producing its major antitank weapon, the M–60, and even started selling some of those in its inventory to non-NATO allies. Nevertheless, if the increased threat is as great as the Army says it is, then it should be pointed out that proceeding at the rate the Army proposes, we will only have 200 or 300 Tow launchers in Europe by the end of the next calendar year, and it will be 1974 or 1975 before we have that weapon fully deployed there. Yet the Army has on hand at this very moment the capability of putting 500 Shillelagh launchers into Europe almost overnight, since we have some 500 Sheridan tanks sitting around unused, in storage today, because they cannot fire their conventional ammunition, but are still fully capable of firing the Shillelagh missile. If we are really worried about an urgent threat, that would seem to be the fastest and best way to meet it.

As a matter of fact, the only real difference between Tow and Shillelagh infantry deployment in Europe is that we cannot have the Shillelagh fully deployed as an infantry weapon in Europe until about 18 months or 2 years later than we can have Tow deployed. Yet, since what we are talking about is a 1974 to 1976 time frame, if I read the papers correctly and the RECORD of this Congress, by that time we will be pulling many of our troops out of Europe rather than putting them in, and this would certainly apply to infantry handled weapons.

Tow is called an infantry weapon. But let me point out that it can only be manhandled for a distance of about 200 yards. Beyond that it needs a jeep at least to carry it. So it is really not much more mobile than a Shillelagh fired from the highly mobile Sheridan tank.

So, Mr. Chairman, if we really mean what we say about preventing duplication and waste, and if we really believe that this Congress ought to be calling the shots on military spending rather than just rubberstamping the generals and the admirals, then we ought to go slow in funding the Tow system, at least until we have completed the additional research and the shootoff between the Tow and the Shillelagh which the House and Senate conferees directed in their report. I believe we ought to eliminate these funds today. I believe we should send 500 Sheridans with Shillelagh missiles to Europe immediately to defend against the Soviet tank threat, and then leave the decision about going down another billion dollar road for still another Army weapon until after we have concluded the careful examination which this House strongly recommended just a few weeks ago.

Mr. MOORHEAD. Mr. Chairman, I would like to commend Chairman MAHON and the members of the Appropriations Committee for their efforts on this year's military appropriations bill. They have brought about the largest reduction in the military budget since the end of the Korean war. Through their diligence, some $5.5 billion has been trimmed from the budget—and in the words of the distinguished chairman—these are not paper savings. They are real savings to the taxpayers of the country.

Although the Appropriations Committee literally made history with its report, there is still much to be done toward returning the military budget to proportions that are reasonable in light of the other problems which this country faces.

But for now let me dwell on what the committee actually did and those tasks that remain to be accomplished.

There are two significant areas of reduction in weapons systems procurement:

First. The F–14 program was curtailed with $129 million cut from the overall program.

Second. The shipbuilding and conversion program was curtailed by $352 million.

These and the other minor cuts made by the Appropriations Committee in concert with the Defense Department are salutary. However, many of the original questions which I and many of my colleagues have had for over a year are left unanswered:

First. The ABM which created such dispute throughout the country with respect to its feasibility, necessity and wisdom remains untouched.

Second. The C–5A and the accompanying scandal still haunts us. Although I was impressed that the Air Force decided they did not need 120 C5's any longer—that they could perform their mission with only 81—I am still not convinced that they cannot do the job with their presently funded 58.

Third. The CVAN–69, the nuclear attack carrier appears of dubious neces-

sity in the years to come because of the rapid changes in technology, warfare, and our changing role in the world's security. Our only potential adversaries in the area of naval warfare—the Soviet Union—does not have a single aircraft carrier, while we maintain and renew our force of 23 attack and ASW carriers—a superiority, mind you of 23 to 0. Yet this remains untouched.

Fourth. The AMSA, the advanced manned strategic aircraft, that will add only marginally to our strategic and retaliatory forces, and which was not justified by the Department of Defense remains untouched.

All of these major programs and others were spared the scrutiny and the scalpel that was so deftly applied to the smaller weapon programs.

The lack of reduction in the larger weapon systems despite the fact that they have not been justified or that have been demonstrated to be procurement horror stories of the first magnitude remain the largest problem in defense procurement facing the Congress. The Appropriations Committee has, in effect, admitted this. They have castigated the Minuteman program for weakening our defenses. They have censured the DOD and the industry for gold-plating weapons systems. They have stated their displeasure with the C–5A program, its contracting practices, the overly optimistic estimates and the rest of this sordid tale. And they have, in effect, blasted the services for their slovenly management practices. Yet none of these large programs was touched despite the fact that they rob the taxpayers of many billions of dollars per year—far more than the amount they cut out of the bill. This is the remaining problem facing Congress, and this is the problem we intend to pursue when the new budget is submitted to Congress.

Mr. VANIK. Mr. Chairman although I would support a reasonable and understandable appropriation for the Department of Defense I must oppose the provisions of this $70 billion bill. Frankly, it is impossible for a Member of Congress to make a fair and adequate appraisal for a commitment of this dimension in a single appropriation bill. The committee has made an effort this year for which it is to be commended, but the basic problem is the submission of an omnibus bill which lumps good with bad and necessary with wasteful, all under the guise of the national security.

In spite of the diligent efforts of the Appropriations Committee, this bill is filled with waste and extravagance of an awesome dimension. During his presentation in support of this bill, the chairman of the Appropriations Committee, the Honorable GEORGE MAHON, of Texas, stated that this bill also included carryover appropriations totalling $39.9 billion making available to the Department of Defense in this fiscal year a sum totaling almost $109 billion. The availability of this kind of expenditure makes it completely within the power of the executive and the military services to determine the course of military spending. It would seem to me that Congress should insist on the power to place an overall ceiling on total expenditures in the current fiscal year if it is to make a proper assessment of national security needs and domestic priorities. This is completely impossible under the omnibus bill which is submitted for our consideration today.

The essential information relating to this legislation, the hearings, were not completely available to Members of the House until last Tuesday, December 2. The decisions of the Subcommittee on Appropriations were not available to Members of the House until last Wednesday, December 3. It is insulting to assume that the membership of the House has had an adequate opportunity to review 5,947 pages of hearings and 102 pages of the report and form a responsible judgment on whether this $70 billion appropriation should be approved or disapproved.

When the authorizing bill was under consideration, I opposed the granting of a blank check for defense. I supported amendments to strike out funds for the deployment of the anti-ballistic-missile system. I also opposed the addition of over $1 billion for the construction of an additional carrier which was not requested by the President. This spending is wasteful and unnecessary evidence of commitments not related to the defense of our country.

I also opposed the $481 million request for the procurement of the fourth C–5A Air Force squadron which was subsequently reduced in its size. While many of the procurements for research and development contained in this bill deserve our earnest support, others raise serious questions of need, cost, duplication, waste, and inefficiency. Some programs are outrageously ill conceived and should be rejected outright.

Since this appropriation bill includes wasteful and unnecessary appropriations for so many questionable programs. I feel that this bill should be opposed until it can be cured of defects which I consider of important relevance to the security of America and the taxpayer interest.

If we are to prepare an adequate defense, if we expect to win the fight against inflation, if we are to respond to our responsibilities as members of this legislative body, now is the time to begin.

Mr. MONAGAN. Mr. Chairman, I support H.R. 15090. In the present state of the world, it is necessary that we have a Military Establishment and that this establishment be furnished with equipment that is adequate to meet any reasonably foreseeable threat to our security. This objective would be adequately served by the present bill.

At the same time, this bill is significant in its substantial limitation of military activities and the committee which voted out the bill has shown a welcome willingness to cut appropriations when it deemed this course possible and to view with critical eye all the requests of the military.

I have never believed that military recommendations should be accepted without the exercise of independent congressional judgment any more than I believe that the military policy should shape the course of our Nation. From the beginning of our history, our national policy has held the military under civilian control and I believe that this has been a sound policy and should continue. Surely, the military plays an important and irreplaceable part in the life and security of our Nation, but neither the military nor the Nation would be served by permitting undiluted military policy to dominate our national thinking.

This bill cuts appropriations $5.3 billion below the revised budget estimates and $7.7 billion below the original January estimates. More significantly, it represents a cut of $4.4 billion below the 1969 appropriations. Cuts in requests are not as vital as cuts in actual appropriations amounts. These cuts are substantial since the appropriation is cut 6 percent, but I hope that they will not be the last word and that we shall be able to continue to make these reductions. I trust that the words of the committee report will be prophetic when they state:

> Further withdrawals of U.S. forces may make additional funding reductions possible during the remainder of this fiscal year.

Mr. FRASER. Mr. Chairman, I shall vote for this bill in view of the substantial cuts made by the committee. My vote indicates approval of the $5 billion reduction, but does not extend to many items included in this appropriation. The ABM and a number of other weapon systems which the bill finances should have been eliminated or deferred. I favor an early end to our involvement in the Vietnam war. This will finance that involvement as well.

Yet my views on these weapon systems and upon Vietnam have been made clear by other votes, some of them against authorizations for military spending. Since we have debated and discussed these questions earlier, I am not surprised that the Appropriations Committee elects to fund them now.

The significant aspect of this bill—the welcome surprise—is in the substantial savings effected. This kind of reduction must become the trend over the long term. We must not permit unrestricted demands for new military hardware to eat away at resources needed for more peaceful and constructive uses at home and abroad.

The debate which the House engaged in when the military procurement bill was under consideration must be continued. So must efforts to reduce manpower totals. So must efforts to trim unnecessary units from our forces.

The United States needs an adequate deterrent and effective conventional forces of modest size. I believe we can buy the national defense we need for funds totaling much closer to $50 billion a year than the present figures. As Vietnam recedes we must press for this result. In the meantime I commend the committee for its actions in reducing the military budget without impairing our security.

Mr. BINGHAM. Mr. Chairman, I want first to commend the Committee on Appropriations, and particularly the Defense Subcommittee, for much that they have done on this legislation—the fiscal year 1970 Defense appropriation bill. This is an enormous piece of legislation in terms of the number of programs for which it provides funding and the total

amount of funds it contains. With a price tag of nearly $70 billion, it is one of the biggest money bills ever to come before this House, and the task of conducting a careful review in committee was, I am sure, similarly enormous.

I am gratified by the magnitude of the total cuts imposed by the committee—$5,318,000,000 from the latest budget estimates, and $7,780,152,000 from earlier budget estimates. But more significant than the size of the cuts, it seems to me, is the magnitude of this appropriation in comparison with the 1969 budget. The total funds proposed to be allocated in this legislation amount to nearly $4.5 billion less than the 1969 appropriation. I think we are long overdue for a change in the trend of military expenditures, which has been steadily and precipitously moving upward over the past several years. I sincerely hope that this marks the beginning of a steady and even precipitous downtrend in our expenditures for military hardware and personnel in the future.

The committee has acted commendably by exercising caution on several new weapons systems. During consideration of the Military Procurement Authorization, I proposed that we implement additional research and development on the new F–14 Navy fighter, at least to the point where we have completed some flight tests of the aircraft and its various component systems, before we take it into production. I therefore proposed that the $275 million for the first six production models of the F–14 be deleted from the fiscal year 1970 budget, and that we refrain from authorizing or appropriating such funds until we have flight tested this very complex and innovative aircraft.

I was permitted only a few moments to defend that amendment during the debate on Defense procurement, and it was defeated. Apparently, however, the Appropriations Committee took note of the caution flags raised on the F–14 program, which follows hard on the heels of the F–111 fiasco which ran up such large cost overruns. The committee has deleted the very same $275 million for F–14 production that I urged be deleted, adding $146,000,000 for three additional R. & D. models.

I wholeheartedly endorse the strong language used by the committee concerning the scandalous inflation of final weapons costs over initial estimates. I particularly agree with the committee that one of the major reasons for these immense and costly overruns is the "tendency to move too fast into production even before development and testing has reached the point where a reasonably intelligent decision to enter into production can be made." It was this weakness in our approach to defense buying that I was trying to get at with my amendment on the F–14, and I feel the committee has done the American public a great service by recognizing this problem not only with regard to the F–14, but also other proposed new weapons systems.

Now, there are several aspects of this legislation which I find disturbing, and I must note from the outset that I think these negative items in the bill outweigh the encouraging aspects I have mentioned.

For reasons I have often stated before, I share the opposition expressed by 10 members of the committee to the appropriation of $359.5 million for deployment of the Safeguard ABM system.

With the SALT talks currently underway in Helsinki and showing signs of possible fruitfulness, it would be especially foolish for us to begin deployment of an ABM system now. With almost no risk whatsoever, we could postpone such a move until we have had a chance more fully to explore the possibility of reaching agreement with the Soviets to control this and other destabilizing strategic weapons systems. I must take strong exception to the presumption of the Committee on page 8 of its report which argues that, because the SALT talks are "preliminary in nature, there is no reason to believe at this time they will have any impact on the fiscal year 1970 Defense budget." The report goes on to say:

> If a safe and meaningful limitation on strategic weapons were to be agreed to, the budgetary impact would be felt in future years.

That may well be true. But it is not, in my view, a convincing argument for moving immediately to deploy a new weapons system such as the ABM. Not only may these deployment funds be wasted if we later reach restrictive agreement with the Soviets on ABM, but immediate deployment will also make such agreement more difficult to reach.

For these reasons, I intend to support the efforts I understand will be made by a member of the Appropriations Committee, the gentleman from Illinois (Mr. YATES), to amend this legislation to delete the deployment funds for ABM.

In light, also, of the SALT talks which are now underway, I think it is tragic that this legislation is based on a continuation of the philosophy that, in the committee's words:

> This country must maintain its military superiority over any other nation.

Adoption of such a philosophy will doom any arms limitation talks to failure and thus will accelerate the arms race, not dampen it.

In the testimony—just released last week—before the committee, Air Force Chief of Staff, Gen. John D. Ryan stated that the United States is working to develop "hard-target killer" MIRV's. This statement will doubtless be construed by the Soviets to the effect that we are seeking to develop a first-strike capability. General Ryan's unsettling statement is in contrast to what the DOD told the House Subcommittee on National Security Policy and Scientific Developments; in its report on MIRV testing, that subcommittee noted:

> DOD witnesses testified before the subcommittee that the objective of U.S. MIRV's is to assure penetration of Soviet ballistic missile defenses, a second strike mission which does not require high accuracies.

To talk about "hard-target killers" is clearly something else again.

I was the first Member of Congress to call a suspension of flight testing of MRV's prior to the commencement of the SALT talks, and I am disturbed that this legislation contains funds for continued testing without even the most minimal, nonrisk restrictions to demonstrate our good faith in attempting to reach some agreement with the Soviets on MIRV's. I am even more disturbed, however, by the continuing contradictions in administration statements concerning the purposes and capabilities we are pursuing in the development of these highly provocative and destabilizing weapons. In my view, we have much to gain and nothing to lose from refraining from further MRV flight testing while the SALT talks are getting off the ground, and there is no justification for the development of MIRV's with a hard-target capability that will cast doubt on their deterrent function and force the Soviet Union to suspect first-strike intentions. To the considerable extent that this legislation contradicts these considerations, I feel compelled to vote against it.

I am disturbed by the large proportion of these funds which are likely to be used by the Defense Department and the individual services to propagandize the American public. I have noted the evidence on this matter which Senator FULBRIGHT has revealed in the past week, and I have done some investigating myself. It seems clear that as much as $27,000,000 was expended in 1969 by the various services for public relations and public information. A significant portion of these funds provide the materials and manpower with which the armed services, in effect, promote their own goals, programs, and policies.

Until 1959, strict limits were included in the Defense Appropriations bills on the amount that could be devoted to public relations and public information. In 1959, that limit was $2.7 million. During the 10-year absence of such limitations, this expenditure has swelled 1,000 percent, to at least $27 million. That is the admitted figure and the real figure is probably much higher.

While this wasteful and improper use of funds is not of such magnitude that it would justify opposing this legislation, I do feel that it is of more than sufficient import to require immediate attention and remedial action. With that in mind I intend, at the appropriate time, to offer an amendment to limit to $10,000,000 the amount of funds in this act which may be devoted to public information and public relations activities. This amendment, I feel, is necessary despite the cuts totaling $4,955,000, made by the committee in the public information and public affairs budgets of the respective military services.

In addition to the various other unnecessary and, indeed, undesirable items of expense, this bill, of course, also provides billions of dollars for a seemingly unlimited continuation of our tragic military involvement in Vietnam.

This bill, therefore, runs counter to the views which I have previously expressed here in relation to the need for much more drastic steps to extricate ourselves from Vietnam than have yet been taken or seem to be envisaged by the President or the Appropriations Committee.

For all of these reasons, I shall vote against H.R. 15090.

Mr. SCHEUER. Mr. Chairman, I oppose this bill. Though the Appropriations

Committee deserves praise for its scrutiny of H.R. 15090, I believe further cuts are possible without causing any danger to ur national security. For the carelessness Ernest Fitzgerald revealed about the C–5A is surely not exceptional in Pentagon planning.

Many Members have questioned the effectiveness of our spending in the war against poverty—and properly so. But cannot we recognize that mistaken judgments in a single Department of Defense program are frequently responsible for cost overruns greater than the entire budget appropriated for the Office of Economic Opportunity?

Today, I am questioning more than the ultimate use of our defense money. I am also questioning the administrative policies of the Department of Defense.

For years we have been told that "efficiency" and "cost-effectiveness" are the hallmarks of our defense spending. And yet, what does the history of the Defense Department cost estimates actually reveal? The cost of the missile systems of the 1950's and the early 1960's was 3.2 times the original estimates. Initially, the cost of the Air Force's manned orbiting laboratory was estimated at $1.5 billion. The most recent estimate was $3 billion. Equally grave miscalculations were made for the Sheridan armored vehicle, the Cheyenne helicopter, and countless other weapons.

Indeed, incidents of faulty planning are becoming more common, and apparently, more acceptable in the Pentagon. Last week the chairman of the Senate Armed Services Committee announced that the Navy's Mark-48 torpedo program has a cost growth of 395 percent over the original estimate. The House Appropriations Committee report on H.R. 15090 has labeled 1969 "The Year of the Cost Overrun."

Of course, some of the higher cost can be explained by inflation and improved technology. However, the House Appropriations Committee has declared that 49.2 percent of the cost increases is due to revision of estimates, something that any private business would avoid as a matter of policy. Indeed, any company that used equally lax managerial practices would soon go bankrupt.

Some immediate action must be taken. The contractors must become accountable for their original estimates. There must be an increase in competition for contracts. For years the Defense Department officials have told us that savings of at least 25 percent can be realized through competitive procurement practices. Yet, within the past 4 years there has been a decrease in competition. In 1966 50 percent of the total military procurement was awarded competitively. In 1968, the figure was only 42.1 percent.

The need for reduced military spending is glaring. Our Nation's internal problems are clamoring for treatment and funds. The air we breathe in our cities is endangering our health. Our cities' schools are becoming market places, not of ideas, but of crime and narcotics. Inflation is hurting the middle class as well as the poor.

Mr. Chairman, while our country's domestic problems have been worsening, 35 defense weapons programs have overrun their original estimated costs by 19.9 billions. Until we end the war in Vietnam, until we clean our air and our waterways, until our cities receive adequate funding, until we bring military expenditures under rational, hard-headed cost controls, I cannot favor the military appropriations bills brought before this House.

This Nation must begin to establish a set of rational priorities. No longer can we allow our military spending to continue to dominate our entire national budget.

Mr. RYAN. Mr. Chairman, although the Appropriations Committee has reduced the administration's budget request of $75.2 billion by $5.3 billion to $69.9 billion, the military budget reflects the serious imbalance in our national priorities and underwrites the war in Vietnam. The Appropriations Committee estimates that some $23.1 billion appropriated by H.R. 15090 will be allocated to the Vietnam war in fiscal year 1970.

As in the past, I again point out to the House that the only way to change the policy in Vietnam is to refuse to finance that tragic war. From January 1, 1961, through November 29, 1969, 39,642 American lives have been lost through hostile action in Vietnam. As long as the House votes the funds and supports the administration's policy, as it did last week by a vote of 333 to 55, it must bear its share of responsibility for the continuation of the war. Therefore, I cannot in good conscience support this bill.

In opposing the bill, no Member of Congress is denying that an appropriate amount of funds should be appropriated for the legitimate defense needs of the Nation. Instead, opponents are critical of a bill which is the result of the outdated assumptions of the cold war, the expansive growth of the military-industrial complex, and the war in Vietnam.

The Congress has failed to exercise its responsibilities and has constantly voted in favor of military budgets with little, if any debate; and those critical of the budget receive only nominal support. This abdication of responsibility by the Congress has permitted a growing concentration of critical policy decision to be made in the executive branch.

An area of the bill which is of particular concern is the proposed anti-ballistic-missile system. This bill provides $799.4 million for the Safeguard system: $400.9 million for R.D.T. & E., $345.5 million for procurement, $23.2 million for operations and maintenance, and $9.8 million for military personnel.

In the past, I opposed funds for the deployment of the Sentinel system, and I have the same basic objections to the Safeguard which I outlined on October 2, 1969, when the military authorization bill was before the House.

ABM deployment threatens to upset the present delicate strategic balance, encourage escalation of the arms race, and impair the U.S. position at the strategic arms elimination talks in Helsinki.

In addition, the moneys being used to fuel the fire of the spiraling arms race only add to the inflationary pressures on the economy. Certainly, these funds could be better used to help solve some of our critical domestic problems.

Ten of the members of the Appropriations Committee, in separate views in Report No. 91–698, expressed their opposition to the funds appropriated for procurement, operations and maintenance, and personnel which total $359.5 million. They question the appropriation of funds for deployment before the research, development, and evaluation has been made and point out how much waste in military spending has resulted from appropriations of funds for deployment at the same time as funds for research and development.

To provide funds now for deployment risks huge overruns on a system which is presently slated to cost over $8 billion.

Mr. Chairman, I would like to mention one item for which funds have been cut—the manned orbiting laboratory. For years, I have pointed out that the MOL duplicated a NASA program. A year ago, the Secretary of the Air Force refused to brief Members of Congress on the project. In September of 1968, I introduced an amendment to the DOD appropriations bill to reduce the military budget by 8.5 percent. Included in the amendment the the deletion of $550 million for the MOL.

Although my amendment was not adopted, the Defense Department has now abandoned the MOL because, in its words, of "first, continuing urgency of reducing Federal defense spending and second, advances in automated techniques for unmanned satellite systems.

This is an example of the kind of waste that Congress has allowed in the past. The money for the MOL could have been used to feed the hungry, build adequate housing, provide better health and medical care, and permit every American child the opportunity to receive an education. These are goals for which we should be striving.

The imbalance in our priorities is clear. H.R. 15090 appropriates almost $70 billion to the military, while our domestic social programs are starved.

That I cannot justify.

Mr. MIKVA. Mr. Chairman, I will vote against the fiscal year 1970 Department of Defense appropriations bill for three reasons. I do this with some reluctance because of the already sizable cuts made by the Appropriations Committee and the members of the Defense Appropriations Subcommittee. I believe that the committee, chaired by the distinguished gentleman from Texas (Mr. MAHON) and the subcommittee, also chaired by him, have done an impressive job in reducing the inflated size of the DOD budget. I want to make clear that my voting against this bill has nothing to do with any of the cuts which the committee has made.

Rather, my opposition to this bill is based on three items which indicate how totally out of proportion to the real defense needs of this Nation the present $70 billion Pentagon budget is. The first of these unjustifiable "unnecessaries" is the Safeguard anti-ballistic-missile system. This bill, H.R. 15090, contains almost $400 million of taxpayers' money to deploy the ill-advised ABM. Not only is the ABM a waste of taxpayers' money because of its doubtful efficacy, it is a positive danger to American

security because of the threat it poses of further escalation of the nuclear arms race between ourselves and the Soviet Union. When I consider that the need for the ABM has not been convincingly demonstrated, that we have no proof that it will even work, and that we will never be able to effectively test it as a weapons system, I simply cannot justify casting a vote to spend the money on this monstrous military miscalculation.

The second reason that I feel compelled to vote against this appropriations bill is that it contains substantial sums to support the war in South Vietnam. As I have said elsewhere, my own belief that the way to end the war in South Vietnam is to begin immediately the complete withdrawal of all American forces and to complete the withdrawal as soon as a move involving so many men and so much material is possible. But the present bill contains funds to support the present policy of indefinite delay in the withdrawal of American forces. It contains funds to continue the participation of American military forces in a war which most citizens have long ago decided was a mistake from the beginning. It contains money to continue the fighting and the dying by Americans in that land so far away from our shores and so remote from our national interests. I cannot support a bill which provides money for these purposes so at odds with the national interest of the United States.

Finally, I must vote against this appropriations bill because it continues to provide funds for military manpower which far exceeds the real needs of this country. Although that number has been lowered from 3.46 million men at the beginning of this year to something under 3.3 million by the end of fiscal 1970, we still have on active military duty far more men than are required to serve the security needs of this Nation. What is even more disappointing than the excessive number of men is the reluctance of this Congress to assert its constitutional prerogatives to determine the size of the Armed Forces.

It is difficult to think of a congressional responsibility which is more clearly spelled out in the Constitution than the duty to determine the size of America's Armed Forces. Yet for almost 20 years we hav left the job of sizing U.S. forces to the men who command them—the generals, admirals, and military planners of the Pentagon. I cannot endorse this abdicat:.n of congressional responsibility by voting for funds to support troop levels which have never been adequately justified to Congress. Until our force levels and the number of men on active military duty are reduced to levels more consistent with our real security requirements, I cannot support a bill which provides funds at grossly exaggerated force levels.

Mr. Chairman, no Member can lightly vote against a bill which provides funds for the defense of the United States. But when such a bill provides so much more money than is really required that it both distorts the economy of this country and robs the Government of resources to meet the pressing domestic needs of America, then I feel compelled to cast my vote "No."

Mr. MINSHALL. Mr. Chairman, I have no further requests for time.

Mr. MAHON. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. There being no further requests for time, the Clerk will read.

The Clerk read as follows:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the following sums are appropriated, out of any money in the Treasury not otherwise appropriated, for the fiscal year ending June 30, 1970, for military functions administered by the Department of Defense, and for other purposes, namely:

Mr. YATES. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 305]

| | | |
|---|---|---|
| Abbitt | Foley | O'Neal, Ga. |
| Adair | Fraser | Ottinger |
| Andrews, N. Dak. | Fulton, Tenn. | Patman |
| Baring | Galifianakis | Pepper |
| Bell, Calif. | Gallagher | Poage |
| Betts | Gettys | Podell |
| Bingham | Giaimo | Powell |
| Blackburn | Green, Oreg. | Price, Tex. |
| Boland | Griffin | Reid, N.Y. |
| Bolling | Halpern | Reifel |
| Brademas | Hammer-schmidt | Riegle |
| Brotzman | Hanley | Robison |
| Brown, Calif. | Hays | Rogers, Colo. |
| Buchanan | Hébert | Rooney, Pa. |
| Bush | Holifield | Ruppe |
| Cahill | Horton | St Germain |
| Celler | Hosmer | Scheuer |
| Chisholm | Jones, N.C. | Smith, Calif. |
| Clark | Karth | Smith, Iowa |
| Clay | Kirwan | Smith, N.Y. |
| Cowger | Landrum | Staggers |
| Cramer | Lipscomb | Steiger, Ariz. |
| Daddario | Long, La. | Tiernan |
| Dawson | Lukens | Tunney |
| Dingell | McCarthy | Ullman |
| Edmondson | McDade | Utt |
| Edwards, Ala. | Macdonald, Mass. | Whalley |
| Edwards, La. | Mailliard | Wilson, Charles H. |
| Eilberg | Meeds | Wright |
| Farbstein | Michel | Wydler |
| Fascell | Nichols | Young |
| Findley | O'Hara | |
| Flowers | | |

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. ROSTENKOWSKI, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 15090, and finding itself without a quorum, he had directed the roll to be called, when 337 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. The Clerk will continue reading.

The Clerk read as follows:

TITLE I

MILITARY PERSONNEL

MILITARY PERSONNEL, ARMY

For pay, allowances, individual clothing, subsistence, interest on deposits, gratuities, permanent change of station travel (including all expenses thereof for organizational movements), and expenses of temporary duty travel between permanent duty stations, for members of the Army on active duty (except members of reserve components provided for elsewhere); $8,312,000,000.

AMENDMENTS OFFERED BY MR. YATES

Mr. YATES. Mr. Chairman, I offer several amendments.

The Clerk read as follows:

Amendments offered by Mr. YATES: On page 2, in line 10, strike out "$8,312,000,000" and insert in lieu thereof "$8,308,000,000".

On page 6, in line 19, strike out "$7,214,447,250" and insert in lieu thereof "$7,204,447,250".

On page 15, in line 6, strike out "$4,281,400,000" and insert in lieu thereof "$3,935,900,000".

Mr. YATES. Mr. Chairman, all the amendments that have been read relate to the principal amendment of striking out deployment funds for the ABM.

I ask unanimous consent that all three may be considered en bloc at this time.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

Mr. ARENDS. Mr. Chairman, we cannot hear the gentleman. Will the gentleman repeat his request.

Mr. YATES. Mr. Chairman, my amendments relate to three different sections of the bill, all of which are related to the deployment of funds for the ABM. I ask unanimous consent that they may be considered en bloc at this time.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The CHAIRMAN. The gentleman from Illinois (Mr. YATES) is recognized.

Mr. YATES. Mr. Chairman, I ask the Members of the House to take a look at the committee report because they will see one of the few instances when dissenting views are filed to the report of the Committee on Appropriations. You will note that 10 members on the Committee on Appropriations—20 percent of the entire membership of the committee united in opposing funds for deployment of the ABM.

At the start of the debate today, my good friend, the chairman of the committee, the gentleman from Texas (MR. MAHON) spoke of cost overruns, and he also talked about the evil of concurrency. He must have had the Safeguard ABM in mind because there will be substantial overruns in the future.

My arguments in opposition to the deployment of the ABM are taken from the report and hearings of the committee.

On page 48 of the committee report, you will see what to many may be a new word—the word "concurrency." That word refers to an obnoxious practice, the practice of the Department of Defense in conducting research and deployment or production at the same time. This practice has resulted in the waste of hundreds of millions of dollars. Programs that come readily to mind of such concurrency and the evils that flow from it are the F–111 program, the Sheridan tank program; there are many others that could be cited.

There is one that I would like to tell you about.

I want to tell you about the so-called DASH helicopter program, which is de-

signed to fly from a ship or base, detect an enemy submarine, and destroy it.

The DASH helicopter program, since 1960, has lost 362 out of the 746 helicopters which were procured under a concurrency program, lost, because they were made prematurely, made and used before they were ready, without even an emergency. Some of the helicopters remain on station today. The rest are in storage, presumably for good—another example of the so-called concurrency program. That is why I oppose ABM today, because the ABM program may be another example of deployment that is premature.

Those of us who opposed deployment, as you will see by the report, favor continued research on the program, and funds are present in this bill for such continued research.

We are also opposed to this program because we consider it to be ineffective. I suggest you may wish to read page 387 of volume 4 of the hearings, where the gentleman from Texas (Mr. MAHON) asked the witness, General McNickle, this question:

> General McNickle, do you feel that the development of an effective antiballistic missile system is feasible within the current state of the art?

That is the $64 billion question. What did General McNickle say? He said:

> Yes; I think proof of that is what we have been able to do with our space programs.

Not any statement that the ABM's have been effective, not any statement that they have been shooting missiles out of the skies with an ABM missile program, but he says that we have done this so well in the space program, we have faith we will be able to do as well with the ABM system. It cost $21 billion to put a man on the moon. Will it cost that much to put an ABM missile into the sky?

Then Mr. MAHON repeated the question, because he was not satisfied with the answer. On that same page, Mr. MAHON said:

> Do you foresee that we could develop a totally effective defense against the ICBM?
>
> General MCNICKLE. If totally effective means stopping all incoming warheads I think there will always be some that would get through under any circumstances that you talk about, sir.

Some would get through. How many incoming nuclear-headed missiles would have to get through in order to destroy the targets? How effective is an ABM system that does not shield this country from incoming missiles? Yet the proponents of the ABM system say that deployment will protect this country from any kind of serious or determined attack from the enemy.

So, Mr. Chairman, it seems to me, if we have a high regard for the taxpayer and for avoiding premature military programs of the type that have cost hundreds of millions of dollars without bringing any measure of security to the Nation, we must stop deployment of the Safeguard ABM. I urge the Members of the House to support my amendment.

Mr. PELLY. Mr. Chairman, I rise in opposition to the amendments.

Mr. Chairman, in connection with the Department of Defense appropriation bill, I have given much thought as to the advisability of providing funds for the Safeguard anti-ballistic-missile system. The amount as stated on page 11 of the report shows a total of $779.4 million, including $400.9 million for research and development and $359.5 million for deployment.

Deployment of the ABM system will be one of the subjects to be discussed by the Soviet Union and ourselves at the important disarmament discussions now being held in Helsinki, Finland. These discussions will include nuclear offensive and defensive missiles.

Earlier this year I had hoped for a delay in deployment of the Safeguard system, at least until after these talks, but I must say now it would hardly be appropriate; in fact it could well be most unwise for Congress to act in any way to prejudice the position of our negotiators. Certainly the President will control expenditure of these funds, and if he sees any hope of an agreement with the Russians of halting deployment of ABM's he will take appropriate action to defer expenditures. He will do so if he decides it can be done consistent with national security.

And, frankly, it may well be that because of Red Chinese capability in the nuclear missile field, the Soviet Union will not find it expedient to agree to ban defensive missiles but rather would prefer to limit offensive missiles where admittedly both nations have a huge overkill capability.

However, at this late date, as I said, Congress should not intervene while talks are going on, and therefore I must put my trust in the President. And, I do trust him. These funds have been previously authorized by Congress, and now I believe the money should be made available and included in this bill, even though many of us here today fervently hope it will not be spent.

In my opinion, nothing we do must in any way jeopardize the discussions to halt the suicidal nuclear arms race. Therefore, Mr. Chairman, I do not support this amendment to limit the use of funds for the ABM, although I do sincerely hope both Russia and the United States will mutually agree to ban this weapons system which many scientists say will not work and which could indeed boomerang and prove to be a weapon of self-destruction.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. PELLY. I yield to the gentleman from Illinois.

Mr. YATES. Mr. Chairman, does not the gentleman believe if the House approved the amendment I offered, that could give notice to the Russians that Congress does favor curtailment of these missiles systems that are costing so much to both our nations and that it would give impetus to the talks to stop this never-ending arms spiral with its accompanying tensions?

Mr. PELLY. Mr. Chairman, I would say to my friend, the gentleman from Illinois, that I believe the proper negotiations should be conducted by the executive branch, and it is not well for us here in the legislative branch to undertake to twist the arm of anyone or indicate our position.

Certainly the Soviet Union knows just as well how some of us feel about this ABM system. We do not need to take action here today to let them know we want to cut this suicidal nuclear arms race. I commend the gentleman for his interest in that field, because I share it.

Mr. RHODES. Mr. Chairman, will the gentleman yield?

Mr. PELLY. I yield to the gentleman from Arizona.

Mr. RHODES. Mr. Chairman, the Russians are in a little different situation than we are, having already deployed the missile system, I am sure they would look on any action by this House to withdraw from deployment, with a great amount of satisfaction.

Mr. YATES. Mr. Chairman, will the gentleman yield on that point?

Mr. PELLY. Mr. Chairman, I yield to the gentleman from Illinois if he wants to respond.

Mr. YATES. Mr. Chairman, I do want to respond. One has only to look at the interrogation by our chairman of Dr. Foster, of the Department of Defense's R. & D. department, in last year's hearings to see that Dr. Foster is not at all concerned with the deployment by the Soviets of the so-called Talinn and Galosh ABM systems, because our missile strength could overwhelm them at any time. They are woefully inadequate systems and from the testimony, ours will be no better.

Mr. PELLY. Mr. Chairman, I wonder how much the Soviet Union worries about our ABM and how successful that might be.

Mr. MAHON. Mr. Chairman, I move to strike the last word.

Mr. Chairman, we could discuss the question of whether or not we should deploy the anti-ballistic-missile system program for hour upon hour, however, a major portion of the time of this session of the Congress has already been devoted to the discussion of this question. I see no point now in a complete, fullscale debate of this problem at this time.

I can understand the gentleman from Illinois in offering his amendment. No doubt, he knows the amendment will be defeated, but he maintains his position by offering the amendment—which is understandable. But I think, Mr. Chairman, we all have made up our minds as to how we are going to vote. There is no use in having a complete replay of this issue.

I think most of us are convinced that it is well to go forward with only two sites, one in North Dakota and one in Montana, and we have been working to that end.

We have been working on the anti-ballistic missile for 14 years. In 1962 we made our first intercept of a ballistic missile, then designated in the Nike-Zeus program.

We have worked on the development for years and years and years. The time has come to move to deployment on this program. We do not know in fact, and with great precision, where it will lead. We know it is very expensive.

We hope some kind of agreement can

be reached for a slowdown in the arms race. We hope we can slow down the production of strategic weapons and perhaps abandon the whole ABM program, but we should not do it unilaterally.

I would hope that the Members could extend their remarks in the RECORD, or refer to remarks made previously in the session, and go ahead and vote on this issue. We all know what our views are and how we are going to vote.

I do not want to preclude debate, but I do believe we should move forward in view of the very busy schedule of the House this week.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Illinois.

Mr. YATES. I was going to say, Mr. Chairman, the excellent report of the committee gave those who oppose the deployment of the ABM additional ammunition in support of their position.

My position is against concurrency, and what is proposed by Safeguard deployment is a concurrence of research and deployment.

The gentleman from Texas well knows there has been allocated for future years more than a billion dollars for research on this missile system. I believe it is foolhardy to start deployment when research necessary to precede deployment is not complete.

Mr. MAHON. With respect to concurrency, concurrency means to start the research and development and at the same time proceed with production of the weapon.

Since we have worked for more than a decade on this program under research and development, and since it is a matter of the highest priority with the administration, as it was with the previous administration, and with a majority of the Members of Congress, it seems to me that we must now move forward.

With respect to concurrency, if we had all the time in the world we could avoid concurrency in proceeding with a system. We have waited a long time before deploying this system, and are making a minimum deployment. We have to do some deployment to know whether or not the ABM system as a whole will be workable.

I have grave doubts as to whether or not it will ever be totally effective. I do not know of any missile we have ever developed for any purpose, including intercepting aircraft, that is totally reliable. But because we do not have the perfect answer is no reason why we should not proceed.

The time has come to proceed with a limited deployment in order that we can know more precisely where we are. It would seem to me that it would not be to our advantage, as we proceed with the SALT discussions, for us to limit our resolve or to reduce our efforts in this field at this time. Our negotiators need the solid backing of the Congress at this time and in my judgment they will have the solid backing of this Congress, the overwhelming backing of the Members of the House.

Mr. COHELAN. Mr. Chairman, I rise in support of the amendments.

Mr. Chairman, I rise in support of the amendments of the gentleman from Illinois (Mr. YATES). Those who have followed the ABM debate know that I was among the earliest opponents of this system. In all the subsequent debate I have retained my serious doubts about the technical and strategic arguments used to justify this complex weapons system.

As has been pointed out on numerous occasions, there is grave concern whether the ABM can accomplish its task. First, can it intercept incoming missiles of a total first-strike effort; and second, if it can intercept these missiles, will it pollute the atmosphere to such a degree that we have, in effect, just temporarily delayed the effects of an all-out nuclear exchange? Also there is grave question of the basic assumption of the need for ABM, the first-strike capability of the U.S.S.R., is or will be present.

This is not the time to go through a lengthy discourse on the ABM, but to ask a rather simple question: Is this the proper time to allow the deployment of an untested, complex and expensive weapons system? I think the answer is "no."

In the supplemental views which I signed, there was reference to the majority committee view, that the "concurrency between research, and development and production" was not desirable. The majority correctly pointed out that there should be two distinct phases. One for research and development and then production and deployment. Why not apply the same analysis to the ABM? For all the talk and justification of proponents of the ABM there is very little data to suggest that the ABM is operational. In the absence of such proof, why commit deployment funds?

This amendment answers this question in a positive and constructive way. It allows the appropriations of $400.9 million for research, development, testing, and evaluation, but would, in effect, remove the $359.5 million that will be used for deployment. I must point out that I do not feel that R.D.T. & E. requires the full-scale construction of two ABM complexes in the continental United States. In fact I feel that accurate testing; that is, using missiles to intercept missiles, can only be done at the Kwajelein Islands test site.

My objection to this deployment goes beyond a generalized concern for waste in our defense effort. We must realize that this initial commitment is but a small portion of the total price tag of this questionable project. The most conservative estimate is that it will cost $10 billion more than is available under this year's budget constraints for our cities, open spaces, education, and welfare. This is a glaring example of our mistaken priorities and some small effort can be made to alter these priorities by confining the ABM to these priorities by confining the ABM to a research and development effort.

Another compelling reason to defer deployment at this time relates to the continuing progress at the arms limitation conference in Helsinki.

These talks began after the fiscal 1970 procurement authorization was passed, and the debate on the ABM at that time did not consider the impact of deployment on ongoing discussions.

Two facets must be considered. The first is that we should do nothing now which could hamper successful negotiations on arms limitation. The second is that a meaningful arms limitation agreement—formal or informal—will include strictures on ballistic missile defense deployment. I am optimistic that we may be on the road to such agreements, but recognize that an agreement will be increasingly harder to find as deployment of such missiles progresses.

We have heard the numerous arguments asking for delay of deployment on technical grounds. I subscribe to these arguments. But to those reasons we must add the effect of deployment on arms limitation.

At this time the arguments are most compelling for a self-imposed halt in deployment funding until we see where we are going, both technically and politically.

Mr. MAHON. Mr. Chairman, when we return to the House I shall ask that all Members may have permission to revise and extend their remarks on the subject of ABM at this point in the RECORD. I hope we could now limit debate or else vote on the issue.

Mr. RHODES. Mr. Chairman, I rise in opposition to the amendment.

The CHAIRMAN. The gentleman from Arizona is recognized for 5 minutes.

Mr. RHODES. Mr. Chairman, the gentleman from Illinois made some points about the fact that for this system we are asking research, development, test, and evaluation funds of $400.9 million. The implication seems to be that if we need R.D.T. & E., the system is not developed to the point of deployment.

Mr. Chairman, the Defense Department asks for R.D.T. & E. funds for weapons systems which have been in operation, in procurement and deployment, for years. We never quit R.D.T. & E. on a weapons system, and that is the reason we have been able to improve and upgrade so many of the systems which we now have. That is the reason we do it. There is nothing unusual about asking for R.D.T. & E. funds in a situation like this.

Mr. Chairman, we have researched and developed this system to death. The only thing that remains now is to put the system together in order to make sure that it works. This requires limited deployment. We are going to deploy at only two locations. It is not a full deployment by any means. It is not intended to be. Further deployment decisions will be made at the proper time and when the necessity arises. But the fact remains that the Russians have already deployed what they call an anti-ballistic-missile system. It makes no difference whether it is a perfect system or whether it is not. Certainly, the system which we develop will not be a perfect system after the deployment.

Hopefully, however, we can progress with R.D.T. & E. to make it better. But I defy anyone to name a defensive system which will be 100 percent successful to overpower the offense. You will never have a defensive system which will keep

intercontinental ballistic missiles from landing on our shores if someone fires enough of them. However, the main thing is to keep them from being fired. So, the main element we seek is the deterrent effect, which is an extremely important factor. This is why the whole system is worth the money. If the first missile is fired, the game is up—probably for all our civilization. The thing we must do is to keep that first missile from being fired.

Mr. Chairman, as all of us know the Russians have played an international game of poker with us. They are great poker players and great chess players. They think they have an anti-ballistic-missile system. This is the most dangerous fact I know of. They think we do not have an anti-ballistic-missile system and this is the second most dangerous thing I can think of. They could try to parley these two facts into an international game of blackmail which could be disastrous to our system and to our Nation.

Mr. Chairman, I think we should bear in mind today that the Safeguard system can end up with giving us a credible anti-ballistic-missile system to keep this country from having to sustain an attack from abroad. I think it is absolutely necessary that we do this and proceed with it. I hope that we will, proceed to vote this amendment down and proceed to deploy an anti-ballistic-missile system. Mr. Chairman, this is the only type of language which is really understood by the people who are unfortunately now our adversaries.

If we can have talks in Helsinki or some other place and some plan will come into being to keep them from being an adversary, I will be the happiest person in the world. But in order to keep them from being an adversary we must get the point across to them that after once marching up the hill insofar as deployment is concerned, we will not then march back down the hill again, in a unilateral act. Let them destroy their ABM system, and if they do, I would then be in favor of refraining from deploying ours.

Mr. REUSS. Mr. Chairman, I move to strike the requisite number of words.

Does the gentleman from Illinois desire me to yield to him?

Mr. YATES. Yes; will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Illinois.

Mr. YATES. I merely want to say in response to my good friend from Arizona who refused to yield to me during his time, the arguments he makes in favor of the anti-ballistic-missile system were made last year to sustain the so-called Sentinel system by the proponents of that system in order, as they said, to protect the people living in the cities. Now, President Nixon earlier this year exploded that thesis completely. He said Sentinel could not protect people in the cities and he cancelled that program. However, the same proponents of that system now make the argument that the Safeguard is much better. How the same system can be better by a mere change of name escapes me. The arguments that were made last year for Sentinel are now advanced for an equally inadequate system, the Safeguard.

Mr. REUSS. Does the gentleman from Arizona desire me to yield to him to respond to the gentleman from Illinois?

Mr. YATES. The gentleman from Arizona would not yield to me during his time.

Mr. RHODES. This may be an indication as to why there is no credibility gap in this administration as there was with the previous one. The system which was planned to be deployed in the previous administration obviously would not have protected the cities, with the configuration and quantities of the planned deployment complexes. It would, however, have added to the credibility of our deterrent.

Mr. YATES. Why did you vote for it at that time?

Mr. RHODES. The Safeguard system is supposed to protect only certain Minuteman missile sites which gives us a deterrent. If we did not do this the Russians would never know that if they launched a preemptive attack that they would not knock out our missile sites, and thereby do away with our retaliatory capacity.

Mr. FRASER. Mr. Chairman, if the gentleman will yield——

Mr. REUSS. I yield to the gentleman from Minnesota.

Mr. FRASER. I wonder if the gentleman from Arizona might tell us whether he thinks he was right last year, or whether President Nixon is right this year.

Mr. REUSS. Does the gentleman from Arizona desire to respond?

Mr. FRASER. Last year the gentleman supported the so-called Sentinel version. Is that true?

Mr. RHODES. Yes.

Mr. FRASER. Now President Nixon has come out as wanting to shift the objectives and mode of deployment. At which time does the gentleman from Arizona believe that he was right?

Mr. RHODES. Mr. Chairman, if the gentleman will yield further, I supported last year the only system that came to the floor for a vote. I do not believe it makes too much difference just where the system is deployed and which way it is aimed, because these incoming missiles are coming from outer space. It really does not make a lot of difference whether you have the ABM missiles here or over there, as long as they have the range and capability to engage the incoming missiles. The main thing is to have a system which helps the credibility of our deterrent. Both Safeguard and Sentinel did that.

Mr. FRASER. Then the gentleman would side with President Nixon?

Mr. RHODES. I did not say that.

Mr. FRASER. He indicated the Sentinel system was not an acceptable concept, and that all it might do was serve notice to the Soviet Union that we were going for a first strike capability.

Mr. RHODES. I do not think the gentleman from Minnesota can find that quotation from President Nixon. I do not recall his saying that. Both Sentinel and Safeguard add to our deterrent—the latter more effectively than the former.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Illinois.

Mr. YATES. I am pleased that the gentleman from Arizona acknowledges his error in voting for Sentinel last year when it is conceded that it was an ineffective system. Why is this system any better? Solely because of a new name or a new administration? That is hardly a reason for spending hundreds of millions of dollars.

The CHAIRMAN. The time of the gentleman has expired.

The question is on the amendments offered by the gentleman from Illinois (Mr. YATES).

The question was taken; and on a division (demanded by Mr. YATES) there were—ayes 25, noes 78.

So the amendments were rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

RESERVE PERSONNEL, ARMY

For pay, allowances, clothing, subsistence, gratuities, travel, and related expenses for personnel of the Army Reserve on active duty under sections 265, 3019, and 3033 of title 10, United States Code, or while undergoing reserve training or while performing drills or equivalent duty, and for members of the Reserve Officers' Training Corps, as authorized by law; $308,000,000.

Mr. CAREY. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I take this time first to say to the committee what I have already said to the chairman privately with regard to the form in which the appropriation bill and report have been sent to the Chamber. I think they deserve the gratitude and appreciation of all the Members here for the manner in which they have set forth the list and checklist of the progress being made on authorizations and appropriations so that we can have clearly before us how far down the road we have to go before we finish our work for this session.

This is most helpful to us. The clarity in which the report is written deserves commendation. I think we can all say to the chairman and the committee that this is a job well done.

Mr. Chairman, I also take this time to raise briefly a minor item. In fact, I am almost hesitant to bring such a small amount to the attention of the committee, but on page 95 of the report there is set forth an explanation of the permanent new budget—obligational—authority, Federal funds, in the amount of $282,000 per annum which, as set forth in the fine print, is beyond the reach of the bill. In other words, there is no way in which a member of the Committee of the Whole here at this time can do anything to strike or increase or otherwise affect the amount set forth.

Now I am somewhat familiar with this so-called conservation program, I might say. I am thoroughly in favor of conservation. As I recall, this is a program under which we have hunting and fishing and other sports pursuits and game activities on the military reservations. Incident thereto are some very worthwhile measures of conservation and also the stocking of fish ponds and game preserves.

I ask the chairman of the committee—Is it true that what we have here, $282,000, is in large sum the disbursal of moneys which are collected pursuant to this program from the agreements and arrangements made with private sporting groups and service personnel and nonservice personnel who hunt on the reservations and pay a fee? As I understand it this money is disbursed by the Secretary in furtherance of this activity without having to come back for an appropriation? I ask the gentleman if that is the sense of this?

Mr. MAHON. I want first to thank the gentleman from New York for his generous references to the report which has been submitted by the committee.

As the gentleman has pointed out, this matter involves a permanent authority which does not require annual appropriation. These funds are available as a result of a law to which the gentleman referred.

Mr. CAREY. I will ask the chairman this—As a practice is it not true that this is somewhat unique and actually it is against what we have been told is good budgetary and appropriation practice and procedure?

I have in mind a similar fund which applies to all of the public land areas of the United States—the national parks and so forth—the offshore oil lands and the land and water conservation fund is in exactly analagous terms, the collection of fees paid by those who go on the parks and other public lands. This money is then accumulated in a fund in trust for the acquisition of further public lands. Under that procedure, the program, the land and water conservation fund, is it not true that every single disbursement from that fund must follow the route of appropriation by Congress?

I am wondering why if in this case it is good and sound practice to return the fees of the hunters and the sportsmen in the military reservation, why it is not also sound practice under the land and water conservation fund to have constantly available for disbursement by the Secretary, after due clearance from Congress, moneys contained in this program for public recreation for all the people of the United States.

Mr. MAHON. I would like to say to the gentleman, I do not have the pertinent statute before me. I am a little unclear as to what the precise situation is.

I do think it is good practice for the Congress generally to reserve unto itself the actual appropriation of funds as a general proposition. I shall expand on my response for the RECORD in order to provide a more precise answer to the gentleman's question.

Mr. CAREY. I thank the gentleman.

Mr. MAHON. Under leave to revise and extend, I should like to point out that the legislation establishing the wildlife conservation program for military reservations, and establishing its financing, was separately enacted by Congress in 1949—Public Law 81–345—and amended in 1960—Public Law 86–797. It is, as the gentleman has pointed out, significantly different than the basic law underlying the land and water conservation programs of the Department of the Interior. I am generally opposed to so-called "back-door" spending authority, as the gentleman knows. However, in an effort to be helpful, the reports of the committee include tabulations of all funds available to the departments, whether they be trust fund, permanent appropriations, or otherwise. Thus, in the present instance, the amount is not in the bill before us, but appears in the report tables by way of information only.

Mr. SAYLOR. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I take this time to commend our colleague, the gentleman from New York, for bringing this matter to the attention of the Members of Congress.

It is rather strange that the Committee on Appropriations uses one method of treatment for military reservations and those personnel who hunt on the military reservations, but use an entirely different criteria for those who use the public domain.

I suggest that if the Congress has placed this fund beyond the action of this House and the Senate for appropriation, there is absolutely no reason why the $200,000,000 that annually goes into the land and water conservation fund should not be placed under the same condition.

The reason I state this is the Bureau of the Budget has said that the $200,000,000 in the land and water conservation fund cannot be spent. It is frozen. The House Committee on Interior and Insular Affairs was very gracious to the Committee on Appropriations and asked that they supervise and approve the expenditure of the land and water conservation fund.

But if you are going to have one rule for the military, then you should have the same rules for the civilian personnel on the public lands.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman.

Mr. YATES. The gentleman is absolutely right. The gentleman's argument is exactly correct. This is the so-called Generals' Hunting Preserves Amendment over which there was so much controversy some years ago and it comes as a surprise to many of us that the Committee on Appropriations now has no control over legislation that is passed. Apparently that privilege of the generals is frozen into law and the funds will go automatically toward building up the hunting preserves for the military services. The Committee on Appropriations of the House will have no control over it at all.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I yield to the chairman of the committee.

Mr. MAHON. I have before me Public Law 797 of the 86th Congress, which originated, I believe, in the Committee on Merchant Marine and Fisheries. As the gentleman from Illinois has pointed out, the Committee on Appropriations has no jurisdiction over funds under these circumstances as a result of the wording of the substantive law that deals with the subject.

Mr. SAYLOR. In that case, I might say to my distinguished chairman and members of the committee, that I expect to introduce legislation which would follow the same pattern as far as the land and water conservation fund is concerned, and I invite anyone who is interested to join me.

Mr. CAREY. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to the gentleman from New York.

Mr. CAREY. I would join my colleague on the Committee on Interior and Insular Affairs, the ranking member of our committee, by saying that further perusal of the basic act, known as the Eglin Reservation Act, for it originally applied to the Eglin Air Force Base in Florida, will indicate not only is there an amount of $282,000 available for expenditure, but the Secretary of the Interior is directed in the basic law to provide to the military fish, game, and wildlife specialists on the stocking of fish ponds and such other aids and assistance that may be required to make sure that there is always something to shoot at and something to hook. Perhaps in this instance the taxpayers are apt to get a little hooked. We ought to make sure that not only will the Department of Interior have the expenditure available, but also we will make sure that the generals and those that are their guests are able to get a good day's bag when they go hunting. I would like to have the same opportunity for my constituents when they go on public lands to do the same thing.

Mr. SAYLOR. I might say to my colleague that is my complaint with the present law, which has been specified and referred to by the chairman of the full committee. If this is right for those who are in the military, it should be right for the taxpayers of this country who foot the bill for all of these projects.

Mr. GROSS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise to ask a question or two concerning the bill.

Did I understand that there are several billion dollars in this bill to fund cost overruns?

Mr. MAHON. No, there are not several billion dollars in this bill to fund cost overruns. There are many cases where cost overruns take place. In those cases, additional appropriations are requested to complete a weapons system over a period of years. It is all but impossible to ascertain what part of the fiscal year 1970 budget is for costs in excess of the original cost estimates given on the individual items.

Mr. GROSS. What is the estimate of cost overruns that are included in this bill, that is, the money required to take care of cost overruns? Was there not some figure given earlier in the debate this afternoon?

Mr. MAHON. I believe a figure was mentioned, but not by a member of the committee. I was not familiar with the figure given. The Secretary of Defense, Mr. Laird, in testifying before the Committee on Appropriations, as shown in part 7 of our hearings, points out that in the last several years there have been cost overruns on major weapons systems totalling $16 billion. This does not

mean that the $16 billion is in the bill for fiscal year 1970. But this is an oversimplification of the problem. The $16 billion means that the programs have been given redirection. It means that in a 5-year period inflation has upped the costs. It means that the Department of Defense has specfied additional parts and expanded programs in certain systems, and so forth.

What usually happens in a cost overrun situation is that the Navy, for example, may ask for a couple of billion dollars for ships and then find that they have underestimated the cost of ships. Then, the Navy will delete from the program the lowest priority ship and ask concurrence of the Congress to use those funds to finance the overruns on the other ships.

Mr. GROSS. I will say to the distinguished chairman of the committee that the Department of Defense was established several years ago, during my time in Congress, and I opposed it. This heavy layer of bureaucratic fat was established over the already existing Secretaries and Assistant Secretaries of the various Armed Forces and for the alleged purpose of providing economy through commonality of purchases, closer scrutiny of contracts, and so on. Yet today we heard from the gentleman from Ohio (Mr. MINSHALL), the story of the survival radio which ranges in cost from $203 to $820, according to the manufacturer. The gentleman from Ohio says the cheapest model is adequate.

All this figures into the cost overruns and the lack of good administration in the Defense Department. We do not have commonality in purchases, and we do not have common cataloging of purchases. We do not have commonality, period. Anyone who has read the newspapers recently knows that we are running into excessive cost overruns in the purchase of major hardware and major supplies for the Armed Forces.

My question is: What is being done about it and what can be done about it?

I realize we here today in consideration of this bill are in what is commonly known as a bind. We can do little as of this day and hour except protest. But what is being done to put a stop to this business?

Mr. MAHON. Mr. Chairman, I would say to the gentleman from Iowa that cost overruns are taking place throughout the Government and private industry as a result of inflation.

Mr. GROSS. The gentleman gave us an example.

Mr. MAHON. If the gentleman heard my opening remarks, he heard that.

Mr. GROSS. Yes, I did.

Mr. MAHON. The cost overrun on the lunar module for landing on the moon was 500 percent, and the highway program was about 100 percent. So there have been cost overruns and we must do whatever we can to get accurate estimates of costs.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

(By unanimous consent, Mr. GROSS was allowed to proceed for 3 additional minutes.)

Mr. MAHON. Mr. Chairman, if the gentleman will yield further, except for the work that has been done, this bill today, instead of being $69 billion, could have been $109 billion, in my opinion. However, a great deal has been achieved by way of commonality and otherwise in the Defense programs. There is still very much to be done, but the Department is making progress. It is a continuing struggle. The reductions made in this year's Defense budget are for the purpose of mandating better management.

Mr. GROSS. I sincerely hope the Appropriations Committee or some committee of the House of Representatives will go further in mandating the Department of Defense on these and other items on which costs are running so high.

This bill is $5.3 billion below the budget, and approximately $4.5 billion below last year's spending for the same general purposes. Does the gentleman anticipate that, as usual, there will be a restoration of funds that have been cut through a supplemental appropriation bill at a later time?

Mr. MAHON. I think I can say with complete confidence that unless there is an escalation of the war, or a turn of events which is wholly unanticipated at this time, there will not be a supplemental of any consequence for the Defense Department, except for about $2,100,000,000 to cover the cost of pay raises which have been provided by the Congress.

Mr. GROSS. Yes.

Mr. MAHON. Of course, there will continue to be cost overruns in many of the programs—in ships and in intercontinental ballistic missiles and in the ABM—there will be different cost overruns. They will be announced from time to time with respect to all these programs.

Various committees of the Congress are working in this field.

The Department of Defense is working in this field.

This is all a wholesome and healthy sign. I would say the chances of a supplemental of any significance are not great, and it is not anticipated at all at this time.

Mr. PUCINSKI. Mr. Chairman, I move to strike the last word.

I want to congratulate the chairman of the Appropriations Committee and the members of his committee for bringing before us a bill that has $5.3 billion less earmarked for defense than was requested by the Department. I am encouraged by this and can certainly support it.

I believe the chairman has done a good job in assuring us that this is not going to be recovered in a subsequent supplemental appropriation at some future time. I hope the chairman will impress upon the agencies that they had better not come in here, except under extremely extenuating circumstances.

I am disturbed however by the colloquy which just preceded this. I am disturbed about the fact that there does not seem to be enough opposition to this business of cost overruns.

I am disturbed by the fact that the General Accounting Office almost every day, with monotonous regularity, is handing down extensive reports about mismanagement in the Defense Establishment.

I am disturbed that when defense manufacturers come before the agency with a claim for more money because of an overrun they do not show anything as to what cuts they have made in other parts of their operations.

There is no question in my mind that anybody who has traveled around this country and looked at some of our defense plants and some of the top management operations will see that they are living in the Garden of Babylon. They are traveling first class. As one looks at the facilities of some of the defense plants one sees there is no effort being made to take cognizance of the fact that some taxpayer is paying for all this.

Certainly I am not going to stand here and support any action that would deny any American soldier everything he needs to perform his duty. I do not believe any American citizen wants to shortchange any soldier, sailor, or airman.

But I say this in all honesty and sincerity: The citizens of this country have been very generous in support of our defense effort. America has spent almost $2 trillion in the last two decades on the Defense Establishment of this country.

It does seem to me that when these people come in with a cost overrun the distinguished chairman of the Appropriations Committee and the distinguished chairman of the Armed Services Committee, who I know have spoken time and again about this subject, should insist that any company that comes in with an overrun must show in great detail what it has done to curb other expenses.

I noticed that after the successful moon shot—and we have the same thing in the Defense Establishment—we saw the newspapers and magazines of the full page ad after full page ad in all of country, bragging about the equipment that they built for these operations. Who do you suppose is paying for that? The company out of its profits. Forget it. They are paying for that out of operating expenses.

I have heard the distinguished chairman of the Armed Services Committee say here that he has taken steps in his committee to evaluate and inventory these overruns. I am also advised that the chairman of the Armed Services Committee of the other body has set up an inspection subcommittee to look at overruns.

I am told that of the 21 major weapons systems there are overruns in every one of them.

I would hope that before we vote on this bill we would have an expression from the chairman of the Appropriations Committee and hopefully from the chairman of the Armed Services Committee that indeed there is going to be some tightening of the belt in all these luxurious services and all these fine, first-class facilities which the defense contractors of this country have been building with the taxpayers' money, and that these are going to be toned down.

Several years ago I had occasion to

meet a young man who flew a Russian Mig out of Poland into Denmark. His name was Lt. Frank Jarecki. He came to America on a good will tour. They took him around to some of our defense plants. He flew one of our F–81 Sabre jets out to the west coast, and when he came back I had occasion to meet him at O'Hare Field in Chicago. I asked him how he liked our best fighter of that era.

He said, "What is this: a fighting aircraft?" I said, "Of course it is." So he took me around and showed me all of the luxuries, including the luggage compartment, in that aircraft. He said, "When the Soviet Union builds an aircraft they want speed, distance, and a heavier payload." It is high time our own manufacturers got to taking some of the frills out of the defense budget and got down to the real business of spending the taxpayers' money in a way that will get us top value for our money.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

RESERVE PERSONNEL, NAVY

For pay, allowances, clothing, subsistence, gratuities, travel, and related expenses for personnel of the Navy Reserve on active duty under section 265 of title 10, United States Code, or while undergoing reserve training, or while performing drills or equivalent duty, and for members of the Reserve Officers' Training Corps, as authorized by law; $131,400,000.

Mr. MAHON. Mr. Chairman, I move to strike the last word.

Under leave to extend, let me briefly respond to the remarks of the gentleman from Illinois just concluded.

The report of the committee on this bill contains many examples of waste which have been uncovered by the committee and in which specific funding deletions were made. I would hope my remarks during debate today should assure the gentleman, and others, that we are seeking to obtain a dollar in value for a dollar spent.

The reductions made below the budget are, in significant part, recommended for the purpose of demanding better management and more economical procurement.

The Committees on Appropriations and Armed Services, the General Accounting Office, and others are constantly reviewing and investigating Defense programs and activities.

The Secretary of Defense and the military services have many programs designed to avoid waste.

I believe that we are doing a creditable job in insisting on better utilization of available resources.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

NATIONAL GUARD PERSONNEL, AIR FORCE

For pay, allowances, clothing, subsistence, gratuities, travel, and related expenses for personnel of the Air National Guard on duty under sections 265, 8033, or 8496 of title 10 or section 708 of title 32, United States Code, or while undergoing training or while performing drills or equivalent duty, as authorized by law; $97,300,000: *Provided*, That obligations may be incurred under this appropriation without regard to section 107 of title 32, United States Code.

Mr. RIVERS. Mr. Chairman, I move to strike the last word.

(By unanimous consent, Mr. RIVERS was allowed to proceed for 5 additional minutes.)

Mr. RIVERS. Mr. Chairman, I want to say at the outset that I generally agree with the Committee on Appropriations. I recognize the problems it has in sustaining and maintaining a bill that will withstand those who are constantly urging additional cuts in the Defense Department. It is hard to get anything these days. We know what this is. I would like to take 1 minute to refer to my dear friend from Chicago, Mr. PUCINSKI, for whom I have the highest regard, to say this: I do not like to see some of these corporations using these full page ads. I see them after the moon shots. This may be a fault of our tax structure. Maybe they should not be permitted to write off these kinds of things.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. RIVERS. I yield to the gentleman.

Mr. MAHON. The Congress, the Pentagon, and the Internal Revenue Service insist that these items cannot be written off as part of the cost.

Mr. RIVERS. I was just getting ready to say that. We have already addressed ourselves to that, and I hope the chairman will continue to reiterate it, because certainly we have tried to do many things that the gentleman from Illinois has already mentioned. We can look at what has been done in many areas. The Kennedy Center has already has had a 45-percent overrun. There are overruns in everything, you see. Every single thing in this budget is going to be touched by inflation. If you look at it, you will see that the Secretary of Defense has already laid up over 111 ships. If he keeps this up, all he will have left is the admiral's gig. We will not even have anything on the high seas. That is the way he is approaching it. I think that is a mistake. The thing to do is to meet the need and tell the American people, "If you want a Navy, pay for it. Otherwise lay it up and let the Soviet Union take over the oceans." That is the way the DOD is to meet these people who are giving us hell on every street corner. We can go to them and say, "Certainly. You are right. We do not need the U.S. Navy. Sink it."

Mr. MILLER of California. Mr. Chairman, will the gentleman yield?

Mr. RIVERS. Of course I yield to my good friend.

Mr. MILLER of California. When you said the only thing the Navy would have left is the admiral's gig, that would be only a repetition of what took place during the war when you had one small ship down here at the navy yard but all of the ranking naval officers were attached to that ship so that they could draw overseas pay.

Mr. RIVERS. If you want to leave that in the RECORD, you go ahead and leave it in. I am not in that kind of businesss.

According to Admiral Moorer, the Chief of Naval Operations, the greatest need of the Navy today is new ships. Both the Secretary of the Navy and the Chief of Naval Operations see an urgent need for a new 10-year shipbuilding program of between $3 billion and $3.5 billion yearly as the minimum. This is just your Navy end of it.

A recognized expert, "Jane's Fighting Ships," and they are the bible of the industry worldwide, says that some of our Navy ships are so old as to be a liability instead of a protection.

Mr. Chairman, the Armed Services Committee has again and again pointed out the need for new ships. This year the authorization which our committee recommended and which this House approved envisioned a shipbuilding program of close to $3.6 billion in order to make the initial start on those naval vessels which are now so badly needed. In conference we finally agreed on a program of just under $3 billion.

The bill before us today would cut that program even further, to $2.58 billion. While this is the largest shipbuilding appropriation in several years, nevertheless, keeping in mind this inflation, it is far short of the minimum we need.

Now, Mr. Chairman, I am not going to offer any amendment or fight the Appropriations Committee as I told the distinguished chairman when I appeared before that great and dedicated committee. It is a question of judgment and I told them that. I am not here to criticize the chairman, my friend, the gentleman from Texas (Mr. MAHON), for whom I have such a lofty affection. I am just calling this to the gentleman's attention. We have testified and urged the Appropriations Committee in its wisdom to see if we could not increase this.

Mr. Chairman, it is a choice between ships and dollars, the choice of its being made now or next year which could well be too late since it takes at least 3 years to build a new ship. They are becoming more and more and more sophisticated all the time and on everyone of those ships is a sophisticated gadget of some kind which has just come from the minds of the scientists.

So far, Mr. Chairman, I have spoken primarily about the need for combatant ships with which to meet the challenge of the ships being built in increasing numbers—increasing numbers I tell you—by the Soviets. They have one yard to the far north that can turn out from 15 to 20 Polaris submarines every single year. We have nothing even in that ball park. The Navy has growing desperate need for supply ships. Do not lose sight of this. It will not help us and the Navy if we have a lot of new ships but still have the old oilers and tankers which are so old and decrepit that the new ships cannot be reached for replenishment of supplies. We need the whole business.

Mr. Chairman, it has been said that even if the funds are appropriated, the money would not be spent by the Department of Defense.

Mr. Chairman, I would point out that the fault for replacing ships not be put up to us but be put up squarely to the executive department. Let them default in their responsibility. I am not willing to anticipate failure. I just never have and I am not starting on the 8th of December 1969. I tell you we need these things.

It is most regrettable that the money was not funded to do these things.

Now, my dear friends on the Appropriations Committee—and I want the chairman to listen—chose to remark that the Navy has aged hulls that can be modernized. I regret to say that this is not a fact—this is not a fact.

We have previously pointed out that the Navy's ships are too old to go through any other modernization. Fleet modernization and repair, which we call FRAM, cannot be exercised on some of the hulls we have. They have reached their capacity in the amount of electrical power that they have available for new systems. They have reached the end of the endurance of the sailors who have repatched the boilers over and over again. It does not make any sense to spend a fortune on new equipment, even if it could be designed to go into the space available on the old ships, and come within the limits of the electrical power available, if the boilers keep breaking down.

See the report made by the distinguished gentleman from Florida (Mr. BENNETT), look at the photographs contained in these reports about the conditions of the boilers in our ships that we have in our fleet.

Mr. Chairman, I have seen the casualty reports of our fleet. They are indeed shocking. The Committee on Appropriations says that the age of our ships is not a proper base to determine effectiveness. Unfortunately, Mr. Chairman, our ships are not like vintage wine, they are not and they do not grow better with age. They are growing old, and that is the simple fact.

To me, Mr. Chairman, the Navy is one service which can be used best to keep any future war from being fought on or over American soil.

The CHAIRMAN. The time of the gentleman from South Carolina has expired.

(By unanimous consent, Mr. RIVERS was allowed to proceed for 1 additional minute.)

Mr. MINSHALL. Mr. Chairman, will the gentleman yield?

Mr. RIVERS. Mr. Chairman, I have one further paragraph, and then I will be happy to yield to the gentleman from Ohio.

Perhaps the best example of seapower to prevent a conflict was most recently illustrated by the use of our Navy during the Cuban missile crisis—when a task force of over 150 ships supporting eight aircraft carriers put a quarantine around Cuba. This action forced the Soviets to have second thoughts, and gave us time to make other plans. It may have prevented a holocaust—who knows, I do not. We are now observing that power being duplicated before our very eyes.

Mr. Chairman, the time to act is now. Tomorrow is powerfully late, it could be too late.

Mr. Chairman, I now yield to the distinguished gentleman from Ohio.

Mr. MINSHALL. Mr. Chairman, I thank the gentleman for yielding. I certainly have the highest regard for my good friend, the gentleman from South Carolina, Mr. RIVERS. I know of no Member of the Congress who is more concerned about the status of our military than he is, and who has done more for it.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MINSHALL. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would ask the distinguished gentleman from South Carolina to remain for a question.

Mr. RIVERS. Mr. Chairman, I will be ready to answer any questions.

Mr. MINSHALL. Mr. Chairman, I would like to point out to the gentleman again that I hold the gentleman in the highest regard. In this year's budget I know the gentleman wanted additional funds for the Navy. But the appropriation in 1969 was a total of $820 million, last year. This year we have recommended in this bill $2.5 billion in additional shipbuilding for the Navy. I think that that is a substantial increase. Further this is just the first stage of a complete refurbishing and building program.

Mr. RIVERS. It is a substantial increase, but when you take into consideration all of the escalation and the inflation, then it is not a substantial increase. Our fleet is being methodically laid up and dissipated and worn out. I know it costs money to maintain our fleet. You have given us one additional submarine.

Mr. MINSHALL. I would like to point out to the gentleman from South Carolina that this is three times as much as we appropriated last year.

Mr. RIVERS. I know that. I said that. This is not even the minimum needed.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. MINSHALL. I yield to the gentleman from Texas.

Mr. MAHON. Mr. Chairman, I would like to join the gentleman from Ohio in expressing my deep appreciation for the good work and the dedication of the gentleman from South Carolina (Mr. RIVERS).

He has through the years fought the battles for the security of our country. We, on the Committee on Appropriations, have worked with the gentleman generally and we, of course, are all for the security of our country.

If the fiscal conditions were different and if the atmosphere were different generally, this bill would not have been cut as deeply as it has been. But this does not mean that the Committee on Appropriations or that the gentleman from Ohio are anti-Navy. We realize, as does the gentleman from South Carolina, that the Navy must be modernized and we are moving in that direction. Of course we would like to move more rapidly. But I do not think that what we are doing this year will, over the long pull, be disastrous to a program of maintaining supremacy over the Soviet Union in all important areas of defense.

Mr. RIVERS. Mr. Chairman, will the gentleman yield?

Mr. MINSHALL. I yield to the gentleman.

Mr. RIVERS. The fact that the chairman has made that statement is the very reason I did not want to get on the floor and put in an amendment. I am glad that the chairman is alert to the Navy's need for help and for money. Pro rata, relatively, because of inflation it does not do as much. I recognize the gentleman had to do it and I appreciate the gentleman's attitude. For that very reason, I will not, and I am not criticizing your great committee.

Mr. KYL. Mr. Chairman, I move to strike out the last word to direct a question to my distinguished friend, the chairman of the Committee on Armed Services, the gentleman from South Carolina (Mr. RIVERS).

We had a little debate on the matter of two missile systems and I will take your word for the decision which you made on that point. But I would like to ask how and when do we get some action on some other things that continue year after year.

I am not antimilitary and I certainly am not anti-God. But I use this expression to get to the kind of detail we have in this bill. The Army, Navy, and the Air Force use the same prayer book. One of them has a red cover; one has a green cover, and one has a gray cover. They are not provided by the same source—I do not know how you could change those things. It has nothing to do with the arms or arms race or anything else. We have manuals that all three branches of the services use except one of them has two holes punched in them and some of them have four holes punched in them and some of them have five—and they do not come from the same source.

How do we take care of those things and when do we take care of them, sir? How do we do this? I have to ask you as an expert about it.

Mr. RIVERS. Of course, we do not administer the law or administer these acts. The executive branch administers them.

I can tell you that 15 or 20 years ago a former Member of this body, William Hess, was head of the subcommittee, who was followed by the gentleman from Louisiana (Mr. HÉBERT), and a fellow Californian, a very dear friend of yours, Jack Anderson, and then Mr. Porter Hardy of Virginia had it, and now I have it.

We have asked that these things be done. We cannot make them do it. Time and time again we have put amendments in bills requiring this. Much as I dislike some of the things that Mr. McNamara did, he was the first Secretary of Defense who had a common procurement for gasoline and for handkerchiefs and for Kleenex or whatever they use, and there are hundreds and hundreds of thousands of items involved.

Do you know how many items there are in a defense supply building down in a big naval shipyard or on a big airbase? There are 300,000 or 400,000 or 500,000 or 600,000 items of inventory.

Mr. Pike got up on this floor and showed you a screw that somebody brought up, or some kind of a gadget that we paid $2 or $3 for, when you could get it for 50 cents off the shelf.

We are watching this all the time. We work with the General Accounting Office. I agree with the gentleman, we work on such a vast, vast problem here. The big-

gest corporation in America is 50 or 100 times smaller than the Department of Defense and these things about which you complain do happen and I agree with you and we try to stop them. Every time we see a rat hole, we try to stop it up. That is all I can say to you.

Mr. KYL. I just want to say to the gentleman that I think I represent quite a group of Members of this body.

Mr. RIVERS. I agree with you.

Mr. KYL. We are not opposed to the spending of every single cent that is necessary for national defense. But, we are absolutely without further patience. This waste does exist.

Mr. RIVERS. I would suggest to the gentleman to read some of the reports made to the gentleman from Maryland (Mr. FRIEDEL), from the investigating committee.

Mr. KYL. I read those every week.

Mr. RIVERS. We save hundreds and hundreds of millions of dollars. We get the GAO after those people and we try to stop all this waste. Inevitably there is some in preparation for war. We have tried to cut it down and do the same things the gentleman has suggested. I am sure the distinguished chairman of the Committee on Appropriations has done the same thing. Wherever we see these things we try to stop them.

Mr. GUBSER. Mr. Chairman, will the gentleman yield?

Mr. KYL. I yield to the gentleman from California.

Mr. GUBSER. I commend the gentleman for bringing up this point of unnecessary duplication, and I do so to preface an argument which is going to take place on an amendment to be offered by the gentleman from Illinois (Mr. YATES) in just a few moments whereby we will be procuring two missiles, the Tow and the Shillelagh, to do exactly the same job. But this is going to cost a lot more than a prayer book. This will cost several hundred millions of dollars out of the taxpayer's pocket.

Mr. RHODES. Mr. Chairman, will the gentleman yield?

Mr. KYL. I yield to the gentleman from Arizona.

Mr. RHODES. I wish to refer to another duplication which I have tried to get the services to eliminate. The lawyers of the three services enforce the same law, the same military code of justice, and yet there are three separate schools for the judge advocates of the three services. It seems to me that it makes a lot of sense for these three schools to be consolidated, and if there is any specialized training needed for the services, that could be arranged later.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

The Clerk will read.

The Clerk read as follows:

TITLE IV

PROCUREMENT

PROCUREMENT OF EQUIPMENT AND MISSILES, ARMY

For expenses necessary for the procurement, manufacture, and modification of missiles, armament, ammunition, equipment, vehicles, vessels, and aircraft for the Army and the Reserve Officers' Training Corps; purchase of not to exceed five thousand two hundred and seventy-six passenger motor vehicles (including one medium sedan at not to exceed $3,000) for replacement only; expenses which in the discretion of the Secretary of the Army are necessary in providing facilities for production of equipment and supplies for national defense purposes, including construction, and the furnishing of Government-owned facilities and equipment at privately owned plants; and ammunition for military salutes at institutions to which issue of weapons for salutes is authorized; $4,281,400,000, and in addition, $50,000,000 shall be derived by transfer from the Defense stock fund, to remain available for obligation until June 30, 1972.

AMENDMENT OFFERED BY MR. YATES

Mr. YATES. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. YATES: on page 15, in line 6, strike out "$4,281,400,000" and insert in lieu thereof "$4,181,400,000".

The CHAIRMAN. The gentleman from Illinois is recognized.

Mr. YATES. Mr. Chairman, this amendment seeks to sustain the position taken by the Committee on Armed Services of the House in respect to antitank missiles. There is $100 million in this bill for the so-called Tow missile. There is $50.5 million for the so-called Shillelagh missile. Both of these are antitank weapons. The two missiles perform missions so similar that to procure them both would be redundant and wasteful.

I agree completely with what was said a few moments ago by the gentleman from California (Mr. GUBSER) when he stated that this would be an expensive duplication, unneeded in the interest of our national security. The $100 million requested for the Tow missile ought to be denied. The Army's backup for this fiscal year 1970 budget request indicated that the performance of Tow and Shillelagh are very similar, but the unit cost of Tow was given as $6,300 compared to $2,970 for Shillelagh, and a projection through 1974 indicates that there will be an overall Tow cost of $1.2 billion, and a projection through 1974 indicates that an overall Tow cost of $1.2 billion will have to be made compared to only $686 million for Shillelagh.

The performance statistics of both weapons are identical, except that Shillelagh is 10 pounds heavier, with 5 of those pounds accounted for by a larger and more lethal warhead.

This is the logical time, Mr. Chairman, to bring the redundant development of these two missiles to a halt, since the $100 million in this bill for the Tow missile would pay for the first major production procurement. The Shillelagh is already in production and is a proven commodity.

The House version of the 1970 military authorization bill denied the $100 million request for the Tow missile. The Senate restored that amount in its version of the military authorization bill. In conference, after 3 weeks of negotiating and bargaining, the fund for the Tow missile was reinstated. I hope, Mr. Chairman, that the production of the Tow missile which is authorized in this bill, and which my amendment seeks to knock out—I hope my amendment is sustained.

Mr. MINSHALL. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from Ohio.

Mr. MINSHALL. Mr. Chairman, I thank my good friend, the gentleman from Illinois, for yielding. The gentleman and I have locked horns on the SST's and everything else in the last few months. I would like to ask the gentleman, who is such an authority on these weapons systems, what does Tow stand for?

Mr. YATES. I am sorry, I did not hear the gentleman.

Mr. MINSHALL. It has a significance.

Mr. YATES. Is the gentleman talking about an acronym?

Mr. MINSHALL. Yes. It is tube launched open-sighted wire-guided missile system.

I want to point this out to the gentleman, that it is not competing with the Shillelagh, it is complementing it. This is designed primarily for the infantry units.

Tow is a wire-guided missile for the Infantry and Shillelagh is designed to be fired from a tank. It cannot be removed for assault use by ground forces. This Tow weapons system has been proven and already successfully test-fired. It weighs only 10 pounds lighter, but it is available now for the ground troops, which is what it was designed for.

Mr. YATES. The information the gentleman has just given to the House is directly contrary to the information given to me by the very knowledgeable and distinguished member of the Armed Services Committee, the gentleman from New York (Mr. STRATTON), who is chairman of the subcommittee of the House Committee on Armed Services. His subcommittee investigated the question of the Sheridan tank and the missiles which are to be used in connection with its operation.

The gentleman from New York comes to an entirely different conclusion than does the gentleman from Ohio. I suggest the gentleman from Ohio may want to listen to the arguments of the gentleman from New York in connection with my amendment.

Mr. STRATTON. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, we have heard a number of interesting comments here earlier this afternoon on the subject of Defense overruns and how to avoid excessive spending in the Defense Department. Obviously the first way to prevent excessive overruns is to prevent unnecessary spending before it gets started.

Mr. Chairman, the Tow missile is a classic example, as I indicated a moment ago, of an unnecessary expenditure. The gentleman from Ohio (Mr. MINSHALL) mentioned a moment ago that the Tow missile was designed to be an infantry weapon, and was a wire-guided missile, whereas the Shillelagh was designed to be fired from a tank and was an infra-red-controlled missile.

But the fact is despite their differences in configuration and in spite of their initial programing and planning, the two missiles are almost identical in their per-

formance. The Army considered 7 years ago the question whether they ought to be going down two separate roads in the development of two separate antitank missiles, one of them to be fired by infantry troops and the other by a tank. A study concluded then that the most expensive way would be for them to continue down these two separate roads instead of adapting one missile for both purposes, yet the Army ignored their own study.

The House itself, on the recommendation of the Committee on Armed Services, contained in the report on our defense authorization bill, on page 44, refers to the idea of spending another billion dollars to develop Tow as an additional antitank missile to be used by infantry troops, when there already is an antitank missile to be fired from the Sheridan vehicle, as an "unacceptable redundancy."

Those are not my words. Those are the words of the committee.

The House overwhelmingly endorsed the committee recommendation, as it always does, under the leadership of the gentleman from South Carolina (Mr. RIVERS). When we went to conference we found we had a good deal of pressure from the Senators. They did not seem to understand the missile situation as clearly as we did. That sometimes is a problem in dealing with the other body. So we had to yield and approve $100 million for Tow, a cut of $42 million.

But even the conference report points out, on page 16, that $20 million was to be allocated from Army R. & D. funds for the further development of the Shillelagh in its ground mode, and we also proposed that there be a shootoff between the Shillelagh and the Tow in the helicopter mode.

None of these things has been done yet. It does seem to me that it would be wise for us not to obligate $100 million for full procurement of the Tow until after this additional research and development recommended even by the conferees is carried out and we have a chance to assess the results.

If we really want to save money, we ought to delete this $100 million this year, carry out the shootoff, and then come back next year to see whether we really want to build two separate missiles to do the same thing, or whether we can get the same job done more cheaply with a single missile.

Mr. MINSHALL. Mr. Chairman, will the gentleman yield?

Mr. STRATTON. I am happy to yield to the gentleman from Ohio.

Mr. MINSHALL. I certainly respect the gentleman's good judgment on many of these matters, but on this one we disagree. We are providing funds in this budget so that they can have a shootoff to decide what they want to do. They impressed upon us the fact that if we take these funds away now we will be depriving the ground infantryman of an antitank weapon another kind of which cannot be produced for at least 4 years.

Mr. STRATTON. In terms of depriving the infantryman of a weapon, I would not worry too much about that, because we have 500 Sheridan launchers in storage around the country today. Those could be put in Europe tomorrow, or shortly thereafter, to fire the Shillelagh antitank missile, and protect our troops. They would be available much more rapidly, to give the infantryman the same protection that the Tow would be able to give only a year or so later.

Mr. MINSHALL. The problem is this: the Shillelagh cannot be used by the ground infantryman, but can only be used from the Sheridan tank or another tank.

Mr. STRATTON. The point the gentleman does not consider is that the Tow may be called the infantry weapon, but one can only manhandle it for about 200 yards. It has to be carried on a jeep. The Sheridan can get around much more easily than can a jeep, so it could get virtually everywhere that a man could personally haul a Tow with the help of a jeep.

Mr. MAHON. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, in this bill there are for the so-called Tow missile, about $100 million for procurement, and there are $50 million for procurement of the Shillelagh missile.

The Shillelagh missile is an antitank missile. The Tow is also an antitank missile but it is a more flexible missile. It can be used by the infantry and can be used on helicopters.

The Shillelagh missile depends upon an infrared homing device, and the Tow missile is a wire-guided device.

The infantryman cannot use the Shillelagh missile. It is now adopted to tank vehicles.

Anything we can do to make the plight and the security of the infantryman better, it seems to me, if it is at all practical, should be done. That is the object of the Tow missile, to make this weapon available to the infantryman in the shortest time possible.

The Tow is a lighter missile. It weighs 10 pounds less than the Shillelagh, which weighs about 60 pounds. The Tow can also be used from a helicopter; it might be possible to fire Tow from a tank, so far as that is concerned, but this would cost many millions of dollars in research and development funds and would take a considerable period of time to accommodate Tow for use on a tank.

There was a great deal of discussion about this matter and after considerable hearings on both antitank missile systems and a conference between the House and the Senate on the authorization bill, the conferees decided—and Mr. STRATTON was a member of that conference—that they would go forward with both missiles. I do not believe the Committee on Appropriations could now overturn what the Committees on Armed Services of the House and Senate in conference agreed upon, and what both houses of Congress apparently agreed upon, and enacted into law. The Senate would probably insist on its earlier position.

If you want to try to adapt the Shillelagh missile for use by the infantryman, it will take 2 or 3 years to do this job. That is another one of the complicated and costly problems involved.

Mr. Chairman, General Westmoreland came to my office one day. He said, "I am going to Europe." I said, "General, is there anything you want to discuss with me before you go?" This was because we were in the midst of the hearings on the defense budget at the time.

He said, "Yes. I want to put in a good word for the Tow missile. Our infantrymen need it and the Army needs it and we hope that the Congress will provide us with funds for the Tow missile."

Well, Mr. Chairman, I do not claim to be an expert on these matters. We have all studied this problem—Mr. STRATTON, Mr. YATES, and many others. The problem has been resolved in the authorization bill. The Committee on Appropriations has gone along and provided the funds for the buy out of the Shillelagh missile; we are at the end of the Shillelagh procurement program. We will have the Tow missile which will be a great advantage to our infantrymen and to our people in helicopter gunships. I cannot for a moment entertain the thought of eliminating the Tow from this bill. There is some duplication between these two in that they are both antitank missiles. It is unfortunate that the Shillelagh was not configured several years ago so that it could do all three jobs, but the Tow missile is regarded as being more flexible at this point in time, and more useful in the hands of the infantryman.

So, Mr. Chairman, I urge defeat of the amendment.

Mr. STRATTON. Mr. Chairman, will the gentleman yield to me?

Mr. MAHON. I yield to the gentleman.

Mr. STRATTON. The gentleman from Texas said that the Tow missile is more flexible. Actually the Tow missile cannot be fired from a tank. It cannot be used on the Sheridan. But the Shillelagh missile can be fired not only from the Sheridan tank, but it can be at the present time fired from a helicopter just as readily as the Tow missile and it can also be fired in the infantry mode. It was fired in the helicopter mode in 1962. So the Shillelagh is actually the more flexible. The only delay is for the development of some compact control machinery, which will take a little extra time.

Mr. MAHON. They say it will take 2 or 3 years.

Mr. STRATTON. I think 18 months to 2 years is a better estimate. But in terms of flexibility, the Shillelagh is actually much more flexible than the Tow missile.

Mr. MAHON. The opponents in the House of this missile have cited their views, but I think the House will do the right thing in supporting the urgent request of the Secretary of Defense, the Secretary of the Army, General Westmoreland, the Chief of Staff of the Army, and others who have supported the Tow missile as an important weapon in the hands of Army troops. Mr. Chairman, I trust that the amendment will be defeated.

Mr. GUBSER. Mr. Chairman, I rise in support of the amendment.

(By unanimous consent, Mr. GUBSER was allowed to proceed for 5 additional minutes.)

Mr. GUBSER. Mr. Chairman, I rise

in support of the amendment offered by the gentleman from Illinois (Mr. YATES).

I rise as the ranking Republican on the Stratton subcommittee, which I respectfully submit probed more deeply into the Shillelagh system than any committee of the Congress at either end of this Capitol. Based upon the information which we developed during those exhaustive and extensive hearings, I must in good conscience support the Yates amendment.

Let me invite you to come with me for a moment to view the strange world of Howard Hughes, the human enigma of the 20th century.

Howard Hughes is the man who built the Spruce Goose that flew once while he was at the controls. It is still in a large warehouse in Southern California, maintained at a cost of thousands of dollars a month, as the most expensive souvenir that a man could have.

It was Howard Hughes and his company that made a deal with the Army for a light observation helicopter, a deal which our Subcommittee on Investigations probed very deeply.

Through a hanky-panky contract with the Army, Hughes agreed to furnish light observation helicopters at less than $20,000 per airframe. The follow-on contract is in the neighborhood of $50,000 for the very same airframe.

Now, it is a great aircraft. There is nothing wrong with it. But, if that deal is not a pure and simple case of a company buying in on a contract, I have never seen one.

This is typical of the strange happenings in the world of Howard Hughes, the man whom I understand from press reports has apparently bought the city of Las Vegas, Nev. Today he is asking us to buy the Tow missile from his company at a needless, duplicative expense to the taxpayers of this country which will run into the hundreds of millions of dollars.

I predict that within 3 years this purchase of Tow will occupy headlines as an example of a multimillion-dollar waste of taxpayers' money.

Mr. Chairman, these two missiles do exactly the same job. Yes, one, Shillelagh, is 10 pounds heavier than the other, but that 10 pounds is due to the bang it carries. It is more lethal. It is more powerful. They are practically the same in mission and capability.

The Shillelagh has been service-fired from the ground mode. We have motion pictures to prove that it has been so fired. The Tow was originally developed to go into the Cheyenne helicopter so it could have the advantage of shooting downward without the danger of guidance wires getting tangled up in brush and in trees as they certainly will if the infantryman tries to use it. However, the Cheyenne helicopter has been canceled. Now they are trying to adapt the Tow system to the Cobra helicopter. It will take some more work and expense in order to do that.

Mr. Chairman, some try to justify Tow on the ground that this is an infantryman's weapon. Did you know that the launching tube that the infantryman will have to carry into combat is going to cost $96,000 per copy? Is it not something he can carry on his back and pull out of a knapsack. It will possibly take two or three men and probably a jeep to carry it.

Mr. Chairman, the Shillelagh missile is what we are now using in the Sheridan vehicle. The Tow cannot work in the Sheridan system but the Shillelagh can work far in the infantry ground mode.

Some will try to say that we are having trouble with the Shillelagh. There is trouble but not with the missile. The firing tube in the Sheridan vehicle is also supposed to fire a conventional artillery round. The Army has developed a combustible cartridge case which has given trouble. Please note that this has nothing to do with the Shillelagh missile.

Now, all that needs to be done is to adapt the Shillelagh system to the use of the infantryman and to the ground mode. We must miniaturize the launching apparatus, something which is well within the state of the electronics art today and which can be done very easily at a cost of less than $30 million. Then we can have one missile which can be fired from the Sheridan system, from the Cobra helicopter, and by the infantryman on the ground.

Mr. Chairman, we can save the expense of introducing two different kinds of missiles into the inventory, and the cost of maintaining hundreds of thousands of parts and supplies, the maintenance, the training and all the costs that go with having two weapons systems to do the same job.

It has been mentioned that the Shillelagh can be produced for about $2,000. This is because it is currently in production and we are far enough along on the learning curve so that costs are down. However, if you add this system to a second system the new missiles would cost more than $6,000 each.

The argument is made here today that the Tow is an infantry weapon and that the Shillelagh is not. We have seen launch pictures of the Shillelagh missile being fired in the ground mode. We are assured that the system is adequate, that the state of the art for its adaptation is available.

Now, they say there will be a gap in our defense in Europe if we do not give the infantryman this weapon and give it to him right now.

No one has mentioned the French wire-guided missile. I believe it is called the SS–11. It is currently in the inventory with the German troops of our NATO shield.

I was in northern Germany during the first part of June, and I saw a brigade-sized firing by the German Army. Fifteen of these French wire-guided missiles were fired at a range of 3,000 meters, to equal what the Tow can do. Of the 15 missiles fired there were 14 direct hits and one misfire.

Now, do not tell me that we do not have a defense of this kind in our NATO inventory today, because we do. We have enough protection so we can buy the time to miniaturize the launching apparatus and bring the Shillelagh along so we can have one missile in inventory capable of doing everything required.

Let us not forget, as I conclude, that the Tow cannot replace the Shillelagh, but the Shillelagh can replace the Tow. There is no point in a $200 million or $300 million duplication—and that is exactly what this is going to turn into. I suggest that we should not allow ourselves to remain in the strange world of Howard Hughes. I do not believe that it is up to the taxpayers of the United States of America to subsidize a duplicative, foolish, and needless effort simply to do the bidding of the ex officio mayor of Las Vegas.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. GUBSER. I yield to the gentleman from Illinois.

Mr. YATES. Then in this amendment we have a very real opportunity to save the taxpayers hundreds of millions of dollars without in any way curtailing our national defense; is that correct?

Mr. GUBSER. It is my considered opinion that it does. I do not profess to be an expert, but that opinion is based upon weeks and months of hearings as a member of the Stratton subcommittee which went into this in depth. I do not believe our defenses would be endangered, and I think we would eventually be saving countless millions of dollars. Right today, we would have $100 million.

Mr. REID of New York. Mr. Chairman, will the gentleman yield?

Mr. GUBSER. I yield to the gentleman from New York.

Mr. REID of New York. Mr. Chairman, I commend the gentleman on the statement he has made. I might mention, if I am not mistaken, that the SS–11, or a prototype thereof, was in the Israeli armed forces in 1960. So the point the gentleman is making I think is entirely correct.

Mr. GUBSER. I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. YATES).

The question was taken; and on a division (demanded by Mr. MAHON), there were—ayes 44, noes 40.

Mr. MAHON. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. YATES and Mr. MAHON.

The Committee again divided, and the tellers reported that there were ayes 43, noes 59.

So the amendment was rejected.

Mr. BINGHAM. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, there are many things in this bill which I cannot support, but I do want at this point to pay my respects and compliments to the committee for the many reductions they have made.

I particularly want to call attention to the fact that the procurement money for the production models of the F–14 aircraft was removed by the committee.

During consideration of the authorization bill, I offered an amendment to this effect and it was, if I may say so, rather brusquely treated by the spokesmen for the Armed Services Committee. But the Committee on Appropriations in its wisdom has now recommended elimination of those production models.

They have added some R. & D. funds for the F–14, so the net reduction is not in

the total amount of $275 million. However, the committee's action means we will not be going forward with the production of this aircraft until we are sure that it is an effective and practical aircraft. I commend the committee on that action.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

TITLE VI

GENERAL PROVISIONS

AMENDMENT OFFERED BY MR. REUSS

Mr. REUSS. Mr. Chairman, I offer an amendment. The Clerk read as follows:

Amendment offered by Mr. REUSS: On page 23, line 11, insert a new section 601, renumber all subsequent sections in title:

"SEC. 601. No part of any appropriation contained in this Act shall be used for publicity or propaganda purposes not authorized by the Congress."

The CHAIRMAN. The gentleman from Wisconsin is recognized.

Mr. REUSS. Mr. Chairman, the amendment I offer is a very simple one. It uses language such as is contained in many other appropriation bills. It uses language almost identical with that contained in the act with respect to the Arms Control and Disarmament Agency, where propaganda expenditures are prohibited.

Surely if we prohibit propaganda about arms control and disarmament, we ought to forbid propaganda about arms production, arms deployment, and arms use.

The fact is that expenditures for propaganda and related purposes in the last 10 years have been multiplied almost tenfold, from $2.7 million back in 1959 to $27 million today, including shepherding and leading businessmen on tours of the country, running cruises to Hawaii on Navy ships for civilian VIP's, and so on.

The Department of Defense should get out of the propaganda business and stick to factual information, just as the other agencies are asked to do. My amendment would encourage them to remove the propaganda and stick to the information, and I hope, because it is in language identical to that contained in the other appropriation bills, that there will be no objection to it.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield to the distinguished chairman.

Mr. MAHON. There have been many sharp reductions in civilian personnel and a considerable reduction in military personnel. One of the reductions in both civilian and military personnel has to do with the public affairs and public relations activities of the services. I see nothing in the gentleman's amendment which would prohibit publicity operations which are authorized by law, and I have no objection to the gentleman's amendment.

Mr. REUSS. I thank the gentleman. The committee has made some excellent provisions with respect to restricting what the Department does about information other than propaganda.

The amendment will mean that those remaining officials will be able to carry on their task.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin (Mr. REUSS).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

Mr. MAHON. Mr. Chairman, I ask unanimous consent that the remainder of the bill be considered as read and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

AMENDMENT OFFERED BY MR. BINGHAM

Mr. BINGHAM. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BINGHAM: On page 43, after line 23, add a new section as follows:

"SEC. 642. Funds provided in this Act for public information and public relations activities, including personnel costs, shall not exceed $10,000,000."

Mr. BINGHAM. Mr. Chairman, my amendment would limit the amount to be spent under this bill for public information and public relations activities to a total of $10 million. Until 10 years ago there was such a limitation in the defense appropriation bills. At that time it was provided that there should be no more than $2,755,000 spent for this purpose. Since that time, the total of the defense appropriations have doubled, while the amount for public relations and public information has gone by 10 times, to more than $27 million.

If the Members would like a breakdown of the funds as they have been supplied by the DOD and the services for last year—not for the coming year—they are as follows:

For Department of Defense itself, $3.7 million; for the Army, $4.9 million; for the Air Force, $9.4 million; for the Navy, $9.9 million; for a total of $27,922,000 for public relations and public affairs activities.

It seems to me that this amount has gotten entirely out of hand. I am not talking exclusively by any means about the systematic support of controversial programs which has been carried on under cover of these activities. I am content for now to talk on the assumption that these are legitimate public information and public relations activities. But how in the world can the Pentagon justify increasing its budget for this purpose by 10 times, by 1,000 percent, when the total amount for defense appropriations has increased by only 100 percent in that period?

I know the committee has made an effort in this regard. As far as I can make out from the committee report, reductions in this area in the various segments of the bill add up to about $5 million. But I submit that is not enough. I think it is legitimate to propose that a ceiling of $10 million be set for these programs, returning to the custom of 10 years ago.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. BINGHAM. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Chairman, I take it it is not the gentleman's intention in any way to affect the liaison offices that operate in conjunction with Congress?

Mr. BINGHAM. That is not my intention.

Mr. MAHON. Mr. Chairman, I rise in opposition to the amendment. It places a ban under certain circumstances on funds spent on public information.

The people of this country, in our free society, are entitled to information with regard to the Defense Department.

There should not be any abuse, but I would not want the Congress to appear to go on record as trying to suppress the distribution of defense information to the American people.

I will agree that much of the information with regard to the war, for example, has been adverse, but nevertheless the people are entitled to the truth.

What is this material which we get through the legislative liaison offices of the Services for our constituents in regard to programs and in regard to casualties and what not? What is that other than public information?

I do not believe we ought to go on record as wanting to suppress information that might be available to the people through the Members of Congress and otherwise. I fear that this amendment would not achieve the purpose which the author has in mind.

We have already cut funds for public relations and public information activities by about $5 million. We have reduced funds for personel otherwise. We have made some sharp cuts in the general overall field of administration. But we certainly have not undertaken to restrict the availability of information to the public, or to the Congress, from the Department of Defense.

This amendment limits specifically the funds provided in this act for such information and public relations activities and so forth. I would think this would be most unfortunate.

Mr. BINGHAM. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from New York.

Mr. BINGHAM. I thank the distinguished chairman for yielding.

I would ask if it is not true that 10 years ago there was a limit precisely like what I propose on public relations and public information for the Department of Defense, and that the limit at that time was $1,755,000.

Mr. MAHON. The activities in the organization of the Department of Defense in this field have been restructured in recent years, and the situation has been changed.

At one time it was felt—and I was one of those who felt that way—that the Pentagon had officers going about the House Office Buildings and the Senate propagandizing the Congress.

The CHAIRMAN. The time of the gentleman from Texas has expired.

(By unanimous consent, Mr. MAHON was allowed to proceed for 2 additional minutes.)

Mr. MAHON. I believe the liaison people now are doing a good job in providing information to the Congress, and a reasonably good job is being done in providing information to the general public. The need for adequate information in

regard to the farflung operations of the Department of Defense is very great.

The amendment which we agreed to just a few minutes ago provided that no part of any appropriation in this bill shall be used for publicity or propaganda purposes not authorized by Congress. I would think we have met adequately the situation about which the gentleman is concerned. I believe it would be dangerous to proceed further.

Mr. MINSHALL. Mr. Chairman, I rise in opposition to this amendment. In so doing I concur in everything the gentleman from Texas (Mr. MAHON) has said.

I should also like to point out that the commitee on its own cut back the funds asked for this particular part of the bill from $30,669,000 down to the 1965 level, of about $20 million. The amendment offered here today would cut that in half and seriously impair the very rightful duties of this particular information office.

I should like to point out, also, to the gentleman that on page 576, of part VI of our hearings, the Secretary of Defense, Mr. Laird, sent a memorandum letter to all of the Secretaries of the services dated March 4, 1969, which specifically says that it is the intent of the Department that public information funds will not be used for any kind of propaganda.

Mr. BINGHAM. Mr. Chairman, will the gentleman yield?

Mr. MINSHALL. I am glad to yield to the gentleman from New York.

Mr. BINGHAM. I thank the gentleman for yielding.

As I understood what he said, he said there had been a cut of some $10 million in these activties. However, in going through the report, as I did, very carefully, I added up every one of the cuts made that were referred to here in the various points in respect to public information and public relations activities. Those cuts only added up about $5 million as I read them.

Mr. MINSHALL. The gentleman is absolutely correct in his statement. The cuts actually amount to $4,955,000, but because of reduction in civilian personnel and headquarters and administration cost an additional $5 million cut could be obtained in the information operation.

Mr. BINGHAM. I thank the gentleman for his comment.

Mr. SIKES. Mr. Chairman, will the gentleman yield further?

Mr. MINSHALL. Yes. I am glad to yield to the gentleman from Florida.

Mr. SIKES. Is it not important to call to the attention of the House the fact that a great part of this increase is occasioned by the fact that we are now in a war and the people of the country are concerned about that war. Is it not a fact that it is taking several times as much money now to carry on this public information activity as was required, let us say, 10 years ago when the figure was much, much smaller than it is now? Is it not also true that this is a nationwide activity, a worldwide activity, supplying information to the people about what the Department of Defense and the military installations are doing?

Mr. MINSHALL. The gentleman is absolutely correct.

Mr. Chairman, I yield back the balance of my time.

Mr. SCHEUER. Mr. Chairman, I rise to strike the requisite number of words.

Mr. Chairman, I rise in support of the Bingham amendment.

Mr. Chairman, I might say that I would not want to do anything to diminish the capability of the Department of Defense from serving Congressmen in every way and providing their constituents with information. But I believe that we have too many layers of personnel placed between these aggressive newspapermen and the sources of the news. I have the highest confidence that the American press, the most enterprising press in the world, is quite capable of ferreting out news if they are given unobstructed access to the sources. Events of the last several weeks have proven this far more dramatically than any words of mine. But it seems to me that we have overstructured the public relations and news media capabilities of the Department of Defense so that they are unnecessarily retarding and restricting the enterprising newspaperman. I think it would be highly salutary for more effective news and more effective scrutiny and analysis of our effort in Vietnam for these excessive restrictions to be removed.

Mr. LONG of Maryland. Mr. Chairman, will the gentleman yield?

Mr. SCHEUER. I will be happy to yield to my friend from Maryland.

Mr. LONG of Maryland. The point has been made here by the gentleman from Florida that a large part of this inflation and cost with reference to public relations on the part of the military is due to the fact that we are all calling upon them for certain information and, of course, we are all conscious of that fact as Members of Congress and recognize that this places a great burden upon them. I direct a lot of mail to the liaison officers and to the military branches themselves.

However, the question arises in my mind that this is not the first time we have been at war. We can refer to the Korean war as well as World War II.

I would like to ask the gentleman from Florida or the gentleman from New York whether they have made any comparisons as to the cost of public relations during the Korean war and World War II as compared to the present in order to find out whether the expenditures are inflated with respect to other similar comparisons to the war we are engaged in now?

Mr. BINGHAM. Mr. Chairman, will the gentleman yield?

Mr. SCHEUER. I yield to the gentleman from New York.

Mr. BINGHAM. In relation to the remarks of the gentleman from Maryland, I am sorry that I cannot answer the gentleman except to say that 10 years ago, as I indicated, the figure was $2.7 million.

With reference to the remark that a lot of these funds are needed to service Members of Congress, I would point out that the Air Force alone in fiscal 1969 spent $9.4 million. That included a staff of 944 people in the public relations program in the Air Force alone.

Mr. SCHEUER. And, that adds up to just about 2 for every Member of the House and the other body.

Mr. Chairman, let me just reiterate, it seems to me there is far too much obfuscation of the real news. I think we ought to let the newspaper professionals get to the sources of the news. This will eliminate much of the expense for public relations money.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. BINGHAM).

The question was taken; and on a division (demanded by Mr. BINGHAM) there were—ayes 31, noes 84.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. OTTINGER

Mr. OTTINGER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. OTTINGER: On page 43, between lines 23 and 24, insert the following:

"SEC. 642. Notwithstanding any other provision of this Act, the aggregate amount which may be appropriated under this Act may not exceed $62,964,043,200."

Mr. OTTINGER. Mr. Chairman, the bill before us today, appropriating nearly $70 billion for the Department of Defense, is one of the most important measures to come before the House this year. Its importance cannot be measured only in terms of the military programs it includes; it must be weighed in terms of its representation of the expenses of continuing the Vietnam war and its tremendous impact on our economy, on the Federal budget, on the international arms race, and on our entire structure of national priorities.

Before commenting on this legislation and the issues it raises, I want to commend the Committee on Appropriations for the very exhaustive consideration and study it has devoted to the Defense budget for fiscal 1970. The record developed in seven volumes and 5,947 pages of testimony and supporting data certainly reflect the growing sentiment in Congress for greater knowledge and control of military spending. The committee also should be commended for the $5.3 billion it has trimmed from the budget request and for its expressions of concern over defense procurement practices.

Unfortunately, the committee did not go far enough, either in reducing the defense appropriation to a reasonable level or in bringing the entire process of defense spending under effective congressional control.

Inclusion of $359.5 million for procurement, operations, and maintenance and personnel related to deployment of the Safeguard antiballistic-missile system is sufficient cause, in my view, for rejecting the entire bill. I am convinced that the ABM will merely touch off an offensive-defensive cycle of arms escalation, resulting in vastly greater destructive power on all sides, without any increase in security. Furthermore, to commit $359.5 million to ABM deployment before research and development answers the many technical questions which have been raised vastly increases the risk of

huge cost overruns. We have just heard the Secretary of Defense admit that cost overruns in major weapons systems have exceeded $16 billion in the past few years. The lesson should be clear, and it should be applied to the ABM.

But, Mr. Chairman, there are global considerations in the bill before us today. Recent studies have concluded that we are involved in a runaway arms race that will see arms outlays in the early years of the next century exceed the entire present world production of all goods and services.

At least partially because of the impetus of U.S. military spending, world military spending over the past 20 years rose at an average rate of 5.9 percent a year, with a frightening 50 percent rise to 8.9 percent in the last 3 years.

A study team from the Stockholm International Peace Research Institute, of which Gunnar Myrdal is chairman, reported recently that the world spent $159.3 billion for military purposes last year, of which $79.3 billion was spent by the United States, $39.8 billion by the Soviet Union, and approximately $7 billion by Communist China.

The most immediate hope for a break in this perilous course lies with the current SALT talks in Helsinki. An agreement on limitation of strategic weapons could be the breakthrough that sees our resources turned back to programs aimed at improving the quality of life for all people.

But we need not wait for the conclusion of the SALT talks to reassert congressional control over military spending, and at least start a basic reordering and restructuring of our national priorities. We can start with this bill today. We can start by recognizing that while we must retain a strong national defense posture to protect against outside threats, we must also deal effectively with threats from within our society—the poverty, blight, disease and malnutrition which scars our urban areas, the despoliation of our lakes and rivers, the poisoning of the very air we breathe, the inadequacy of current efforts to keep pace with the need for expanding employment and education opportunities.

Consider the nearly $70 billion appropriated in this bill in relation to the less than $500 million appropriated to feed undernourished American children through food stamps, school lunches, and the special milk program, combined. Consider it in relation to the $2 billion provided for all federally-assisted housing programs, including model cities.

It is obvious that we cannot make or meet national requirements in education, transportation, environmental protection or any other domestic area while so great a proportion of our national incomes are spent on the defense industry and on our far-flung network of foreign military bases.

A tragic example of how the mad momentum of military spending distorts national priorities recently came to light. On the spending side was the Defense Department's routine announcement that the Army was awarding a $5.7 million contract to the Martin Marietta Corp. for "Pershing missile component and power station research and development." What really was involved were relatively minor improvements in an 11-year-old missile system.

On the other side of the story was the decision of the Nixon administration to cut out five health programs designed to find ways of putting the findings of research scientists to work in practice. The projects to be cut out at the end of this year are the pap smear test program to detect uterine cancer in women; the Framingham, Mass., heart study which, after 20 years, was getting to the point where it might tell why some people suffer heart attacks and others do not; the neurological and sensory disease program which includes a widespread program of testing for glaucoma, a disease that can cause blindness if it is not detected in time; and programs dealing with chronic resipratory diseases, diabetes and arthritis.

This distortion of priorities is bad enough on its own merits.

What is worse is the incompetence, mismanagement, and outright fraud which has so often marked the Pentagon's $44 billion procurement program. The Joint Economic Committee, Admiral Rickover, and others have uncovered myriad examples of incredibly sloppy procurement practices, ranging from billion-dollar cost overruns on the C–5A cargo plane which were deliberately hidden from Congress to the $67.50 the Navy paid for each of 30 insulated couplings which the manufacturer's catalog listed at $2.75.

It is clear that despite the Appropriations Committee's concern over military procurement policies, no fundamental reforms are being undertaken which will prevent future abuses. Military spending is still not considered—either by Congress or the White House—in the overall context of national needs and problems.

I intend to offer again on this bill, as I did on the military authorization bill, an amendment to reduce the total military appropriation by 10 percent, or approximately $7 billion. I am supporting efforts to eliminate the $359.5 million for ABM deployment. And, as protest against the continued dominance of military spending and the unwarranted influence of the defense industry, I intend to vote against the bill in its entirety.

Time is running out on us to correct our distorted priorities. The hungry and undernourished people in our cities cannot be expected to wait for their demise. Winter imperils thousands who are condemned to live in unsafe, unsanitary, and unhealthy housing. To produce the funds needed for these critical needs, the defense budget must be reduced far more sharply than it has been in this bill.

Mr. SIKES. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, the Subcommittee on Defense of the Committee on Appropriations has done the most meaningful job in making reductions in expenditures that has been accomplished since the Korean war. The reductions are $7 billion below the Johnson budget, and $5.3 billion below the Nixon budget.

The gentleman from New York (Mr. OTTINGER) who has offered the amendment, now proposes another $7 billion reduction. He is proposing to cut $1.5 billion a minute for the time that he spent on the floor in explaining his amendment.

The best the committee could do in a year of deliberation was to cut an equal amount—$7 billion below the Johnson budget with the benefit of the staff and the combined efforts of all of the members of the subcommittee. We feel that we have done a very thorough job and we hope with some misgivings that we have made cuts which are acceptable, and which do not cripple our defenses.

Now, I must say that to follow the recommendations of the gentleman from New York would be to gut the defense program. I do not believe that is what the House wants to do.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. OTTINGER).

The amendment was rejected.

Mr. RYAN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I take this time to call the attention of the House to a matter of grave concern regarding the activities of the Department of Defense in using its power to undermine the nationwide boycott of California table grapes, which the United Farm Workers have been carrying on.

Mr. Chairman, since 1965 there has been a nationwide boycott of California table grapes in support of the attempts of the United Farm Workers to organize.

In the past most attempts to organize farm labor have failed. But the strike by the United Farm Workers has been successful in its attempts to achieve better wages and working conditions for farmworkers. In the 4 years of the strike, the United Farm Workers have signed contracts with 10 grape growers in California, and its membership at peak harvest time is as high as 7,500.

However, while Americans across the Nation have endorsed the grape boycott and its goal—a decent working wage, sanitary working and living conditions, prevention of child labor—the Department of Defense, an agency of the U.S. Government, has continued to purchase grapes from the farms of boycotted growers. Moreover, Defense Department purchase of grapes since the beginning of the 1965 boycott has greatly increased.

In 1965, the Defense Department was the 17th largest purchaser of California table grapes in the Nation; in 1968, it was the third largest purchaser. The Defense Department claims that it has remained neutral in the strike, buying only 1 percent of the grapes sold in fiscal year 1968.

This figure is misleading, however, because it represents Defense Department purchases against all grapes sold—table grapes, grapes for wine, and grapes for raisins. In fact, the Department of Defense bought over 2 percent of the U.S. production of table grapes in both fiscal years 1968 and 1969.

Regardless of whether the Defense Department of purchase of grapes is equal to 1 percent or 2 percent of total grape purchases, its action is affecting the price. A change in only 1 percent of the demand for table grapes can affect the price of the grapes by 3 percent or 4 percent. Senator MONDALE, at recent hear-

ings on migrant and seasonal farmworker powerlessness said:

We have farm programs, we spend millions and millions of dollars trying to affect the market by 1 percent, because for 1 percent you can affect the market three or four percent. One percent can make the difference in winning or losing a strike. To argue that one percent is neutral is just not good economics.

(Hearings on Migrant and Seasonal Farm Worker Powerlessness—Efforts To Organize, Subcommittee on Migratory Labor, Senate Committee on Labor and Public Welfare, July 15, 16, 17, 1969, at p. 88).

Last February I formally called upon the Secretary of Defense to cease buying California table grapes. The cessation of grape purchases should be an administrative matter, and no legislation should be necessary. But the Defense Department has continued to buy the grapes.

By purchasing California and Arizona table grapes, the Defense Department is lending its power to efforts by the grape growers to break the strike. For this reason I have introduced legislation, H.R. 14640, with 10 cosponsors to prohibit the Defense Department from purchasing California table grapes. The United Farm Workers have brought a legal action against the U.S. Government to prohibit the Defense Department from buying table grapes at levels above fiscal year 1966 purchases.

The Department of Defense has continued to increase its purchase of California table grapes. In fiscal year 1966, the Department bought 7.5 million pounds at the cost of $1.04 million. In fiscal year 1969, 10.42 million pounds of grapes costing $1.7 million were bought by the Department. And in the first quarter of fiscal year 1970, ending September 30, 2.55 million pounds have been bought at a cost of $464,000.

Similar increases occurred in Vietnam. In fiscal year 1967, 468,000 pounds of grapes were shipped to Vietnam. In fiscal year 1969, the amount of grapes shipped to Vietnam rose to 2.1 million pounds. However, during the same time, troop strength in Vietnam rose from 392,000 to 539,000. The troop figure in 1969 is about one-third higher than 1967. The grape shipment increase between 1967 and 1969 is almost fivefold.

On a worldwide basis, troop levels decreased from 3.6 million in 1968 to 3.5 million in 1969, a decrease of about 3 percent. During the same period of time, total purchases of California table grapes increased from 6.9 million pounds to 10.42 million pounds, an increase of over 41 percent.

I again urge the Secretary of Defense to discontinue the purchase of California and Arizona table grapes. The Defense Department must cease using its power to further the efforts of the grape growers to break the strike of the United Farm Workers.

Mr. MAHON. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with an amendment, with the recommendation that the amendment be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the Chair, Mr. ROSTENKOWSKI, Chairman of the Committee of the Whole House on the State of the Union, reported that the Committee, having had under consideration the bill (H.R. 15090) making appropriations for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes, had directed him to report the bill back to the House with an amendment, with the recommendation that the amendment be agreed to and that the bill as amended do pass.

Mr. MAHON. Mr. Speaker, I move the previous question on the bill and the amendment thereto to final passage.

The previous question was ordered.

The SPEAKER. The question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. MAHON. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 330, nays 33, not voting 70, as follows:

[Roll No. 306]

Mr. Wright with Mr. Riegle.
Mr. Abbitt with Mr. Galifianakis.
Mr. McCarthy with Mr. Dawson.
Mr. Edwards of Louisiana with Mr. Gettys.
Mr. Jones of North Carolina with Mr. Bell of California.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

## GENERAL LEAVE

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members who have spoken on the Department of Defense appropriation bill today may have permission to revise and extend their remarks in the body of the RECORD, and include pertinent additional material.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill just passed, and to include extraneous material.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

## FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. Arrington, one of its clerks announced that the Senate had passed with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 14751. An act making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 14751) entitled "An act making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes," asks for a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. MANSFIELD, Mr. BIBLE, Mr. PROXMIRE, Mr. YARBOROUGH, Mr. RUSSELL, Mr. SYMINGTON, Mr. BOGGS, Mr. PEARSON, Mr. FONG, Mr. YOUNG of North Dakota, and Mr. GOLDWATER to be the conferees on the part of the Senate.

## APPOINTMENT OF CONFEREES ON H.R. 14751, MILITARY CONSTRUCTION APPROPRIATIONS, 1970

Mr. SIKES. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill H.R. 14751, making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Florida? The Chair hears none, and appoints the following conferees: Messrs. SIKES, MCFALL, PATTEN, LONG of Maryland, MAHON, CEDERBERG, JONAS, TALCOTT, and BOW.

## PERMISSION FOR COMMITTEE ON APPROPRIATIONS TO FILE REPORT ON FOREIGN ASSISTANCE APPROPRIATIONS, 1970

Mr. PASSMAN. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight tonight to file a privileged report on the foreign assistance appropriation bill for the fiscal year 1970.

Mr. SHRIVER reserved all points of order on the bill.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

## PERMISSION FOR COMMITTEE ON RULES TO FILE CERTAIN PRIVILEGED REPORTS

Mr. MATSUNAGA. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The SPEAKER. Is there objection to the request of the gentleman from Hawaii?

There was no objection.

## PERMISSION FOR MANAGERS TO FILE CONFERENCE REPORT ON H.R. 12964, STATE, JUSTICE, COMMERCE, AND THE JUDICIARY APPROPRIATIONS, 1970

Mr. ROONEY of New York. Mr. Speaker, I ask unanimous consent that the managers of on the part of the House may have until midnight tonight to file a conference report on the bill (H.R. 12964) making appropriations for the Departments of State, Justice and Commerce, the judiciary and related agencies for the fiscal year ending June 30, 1970.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

CONFERENCE REPORT (H. REPT. NO. 91-709)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 12964) "making appropriations for the Departments of State, Justice, and Commerce, the judiciary, and related agencies for the fiscal year ending June 30, 1970, and for other purposes," having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 1, 2, 6, 8, 14, 15, 16, 19, 28, and 30.

That the House recede from its disagreement to the amendments of the Senate numbered 3, 4, 13, 20, 27, 29, and 33.

And agree to the same.

Amendment numbered 5: That the House recede from its disagreement to the amendment of the Senate numbered 5, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$2,344,500"; and the Senate agree to the same.

Amendment numbered 7: That the House recede from its disagreement to the amendment of the Senate numbered 7, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$6,000,000" and the Senate agree to the same.

Amendment numbered 9: That the House recede from its disagreement to the amendment of the Senate numbered 9, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$74,300,000"; and the Senate agree to the same.

Amendment numbered 10: That the House recede from its disagreement to the amendment of the Senate numbered 10, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "*$268,000,000*"; and the Senate agree to the same.

Amendment numbered 11: That the House recede from its disagreement to the amendment of the Senate numbered 11, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$174,500,000"; and the Senate agree to the same.

Amendment numbered 12: That the House recede from its disagreement to the amendment of the Senate numbered 12, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$19,500,000"; and the Senate agree to the same.

Amendment numbered 17: That the House recede from its disagreement to the amendment of the Senate numbered 17, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$121,350,000"; and the Senate agree to the same.

Amendment numbered 18: That the House recede from its disagreement to the amendment of the Senate numbered 18, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$24,300,000"; and the Senate agree to the same.

Amendment numbered 22: That the House recede from its disagreement to the amendment of the Senate numbered 22, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$2,000,000"; and the Senate agree to the same.

Amendment numbered 23: That the House recede from its disagreement to the amendment of the Senate numbered 23, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amend-

ment insert "$14,000,000"; and the Senate agree to the same.

Amendment numbered 24: That the House recede from its disagreement to the amendment of the Senate numbered 24, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$900,000"; and the Senate agree to the same.

Amendment numbered 25: That the House recede from its disagreement to the amendment of the Senate numbered 25, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$12,500,000"; and the Senate agree to the same.

Amendment numbered 26: That the House recede from its disagreement to the amendment of the Senate numbered 26, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$650,000"; and the Senate agree to the same.

Amendment numbered 31: That the House recede from its disagreement to the amendment of the Senate numbered 31, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$160,750,000"; and the Senate agree to the same.

Amendment numbered 32: That the House recede from its disagreement to the amendment of the Senate numbered 32, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$2,600,000"; and the Senate agree to the same.

The committee of conference report in disagreement amendment numbered 21.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 12964) making appropriations for the Departments of State, Justice, and Commerce, the Judiciary, and related agencies for the fiscal year ending June 30, 1970, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report as to each of such amendments, namely:

TITLE I—DEPARTMENT OF STATE

*International commissions*

International Boundary and Water Commission, United States and Mexico

Amendment No. 1: Appropriates $400,000 for "Construction" as proposed by the House instead of $1,900,000 as proposed by the Senate.

American Sections, International Commissions

Amendment No. 2: Appropriates $561,000 as proposed by the House instead of $593,000 as proposed by the Senate. The Commission should continue to call on the Department of State and the Corps of Engineers for such technical assistance as may be needed.

Amendments Nos. 3 and 4: Insert language proposed by the Senate providing for the payment of salaries to Commissioners.

International Fisheries Commissions

Amendment No. 5: Appropriates $2,344,500 for expenses instead of $2,335,000 as proposed by the House and $2,354,500 as proposed by the Senate. The sum of $9500 is included for the International Commission for the Conservation of Atlantic Tuna.

*Educational exchange*

Mutual Educational and Cultural Exchange Activities

Amendment No. 6: Appropriates $31,425,000 for expenses as proposed by the House instead of $32,925,000 as proposed by the Senate. Amendment No. 7: Provides that not less than $6,000,000 shall be used for payments in foreign currencies which the Treasury Department determines to be excess to the normal requirements of the United States, instead of $8,500,000 as proposed by the House and $4,500,000 as proposed by the Senate.

General Provisions—Department of State

Amendment No. 8: Deletes language proposed by the Senate. The majority of the conferees are in agreement with language inserted by the Senate relating to changing status of any territory referred to in Article 3 of the Treaty of Peace with Japan but feel that it should be a part of a legislative bill rather than an appropriation bill.

TITLE II—DEPARTMENT OF JUSTICE

*Federal prison system*

Salaries and Expenses, Bureau of Prisons

Amendment No. 9: Appropriates $74,300,000 instead of $74,179,000 as proposed by the House and $74,540,000 as proposed by the Senate.

*Law enforcement assistance administration*

Salaries and Expenses

Amendment No. 10: Appropriates $268,000,000 instead of $250,000,000 as proposed by the House and $275,500,000 as proposed by the Senate. The amount allowed is allocated as follows: $21,000,000 for planning grants; $215,000,000 for action grants; $18,000,000 for academic assistance; $8,500,000 for the National Institute of which not less than $1,000,000 plus whatever savings can be effected is for the National Criminal Justice Information and Statistics Service; $1,200,000 for technical assistance; $4,300,000 for general administration.

TITLE III—DEPARTMENT OF COMMERCE

*Economic development assistance*

Development Activities

Amendment No. 11: Appropriates $174,500,000 instead of $170,000,000 as proposed by the House and $178,231,000 as proposed by the Senate.

Operations and Administration

Amendment No. 12: Appropriates $19,500,000 instead of $19,000,000 as proposed by the House and $19,829,000 as proposed by the Senate.

Amendment No. 13: Provides that not less than $1,200,000 shall be advanced to the Small Business Administration for the processing of loan applications as proposed by the Senate instead of $2,000,000 as proposed by the House.

*International activities*

Salaries and Expenses

Amendment No. 14: Appropriates $19,000,000 as proposed by the House instead of $20,366,000 as proposed by the Senate.

Amendment No. 15: Provides that $11,100,000 shall remain available for international trade promotions until June 30, 1971 as proposed by the House instead of $12,466,000 as proposed by the Senate.

Participation in U.S. Expositions

Participation in New York World's Fair

Amendment No. 16: Deletes Senate proposal to appropriate $350,000.

*Environmental science services administration*

Salaries and Expenses

Amendment No. 17: Appropriates $121,350,000 instead of $121,000,000 as proposed by the House and $121,700,000 as proposed by the Senate. Of the increase allowed over the House amount, $100,000 is for aviation weather forecasts and $250,000 is for air pollution forecasts and for the basic communication network.

Research and Development

Amendment No. 18: Appropriates $24,300,000 instead of $24,000,000 as proposed by the House and $24,685,000 as proposed by the Senate.

*National Bureau of Standards*

Research and Technical Services

Amendment No. 19: Appropriates $37,000,000 as proposed by the House instead of $37,100,000 as proposed by the Senate.

*Maritime Administration*

Ship Construction

Amendment No. 20: Appropriates $15,918,000 as proposed by the Senate. The conferees would be receptive to a realistic substantial request in a supplemental budget at an early date for additional funds for "Ship Construction."

TITLE IV—THE JUDICIARY

*General provision*

Amendment No. 21: Reported in technical disagreement. The managers on the part of the House will offer a motion to insert amended House language relative to availability of funds for salaries and expenses of any deputy clerk in any District Court Clerk's office.

TITLE V—RELATED AGENCIES

*Department of Health, Education, and Welfare*

Office of Education

Amendment No. 22: Provides not to exceed $2,000,000 for salaries and expenses instead of $1,500,000 as proposed by the House and $2,850,000 as proposed by the Senate.

Amendment No. 23: Appropriates $14,000,000 for "Civil rights education" instead of $12,000,000 as proposed by the House and $20,000,000 as proposed by the Senate.

*Equal Employment Opportunities Commission*

Salaries and expenses

Amendment No. 24: Provides $900,000 for payments to State and local agencies for services to the Commission pursuant to title VII of the Civil Rights Act instead of $700,000 as proposed by the House and $1,200,000 as proposed by the Senate.

Amendment No. 25: Appropriates $12,500,000 instead of $11,500,000 as proposed by the House and $15,905,000 as proposed by the Senate.

*Foreign Claims Settlement Commission*

Salaries and expenses

Amendment No. 26: Appropriates $650,000 instead of $450,000 as proposed by the House and $781,000 as proposed by the Senate.

*National Commission on Reform of Federal Criminal Laws*

Salaries and expenses

Amendment No. 27: Appropriates $300,000 as proposed by the Senate instead of $250,000 as proposed by the House.

*Small Business Administration*

Amendment No. 28: Deletes the language of the Senate, without prejudice, on the assurance that the House legislative committee will expedite the consideration of the legislation pending before it.

Amendment No. 29: Makes no appropriation for additional capital for the Business Loan and Investment Fund, as proposed by the Senate, instead of appropriating $25,000,000 as proposed by the House.

*Special representative for trade negotiations*

Salaries and Expenses

Amendment No. 30: Appropriates $482,000 as proposed by the House instead of $559,000 as proposed by the Senate.

*U.S. information agency*

Salaries and Expenses

Amendment No. 31: Appropriates $160,750,000 instead of $160,000,000 as proposed by the House and $161,500,000 as proposed by the Senate.

Special International Exhibitions

Amendment No. 32: Appropriates $2,600,000 instead of $2,500,000 as proposed by the House and $2,766,000 as proposed by the Senate.

TITLE VII—GENERAL PROVISIONS

Amendment No. 33: Inserts August 1, 1969 in Sec. 706 as proposed by the Senate instead of October 12, 1968 as proposed by the House.

JOHN J. ROONEY,
(except as to amendments Nos 22, 23, 24, and 25),
ROBERT L. F. SIKES,
JOHN M. SLACK,
JOHN J. FLYNT, Jr.,
GEORGE MAHON,
FRANK T. BOW,
GLENARD P. LIPSCOMB,
E. A. CEDERBERG,
MARK ANDREWS,
*Managers on the Part of the House.*

## PROPOSED TAX REFORMS

(Mr. CONABLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CONABLE. Mr. Speaker, a great deal of publicity has been given to the numerous tax relief devices which the other body has added to our tax reform bill. Many of these devices were accepted almost casually after a brief debate on the floor, but inevitably there will be moves here to build support and ultimately to instruct the conferees to accept some of these relief measures. I hope my colleagues will not succumb too readily to these opportunities, however popular they may appear to be.

The purpose of this reform bill was to improve the credibility of our system of raising money to support the activities of the Government. As sent to the other body, our bill achieves its goal in that it limits the tax preferences which in some cases have come to be used more for tax avoidance than to express national priorities. But if the goals of tax reform are lost because our National Legislature cannot keep its eye on the ball, not only the credibility of the tax system, but of our whole system of Government, will have been damaged.

Tax relief is a commendable goal also, but it is quite different from tax reform. Tax relief has to be properly timed, and carefully designed, if the economy is not to suffer and if the benefits are to reach the people who need them most. Even with the best intentions, I do not think this Nation can afford at this point to give up the fiscal battle against inflation, nor should we here in Congress take a step now which would inevitably increase the percentage of total public moneys which will have to be raised by the comparatively unfair local and State property and sales taxes.

In short, Mr. Speaker, I hope my colleagues will pause and consider, before they leap into the tax pattern the other body has established.

## DEPARTMENT OF DEFENSE APPROPRIATION BILL, 1970

(Mr. WHALEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WHALEN. Mr. Speaker, today the House of Representatives will consider H.R. 15090, the Department of Defense appropriation bill for fiscal year 1970.

This measure, like all other appropriation bills, funds new and on-going programs. One project for which moneys are allocated in H.R. 15090 is our military effort in Vietnam.

Normally each program, before receiving congressional funding approval, should meet three criteria.

First, it should be directed toward a specific need or problem.

Second, if funded in the past, should reflect a favorable benefit-cost ratio.

Third, future spending should be expected to produce similar results.

It is only reasonable that our Vietnam operation, for which $23.2 billion will be spent this fiscal year, be subjected to this same three-way test. This I shall attempt to do in the following paragraphs.

II. OUR VIETNAM PROGRAM

A. THE NEED OR PROBLEM

Deployment of U.S. combat forces in Vietnam first occurred in March 1965.

What was our purpose in undertaking this commitment? Several theories have been advanced, then discarded.

First, we were told that our SEATO—Southeast Asia Treaty Organization—obligations compelled our military intervention in Vietnam. As former Presidential Assistant Arthur M. Schlesinger, Jr., noted: this proposition first was advanced by Secretary of State Dean Rusk in January 1966. Yet appearing before the Senate Foreign Relations Committee 17 months earlier—August 6, 1964—Secretary Rusk, according to Schlesinger, testified:

> We are not acting specifically under the SEATO Treaty.

Henry Brandon, the London Times Washington correspondent, in his new book "Anatomy of Error," quotes a memorandum issued to the President on February 12, 1966, by George Ball, Under Secretary of State:

> Our only treaty commitment in that area is to the SEATO partners, and they have without exception viewed the situation in Vietnam as not calling the Treaty into play.

Indeed, only four of the eight SEATO signatory nations have sent combat troops to Vietnam.

Second, after the SEATO argument became unpalatable, it then was contended that our presence in Vietnam was necessary to "arrest the tide of Communism in Southeast Asia." If South Vietnam fell to the Communists, the argument went, so would its neighboring states.

In espousing this "domino" doctrine our leaders were oblivious to the new forces motivating the peoples of the world.

Since 1945 those millions inhabiting colonial areas have been struggling for self-determination, a national identity, a national dignity.

From this thrust has emerged over 60 new nations, their subsequent adherence to the policy of nonalinement, the inevitable demise of monolithic communism, and the resultant discrediting of the so-called "domino theory."

With the collapse of the domino concept, "stop communism" lost its credibility as a basis for our Vietnam intercession.

Third, the United States "self-interest" next was cited as the reason for sending combat troops to Vietnam. For reasons outlined in section II, B, this rationale, too, was abandoned.

Thus, to this date our Government has been unable to identify for the American public a plausible Vietnam raison d'etre. Instead, we now admit that we were wrong in becoming involved there. No wonder our youth—who must fight this war—have become so alienated.

B. PAST RESULTS

Our Vietnam commitment has cost 46,682 American lives—39,642 in combat; 7,040 in nonhostile action.

Since January 1, 1961, we have sustained 259,828 casualties, more than in World War I.

In dollar terms, Vietnam has been the second most expensive venture in U.S. history. Since fiscal year 1965, $81.407 billion has been allocated to this undertaking.

Expenditures of this magnitude have dissipated our financial will and capacity to deal with pressing domestic problems. This failure has dimmed the hopes of the oppressed for whom the "Great Society" held such great promise. Civil unrest has been the natural concomitant.

Vietnam has increased the citizens' tax burden. In July 1968, Congress imposed a 10-percent surtax on individuals and corporations to cover the increased Government costs occasioned by our growing military budget.

The surcharge notwithstanding, inflationary pressures have been, and continue to be, generated by our Vietnam expenditures. Production of war materiel creates income advances which are not matched by corresponding increases in consumable merchandise—the old story of more money chasing fewer goods. Hence, the Consumer Price Index has risen 17.6 percent since December 31, 1965 from 109.9, to September 30, 129.3 percent of the 1957–59 average.

The disposition of 550,000 servicemen

in Vietnam has been viewed by many nations as an American assumption of the former French colonial role in Southeast Asia. This, obviously, has tarnished our image abroad in recent years.

Finally, our military posture has been weakened by our Vietnam adventure. Committing over half a million troops there has cost us flexibility. We have become less able to respond to other, perhaps more important international problems which may occur elsewhere in the world. Indeed, the knowledge of this relative immobility could prompt foreign rivals to precipitate such crises in a deliberate attempt to embarrass us.

Too, as Vietnam has consumed a greater portion of our Defense budget, research and development programs bear less relevance to military needs of the future. As Robert Hotz, editor, Aviation Week and Space Technology Magazine, observed in his November 3, 1969 editorial:

> This area (R&D) has been drained badly to fund Vietnam expenses. Nearly an entire generation of technical progress in key weapons development has been vitiated as a result.

What about Vietnam, itself?

In our desire to save that nation from the evils of communism, we literally have destroyed it.

Depending upon the source of the statistics, the war has cost the lives of 50,000 to 300,000 South Vietnamese civilians. Another casualty figure is estimated as high as 700,000.

American aircraft have deposited on Vietnam soil more bombs than we dumped in Europe during World War II.

With the tremendous influx of American dollars, inflation there has become rampant. A culture is being despoiled by over-Americanization of the countryside.

Perhaps most disturbing, however, is our arrogance in denying to the inhabitants of South Vietnam those civil rights which are guaranteed our own citizens. In the United States, to enter and search a house and its occupants requires a legal warrant. Upon being arrested, an American is apprised of his rights and is assured of a fair trial for his alleged offenses.

In Vietnam, however, villagers' homes are invaded daily by foreign troops without legal sanctions. Those who fail to provide satisfactory responses to their foreign interrogators are turned over to South Vietnamese military personnel for further "disposition."

C. FUTURE RESULTS

What can this country expect if the Congress approves H.R. 15090 in its present form?

First, as previously noted, $23.2 billion will be reserved for continuation of our military exercise in Vietnam.

Second, this expenditure will divert money—and attention—from needed domestic programs, thus planting the seeds of future civil strife.

Third, the polarization of our society will accelerate.

Fourth, inflationary pressures will persist as long as billions are spent.

Fifth, the administration may be forced to request further extension of the surtax.

Sixth, among the community of nations our reputation as a neocolonial power will grow.

Seventh, essential new weapons systems, as well as military research and development programs, will remain underfunded.

Eighth, in Vietnam, itself, innocent civilians will continue to suffer from the ravages of war.

Ninth, and most important, many more thousands of American servicemen will lose their lives in a war we now declare unwise and unwinnable.

III. CONCLUSION

Members of Congress have limited jurisdiction in the conduct of a war. We cannot plan military strategy. We cannot dictate tactics. We cannot order troop reductions or troop withdrawals. We cannot initiate peace negotiations. We cannot conduct peace negotiations. All of these are prerogatives of the Commander in Chief, the President of the United States.

Some Members have expressed their concern in the various Vietnam resolutions now before this Congress. As a means of illuminating this issue, these resolutions are no more effective than a candle in a wind storm.

We in Congress do possess, however, two specific war powers.

First, we have the authority to declare war. In the case of Vietnam, the Congress abrogated this responsibility.

Second, we can influence the direction of a war through the appropriate process.

For me the "moment of truth" about Vietnam came shortly after being sworn in as a Member of the 90th Congress. In March 1967, I was asked by the bereaved parents of a young man who had given his life in Vietnam:

> For what purpose did our son die?

I could not answer them. I am unable to do so today.

Yet for 2 years I assuaged my doubts by convincing myself that "it is the President's job to terminate the conflict." Thus, in the hope that the Chief Executive would do just that, I supported the two Defense appropriations bills which came before the House of Representatives in 1967 and 1968.

This week, if this body approves H.R. 15090, as now written, we are condemning to death another substantial number of young Americans. At the same time we are telling our servicemen in Vietnam:

> We admit this war is wrong. We cannot win it. Therefore, you really should not be in Vietnam, and we hope to bring you home as soon as possible. Meanwhile, in all honesty, we must confess that many of you will die this coming year.

This I cannot accept.

Thus, I intend to vote against H.R. 15090 in its present form.

I do not view this as a protest vote. Rather, I consider that I am availing myself of the one opportunity by which a Member of the Congress can effect a policy change—and at the same time, in my case, clear my conscience of responsibility for the cruel and needless deaths of many additional fine young Americans.

I will support H.R. 15090, however, if it is amended to require complete U.S. troop withdrawal, effective December 31, 1970. If 217 other Members concur, our Vietnam policy can and will be changed.

## "SHOOTOUT" IN CHICAGO

(Mr. MIKVA asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MIKVA. Mr. Speaker, at 4:40 a.m. on December 4, 1969, Fred Hampton and Mark Clark, leaders of the Illinois Black Panthers, were shot to death in a police raid on Hampton's apartment. The police who participated in the raid were under the direction of the Illinois State's attorney's office. They had a search warrant based on a police sergeant's sworn statement that a cache of illegal weapons was located in the Hampton apartment. Weapons were found at the apartment.

At this time, these meager facts are about all we know for certain about the events on that early Thursday morning. But in Chicago, and I suspect throughout the Nation, people are disturbed by a number of unanswered questions in the Hampton-Clark shootings. Police who conducted the raid have said that they were fired upon by those in the apartment, and estimated that over 200 shots were exchanged between police and those in the apartment. On the other hand, witnesses at the scene indicate that evidence there shows that Hampton, at least, was lying in his bed when he was shot. A private autopsy conducted on Hampton's body, which was reported in yesterday's New York Times, seems to indicate that the body was in a reclining position at the time the bullets entered and left it.

The raid on Fred Hampton's apartment has become a subject of great controversy in only the few days since it took place. The major daily newspapers in Chicago have all editorialized on the subject, and it has received extensive news coverage. Despite the apparent paucity of facts, sweeping conclusions are already being drawn by various elements of the community. The State's attorney's office has termed the shootings justifiable acts of self-defense. Other elements of the community, both black and white, have characterized the Hampton-Clark shootings as nothing less than deliberate assassination, part of a nationwide campaign to eradicate the Black Panthers. My own view is that no conclusions can be drawn until we have more facts. But we must be sure that we are going to get those facts, and get them from a source which will be objective and credible to all parties concerned. As the Chicago Sun-Times said in an editorial:

> This potentially explosive situation must be calmed by a full airing of the facts concerning the events that occurred in the early Thursday morning raid on the Black Panther apartment.

I believe that the concern of many Chicagoans about this matter is justified. If there was illegal possession of firearms, then the police should have moved in to confiscate them and arrest those illegally possessing the contraband as they are

bound by law to do. But illegal possession of firearms is not normally an offense which, if proved, carries the death penalty, or even a very long jail term. Nor is it normally an offense for which a search or arrest warrant is served at 4:40 in the morning. Finally, men who are engaged in a "shootout" with the police do not normally do their shooting from a reclining position. For all of these reasons, whatever answers are eventually developed to the questions surrounding the "shootout," must, if they are to be credible answers, come from some source other than the State's attorney's office or the testimony of his police.

For this reason, I am today writing a letter to Dr. Milton Eisenhower urging that the National Commission on the Causes and Prevention of Violence initiate an investigation into the nature of the shootings in Chicago last Thursday. I understand that the Illinois Division of the American Civil Liberties Union has done likewise. There are several reasons that such an investigation by an impartial Federal commission is necessary. First, whatever story is revealed during the trial of Panther leaders arrested at the time of the "shootout," it is bound to be based primarily on the testimony of those directly involved in the incident. Thus, whatever the trial discloses, it will still be less than credible to those who already have doubts about the shootings. Second, the Violence Commission already has significant experience and expertise in investigating the nature of violent incidents. The commission staff investigated in depth a shootout incident which occurred in Cleveland last year. It has the manpower and the techniques to make a thorough and objective investigation.

Finally, and perhaps most important, the central reason for concern in the Hampton-Clark shooting is directly within the scope of the commission's mandate. The commission was established to investigate the reasons for excessive violence in American life, whether on the part of criminals, private citizens, or the police. As one who has sought stringent gun control laws, I am hardly sympathetic to the stated philosophy of the Black Panther party. My reason for concern is, rather, that whenever violence occurs in our society, all citizens are hurt, all our lives are endangered. What has been worrying so many Americans about crime is not the money they will lose, it is violence—the threat of physical harm to themselves or their families. It is excessive violence, whether perpetrated by private citizens or officials of the State, which we have most to fear. Thus in a very real sense, "law and order" demands that the reasons and responsibility for the violence which occurred last Thursday be brought to light.

I insert a New York Times article referred to above and an article by Barbara Reynolds in the yesterday's Chicago Today at this point in the RECORD:

[From the New York Times, Dec. 7, 1969]

PANTHERS SAY AN AUTOPSY SHOWS PARTY OFFICIAL WAS "MURDERED"

(By John Kiener)

CHICAGO, December 6.—A black alderman and attorneys for the Black Panther party asserted today that an independent autopsy performed on the body of Fred Hampton, a slain Panther official "confirms our theory that he was murdered while he was asleep."

Mr. Hampton, the 21-year-old Illinois state chairman of the Panthers, and Mark Clark, a Panther leader from Peoria, were shot to death in a police raid on Mr. Hampton's apartment here early Thursday morning.

The police have said that the two men were shot in a gun battle lasting at least 10 minutes when the raiding party entered the apartment a block from the Panther offices at 4:40 A.M. in a search for weapons. The police said that what they termed a "shootout" ensued after a woman in the apartment opened fire on them with a shotgun. They said they had seized a number of weapons.

Four other Panthers were wounded in the apartment, and three more were arrested. One policeman was grazed on the leg with a shotgun pellet and another cut his hand on a piece of glass.

PARTY AIDE SURRENDERS

The Panthers charged that the police had burst into the apartment and opened fire and that the occupants had had no opportunity to shoot back.

The Panthers' deputy minister of defense, Bobby Lee Rush, the ranking surviving party official here, surrendered to the police this morning at a meeting of the Southern Christian Leadership Conference's operation breadbasket.

He had been sought on a warrant charging him with failure to register a weapon since the police staged a raid on his apartment at 5:30 A.M. yesterday. He was not at home then.

The police said that the raid had produced a 22-caliber, two-shot derringer, several hundred rounds of ammunition, dried leaves that might be marijuana, military instruction manuals and literature that they described as "inflammatory."

Mr. Rush was held on $1,500 bond.

The private autopsy was held at the funeral home owned by Alderman A. A. Rayner, where Mr. Hampton's body is awaiting burial on Monday.

LAWYER WATCHES AUTOPSY

Francis Andrew, one of three attorneys for the Black Panthers who arranged and observed the examination, said that the autopsy had been conducted by "a leading pathologist, a renowned expert in forensic medicine. He was assisted by two other distinguished doctors."

All three doctors were white.

Mr. Andrew said, "A bullet hole was found just below Fred Hampton's hairline above his right eye. An examination of the angle of the wound showed that if Hampton was lying on his back, the person who shot him would have been standing above him, slightly to the right and behind his head."

"Another bullet hole was below the right ear, with an exit hole on the left side of the lower neck, showing exactly the same angle as the other bullet hole," the lawyer continued. "There were two other bullet grazes, one of the front left shoulder, again at the same angle, and one on the right arm."

"No exit wound could be found for the bullet hole in the top of the head, but the doctors could not find the bullet, which is very curious," he said.

James J. Walsh, administrative assistant to coroner Andrew J. Toman, said yesterday that the official examination showed Mr. Hampton had been struck by a bullet in the left temple and by another in the lower portion of his neck, while a third had grazed his arm.

Meanwhile, Edward V. Hanrahan, state's attorney, announced that Alderman Rayner himself was under investigation for his connection with the Panthers. Mr. Hanrahan's office said that copies of the lease on the Panther headquarters "uncovered" yesterday had been signed by Mr. Rush and Mr. Rayner.

SAYS HE SIGNED LEASE

The alderman confirmed that he had cosigned the lease and added: "The police red squad has been asking people in the area about my work with young people."

The Panthers have been conducting tours of the apartment in which their leader was slain. Hundreds of people, including some whites and two Negro state senators, have passed through, listening as Panthers lecture and point out the bullet holes.

The small, five-room apartment does not have extensive scars, pockmarks and bullet holes. Many walls and entire rooms have no visible scars, and most of the bullets are clustered in the area where the Panthers were shot.

Roy Innis, national director of the Congress of Racial Equality, called yesterday for investigations into the deaths of 28 Black Panther party members killed in clashes with the police since January, 1968.

Mr. Innis made the request in telegrams to President Nixon, Attorney General John N. Mitchell, Mayor Richard J. Daley of Chicago and other officials.

---

A REPORTER SOUNDS OFF: HOW WILL THEY SEE HAMPTON'S DEATH?

(By Barbara Reynolds)

I found myself standing in Fred Hampton's blood.

As I stood there Thursday in my friend's home at 2337 W. Monroe st., I could almost see him greeting me with his sweet smile, clenched fist, and "All power to the people, sister."

I looked at the blood spattered wall, the crimson mattress, and the bullet holes in his green bedspread, and I wondered what people who didn't know Fred Hampton were thinking about his violent death.

Would they think he was just another "hood," who was better off dead? Or would they feel he died because he had ceased to be a "boy," and had determined, at 20 years of age, that was time to be his own man or die trying?

Fred was no fool. He knew other Panthers who tried to change the system had either been killed, thrown in jail or run out of the country. He knew he would be gagged in one form or the other, just as Bobby Seale had been gagged in Judge Hoffman's courtroom. But, perhaps, he felt he hadn't much to lose. If you're living in bondage, you're not really living anyway.

The end came quickly. At 4:30 in the morning someone decided to issue a search warrant because a witness said there were guns inside Hampton's apartment. It took 50 armed policemen who cordoned off a two-block area around his home to deliver the warrant.

Police said as they tried to enter, Panthers inside opened fire. So they blasted the back and front doors down. More than 200 shots were exchanged in 12 minutes of rapid firing, the police said.

Yet both doors were still standing when I arrived as a reporter and the only thing I could see wrong with the back door was that it needed painting.

There were few bullet holes from all the 200 shots that were supposed to have been fired, except in Fred's bedroom where blood was still oozing from his mattress down to the floor.

Bobby Rush, the Panther's deputy defense minister, claims Hampton was murdered in his sleep.

This story sounds strange, also. But it is no stranger than the inconsistent police accounts of the event.

On the whole it matters little how Fred was killed. The fact is he is dead. He had to be killed, imprisoned or exiled because he believed the system won't allow black folks to run around leading a revolution that will make democracy work in favor of its black minority.

I will never see my friend again. But I will see his militant spirit roaming the streets of Chicago in the black masses who would rather fight and die than live with police brutality, ghetto housing, and poverty in a nation of plenty.

## JUVENILE INSTITUTE BILL

(Mr. RAILSBACK asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. RAILSBACK. Mr. Speaker, today I have introduced, along with the gentleman from Illinois (Mr. MIKVA), the gentleman from Pennsylvania (Mr. BIESTER), and more than 80 other Members, a bill which would create an FBI Academy-type institution to provide trained workers and information for use in the battle against juvenile delinquency.

This bill is not simply another study or research effort. We have sought in this proposal to make some very real and measurable progress in this Nation's efforts to deal with and prevent juvenile delinquency.

A detailed study recently released by the Justice Department has revealed that the astounding total of 72 percent of youths once arrested were rearrested within 5 years. This bears repeating: almost three-fourths of the youths once arrested and supposedly within the reach of our juvenile justice system were rearrested. Statistics on crime are easily cited to demonstrate the seriousness of the problem. For instance, during 1968 there was one murder every 39 minutes, one forcible rape every 17 minutes, one robbery every 2 minutes, one aggravated assault every 2 minutes, one auto theft every 41 seconds, and one burglary every 17 seconds. There was an average during 1968 of one violent crime every 54 seconds. But even more disturbing are the statistics which show the almost unbelievable increase in crime among our young people. During the period from 1960 to 1968, the number of arrests of juveniles for serious crimes increased by 78 percent. As tragic and disheartening as the above may seem, it should strike at the hearts of all of us that this represents only the beginning of a career in crime for many of these youthful offenders. With a three-quarters repeater rate, we just are not stopping careers in crime.

In its 1967 Task Force Report on Juvenile Delinquency and Youth Crime, the President's Commission on Law Enforcement and Administration of Justice estimated that in the inner city as much as 70 percent of the young people find themselves in trouble with the law before their 19th birthday. A report by the New York City Department of Corrections has found that more young men are put in detention centers or jails between the ages of 16 to 20 than at any other time in their lives.

Earlier this year a timely symposium was held in Washington, D.C., under the joint sponsorship of the American Parents Committee and the National Council of Juvenile Court Judges. The thought-provoking title of this symposium was "Youth in Crisis—Our Nation's Stake in Juvenile Delinquency Prevention." It is encouraging that public interest in trying to save young people from a life of crime is increasing. As representatives of the interested citizens in our home districts, we in Congress have contributed some action and many words. In this proposal we hope to make possible more action and leadership.

Almost one-half of those arrested in 1968 for criminal offenses were under the age of 18. In other words, what we are talking about today is, simply put, one-half of the crime problem. We have designed our legislation to strike at the very heart of crime. We think our proposal represents a new approach to attacking the root causes of recidivism so far as juvenile offenders are concerned. We are convinced that juvenile crime is the single most pressing and threatening aspect of the crime problem. The failure to deal effectively with criminals and with the causes of crime has become a near disaster for this country. Our bill is intended to provide not just more talk, but some very definite action.

We propose the creation of the Institute for Continuing Studies of Juvenile Justice. As it is envisioned, the Institute will provide a two-pronged attack on juvenile crime. The main purpose would be to provide expert "graduate" or continuing education and training for persons working to combat juvenile delinquency at the State and local level. The operation would be patterned after the very respected and successful FBI Academy, and would offer training by experts for local law enforcement officers, judicial personnel, welfare officials, correctional officers, probation officers, and others connected with the treatment and control of juvenile offenders. The second purpose would be to establish a clearinghouse or data bank for the valuable information on juvenile delinquency presently existing but not in any one convenient or central location. This information would be put into useful forms and disseminated to the State and local people who can put it to work in their everyday dealings with the juvenile offender.

The problem of juvenile delinquency is primarily a local one. However, to the extent that there are 50 States and countless local communities which are presently approaching the problem in different ways, we believe that some guidance and assistance should be available on a coordinated basis to these State and local governments. Admittedly, some States have done more than others in the area of juvenile delinquency prevention and control. The Governor's Conference has placed the responsibility as follows:

> The burden rests with the individual governments to adopt, adapt, and act against crime.

The Governors at their 1969 meeting also reported the following recommendations:

> In recognition of the key role which state governments play in the intergovernmental effort to prevent and control juvenile delinquency, the National Governor's Conference urges the following actions by states: (1) Each state should establish the necessary administrative machinery to provide leadership and coordinate the planning and services of all state agencies which contribute to the prevention, control, and treatment of juvenile delinquency. (2) Each state should emphasize and strengthen its commitment to programs designed to prevent delinquency, giving particular emphasis to home and school-centered programs aimed at youth who are in danger of becoming delinquent.

One outstanding example of helping the State and local governments has been the FBI Training Academy and the local training schools operated by the FBI. In fiscal 1969, training was afforded to 233,741 municipal, county, and State law enforcement officers who attended 7,804 schools. Of the over 5,000 graduates of the FBI Training Academy, 27 percent are now the heads of their agencies. We think this is a fine example to follow, and by applying a similar approach to training State and local personnel in the field of juvenile delinquency, we hope for very real benefit at a reasonable, if not comparably inexpensive, cost.

To demonstrate the varying laws among the States with respect to juveniles, 24 States expressly deny the right to a jury trial in juvenile proceedings. In 14 other States the statutes make no reference to jury trials in juvenile proceedings. In the dozen other States, a jury trial is guaranteed. This condition exists in spite of the May 20, 1968, U.S. Supreme Court decisions in the cases of Duncan against Louisiana and in Bloom against Illinois in which the Court gave very strong hints that jury trials would be required. Only 1 month ago, the Supreme Court was asked in the case of DeBacker against Brainard to rule that jury trails are required. The Court said only that it would not so rule with respect to cases which arose prior to May 20, 1968, the date of the above decisions. Not only do one-half of the States deny jury trials, even more States do not have full-time specialized juvenile judges or courts. Only five States were found to have a complete system of juvenile courts. Some 16 other States had partial systems involving specialized courts in some counties or cities. In 28 States, judges on regular circuit courts were assigned on occasions to handle juvenile cases. In only 31 States was there a guarantee of a right to counsel in express terms. In short, with one-half of serious crime perpetrated by juveniles, we have a long way to go in simply providing the law and court structure to effectively deal with these offenders.

The Joint Commission on Correctional Manpower and Training pointed out recently two problems present in attempting to deal with any aspect of the crime problem.

> (1) Correction today is characterized by an overlapping of jurisdictions, a diversity of philosophies, and a hodge-podge of organizational structures which have little contact with one another; and
>
> (2) Lacking consistent guidelines and the means to test program effectiveness, legislators continue to pass laws, executives mandate policies, and both cause large sums of money to be spent on ineffective corrective methods.

**The findings of the Commission indicate that what we need if we are to achieve more timely results is a single model or leader to coordinate activities in the field of juvenile delinquency.**

The National Council on Crime and Delinquency has recommended "increased professional training, and additional training programs to upgrade the skills of those already in the field." The President's Task Force on Juvenile Delinquency said simply:

> Personnel training is an obvious need . . . The kind of leadership needed at the Federal level requires a better integration of the various disparate Federal programs than is found at present.

And the need for such an institution as we have proposed is recognized by juvenile authorities throughout the world. Even in the police states of the Communist-controlled countries of Czechoslovakia, Hungary, and Yugoslavia, the oppressive governments recognize the problem and all require that their judges and police receive special training in child handling.

We have already accumulated vast amounts of knowledge concerning juvenile offenders and the offenses they commit, but we simply have not put this information to the best use. It must be supplied to all those concerned with the problem of juvenile delinquency. Furthermore, we must assist in the training of individuals to cope with juvenile offenders. After consultations with recognized experts, both within and without the government service, we are convinced that a multidisciplinary approach is needed in effectively dealing with juvenile offenders. In other words, what is needed is a combination training effort including the viewpoints, expertise, and disciplines of correctional, probational, judicial, law enforcement, and welfare personnel.

As the President's Commission stated in 1967:

> America's best hope for reducing crime is to reduce juvenile delinquency and youth crime.

The bill which we are introducing today is intended to do just that.

Mr. Speaker, I include the text of the bill, as well as a section-by-section analysis of the bill in the RECORD:

H.R. 15124

A bill to amend title 18 of the United States Code by adding a new chapter 404 to establish an Institute for Continuing Studies of Juvenile Justice

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

SECTION 1. Part IV of title 18, United States Code, is amended by adding at the end thereof the following new chapter.

"CHAPTER 404.—INSTITUTE FOR CONTINUING STUDIES OF JUVENILE JUSTICE

"Sec.
"5041. Establishment; purpose.
"5042. Functions.
"5043. Director and staff.
"5044. Powers.
"5045. Advisory Commission.
"5046. Location; facilities.
"5047. Curriculum.
"5048. Enrollment.

"§ 5041. Establishment; purpose

"There is hereby established an Institute for Continuing Studies of Juvenile Justice (hereinafter referred to as the 'Institute'). It shall be the purpose of the Institute to provide a coordinating center for the collection and the dissemination of useful data regarding the treatment and control of juvenile offenders, and it shall also be the purpose of the Institute to provide training for representatives of Federal, State, and local law enforcement officers, juvenile welfare workers, juvenile judges and judicial personnel, probation personnel, correctional personnel, and other persons, including lay personnel, connected with the treatment and control of juvenile offenders.

"§ 5042. Functions

"The Institute is authorized—

"(a) to serve as an information bank by collecting systematically the data obtained from studies and research by public and private agencies on juvenile delinquency, including, but not limited to, programs for prevention of juvenile delinquency, training of youth corrections personnel, and rehabilitation and treatment of juvenile offenders;

"(b) to publish data in forms useful to individuals, agencies, and organizations concerned with juveniles and juvenile offenders;

"(c) to disseminate pertinent data and studies to individuals, agencies, and organizations concerned with juveniles and juvenile offenders;

"(d) to devise and conduct in various geographical locations, seminars and workshops providing continuing studies for persons engaged in working directly with juveniles and juvenile offenders;

"(e) to devise and conduct a training program of short-term instruction in the latest proven-effective methods of prevention, control, and treatment of juvenile delinquency for law enforcement officers, juvenile welfare workers, juvenile judges and judicial personnel, probation officers, correctional personnel, and other persons, including lay personnel, connected with the treatment and control of juvenile offenders; and

"(f) to develop technical training teams to aid in the development of training programs within the several States and with the State and local agencies which work directly with juveniles and juvenile offenders.

"§ 5043. Director and staff

"(a) The Institute shall be under the supervision of an officer to be known as the Director of the Institute who shall be appointed by the President, by and with the advice and consent of the Senate, to serve for a term of four years. The Director of the Institute shall receive basic pay at the rate provided for level V of the Executive Schedule under section 5316 of title 5, United States Code.

'(b) The Director shall have authority to supervise the organization, employees, enrollees, financial affairs, and all other operations of the Institute and may employ such staff, faculty, and administrative personnel as are necessary to the functioning of the Institution. The Director shall have the power to acquire and hold real and personal property for the Institute and may receive gifts, donations, and trusts on behalf of the Institute. The Director shall also have the power to appoint such technical or other advisory councils comprised of consultants to guide and advise the Advisory Commission. The Director is authorized to delegate his powers under this Act to such persons as he deems appropriate.

"(c) If the Office of Director is left vacant, by resignation or otherwise, the President shall appoint a successor who shall serve for the unexpired portion of the term of office.

"§ 5044. Powers.

"The functions, powers, and duties specified in this Act to be carried out by the Institute shall not be transferred elsewhere or within any executive department unless specifically hereafter authorized by the Congress. In addition to the other powers, express and implied, the Institute is authorized—

"(a) to request any Federal department or agency to supply such statistics, data, program reports, and other material as the Institute deems necessary to carry out its functions. Each such department or agency is authorized to cooperate with the Institute and shall, to the maximum extent practicable, consult with and furnish information and advice to the Institute;

"(b) to arrange with and reimburse the heads of Federal departments and agencies for the use of personnel or facilities or equipment of such departments and agencies;

"(c) to confer with and avail itself of the cooperation, services, records, and facilities of State, municipal, or other public or private local agencies;

"(d) to enter into contracts with public or private agencies, organizations, or individuals, for the partial performance of any of the functions of the Institute;

"(e) to compensate consultants and members of technical advisory councils who are not in the regular full-time employ of the United States, at a rate to be fixed by the Director of the Institute but not exceeding $75 per diem and while away from home, or regular place of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons in the Government service employed intermittently; and

"(f) to report to the Congress at appropriate intervals on programs which have been implemented with the cooperation of the Institute within and among the several States, and to recommend to the Congress further legislative action which may appear desirable.

"§ 5045. Advisory Commission

"(a) The overall policy and operations of the Institute shall be under the supervision of an Advisory Commission.

"(b) The Advisory Commission shall consist of the Director of the Institute, the Attorney General (or his designee), the Director of the United States Judicial Center (or his designee), the Director of the National Institute of Mental Health (or his designee), and fourteen persons having training and experience in the area of juvenile delinquency appointed by the President from the following categories:

"(1) law enforceemnt officers (two persons),

"(2) juvenile or family court judges (two persons),

"(3) probation personnel (two persons),

"(4) correctional personnel (two persons),

"(5) representatives of private organizations concerned with juvenile delinquency (four persons), and

"(6) representatives of State agencies established under the Juvenile Delinquency Prevention and Control Act of 1968 or under title I of the Omnibus Crime Control and Safe Streets Act of 1968 (two persons).

"(c) Members of the Advisory Commission shall serve for terms of four years and shall be eligible for reappointment, except that for the first composition of the Commission, one-third of the members shall be appointed to one-year terms, one-third to two-year terms, and one-third to three-year terms, thereafter each member's term shall be for four years. Any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed, shall be appointed for the remainder of such term. Any member of the Commission may be removed by the President for inefficiency, neglect of duty, or malfeasance in office.

"(d) While performing their duties, members of the Commission shall be reimbursed under Government travel regulations for their expenses, and members who are not employed full time by the Federal Government shall receive in addition a per diem of $100 in lieu of subsistence, as authorized by section 5703 of title 5, United States Code,

for persons in Government service employed intermittently.

"(e) The Director shall act as Chairman of the Advisory Commission. The Commission shall establish its governing rules of procedure.

"§ 5046. Location; facilities

"(a) A suitable location for the Institute shall be selected by the Advisory Commission.

"(b) Following the selection of a location for the Institute, the Director, with the approval of the Advisory Commission, shall—

"(1) acquire such property as has been selected pursuant to subsection (a), and

"(2) make such arrangements as may be necessary or desirable for the construction, equipping, and physical organization of the Institute.

"§ 5047. Curriculum

"The Advisory Commission shall design and supervise a curriculum utilizing a multidisciplinary approach (to include law enforcement, judicial, correctional and welfare as well as probation disciplines) which shall be appropriate to the needs of the Institute's enrollees.

"§ 5048. Enrollment

"(a) Each candidate for admission to the Institute shall apply to the State agency established under the Juvenile Delinquency Prevention and Control Act of 1968 (82 Stat. 462; 42 U.S.C. 3801 et seq.), or the State agency established under title I of the Omnibus Crime Control and Safe Streets Act of 1968 (82 Stat. 198; 42 U.S.C. 3701 et seq.), in the candidate's State. The State agency or agencies shall select an appropriate number of candidates and forward their applications for admission to the Director of the Institute. The Director shall prescribe the form of all applications for admission to the Institute and shall make the final decision concerning the admission of all students or enrollees.

"(b) While studying at the Institute and while traveling in connection with his study, including authorized field trips, each student or enrollee in the Institute shall be allowed travel expenses and a per diem allowance in the same manner as prescribed for persons employed intermittently in the Government service under section 5703(b) of title 5, United States Code."

SEC. 2. The table of contents to "PART IV—CORRECTION OF YOUTHFUL OFFENDERS" of title 18, United States Code, is amended by inserting after

"403. Juvenile delinquency..... 5031"

the following new chapter reference:

"404. Institute for Continuing Studies of Juvenile Justice..... 5041".

SEC. 3. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

SECTION-BY-SECTION SUMMARY OF BILL TO CREATE AN INSTITUTE FOR CONTINUING STUDIES OF JUVENILE JUSTICE

Amend Part IV of title 18 U.S.C. to add a new chapter 404.

Section 5041. Establishment; purpose.

Section 5042. Functions.

Section 5043. Director and staff.

Section 5044. Powers.

Section 5045. Advisory Commission.

Section 5046. Location; facilities.

Section 5047. Curriculum.

Section 5048. Enrollment.

Section 5041 creates the Institute to provide a coordinating center for collecting useful data re the treatment and control of juvenile offenders; and to provide training for individuals in such treatment and control.

Section 5042 authorizes the Institute to:

(a) Serve as an information bank by systematic collection of data from all sources re juvenile delinquency.

(b) Publish data in useful forms.

(c) Disseminate published data to interested persons.

(d) Conduct seminars and works.

(e) Provide short-term training of law enforcement officers, juvenile welfare workers, juvenile judges, probation officers, correctional personnel, and other persons, including lay personnel, connection with the treatment and control of juvenile offenders.

(f) Send out training teams to work at State and local levels.

Section 5043: Director of the Institute shall be appointed by the President with advice and consent of the Senate.

Section authorizes the Institute to obtain data, personnel, facilities and other cooperation from Governmental agencies and departments (Federal, State and local) as well as from private individuals and agencies.

Section 5045 provides for Advisory Commission to set policy and supervise operations of the Institute. The Commission members would consist of:

(a) Director of the Institute.

(b) Attorney General (or designee).

(c) Director of U.S. Judicial Center (or designee).

(d) Secretary of Health, Education and Welfare (or designee).

(e) Director of National Institute of Mental Health (or designee).

(f) 14 persons having training and experience in the area of juvenile delinquency, to be appointed by the President from the following categories:

(1) Law enforcement officers (two persons).

(2) Juvenile judges (two persons).

(3) Probation personnel (two persons).

(4) Correctional personnel (two persons).

(5) Representatives of private organizations concerned with juvenile delinquency (four persons), and

(6) Representatives of State agencies established under Juvenile Delinquency Prevention and Control Act or under title I of Omnibus Crime Control and Safe Streets Act of 1968 (two persons).

Commission members would have four year staggered terms.

Section 5046 directs that a suitable location be selected.

Section 5047 requires Advisory Commission to design and supervise a curriculum utilizing a multi-disciplinary approach (to include law enforcement, judicial, probation, correctional, and welfare worker disciplines) appropriate to the needs of the Institute's enrollees.

Section 5048: Candidates for admission and enrollment in the Institute shall be established under the Juvenile Delinquency nominated by the State agencies or agency Prevention and Control Act of 1968 or the Omnibus Crime Control and Safe Streets Act of 1968 (title 1) with final decision concerning admission being made by the Institute Director.

RECAPITULATION

Rather than simply further study juvenile delinquency, this bill seeks to establish a clearing house or data bank for all the valuable information presently existing but not in any one convenient or central location—a function which could not be easily fulfilled except at the federal level. The other main purpose is to provide expert "graduate" or "continuing" education and training for two persons who are now working to combat juvenile delinquency at the State and local level.

## THE LABOR DEPARTMENT AND THE UMWA

(Mr. WAMPLER asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WAMPLER. Mr. Speaker, on November 28, 1969, the Labor Department released information on the United Mine Workers of America. Such action represents a first for the Department—the first time that the Landrum-Griffin Act has been used to influence a union election.

I am disturbed by the action of the Labor Department. I feel that it warrants a complete investigation by the Congress, followed by appropriate action if the investigation reveals deviation from the mandate of the Department under the labor laws of the United States.

The Department's action indicates a certain bias in the current UMWA election campaign. It seems, at first glance, to be a campaign tool for one of the candidates and a blow for his opponents. Moreover, it does not reveal the exhaustive attention to detail that should characterize an investigation of alleged wrongdoing by the Labor Department. On the contrary, much of it has become a matter of public record in the months since the election campaign within the UMWA has begun. Other information could easily be obtained from the Labor Department and the records filed under the law. To place the seal of the Labor Department on material of this type, and to release it to the press as "sensational new news" smacks of partisanship and anything but impartial justice.

It is not the function of the Labor Department to determine who shall be the president of the United Mine Workers of America. It is not the mandate of the Department to engage in political controversy of this type for any cause, no matter how noble. Rather, the Department's responsibility is to enforce the law and to protect the rights of union members. I would stress that one of these rights is the ability to elect the officers of their union without harassment from either union or outside sources, among which Government agencies must be included.

This action by the Labor Department will cause injury to that Department in the years ahead. Members of unions have traditionally resented such outside interference. This is especially true in the United Mine Workers.

It would be a tragedy if this incident were to cause a strain between organized labor and government—a strain that would hamper the cooperation which must exist if the Nation's economy is to function smoothly.

For, in the final analysis, if the union movement and the Government cannot trust each other, if they hold no respect for each other, our country will surely suffer.

At this time, Mr. Speaker, I would like to insert in the RECORD a resolution adopted Sunday, November 30, 1969, in Clintwood, Va., by the local unions representing 10,500 members of district 28 of the UMWA:

RESOLUTION

Whereas, The Federal Government has improperly interjected itself through the U.S. Labor Department into the election campaign for International Officers in the United Mine Workers of America, and

Whereas, the U.S. Department of Labor has done so in violation of proper democratic concepts and in violation of the primary principles guaranteeing the fostering of free labor unions, and

Whereas, this interference of the U.S. Department of Labor not only is wholely improper, but is also completely biased, and

Whereas, the recent release of a prejudiced report to the news media by the U.S. Department of Labor on the eve of the United Mine Workers of America election, calculated to influence the election is utterly reprehensible and has connotations of a fascist technique in undermining a labor union, and

Whereas, the U. S. Department of Labor rendered this report out of context and in a manner intended to hide from the coal miners and from the general public by suppressing certain aspects of it, many facts that militate against the incumbent W. A. Boyle and redound to in a favorable manner toward his opponent, and

Whereas, the issuance of this report in a partial manner is designed for nefarious reasons to elect a man as head of the United Mine Workers of America who is a convicted burglar, a self-confessed thief on multiple occasions, a deserter of his family according to court records, a purveyor of union influence, a shakedown artist in politics, and a man totally lacking in principle and integrity who will stoop to any level for personal self aggrandizement, and

Whereas, we believe that this entire deplorable government scheme is intended as retaliation for the leading role the United Mine Workers of America played in the last election for President of the United States after Hubert Humphrey announced his candidacy at our International Convention in Denver, Colorado in 1968, and

Whereas, we believe that the man the U. S. Labor Department is assisting in his candidacy for President of the United Mine Workers of America is receiving this help because he is susceptible to political sellouts contrary to the best interests of the United Mine Workers of America,

Now therefore be it resolved, that we contact each congressman, each United States Senator, every high government official, and apprise them to the facts involved in the election campaign in which the United Mine Workers of America is involved, and call upon them to censor the U. S. Department of Labor for their improper and biased conduct, and

Be it further resolved, that a copy of this resolution be sent to the President of the United States, Richard M. Nixon; Speaker of the House, John McCormack; Senate majority leader, Mike Mansfield; and Secretary of Labor, George P. Shultz.

RAY THORNBURY,
*Chairman, Resolutions Committee.*
E. W. GILBERT,
*Secretary.*

## BELLAIRE MEDICAL FOUNDATION

(Mr. MONAGAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MONAGAN. Mr. Speaker, on September 24, 1969, the Committee on Government Operations approved and adopted House Report No. 91–523 entitled, "Office of Economic Opportunity and the Medical Foundation of Bellaire, Ohio." This report followed an investigation by the Special Studies Subcommittee, of which I am chairman, of the comprehensive health services project operated by the Medical Foundation in Belmont County, Ohio, and adjacent counties, with grant funds provided by the OEO. The subcommittee held hearings on the matter in Washington, D.C., on May 20, 21, and 22, 1969.

By letter dated November 11, 1969, Mr. Donald Rumsfeld, Director, OEO, advised the full committee chairman, Hon. WILLIAM L. DAWSON, that he had read the committee's report with great interest and care and had directed that every feasible step be taken by the OEO staff to attempt to carry out the recommendations of the committee as rapidly as possible. Mr. Rumsfeld described actions that had been taken to correct the identified administrative deficiencies and to strengthen the operations of the project. The actions taken, as described by Mr. Rumsfeld, are consistent with recommendations of the committee, and include efforts directed toward increasing the number of local physicians actively participating in the project, in line with the objectives and standards of the comprehensive health services program guidelines. Mr. Rumsfeld is to be commended for his prompt action on these recommendations.

Mr. Rumsfeld's letter to Chairman DAWSON follows:

OFFICE OF ECONOMIC OPPORTUNITY,
*Washington, D.C., November 21, 1969.*

Hon. WILLIAM L. DAWSON,
*House of Representatives,*
*Washington, D.C.*

DEAR MR. CHAIRMAN: Thank you for your letter of October 22, transmitting copies of House Report No. 91–523 entitled "Office of Economic Opportunity and the Medical Foundation of Bellaire".

We have reviewed with great interest and care the Report of the Committee, especially the findings and recommendations on pages 10–12. I have directed that every feasible step be taken by the Office of Economic Opportunity staff to attempt to carry out the recommendations of the Committee as rapidly as possible.

There is enclosed a report on the actions that have already been taken. We will continue to follow through on these matters both to correct the identified administrative deficiencies and to strengthen the operations of the Bellaire comprehensive health services project.

Sincerely,

DONALD RUMSFELD,
*Director.*

ACTIONS TAKEN ON RECOMMENDATIONS OF HOUSE REPORT NO. 91–523

Recommendation (1) The OEO should consider providing for the active participation in the comprehensive health services project in Belmont County of the greatest feasible number of the practicing physicians, hospitals, and private clinics in the target area. This consideration should involve the problem of providing a broader choice of physician, and whether this broader participation would not aid materially in solving the current problem of transporting enrollees.

Arrangements have been made by the OEO staff to further and assist discussions between the Medical Foundation of Bellaire and officers of the Belmont County Medical Society with the aim of increasing the number of local physicians actively participating in the OEO-assisted comprehensive health services project, in line with the objectives and standards of the Comprehensive Neighborhood Health Services Program Guidelines. An amendment to the existing work plan has been developed by the Medical Foundation to involve in the project additional physicians who are interested in contributing to this effort; this proposal has been discussed with Dr. Robert Lewis and Dr. Richard Phillips, President of the Medical Society. Staff of the Office of Health Affairs have met with representatives of both the Foundation and Society to encourage and support these local negotiations. Dr. Phillips is reported to have indicated on October 17, 1969 that preliminary agreement has been reached. The OEO staff will continue to offer its assistance in facilitating local discussions so as to extend the effectiveness of the health services available to poor families in need and to help conclude the long-standing community health dispute.

Recommendation (2) OEO should give consideration to making the Community Action Commission the grantee for the health project and whether this would not increase meaningful coordination and cooperation between and among all OEO-sponsored projects in the area, and with various local health resource agencies or groups as well.

The potential advantage of transferring the grant arrangements so that the Community Action Commission is the grantee for the health project is being considered as part of the planning for the new program year, scheduled to begin March 1, 1970. Actions along these lines need to be closely related to the negotiations currently underway between the various local medical groups, as discussed above under Recommendation (1).

Recommendation (3) OEO, in its administration of the project, should place strong emphasis on adherence to the requirements of the act, as well as to the guidelines, through constant oversight and consultation with grantees.

The staff of the Office of Health Affairs has increased its efforts to monitor and provide assistance to the Bellaire project. To supplement the continuing efforts of the staff of the OHA Comprehensive Health Services Division, the Acting Deputy Chief of the Office of Health Affairs has been appointed to help assist the development of the Bellaire project, especially the discussions between the local medical groups.

Recommendation (4) The outreach activities of the program, especially social services, health education, and home nursing services, should be closely coordinated or integrated by the Community Action Commission with other antipovery area projects to eliminate duplication and unnecessary expense.

The staff of the OHA Comprehensive Health Services Division has been reviewing with officials of the Medical Foundation of Bellaire the best ways of coordinating outreach activities of the project with other available local resources. Particular attention will be given this subject in planning for operations during Program Year C.

Recommendation (5) OEO poverty guidelines for determining eligibility for enrollment in a comprehensive health services project should be revised to define for grantees the meanings of the terms "farm" and "nonfarm", "income" and "family". Also the guidelines should be revised to specify the exceptions from the poverty line index which OEO considers appropriate such as for cases of "unusual medical expenses".

The OEO guidelines with respect to "farm" and "nonfarm", "income", "family" and "unusual medical expenses" are being reviewed with the aim of providing more effective definitions. It is intended to revise the Program Guidelines in the near future to deal with these issues and to reflect other changes indicated by operating experiences and new legislation. In order to facilitate the integration of the OEO Comprehensive Health Services Program with the Medicaid program, these definitions need to take into account the practices being followed in the administration of the State Plans under Title 19 of the Social Security Act.

Recommendation (6) To allay community friction, OEO should enforce its procedures for implementing the "wage comparability" requirements of the act to insure that the salaries and wages of project employees are, in all cases, equitably established and comparable to the wage structure and economic circumstances of the local community. In this regard, OEO should see that a comparability study is made of all the positions in the foundation's program, using all of the

area's five hospitals and private clinics for this purpose.

The staff of the Office of Health Affairs is working with the local grantee to plan and undertake a wage comparability study, including the area's hospitals and clinics.

As a result of the subcommittee recommendation, OEO internal auditors subsequently made an audit of the Medical Foundation of Bellaire. In a report dated October 31, 1969, the internal auditors questioned charges to the grant for the 6-month period ending December 31, 1969, totaling $36,009.38, because of the grantee's methods of distributing and assigning costs. Among the charges recommended for disallowance was $715.82, which had been charged to the OEO grant for food and gifts incident to a Christmas party held for project employees.

The OEO internal auditors' report also identified other areas, such as leasehold improvements, use of Government property, accountability for Government property, and participation of the indigent, which the OEO auditors believed were in need of further evaluation for compliance with OEO requirements.

This report, which, in effect, strongly supports the decision of the committee to make this investigation, is in the files of my subcommittee, room B–377, Rayburn House Office Building, and will be made available to Members who wish to read it there.

The report follows:

Subject: Report of Audit, The Medical Foundation of Bellaire, Bellaire, Ohio 43906, Grant No. OHIO–CG–8868, EOA Section 222(a)(4).

To: Thomas Bryant, M.D., Assistant Director Health Affairs Office.

OFFICE OF ECONOMIC OPPORTUNITY,
GREAT LAKES REGION,
*Chicago, Ill., October 31, 1969.*

Attached is a copy of our audit report of the Medical Foundation of Bellaire. Our audit was directed toward an evaluation of the grantee's system for allocating costs and to determine the propriety and equitability of that system. Also on a limited basis, we appraised compliance with OEO regulations, policy and grant conditions.

We invite your attention to our observations summarized in Part II particularly, that (1) we have questioned charges to the grant in the amount of $36,009.38 because of the grantee's method of distributing and assigning costs, (2) other areas, such as leasehold improvement; use of government property; accountability for government property; and participation and representation of the indigent are in need of evaluation for compliance by Health Affairs.

Also your attention is invited to Part VI of our report where we discuss: comparison of expenditures with services received; the consideration of a single rate for indirect medical costs; the need for guidance to the Citizens Health Program Advisory Council; the need for defining income eligibility and income levels; the problem of reimbursements to the grantee and the need for local coordination; and free medical care provided trustee members.

We will appreciate being advised by December 30, 1969 of the action you propose or initiate on the audit comments and recommendations.

Please let us know if you desire any further information.

JAMES H. ARD,
*Regional Auditor.*

[Grant No. OHIO–CG–8868]

OBSERVATIONS AND RECOMMENDATIONS FOR OEO: THE MEDICAL FOUNDATION OF BELLAIRE, BELLAIRE, OHIO

I. INTRODUCTION

At the request of Dr. Gary D. London, former project manager, Health Services, Community Action Program, OEO, we conducted an audit of The Medical Foundation of Bellaire during the period June 9 to June 23, 1969. The request for audit was the result of questions raised by the certified public accountant relating to the grantee's system of allocation of various expenses. An exit conference with the Foundation's Executive Director, Clinic Administrator, Business Manager and OEO Project Director was held on June 24, 1969.

The Medical Foundation of Bellaire received OEO grants totalling $1,514,991 as of June 24, 1969. A summary by program year follows:

| Program year: | |
|---|---|
| A. May 17, 1967 to June 30, 1968 | $404,480 |
| B. July 1, 1968 to February 28, 1969 | 439,493 |
| C. March 1, 1969 to February 28, 1970 | 671,018 |
| Total | 1,514,991 |

A detailed schedule of personnel contacted is appended hereto as Attachment A.

II. SUMMARY OF OBSERVATIONS

Our audit of the grantee's system for allocating costs to the OEO program disclosed areas of cost distribution which did not provide an equitable distribution of expenses. The cost distribution system is in need of revision to meet the requirements of OEO and the Foundation for distributing costs that are equitable to all programs.

As a result of our audit we are questioning charges to the grant, applicable to the first six months of program year B, (minimal charges applicable to prior program year), of $36,009.38, consisting both of direct and indirect charges that were: (1) allocated using a basis that was not equitable for distribution to the OEO program, (2) based on estimated time and material efforts, where justification was not sufficiently clear and, (3) expenses not appropriate and allowable under the grant.

In addition, the grantee has not: (1) submitted written approval for leasehold improvements, (2) adequately explained nonpayment for the use of government property by non-OEO programs, (3) accounted for government property in accordance with government regulations, (4) increased CHC–OEO representation on the Board of Trustees to desired level of representation.

The effect of the deficiencies was excessive charges to the grant for medical services; use of government property without compensation for its use; lack of control over government property; and the indigent do not have an active role in the administration of the program.

We discussed in general our preliminary observations with the grantee and he agreed in principle with our observations, which had not been refined at the time of our exit conference.

Part III of this report presents details of our observations, summarized above, and the related recommendations. These observations and recommendations are applicable to program year A 1/68–6/30/68; the remaining two months of program year B; and the current program year C.

III. STATEMENTS OF OBSERVATIONS AND RECOMMENDATIONS

*Background*

The Medical Foundation of Bellaire is a non-profit, tax exempt, community-based corporation established in October 1958. The Foundation in May 1959, took over the assets, at no cost, and the medical program from a group of physicians known as The Bellaire Medical Group.

The Medical Foundation operates three out-patient clinics in the State of Ohio for the group practice of medicine; a central clinic in the town of Bellaire and two smaller branch clinics, one in Harrisville, and one in Powhatan Point. The Harrisville Clinic was built in 1959, northwest of Bellaire to serve the community surrounding Belmont, Harrison, and Jefferson Counties. Also in 1959, the Foundation opened the Community Clinic of Powhatan Point, sixteen miles south of Bellaire to serve the population of southern Belmont County and Monroe County.

In 1963, the Foundation was granted exemption from Federal income taxes, as a community welfare corporation and operates under the incorporation code of Ohio as a non-profit corporation relating to health and medical matters. Under its legal structure, no earnings may be distributed except in furtherance of the purposes of the corporation, and upon dissolution all the net assets must go to a non-profit educational organization for medical education or research.

The Foundation owns or leases all facilities, provides all equipment and supplies, and employs all non-physician staff. The Foundation has an agreement with the aforementioned Bellaire Medical Group, a professional corporation of physicians, to provide the medical services.

The purpose of the Foundation is to provide out-patient preventive, diagnostic, and treatment services to low-income families. The program provides health services to three main groupings of patients: (1) Beneficiaries of the United Mine Workers Welfare and Retirement Fund, (2) Members of the low-income families enrolled in the OEO funded Community Health Centers Program, and (3) Individual citizens in the community, who are not enrolled in the above two programs, and pay for services on a fee-for-service basis.

The business and affairs of the Medical Foundation are managed by a Board of Trustees. The Board of Trustees consists of not more than twenty-five members.

There are two classes of trustees: (1) Trustees-at-large are elected by subscribers to the Foundation's health plans to be representative of the general community (The Foundation is a membership corporation and all subscribers to the Foundation's health plans automatically are members.); and (2) Trustees representing each organization participating in the Foundation's health plans.

The trustees select and appoint an administrator, who is subject to the approval of the Medical Group, to conduct the administration of the Foundation.

The trustees also appoint a medical advisory committee consisting of three or more physicians who may or may not be trustees or members. No member of the medical advisory committee can be a member of the lessee Medical Group, with the exception of the Group Medical Director. It is the responsibility of the committee to advise and make recommendations to the trustees on matters of a medical nature.

The appointment of the Medical Director, who is a member of and selected by the Medical Group, is subject to the approval of the trustees.

The Bellaire Medical Group was started in 1952 by four physicians who came to the Bellaire area to establish a group practice. The physicians agreed in 1952, to hold the assets and facilities of the program in trust until such time as the community could organize a nonprofit corporation. This was accomplished in October 1958, with the incorporation of the Bellaire Medical Foundation.

The Bellaire Medical Group is a separate legal entity. It is not viewed as a non-profit organization from a legal and tax viewpoint,

although in concept, intent and practice it operates as such. The physicians are compensated by salary in accordance with an agreed salary schedule based on professional training and experience.

In accordance with an agreement between the Medical Group and The Bellaire Foundation, all income earned by the group in excess of salary and operating costs, accrue to the Foundation in the form of rent to provide for plant and equipment maintenance and expansion.

The medical staff of the group has grown from four members in 1952, to fifteen in 1969. Thirteen of these physicians are full-time and two are part-time.

The Community Health Center's program (CHC–OEO) began program year A on May 17, 1967; however, clinical services were not available under the program until January, 1968. During this period the operation of the program consisted of renovating and acquiring facilities and staff to implement the program and to enroll OEO patients.

The method of charging expenses to CHC–OEO for the first six months of the grant therefore was necessarily different from that of the second six months of program year A. Consequently, the amounts chargeable to CHC–OEO for the first six months consisted mainly of direct expenses and Category II, clinical services allocation, was not applicable as a formula for allocating expenses. Once the program became operative for clinical patients the three categories of costs, discussed in subsequent paragraphs, were applicable.

*A. Cost allocation, general*

The Medical Foundation operated two programs before the inception of the OEO Community Health Centers program (CHC–OEO). The two programs were: (1) A prepayment plan with the United Mine Workers of America Welfare and Retirement Fund (UMW), which is supplemental by a local prepayment plan for miners, (2) A fee-for-service practice available to the general community. People were served who were able to pay for their medical services.

The Foundation charges the United Mine Workers Welfare and Retirement Fund for medical services under the prepayment plan on the basis of a negotiated amount for the cost of operating the UMW medical program. The range of benefits provided under the UMW plan is specified in the agreement between the Foundation and the UMW. In order to supplement the basic plan and provide a wider range of benefits, a check-off plan is available to the miners, whereby an amount is deducted from the miners' check and paid by his employer, or paid direct by the miner to the Foundation for the additional medical coverage.

The fee-for-service plan is available to persons who are not enrolled in any of the Foundation's programs, and wish to use the clinics' facilities. Charges to fee-for-service patients are based on the published fee schedule of the Medical Group (discussed in a subsequent paragraph).

The CHC–OEO program is for comprehensive health services covering day-to-day medical care, a prescription drug program, outreach services, and other services outside the clinic. The outreach and outside services include the use of social workers, public health nurses, health aide personnel and outside referrals.

The system for allocating costs to the CHC–OEO program divides costs into three categories:

Category I costs are those costs incurred solely for the CHC–OEO program and are charged direct to the grant. These expenses are related directly to drugs, outreach, and outside services.

Category II costs are costs that cannot be identified as belonging solely to CHC–OEO. They are costs that are incurred for clinical patient service by program participants and are allocated to each program in accordance with that program's percentage of total services.

Records are maintained that show the dollar value of services provided to patients of each program, with services broken down by service departments. The dollar value of services is taken from the published fee schedule of the Medical Group. The scale of dollar values derived from the fee schedule is applied to all programs and patients for clinical medical services.

The dollar values taken from the fee schedule are hereinafter referred to as "Billings". The term "Gross Billings" as used herein refers to billings before adjustment to "Net Billings," which is arrived at by deducting allowances for professional discounts, charitable and community services and bad debts of the clinic. These billings are not the actual charges to OEO, but the basis used to develop the percent of service rendered each program.

The expenses of each clinic service department is allocated to each program in accordance with that program's percent of service in that department as developed from net billings. The service departments are:

(1) Doctors' Clinic Services.
(2) Doctors' Hospital Services.
(3) Treatment (nursing and injections).
(4) Laboratory.
(5) X-Ray.
(6) Pharmacy.

Other or overhead expenses are allocated to each program in accordance with that program's percentage of overall services as measured by total net billings.

Category III expenses are allocated to CHC–OEO in proportion to the estimated time and material used in the administration of the program. These expenses are salaries for administrative and accounting efforts, space occupied by administrative and accounting personnel and a special allocation for telephone expenses. The expenses are allocated to CHC–OEO based on the assumption that a greater portion of time and material is spent on the CHC–OEO program than is accounted for in the Category II allocation previously discussed.

An estimated percentage of time and material expenses are charged direct to the grant and the remaining expenses are included with Category II expenses to be allocated in accordance with the percentage developed for other expenses (see paragraph #1, above).

The following costs by category were charged to the OEO grant for the period July 1, through December 31, 1968:

| | |
|---|---|
| Category I | $177,064.16 |
| Category II | 171,023.12 |
| Category III | 11,136.21 |
| Total | 359,223.49 |

Our review disclosed the grantee's allocation of Category II and III expenses to be inequitable in the following respects for the last six months of calendar year 1968:

Category II. Expense Allocation

1. We do not consider acceptable costs of $6,119.85 allocated to OEO during the period 7/1–12/31/68, using net billings as a base to distribute Category II expenses.

The grantee reduces gross billings to net billings by subtracting allowances for professional discounts, charitable and community service and bad debts of the clinic.

The aforementioned allowances are applicable to the fee-for-service program which is totally unrelated to the CHC–OEO program. As we do not share in any of the fee-for-service income, which is received entirely by the Medical Group, we do not consider the allowances to be proper for use in making allocations to the grant.

Under the system used by the Foundation, total billings are reduced by the allowances, however, OEO billings are not reduced by the same allowances. Since OEO cost allocation is based on a ratio of OEO billings to total billings, the effect has been that the cost to OEO is increased as the total billings are decreased.

2. The grantee allocated to CHC–OEO injection costs of $2,985.67 and pharmacy supply costs of $1,083.43, at the same percent as was applicable for CHC–OEO drug usage. Of the foregoing amounts, we do not consider appropriate injection and pharmacy supply costs of $1,845.69 and $669.76 respectively, because injections and pharmacy supplies do not have a direct relationship to drug usage at either cost, or at cost plus a mark-up as used by the grantee.

The cost of pharmacy supplies and injections are allocated to CHC–OEO in the same ratio as CHC–OEO drug usage bear to total drug usage. The rate of usage computed for CHC–OEO was 74.80%. Usage cost (arrived at by taking weekly inventories), is the cost of drugs used during the period plus a 100% mark-up. It is this price (cost plus a mark-up) that is used to allocate injections and pharmacy supplies. The actual cost of drugs is not allocated but charged direct to the patient or program user.

The grantee could not adequately justify his criteria for applying the mark-up to drug costs. Further, we do not consider the base used (drug usage) or the 74.80% rate applied to pharmacy supply and injection expenses to be proper as the service performed has no relation to drug usage or price.

We therefore recomputed the charges using a 28.56% rate based on gross billings for doctors' clinic fees. We consider a rate based on doctors' clinic fees as a more equitable method of allocating injections and pharmacy supply costs. The effect of basing pharmacy supplies and injection expenses on drug usage was to inequitably distribute costs to CHC–OEO.

3. The grantee allocated nursing salaries of $15,445.09 to CHC–OEO (amount after our adjustment of distribution base to gross billings). We do not consider costs of $3,564.89 as appropriate as we do not consider the grantee's method of cost distribution, doctor's clinic fees plus drug useage costs, to be equitable.

Nursing salaries and services bear little, if any, relationship to drug usage (previously discussed). We propose a distribution using doctors' clinic fees as being closer related to salaries and services and as a more equitable basis of allocating expenses. The acceptable amount, based on our proposal, is $11,880.20.

4. Nursing supply costs of $3,260.83 (after allocation base was adjusted to gross billings previously discussed) were allocated to OEO based on doctors' clinic fees and doctors' hospital fees. We do not consider acceptable costs of $186.24, because we fail to see the relationship between doctors' *hospital* fees and *clinical* nursing supplies.

We consider a distribution using doctors' clinic fees as a more equitable basis of allocating *clinical* nursing supplies. We consider the amount of $3,074.59 to be acceptable using the method discussed above.

5. Expenses of the Foundation, which are not include in the service departments, are classified as "other expenses" (previously mentioned). They are allocated to each program in accordance with that program's percent of total net billing. OEO received other expense charges of $45,835.27 (after our adjustment of the allocation based from net to gross). Of this amount, we do not consider $4,447.24 as charges distributed on an equitable basis.

The method used by the grantee includes the drug usage costs and mark-up discussed under injections and pharmacy supply costs. The usage cost of drugs should be removed from total gross billings before allocations are made of other expenses, since the usage cost of drugs has the effect of improperly increasing CHC–OEO costs as it has no relationship to the types of costs under other expenses.

6. The grantee allocated $65,642.63 to OEO for physician salaries and other expenses of

the Bellaire Medical Group, based on net billings for doctors' clinic and hospital services. Of the amount allocated, we do not consider the amount of $6,484.19 to be acceptable because the method of distribution is not considered equitable and has the effect of overcharging the grant.

We propose a distribution using gross billings for doctors' clinic and hospital services as a better method of allocating salaries and expenses of the Medical Group. Net billings basis of allocation has the effect of improperly increasing the CHC–OEO program costs.

We consider costs allocation of $59,158.44 as a proper amount of cost for physician salaries chargeable to CHC–OEO for the six month period ending December 31, 1968.

In summary, we question the method of allocating Category II costs to OEO in the following amounts, during the period July 1 through December 31, 1968:

| | |
|---|---|
| Allowances | $6,119.85 |
| Injections | 1,845.69 |
| Pharmacy supplies | 669.76 |
| Nursing salaries | 3,564.89 |
| Nursing supplies | 186.24 |
| Other expenses (drug usage costs) | 4,447.24 |
| Medical group | 6,484.19 |
| Total costs questioned | 23,317.86 |

Recommendations

We recommend:

1. That Health Affairs disallow $23,317.86 of Category II costs for the six month period ending December 31, 1968.

2. That Health Affairs advise the grantee to revise its method of allocating Category II costs whereby charges to OEO for clinical services will approximate cost for services provided. This can be accomplished by (a) eliminating the allowances for professional discounts, charitable and community service and bad debts of the clinic from the base for allocating costs; (b) allocating injections and pharmacy supply costs based on gross doctors' clinic billings; (c) removing the usage cost of drugs from the base used in distributing nursing salaries; (d) using as a base, gross doctors' clinic billings to allocate nursing supply costs; (e) removing the usage cost of drugs from the base before allocating other expenses; (f) using gross billings, instead of net billings, to allocate expenses of the Bellaire Medical Group.

3. That Health Affairs advise the grantee to make appropriate adjustments to Category II cost allocations, based on our recommended methods of allocations, for program year A; the unaudited two months, January and February 1969, of program year B; and the current program year C.

In addition to Category II costs, questioned above, we are questioning other costs in Sections B through J which are applicable to Category II, other expenses. A summary of total costs questioned is shown as Attachment B.

Category III. Expense Allocation

We found that the grantee had no precise basis for estimating administrative and accounting efforts, space occupied by administrative and accounting personnel and the special allocation for telephone charges. We question $8,290.05 of $11,136.21 of Category III expenses allocated to the CHC–OEO program.

Of the questioned amount, $7,390.05 was for administrative and accounting salaries based on an estimate that 20% or one day of each week was devoted to the OEO program. Therefore, 20% of these salaries was charged direct to the grant and the remaining 80% went into other expenses of Category II costs to be allocated in accordance with percentage computed for other expenses.

Space costs of $900.00 was charged to the grant for occupancy of administrative and accounting functions at the Bellaire Clinic. The space costs were based on 5% of the normal occupancy costs.

The grantee could not firmly justify the estimated 20% for administrative and accounting salaries, or 5% for occupancy costs, bases of allocation. The Foundation in a letter dated November 5, 1968, to Health Services, attempted to explain the basis for estimating Category III expenses. The Foundation could not give a precise basis nor did it support its position with records of any type.

Since we found no support that showed any special efforts for the CHC–OEO program from general Foundation programs, we conclude that a better and more precise method should be found to substantiate these charges to the grant.

Recommendations

We recommend:

That Health Affairs advise the grantee to develop and maintain a system that will be an equitable basis for determining Category III charges. That charges of $8,290.05 be disallowed until the grantee can satisfactorily present support or more adequately justify the charges.

More specifically, Health Affairs should advise the grantee to:

1. Develop and maintain records, such as time cards or time sheets for administrative and accounting time, to support the special efforts devoted to the CHC–OEO program.

2. Determine precise space costs based on actual occupancy and use. Thereafter review periodically actual occupancy to support and justify charges made to the grant.

3. Allocate any remaining costs in accordance with the method used for allocating other expenses under Category II.

*B. Travel allowance*

The Foundation's executive director receives a $65.00 monthly travel allowance in addition to reimbursements for local and out of town travel. OEO was allocated a portion of the monthly travel allowance, which had the effect of assigning improper charges to the grant. OEO was charged $134.55 during the last six months of calendar year 1968 as its share of the director's travel allowance.

The allowance of $65.00 per month for travel, is considered improper as it is the policy of the Government to pay for actual costs incurred on a reimbursable basis in accordance with Standardized Government Travel Regulations.

Recommendations

We recommend:

1. That the charge to OEO of $134.55 be disallowed as an expense not appropriate to the grant; and that the cost allocation to CHC–OEO, based on the $65.00 per month allowance for travel by the executive director, be discontinued.

2. That the grantee be instructed to comply with or not exceed Standardized Government Travel Regulations before allocating Travel costs to CHC–OEO.

*C. Cost of food*

Project funds are being expended for the cost of food for employees not in a travel status. The expense is being charged to CHC–OEO on an indirect basis for Foundation employees and as a direct charge for CHC–OEO employees.

During the last six months of calendar year 1968, food costs of $221.45 were allocated to CHC–OEO as an indirect charge and $65.57 as a direct charge.

The cost of food for employees or officials not in a travel status is not considered an allowable expense of the grant.

Recommendation

We recommend that the charge to OEO of $287.02 for cost of food be disallowed.

*D. Special employee events*

The Foundation holds a Christmas party for CHC–OEO employees, Foundation employees, and Foundation trustees during the Christmas season. Food and gifts are purchased and OEO is allocated a portion of the expense as an indirect charge. The amount allocated to OEO for 1968 was $715.82.

Expenditures for the food and gifts are not considered as appropriate or allowable expenses of the grant.

Recommendation

We recommend that the charge to OEO of $715.82 for the 1968 Christmas party be disallowed, and the practice of expanding grant funds for parties and similar employee events be discontinued.

*E. Fringe benefits*

The Medical Foundation in its budget proposal lists as fringe benefits the following categories of expense: Life Insurance, Hospital Insurance, free Medical Care, Trust Funds, and Payroll Taxes.

The CPA for the Foundation in his report for the last six months of 1968, stated that payroll taxes and fringe benefits were charged at 27.48%, the ratio of CHC–OEO payroll to total Foundation payroll. However, an examination of the CPA's workpapers revealed only hospital insurance and payroll taxes were charged at 27.48%; and the other fringe benefits: life insurance, employee medical care, and trust funds, were treated as other expense (not in accordance with the budget) and allocated to OEO at the applicable 34.50% rate.

The Foundation paid $28,296.51 for fringe benefits. CHC–OEO was allocated charges for fringe benefits of $8,834.04 using percents of 27.48 and 34.50. Fringe benefits should include those items approved in the budget proposal and a uniform rate applied. This was not done and the effect was that the grant was charged more than its proper share for fringe benefits.

A charge to the grant for all fringe benefits, as reclassified in accordance with the budget, at the rate of 27.48% would be $7,775.88 for the six month period. This would represent a decrease in expense to OEO of $1,058.16.

Recommendations

We recommend:

1. That the overpayment of $1,058.16 for fringe benefits be disallowed and the appropriate adjustments made.

2. That the grantee be advised as to the proper classification of fringe benefit items.

3. That Health Affairs advise the grantee that the fringe benefit rate be applied uniformly to all fringe benefit classifications.

*F. Audit services*

The CPA firm of John Wiseman & Company audits the Foundation's books. During calendar year 1968, the OEO grant was charged $3,101.00 for audit fees. They consisted of $2,364.00 direct charges, and $737.00 of indirect charges allocated in accordance with Category II, other expenses.

The CPA has stated that he maintains a record of actual time spent on CHC–OEO audits and that all of his time was charged direct to the grant. Because indirect audit charges were allocated to CHC–OEO, in addition to the mentioned direct charges, CHC–OEO was charged more than its equitable share of audit fees. The direct charges represent the only proper expense to the grant. The allocated amount is not an appropriate charge and is applicable entirely to the Medical Foundation and Medical Group.

Discussions with the CPA lent support to our conclusion that OEO was inadvertently charged $737.00 more than its share of audit fees.

Recommendation

We recommend that Health Affairs disallow $737.00 of auditing fees as not appropriate to the grant.

*G. Interest and contribution expenses*

The grant was charged $508.44 for interest expense and $142.26 for contribution expense. The interest charges represent expenses on loans and mortgages of the Medical Foundation. Contribution charges were the result of

donations to various charities and non-profit private organizations.

Interest expense on borrowed capital and contributions for any purpose were not allowable grant costs.

Recommendations

We recommend:

1. That Health Affairs make a determination and advise the grantee as to future allowability of interest and contribution expenses.

2. That unless satisfactory justification is provided, Health Affairs disallow the charges for interest and contribution expenses of $508.44 and $142.26, respectively, as not appropriate to the grant.

*H. Space cost and rentals*

For the six month period ending December 31, 1968, OEO was charged $6,452.82 for space: $3,010.65 for space costs and rentals, and $3,442.17 for depreciation of Foundation owned property and leasehold improvements. The charges for each location was as follows:

| | |
|---|---|
| Rental—Jefferson Street facility | $1,500.00 |
| Space cost—Bellaire Clinic | 1,510.65 |
| Depreciation, leasehold improvement—Bellaire Clinic | 2,355.62 |
| Depreciation—Harrisville Clinic | 504.42 |
| Depreciation—Powhatan Point Clinic | 582.13 |
| Total | 6,452,82 |

The space cost of $1,510.65 at the Bellaire Clinic was arrived at by charging $150 per month or $900 for the six month period for space used in administrative and accounting functions (Category III costs) and the remaining costs of $610.65 was for general space occupancy (Category II, other expenses).

Space costs at the Bellaire Clinic are estimated at 5% occupancy and includes 5% of the normal occupany costs, such as rent, heat, light, water and repairs and maintenance. The monthly estimate of space costs was $3,000.00, of which $295.00 was for rent and the remaining $2,705.00 for the above occupancy costs. A monthly charge of $150.00 or 5% of the estimated expenses was made to CHC–OEO, questioned on page 10.

Our review disclosed that the grant received a duplication of cost because the grantee did not remove the monthly charge of $150.00 from the applicable expense items before making allocation under Category II, other expenses, for general space occupancy. The duplicate charge was $310.50 for the six month period. The duplicate charge was arrived at as follows: six months space costs at $150 per month, or $900, allocated at the rate of 34.5% which amounted to $310.50.

Recommendation

We recommend that Health Affairs disallow total charges of $310.50 as excessive to the grant.

*I. Telephone charges*

The CHC–OEO program is being charged both direct and indirect for telephone expenses incurred by the grantee.

Prior to the inception of the CHC–OEO program, the grantee's monthly telephone equipment charge, was $215.00. The equipment was considered adequate for the Foundation's own needs, but was loaded to capacity. With the undertaking of the OEO program, additional equipment was installed to handle the increase in volume of business. Included in the new equipment was a larger and more expensive switching mechanism centrally located in the Bellaire Clinic, which also serves the CHC–OEO facility on Jefferson Street. Equipment charges rose to $589.00 and the additional cost of $374.00 is being charged monthly to OEO as a direct expense, along with an estimated $100.00 for long distance and toll calls.

After the above total of $474.00 ($374 +$100) is removed from the clinic's monthly telephone billing, the remaining telephone expenses are allocated to CHC–OEO. Included in the remaining expense to be allocated is the $215.00 monthly equipment charge which the Foundation was fully utilizing prior to the CHC–OEO program. The above amount should be removed from the pool before allocation of the remaining telephone charges are made to the grant.

For the last six months of calendar year 1968, the Foundation's telephone expense was $11,783.58, of which OEO was charged $6,069.37. By removing the equipment charge of $215.00 from telephone expenses before allocation, the OEO portion would be decreased by $445.05.

Recommendation

We recommend that Health Affairs disallow $445.05 as excessive charges to the grant, unless the grantee can show that the grant receives a tangible benefit from the original telephone equipment owned by the Foundation.

*J. Ohio sales tax*

OEO paid for the purchase and installation of a Continental Mobile Unit. Included in the charges to OEO was Ohio sales tax of $62.90, paid by grantee check number 4125.

The grantee admitted the charge of sales tax to the Government was in error and stated that the Foundation would try to recover the above amount.

Recommendation

We recommend that the charge to OEO of $62.90 for Ohio sales tax be disallowed as an expense not appropriate to the grant.

*K. Leasehold improvement*

The Medical Foundation during program years A and B made leasehold improvements to its existing facilities at the Bellaire Clinic. The cost of these improvements was in excess of $23,000.00, paid for with Foundation funds, and are being depreciated over a three year period. The additional facilities are used by all program users.

OEO is paying a "use" or "depreciation charge" allocated in accordance with the program's percent of all services.

The charge to OEO for the first six months of calendar year 1968 was $268.07 and the last six months $2,355.62. The larger amount for the last period was due to an acceleration of the rate to enable the grantee to write off the improvement over a three year period.

OEO reserves the right of approval (or disapproval) prior to the granting of a contract for additions, renovations, and improvements. No written evidence of approval by OEO was presented by the grantee.

Recommendation

We recommend that Health Affairs require the grantee to present in writing for approval any contract for leasehold improvements.

*L. Furniture and equipment usage*

The Medical Foundation expanded its facilities at the Bellaire Clinic by purchasing, with grant funds and OEO approval, a mobile unit and furniture and equipment. This addition to existing facilities was considered primarily for OEO use. However, it is being used by all participants enrolled in the health programs. OEO receives no compensation for its use by non-OEO enrollees, which include the fee for service patients.

The Foundation contends that since the mobile unit was primarily for and because of the OEO program a use charge should not be charged non-OEO programs.

The amount of use by non-OEO programs was not determined, however, it was agreed to by the Foundation that OEO is not the sole recipient of its service.

Therefore, we conclude that OEO by paying a use or depreciation charge for the leasehold improvements, discussed in Section K, should likewise be entitled to compensation by the other programs for the use of the mobile unit and furnishings. Its use without consideration for wear and tear is not equitable to OEO.

Recommendation

We recommend that Health Affairs require the grantee to determine, explain and support the percentage of use by non-OEO programs, and Health Affairs negotiate an amount as compensation which is commensurate with use.

*M. Property and supply management*

CAP Grantee Financial Policy and Procedures Guide, Volume V, outlines the responsibility of the grantee to record, tag, and inventory nonexpendable personal property.

The Foundation has purchased furniture and equipment valued at $13,702.43 during program years A and B. The Foundation has not complied with the requirements of the above CAP Guide for control of these items. Property cards have been initiated but are not complete. Individual items are not tagged with the grant number. A complete physical inventory has never been conducted or a complete listing submitted prior to refunding of subsequent actions. Currently, government property is mixed with that of the grantee and positive identification is difficult.

Recommendations

We recommend:

1. That Health Affairs instruct the grantee to complete the property cards which should include as a minimum the basic requirements illustrated in CAP Guide, Volume V.

2. That Health Affairs advise the grantee of the requirement of periodic inventories.

*N. Program income*

A special condition to the grant states that program income must be kept in a special account and appropriate accounting records maintained. This income should be used to meet current operating expenses of the programs before grant funds are used. Program income for the grantee includes, but is not limited to, reimbursements from local, state, and other Federal health and welfare agencies, and private health insurance.

The Foundation received program income of $16,658.00 during program year B and another $9,348.00 was listed as outstanding receivables. A separate bank deposit is made of program income, but a special account and appropriate accounting records are not maintained. The grantee deposits these funds in the regular Foundation bank account.

With the grantee's method of accounting for program income, it is not possible to determine whether these funds are being used to meet current expenses before the use of grant funds.

Recommendation

We recommend that Health Affairs advise the grantee to deposit program income in a special account and establish accounting records that will show the expenses charged against this account.

*O. Foundation board of trustees*

The Board of Trustees are the policy making body of the Bellaire Medical Foundation. The Board consists of twenty-five members, fifteen to seventeen members at large, elected by the membership to be representative of the community and eight to ten members from the United Mine Workers (UMW).

In a draft report showing the dates of visit as September 5–6, 1968, prepared by Program Planning & Evaluation, CAP Health Service Office, it was pointed out that the Medical Foundation Board of Trustees lacked the desirable representation from the CHC–OEO program on the Board. The grant has been operative for two years and has only recently elected one member from the Citizens Health Program Advisory Council to the Board.

The Executive Director of the Medical Foundation proposed that the Board of Trustees consider increasing the CHC–OEO representation to one ninth of the membership, which the Director considered to technically meet OEO requirements. We cannot

and any criteria under which the proposal could technically meet OEO requirements.

The Director discussed the proposal with the Board membership, but five months later no action had been taken to increase CHC–OEO representation beyond the one member.

The Medical Foundation acknowledges that the CHC–OEO program constitutes approximately one-third of the Foundation's medical service, and we found that CHC–OEO absorbs approximately 63%, before adjustments, of the Foundation's cost.

Therefore, we do not consider the one member elected to the Board of Trustees as being adequate representation in compliance with OEO requirements, nor do we consider the proposed increase of CHC–OEO representation to one-ninth as being in a reasonable proportion to Foundation costs absorbed by OEO.

Recommendations

We recommend:

1. That Health Affairs make a determination of the feasibility of increasing CHC–OEO representation on the Foundation Board of Trustees in accordance with OEO guidelines.

2. That Health Affairs immediately advise the grantee of its decision as sufficient vacancies now exist on the Board to increase CHC–OEO representation.

IV. AUDIT COUNSEL

We will be pleased to provide auditing counsel in connection with any matter discussed in this report.

V. SCOPE OF AUDIT

The audit was made for the purpose of evaluating the system of cost allocation used by the Bellaire Medical Foundation to arrive at the amounts chargeable to the grant for comprehensive health services, to determine the propriety and equitability of that system, to ascertain the degree and effectiveness of the representation and participation by the indigent; and on a limited basis, assessed compliance with OEO regulations, policy and grant conditions.

Our audit of cost allocation covered the six month period. July 1, 1968 through December 31, 1968. We limited our coverage to this period as it was the latest period where actual cost had been established by the C.P.A.

In making our evaluation, we reviewed basic grant documents, the grantee's accounting records, financial and audit reports, evaluations and management reports, and other files and records relating to the grantee's activities.

## ADDRESS OF COMMERCE SECRETARY ON CONSUMERISM

(Mr. ERLENBORN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ERLENBORN. Mr. Speaker, on October 30, the President sent Congress a package of proposals designed to protect the rights of consumers in the marketplace. Last week, Commerce Secretary Maurice H. Stans told the members of the National Marketing Advisory Committee of the administration's commitment to the American consumer, and I believe his address will be of interest to the Members of this House as well:

ADDRESS BY THE HONORABLE MAURICE H. STANS, U.S. SECRETARY OF COMMERCE, BEFORE THE NATIONAL MARKETING ADVISORY COMMITTEE, NATIONAL MUSEUM OF HISTORY AND TECHNOLOGY, WASHINGTON, D.C., DECEMBER 4, 1969

INTRODUCTION

Mr. Cleaves has already pointed out that this is an unusual and highly significant meeting of the National Marketing Advisory Committee. I am particularly pleased that in addition to more than 40 members of NMAC who are here for tomorrow's working session with the Department of Commerce, we also have with us tonight representatives of the White House, other Federal agencies, key Congressmen and Senators, and the press. You all are vitally interested in our conference subject—Marketing and Consumer Interests.

I have really been looking forward to this opportunity to exchange views on consumer matters with this top group of marketing executives, which represents both manufacturers and retailers. Without the vital link provided by marketing, producers and consumers could not deal with each other effectively and goods would pile up at our factories. There would be many products ill-suited to customer needs and conversely, important wants would go unrecognized and unfilled. Our whole society would be a vastly different place if it were not for the American marketing system which it is your job to foster and advance.

First, I want to say how much we in the Department of Commerce value our relationship with the NMAC. You have provided us with expert assistance and wise counsel in the past on a wide range of marketing problems. We sincerely appreciate that help. We hope that this particular conference will afford you, the marketing leaders of the country, and those of us in government, with a unique forum to talk and plan together on how to best meet the growing consumer needs of our most important constituents—the American public.

BUSINESS-CONSUMER RELATIONS

A prime secret of the success of the U.S. competitive enterprise system has been the great freedom of interaction between buyers and sellers. That freedom has generated the most dynamic and productive economic system in the world. We need to preserve that system, and build upon its effectiveness.

But that does not mean that there are no problems in the marketplace.

In our complex technological society today, the individual buyer often feels isolated and helpless in what he regards as an increasingly impersonal environment. In fact, this may be the key consumer problem. We all know that purchasing choices are very personal decisions. Even when such decisions are based on factual comparisons and on adequate information, the final decision is a matter of individual judgment. The mass marketplace of today arouses a natural sense of frustration despite its very real contributions to our ever higher material standards of living. When sufficient knowledge on which to base our purchases is missing—and when product dissatisfaction results—the consumer's sense of frustration can reach great heights. Congressmen, Senators and the President himself are no longer surprised at receiving angry letters of consumer complaint with calls for Government action.

Without question the consumer is justified in complaining about products that do not work, warranties that are meaningless, services that do not serve, repairs that cost too much, and workmanship that is shoddy. Even though perhaps only 1% of business is intentionally responsible for these abuses, they reflect upon all.

The consumer has been heard on these matters. Business has recently been placing much greater emphasis on voluntary consumer protection programs. But the efforts to date have left the consumer still not satisfied. One thing should be said in defense of the business community. Without doubt companies have been afraid to meet, to discuss such matters as product standards, sizes and similar subject for fear of anti-trust action. Certainly we must remove this threat in the interest of the consumer to pave the way for voluntary business action.

The extent to which legislation becomes a substitute for free operation of the marketplace in the future will depend on how responsibly we all act—businessmen, those of us in all parts of Government, and even the consumer organizations themselves. But whether we take the legislative route or the route of voluntary action or some blend of both, we need to understand what it is that we really are seeking to protect.

BASIC CONSUMER RIGHTS

These are some of the basic rights of the consumer which I believe we must all acknowledge.

First, the consumer certainly must have protection from fraud, deceit, and misrepresentation.

Second, he must have access to adequate information to make an intelligent choice among products and services.

Third, he must be able to rely on products working as represented.

Fourth, he must have the right to expect

that his health and safety will not be endangered by his purchases.

Fifth, our marketing system must provide him with a wide range of choice to meet individual tastes and preferences.

THE CHALLENGE

It is this last consumer right which reflects the great strength of our current marketing system and yet causes the most difficulty in assuring the other four rights.

As you gentlemen well know, meeting this challenge is easier said than done. The government could, for example, legislate standards for a whole range of "perfect" products. What would be the point, however, if it forced prices so high that the great majority of consumers wouldn't or couldn't buy the goods? There have been attempts to bring out such products. You may have heard about the electric toaster that was guaranteed not to give an electric shook no matter how badly it was misused. And it really worked. That toaster lived up to its billing. The only problem was that it took twice as long to make a piece of toast and cost 20% extra. You all can guess what happened. Customers weren't willing to pay more and wait longer for their toast just to have that extra protection.

More simply, not every automobile driver wants a Cadillac. His needs may be less and he wants to pay less. He should have that right of choice.

Also, it is pretty clear that there is no "average consumer." At least my wife doesn't think she's average in this regard, and I'll bet yours doesn't think she is either. For each individual consumer, product life and performance legitimately have different meanings and value. The fact is that product qualities which are important to some individuals for some uses are not important to others. To restate, the challenge is how to maintain and preserve a diversity in the options available to the consumer while preventing abuses.

BUYER'S BILL OF RIGHTS

From the very beginning of this Administration, President Nixon asked all of us who have consumer responsibilities to give top priority to developing a more constructive consumer program. On October 30th he sent to Congress a "Buyer's Bill of Rights" that will give consumers new protection and at the same time build on the inherent strengths of the American marketing system. The President's program represents an Administration-wide effort focused through Mrs. Knauer, his Special Assistant for Consumer Affairs, and drawing in the Federal Trade Commission, the Departments of Justice, Commerce, and Health, Education and Welfare, and the Office of Economic Opportunity. The President called for:

A New Office of Consumer Affairs in the White House;

Expanded powers for the Federal Trade Commission;

A new Division of Consumers Protection in the Department of Justice;

A new consumer protection law with provisions for consumer class action;

A new consumer products testing law;

A newly activated commission on consumer finance;

Expanded Government consumer education activities;

Increased Federal attention to product safety;

Stronger enforcement of food and drug laws;

Expansion of consumer activities in the Office of Economic Opportunity;

Greater Federal efforts to strengthen State and local consumer programs; and,

A new look at warranties and guaranties and possible legislative remedies.

These proposals stand as the most significant set of Presidential recommendations ever made on consumer interests. Let me emphasize that in this program there is ample room for constructive, voluntary initiatives by business.

The President's consumer program has been hailed as a very significant and positive step forward. There are other views being put forward too. There are those who would resist change and attempt to keep the status quo. There are others who seem to believe that the answer to consumer problems is to have the Government go much further in master-minding the marketplace. Some of their proposals seem to focus only on the very small percentage of present shortcomings while failing to retain the benefits of legitimate market competition.

There is, in my opinion, a middle ground solution. If the American marketplace is to be made to serve the consumer better. We need active involvement throughout the entire marketing community. We want you to use your knowledge and voices in business and trade associations and in the universities where the businessmen and consumers of the future are forming their attitudes which will shape our world of tomorrow.

You men are the top business communicators of America. We are counting on you to make yourselves heard as never before, particularly in the area of voluntary improvements.

VOLUNTARY ACTION

How far can we go and what do we really mean by voluntary action? Let's talk some specifics. We can't expect the impossible. No amount of voluntary action (or legislation either, for that matter) to reduce package size proliferation can give us both standard sizes *and* standard weight of contents. An ounce of perfume and an ounce of cornflakes weigh the same, but they can't be packaged in the same size contaners. We are dealing here with the laws of physics rather than the courts. Lawmakers can't change the laws of physics.

On the other hand, this can go too far. Will we really serve the consumer by standardizing the size and shape of perfume bottles?

But we in Commerce have had some good experiences with voluntary actions which have taken place in a framework of law. The National Bureau of Standards wrote the performance specifications for refrigerator door latches to prevent children from being entrapped. Voluntary innovative action by private manufacturers produced the magnetic door latch to meet the need. Working together, business and Government conceived a better product and ended needless deaths.

Do we always need a framework of law to have effective voluntary action? Let's look at another case. For a year we have been working, along with the President's Special Assistant for Consumer Affairs and others, to guide the major household appliance industry towards voluntary improvements in warranties, guaranties, and service. Frankly, it has been complex and difficult going. But we do see significant progress. Their warranties and guaranties *are* now simpler, easier to read and understand. Agreements *have* been reached on parts availability, the meaning of "authorized" and "factory trained" service, and the location of model numbers where purchasers can read them without undue effort. I understand that agreement has been reached, after more than a decade of indecision, on how much a pound of wash really is, and we didn't even ask them to settle that one.

Gentlemen, we would like to launch more joint Government-business efforts like this major appliance project. We would welcome suggestions either from the retail or manufacturing segments of industry.

MANDATORY ACTION

At the other end of the spectrum there are important mandatory approaches to protecting the consumer. What would our marketplace be like without the rigid standards of weights and measures? Where would we be without standardization on household electric current, light bulbs or pipe threads. You may have noticed that we finally have reached agreement in the lumber industry on a standard size of a 2x4. Differences in wet and dry measurement will be eliminated and construction costs will be cut without strength impairment.

As the President indicated in his Consumer Message, there are some other areas where the mandatory approach can underlie a sounder program. The proposed consumer product testing law aims not at having Government test every product but at determining what tests should be performed to give the consumer the right information on which to base his purchasing decision. And to have Government certify what constitutes a proper testing procedure to develop that information. We believe this proposal is a sound and practical way to help our consumers be better buyers and our manufacturers and retailers be more reliable sellers.

SUMMING UP

What we can observe, then, is that there is no single answer to the protection of the consumer. We must find the best blend of purely voluntary action, voluntarism within a framework of law, and mandatory regulations. Each has its place, and ours is the task of matching each to the need.

How each individual acts—each businessman, each trade association, each Government official and each consumer group—will determine how well we match up problems with the right answers. By helping us and by helping yourselves in your businesses, you can play a crucial role. You are close to the consumer. You know, or know how to find out, what he really needs and wants. You also know business, what it can and cannot do. And as our advisors, you have come to know Government, what we can do and what we must do. You are the professionals on whom the responsibility has fallen to fill two key functions:

First, the early-warning system for business to recognize emerging consumer problems and their solutions before business's inability or unwillingness to solve the problem requires the Government to act; and,

Second, where and when it is necessary for Government to act, you can serve as the most effective business spokesmen to Government on the basis of your unmatched knowledge of the consumer and the marketing system.

So, gentlemen, please recognize that we take most seriously our responsibility to see that the consumer's rights in the marketplace are protected, that the needs of the consumer are being met, and that our marketing system, which we recognize as the world's most productive engine for meeting the consumer's needs, is functioning up to its potential.

*Our intent* is to act where and when we see consumer problems going unmet, but to do so in a manner which improves the functioning of the marketplace. This means protecting the consumer's freedom of choice and preserving fair initiative for the producer.

*Our expectation* is that business will recognize the wisdom and profit of meeting the consumer's needs on its own, and of cooperating to the utmost with Government when our involvement is required.

---

## BENEFIT INCREASE UNDER SOCIAL SECURITY SYSTEM

(Mr. ZWACH asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ZWACH. Mr. Speaker, this week the House of Representatives will vote on a 15-percent across-the-board benefit increase under the social security insurance system.

It has been my feeling that an increase should have been put into effect

earlier this year. Now that the bill is finally coming before the House for a vote, I am not pleased with what we will be voting for, which is a 15-percent across-the-board increase in benefits under the old-age, survivors, and disability insurance program.

I had hoped the Ways and Means Committee would provide a flat dollar increase to those who are receiving minimum monthly benefits, rather than the percentage increase provided in the bill, as the percentage increase gives the greatest increase to those who are currently receiving the highest benefits. Certainly, after voting themselves a hefty increase, the Members of Congress could do something more to assist the old-aged than by just a 15-percent increase. Just last week, Mr. Speaker, the Senate increased the minimum base from $55 to $100 plus the 15-percent increase. This is more in line with what should be done.

I am very much aware of the difficulties that those on fixed income are facing in trying to meet their expenses in these inflationary times. Those who need the money most would be given an increase which would enable them to keep pace with the rising cost of living. Living costs have gone up for all people and the social security raise should recognize this fact.

At this time Mr. Speaker, it appears there will be no opportunity to amend this legislation which would provide for a flat dollar increase or an automatic cost-of-living raise. Which is too bad. For I would like to see more.

If I am only able to vote on the 15-percent increase, Mr. Speaker, I will certainly support this measure and vote yea; and then proceed to make arrangements to introduce legislation during the next session to provide for a cost-of-living increase. So we may truly take care of our senior citizens.

## AMENDMENTS TO THE FOOD STAMP ACT OF 1964

(Mr. KASTENMEIER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KASTENMEIER. Mr. Speaker, today, I am introducing a bill amending in a small but important way the Food Stamp Act of 1964. My bill would give the Secretary of Agriculture the discretion to distribute a free allotment of food stamps to households now receiving surplus commodities. Although the emphasis in recent years in our Government's efforts to feed the hungry in this country has been on food stamps, for a variety of reasons, the number of needy people served by the Department of Agriculture's commodity distribution program still remains greater than the number benefiting from the food stamp program.

At present, a mix of commodities and stamps is permissible only under restricted circumstances. I propose that in order to significantly improve the diets of those persons now relying on surplus agricultural commodities, some variation in the types of foods available to needy families be introduced through free food stamps.

This should not entail major rearrangements of existing procedures nor excessive administrative costs. What would actually be involved is treatment of the food stamps as an additional commodity in currently operating direct distribution programs. Let us say, for example, that $5 worth of food stamps were to be provided each family member monthly through the State agency now administering the commodity program. This would give a family of five $25 each month to purchase such items as fresh fruit and vegetables, fresh milk, and, occasionally, some meat. While the total list of commodities presently available to needy persons numbers 22 items, not all are available in almost all localities, and some of the foodstuffs are difficult to store, prepare, and are unappetizing. The addition of food stamps will not only make a contribution to the improved nutrition of recipients, but will also pave the way for the eventual conversion from commodities to food stamps, which is a prime objective of current planning. By familiarizing families with the proper use of stamps on a limited scale, the changeover to a full food stamp program will be much easier.

I should note that the idea behind my proposal was suggested to me by two people intimately connected with the successful commodity distribution program in Dane County, Wis. These two men are Harold Klubertanz, a former chairman of the Dane County Board of Public Welfare, and Fred Steeves, county administrator of the direct distribution program. Their suggeston was based on on-the-spot, firsthand experience with providing food for over 4,000 persons in Dane County, and their keen awareness of the day-to-day problems facing the people we are trying to help.

Mr. Speaker, I concede that my measure is modest in scope and limited in its application. But, these characteristics, I believe, are precisely its attraction since it would not involve the development of a new and costly program concept, and it could be put into operation without too much advance preparation. It immediately would benefit the close to 4 million needy people in 41 States and four territories now receiving surplus commodities.

I have been gratified over the increasing national focus on the serious problem of hunger in America, and I have been impressed by the strenuous efforts of some of my colleagues both in the House and Senate to find speedy and effective solutions. I am afraid, however, that the broad, far-reaching food stamp measure passed recently by the Senate may not receive as favorable a reception in this House or by the administration. That is why I am hopeful that my proposal will be considered by my distinguished colleagues in the Agriculture Committee, during their current deliberations. Whatever the final outcome, I hope that this House will soon take the necessary steps to move more quickly on the road to banishing hunger from the most prosperous nation on earth.

## IMMIGRATION HEARINGS

(Mr. FEIGHAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FEIGHAN. Mr. Speaker, Wednesday, December 10, in room 2141, Rayburn Building, at 10 a.m., the Subcommittee on Immigration and Naturalization of the Committee on the Judiciary will hear several witnesses on the subject of the impact of the Immigration and Naturalization Act of October 3, 1965, on immigration from Ireland and Northern Europe.

As early as possible in the next session, the Members of Congress will be given an opportunity to testify or submit statements concerning pending bills that would affect immigration from these areas as well as many other legislative proposals pertaining to immigration.

## ONE HUNDRED BILLION DOLLAR LOSS IN STOCK MARKET VALUE MAY COST U.S. TREASURY $20 BILLION LOSS IN ANTICIPATED REVENUES AND TOUCH OFF ADDITIONAL PRESSURES ON RUNAWAY INFLATION

The SPEAKER pro tempore (Mr. GRAY). Under previous order of the House, the gentleman from Illinois, Mr. PUCINSKI is recognized for 30 minutes.

Mr. PUCINSKI. Mr. Speaker, since the beginning of recorded history, man's major and focal endeavor has been to improve his economic lot. In our efforts to reach the ever-distant goals of a better life, we have managed to contrive armies of economic experts, extraordinary complex computers for building economic models and huge amounts of statistical data on economic matters which can be, and often are, interpreted in a number of ways equal almost to the number of stars in the heavens.

Although our tools have indeed reached astounding complexities and efficiency, we seem to have lost complete sight of the individual, the ordinary man whose basic needs and nature have not reached such proportionate changes and who still seems to live in the words of Henry Thoreau, "A life of quiet desperation."

The present course of economic events appears to be heading to change the state from quiet desperation to total disaster.

I have taken this time to spell out in detail the nature of the basic problems we are faced with, the causes which brought about this state of affairs and the tragic consequences which are certain to follow unless we take immediate steps to remedy the present chaotic conditions.

Reduced to its lowest common denominator, the basic problem is high interest rate.

The basic cause is inflation.

For almost a year we have waited and watched the high priests of finance in the Federal Reserve Board tighten the monetary screws with such power and force until the incredible has happened: For the first time in the history of our Nation, the Housing Assistance Administration sought bids for some $300 million of federally guaranteed notes with the result that over half of those notes failed to attract any kind of bid whatsoever.

This is unprecedented for a federally financed program.

Just how did we reach such a state of affairs? I will tell you. Some 9 months ago, the Chairman of the Federal Reserve Board, Mr. McChesney Martin, began to dispense from his ivory tower economic tranquillizers of "patience and persistence."

And what has he wrought?

The stock market has lost more than $100 billion in value; our housing industry is on the verge of catastrophy; funds for fighting pollution, crime, and poverty are fast disappearing; and the greatest irony of all is that instead of a hopefully projected $5.5 billion surplus budget, an essential requisite to reduce inflation, it now appears certain that a large deficit will become inevitable, for the ensuing reasons.

There seems to have been overlooked by Mr. Martin the indisputable fact that his medicine is worse than his disease.

To begin with, the loss of $100 billion in stock market value will create about a $20 billion loss to the Treasury; assuming a 20-percent tax rate for the affluent stockholders who will deduct their losses for income tax purposes. I challenge Mr. Martin to refute this possibility.

No one in the administration wants to talk about the fact that its estimate of anticipated revenue may be reduced by some $20 billion because the stock market has failed to rebound, to overcome the $100 billion loss in value.

This administration could wind up its first year with a $15 to $20 billion deficit because of this factor alone.

In the meantime, as interest rates get higher each month, another tranquillizer appears, the last innoculation happened recently before the Senate Committee on Banking and Currency. We heard testimony and requests for more "patience," although Mr. Martin admitted he came emptyhanded to show any results of his policy of tight credit and high interest rates, except to say that "There are a few straws in the wind here and there."

I recall over a decade ago Mr. Martin said:

> We at the FED have the task of leaning against the prevailing economic winds.

For the sake of our Nation it is my hope Mr. Martin finds something stronger to lean on than a few straws in the wind. I will be glad to provide Mr. Martin with more tangible support. We cannot permit the Federal Reserve Board to continue to dribble away the purchasing power of the consumer until he collapses financially. There is a point in time where relentless and excessive squeezing will produce regrettable results.

I am reminded of the farmer who had a horse and decided to economize by feeding him one handful of hay less each succeeding day. On the last day—and this may come as a shocking surprise to Mr. Martin—the farmer remarked:

> Jest when I got him to eat nothin', the darn fool died on me.

Mr. Martin's policies have given this Nation three serious recessions under his leadership as Chairman of the Federal Reserve Board. God grant that his successor will spare us from a disastrous depression.

The hopes and aspirations of our workingmen are not laboratories for experimentation; the hunger in Appalachia is not an ingredient for sociological test tubes; the pollution of 32 million tons per year of effluent from airplanes alone is not a figure for statistical exercise; the collapse of the housing and construction industry may be of interest for economic model building but not for builders and people who need a home.

The extraordinary profits for some banks of more than 50 percent for the first half of this year and an average of 20-percent increase in profits for all banks, will do little to comfort a householder in need to borrow emergency funds at a rate of interest of more than 10 percent—the highest since the great crash of 1929.

Today, no American earning less than $15,000 a year income can afford to buy a house because of the high cost of financing as well as lack of mortgage money for the lower income group.

And where is all this going to lead us? More tranquillizers of patience and persistence?

I want to remind Mr. Martin that prolonged administration of a single drug will produce immunity. It is particularly true of what is happening in our state of economic affairs.

After repeated doses of patience and persistence from the FED, the business community and the public at large have become immune to the promises that never materialize. Instead, contrary to the hoped for results inflation is galloping and interest rates are racing our astronauts to the moon.

It is an elementary fact of economics that scarcity increases cost. By tightening credit on an unprecedented scale, higher cost of money inevitably takes place. The higher cost of money in turn is reflected in higher interest rates. Moreover, the very thought of expecting higher interest rates creates a stampede to get credit rates while the getting is still good, which in turn results in greater demand for credit, which in turn makes credit even more scarce and results in even higher interest rates.

Perhaps the greatest catastrophe in this isolation ward of economic diseases lurks in the danger of escape for the "creditability gap" virus. This virulent virus is rapidly reaching epidemic proportions and slowly erodes the tenuous tissues of patience and human capacity to continue to trust our economic soothsayers.

It will be considerably depressed within the next 30 days when American industry begins to report its profits and earnings at a substantially reduced rate compared to last year.

What can we do about all this?

To begin with, the Federal Reserve Board should immediately issue a statement that prime rates on interest will be ordered downward by at least 1 percentage point before and not later than February 1, 1970.

This will not only break the vicious cycle of rising interest rates, but prevent a collapse of our entire credit system.

We have recently heard a great deal of testimony on the subject of price-wage and other selective controls. The Fed and the Treasury Department testified how abhorrent this could be, especially in determining priorities and effectively administrating any established controls.

I do not favor such controls but labor unions and a goodly number of business representatives took the contrary view and have concluded that under the circumstances, some controls must at least be considered to curb inflation and reduce interest rates.

The fact of the matter is that today we have in effect the most lopsided controls ever imposed by our Government in modern times. When the construction industry is denied funds to build and is forced to cut production over 50 percent, that is control at the highest level.

When the banking industry is permitted to increase its profits of up to 50 percent, that is lopsided control at the highest level.

However, a critical footnote makes this lopsided picture even more absurd.

When highly skilled mechanics in the construction industry lose their job, they inevitably look for other lines of work and ultimately are lost to the industry when a building recovery does finally take place. The resultant scarcity of skilled manpower in the construction industry is ultimately reflected in the higher costs in housing and the higher price the consumer is forced to pay.

On the other hand, any slack in banking business is mostly reflected in the number of hours computer time is used, since most banks are highly automated.

I suggest the Securities and Exchange Commission immediately postpone by 6 months the permit and authorization of new issues. This will reduce demand on the money supply by some $12 billion at the current rate of business and will curb speculation and provide another source of money supply to help lower the interest rate.

In addition, I call on the administration to immediately cut Federal spending by $10 billion on nonpriority items. I shall support such reductions particularly in nonessential defense and space expenditures. I believe when all the appropriation bills have been voted, I will have voted for more than $10 billion in reductions.

Finally, I, for one, wish to explicitly state my conviction that unless we take immediate measures outlined above, this Nation will face the prospect of an economic disaster similar to that of 1929.

I shall find it difficult, if not impossible, to pay any credence to any statement or prognostication by the Fed or any Government official in this administration on the basis of the performance record to date.

I have only to recall the statement by Charles E. Mitchell who as Director of the Federal Reserve Bank, on the eve of the great crash in 1929, made the following statement:

> The industrial condition of the United States is absolutely sound.

Nor should we forget the reassuring words of President Coolidge on December 4, 1928, in his last message on the state of the Union to the reconvening Congress:

No Congress of the United States ever assembled, on surveying the State of the Union, has met with a more pleasing prospect than that which appears at the present time.

History has little compassion for those who tend to forget. It is even more cruel to those who remember and fail to take necessary action.

Mr. Speaker, we are in our 10th year of continuous prosperity. Our Nation is now reaching for a trillion dollar gross national product. By the year 1980, we expect to have a $2 trillion GNP.

All of this growth is possible if we do not let inflation destroy us. I submit this administration and the Fed have a duty and responsibility to impose some form of limitation on runaway interest rates. I hasten to add that I was just as critical of the Johnson administration for failing to deal forcefully with runaway interest rates. We cannot be talking about price and wage controls while the banks continue to enjoy ever increasing profits at unprecedented rates.

## INSTITUTE FOR CONTINUING STUDIES OF JUVENILE JUSTICE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. RAILSBACK) is recognized for 30 minutes.

Mr. RAILSBACK. Mr. Speaker, a show of support not often seen in the daily workings of our legislative routine has given me cause for sincere and profound thankfulness at the overwhelming response of my colleagues in joining me in sponsoring legislation to combat juvenile delinquency. Eighty-eight Members, including my original cosponsors ABNER MIKVA and EDWARD BIESTER, have joined in cosponsoring the bill to establish the Institute for Continuing Studies of Juvenile Justice.

The bill provides that a short-term training program similar to that of the FBI Training Academy be created to give advanced training to law enforcement officers, juvenile judges, probation personnel, correctional personnel, welfare personnel and lay personnel working to combat juvenile delinquency. We can think of no better contribution than to better train and educate people to fight the crime problem at the local level. This training includes, of course, prevention as well as control of juvenile delinquency. With one-half of the serious crimes being committed by juveniles and with three-fourths of the juveniles repeating as criminal offenders, we feel that it is time to stop studying the problem and to take steps which will provide some action.

I wish to extend my appreciation to each of these cosponsors, who are listed below in alphabetical order. We are hopeful that with such impressive support this legislation can receive prompt, thorough, and favorable attention by the Congress. There are many efforts now being made at several levels of Government but we feel that the problem of juvenile crime merits the definite and tangible action which we have proposed.

The list follows:

LIST OF COSPONSORS

Joseph P. Addabbo, John B. Anderson, of Illinois, Mark Andrews, of North Dakota, Frank Annunzio, William H. Ayres, Mario Biaggi, Edward G. Biester, Jr., Jonathan B. Bingham, Edward P. Boland, W. E. (Bill) Brock.

John Buchanan, J. Herbert Burke, Phillip Burton, of California, George Bush, Daniel E. Button, John W. Byrnes, William T. Cahill, Elford A. Cederberg, William Clay, James M. Collins, Silvio O. Conte.

John Conyers, Jr., Robert J. Corbett, James C. Corman, William O. Cowger, Glenn Cunningham, Emilio Q. Daddario, John R. Dellenback, Don Edwards, John Erlenborn, Marvin L. Esch, Paul Findley, Hamilton Fish, Jr., Peter Frelinghuysen, Jr.

James G. Fulton, of Pennsylvania, Richard Fulton, of Tennessee, Seymour Halpern, Richard T. Hanna, Ken Hechler, Margaret M. Heckler, Henry Helstoski, James J. Howard, William L. Hungate, Andrew Jacobs, Jr., Thomas S. Kleppe, Dan Kuykendall, Allard K. Lowenstein, Paul N. McCloskey, Jr., Joseph M. McDade, Jack H. McDonald.

Martin B. McKneally, Clark MacGregor, Ray J. Madden, James R. Mann, Spark M. Matsunaga, Thomas J. Meskill, Robert H. Michel, Abner J. Mikva, Charles A. Mosher, John E. Moss.

William T. Murphy, John T. Myers, Richard L. Ottinger, Thomas M. Pelly, Jerry L. Pettis, Bertram L. Podell, Melvin Price, Albert H. Quie, Tom Railsback, Thomas M. Rees, Donald W. Riegle, Jr.

Peter W. Rodino, William V. Roth, Philip E. Ruppe, Earl B. Ruth, William L. St. Onge, Charles W. Sandman, Jr., James H. Scheuer, Herman T. Schneebeli, Henry P. Smith III, William A. Steiger, of Wisconsin, Louis Stokes, James W. Symington, Robert Taft, Jr., Fletcher Thompson, Robert O. Tiernan, Charles E. Wiggins, Charles H. Wilson, Wendell Wyatt.

Mr. MIKVA. Mr. Speaker, I am delighted to join my colleagues on the Judiciary Committee, Congressman RAILSBACK and Congressman BIESTER, in introducing today a bill to establish an Institute for Continuing Studies of Juvenile Justice.

Despite the abuse to which the issue of "law and order" has sometimes been subject in recent years, one thing which mounting crime rates, especially among young people, has made us do is to reexamine our system of criminal justice. We have had to take a hard look at not only the theory of that system, but at how it is working in practice. What we have found during that hard look is that we have let our criminal justice system—courts, police, correctional institutions, probation, and parole programs—we have let all of these institutions fall critically behind the times. We have starved them for money, for manpower and for other resources. And since we would not spend the money on these institutions, we are now paying the price in higher crime rates, higher recidivism rates, and a population terrified by the specter of crime in the streets.

This bill is one step on the road to a more effective criminal justice system. It is especially important because it deals with the most worrisome group of lawbreakers—youths and juvenile offenders. In the 1968 Omnibus Crime Act, Congress established an Institute for Law Enforcement and Criminal Justice. The bill we introduce today would give similar attention to the special field of juvenile justice, an area which has traditionally received far less than its share of attention. In brief, the Institute proposed in this bill would gather, organize, and disseminate the best information available on how to deal effectively with juvenile crime. It would provide not only information, but training to State and local officials dealing with these problems. It would make widely available the best, most modern, techniques for dealing with problems of youthful offenders.

If our experience with crime has shown us anything, it has shown that we must develop new methods for dealing with the problems of criminal offenders. Larger police forces and harsher sentences just would not do the job. The Institute for Continuing Studies of Juvenile Justice, would, we hope, be a leader in the search for new and enlightened methods of handling the serious problem of juvenile crime. We hope that it would help keep the juvenile delinquent and youthful offender of today from becoming the hardened criminal of tomorrow.

Mr. ROTH. Mr. Speaker, of paramount concern to every citizen is the increasing rate of crime in America. Few problems with which we deal are such a threat to our personal stability and well-being. Juvenile delinquency is a vital part of this problem—its prevention and control will be a major factor in reducing crime and redirecting the energies of the delinquent element of our youth to useful lives with respect for law and the society in which they live.

The problem of delinquency and its relationship to the whole crime picture has been recognized for some time—a multitude of programs have been developed and studies have been made aiming at its prevention and control. But, despite efforts by public agencies at the Federal, State, and local levels and private agencies throughout the country, there has been no reversal of the trend. This year the Federal Bureau of Investigation reported that arrests of juveniles, ages 10 through 17, had risen 78 percent from 1960 while the population for this age group had only risen 25 percent. Furthermore, juveniles have been found to be the age group most likely to repeat crimes. Of those under 20 released from correctional institutions in 1963, 72 percent—nearly three-fourths—were rearrested within 5 years. It is clear that what we have done has not been effective; obviously, additional steps are necessary.

Hence, I am pleased to cosponsor today a bill which establishes an Institute for Continuing Studies of Juvenile Justice to act as both a clearinghouse for information from all sources concerned with juvenile delinquency as well as a short-term training center for those directly involved with delinquents.

The functions of the Institute will provide for the recycling of valuable information gained through experiences with juveniles in the various States to all interested and involved citizens. Not only will it do this through collecting, publishing and disseminating data but also it will conduct seminars and workshops for professionals, offering a firsthand exchange of ideas.

Another important innovation of the Institute is its capacity as a training center. Modeled after the successful FBI Training Academy, the Institute will conduct short-term courses on modern, proven, effective methods of dealing with

delinquent youth. The enrollees, law enforcement officials, welfare workers, judges and judicial personnel, probation and correctional officers and nonprofessionals connected with juvenile work, will return to their States and communities with valuable information that they can mold to their particular local needs and circumstances.

Finally, the Institute will provide technical assistance to the State and local agencies who wish to develop training programs for those working with juveniles.

Overseeing this whole operation will be a director who will be a presidential appointee. An advisory commission assisting him in the supervision of the operations of the Institute will consist of Federal experts most directly involved, such as the Attorney General and the Secretary of Health, Education, and Welfare, the Directors of the U.S. Judicial Center and National Institute of Mental Health, and 14 other persons from the disciplines concerned with juvenile delinquents.

The Institute for Continuing Studies of Juvenile Justice will provide another element necessary to the success and effectiveness of existing programs for the prevention, control, and treatment of juvenile offenders. It is time we wage a concentrated attack on juvenile delinquency—not only to relieve our society from the burden of crime but also to save potential delinquents from a life of misery.

## GENERAL LEAVE TO EXTEND REMARKS

Mr. RAILSBACK. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days to revise and extend their remarks on the subject of my special order today.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

## TAKE PRIDE IN AMERICA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. MILLER) is recognized for 5 minutes.

Mr. MILLER of Ohio. Mr. Speaker, of the 139,779,540 automobiles in the world, 75,260,847 are in the United States. This represents about 40 percent of the world total. The State of California alone has more cars than any other nation except France and Great Britain.

## INDUSTRY WORKS ON AIR POLLUTION PROBLEM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. CLARK) is recognized for 15 minutes.

Mr. CLARK. Mr. Speaker, I have noted with interest the recent agreement by both the Senate and the House to extend for 1 year, under the provisions of the Clean Air Act, a $45 million authorization for research relating to air pollution caused by fuels and vehicles.

It is my belief that the Congress, industry, and the general public are beginning to realize that the blame for environmental pollution cannot be placed upon any particular group. We are all guilty—the Federal Government, the State governments, the municipalities, business and industry, and even the individual citizen.

However, I am proud to say that two industries located within my district are taking an active interest in trying to solve some aspects of the air pollution problems caused by fuels.

The Babcock & Wilcox Co., with facilities in Beaver Falls, Pa., has for years been a leading research and developer of air pollution control devices. Mr. George G. Zipf, president of the company and Dr. Neil V. Makala, president of Esso Research & Engineering Co. of New Jersey, recently announced that the two firms would develop an advanced air pollution control system for fossil fired electric generating plants.

The financing of this research project is being provided by 16 electric utilities throughout the country, among them the Allegheny power system. The $7 million program will develop a commercial system to eliminate 99 percent of the solid pollutants and 90 percent of the gaseous, and more difficult to control sulfur oxides from the exhaust of powerplant boilers. Sulfur dioxide, which is considered one of the most objectionable pollutants, will be recovered in the form of marketable sulfuric acid to partially offset the cost of the system.

This is a major start, Mr. Speaker, in trying to solve our air pollution problem; however, we cannot rely on just scattered, individual groups to solve our environmental crisis. A cohesive, national program must be developed in which the full capabilities of Federal, State, and local governing units for directing the program is tied in with the technical knowledge that industries and universities can contribute to the effort.

## A CALL FOR THE ENVIRONMENTAL DECADE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 20 minutes.

Mr. REUSS. Mr. Speaker, it is becoming widely recognized that we have an environmental crisis on our hands in America.

As we stand on the threshold of a new decade, we must make the decision to dedicate substantial portions of our Nation's energies and money to cleaning up our degraded land, air and water and to conserving and preserving our natural resources.

Last Friday, December 5, Mr. DINGELL, Mr. GUDE, Mr. HICKS, Mr. MCCLOSKEY, Mr. MOSS, Mr. SAYLOR, Mr. VANDER JAGT and Mr. WRIGHT joined with me in calling for the designation of the 1970's as "The Environmental Decade" and put forward an action program to get the job of protecting our environment well underway in the next 10 years:

We today call for the designation of the decade of the 1970's as the Environmental Decade. Next New Year's Day, January 1, 1970, would be a good time for all Americans to make a New Year's resolution for the decade:

"I pledge that I shall work to identify and overcome all that degrades our earth, our skies, our water, and the living things therein, so that the end of the Environmental Decade of the 1970's may see our environment immeasurably better than at the beginning."

As Members of Congress specially concerned with the conservation of our environment, we make a special pledge to work diligently on a broad series of fronts:

1. WATER

a. All over the country, man is running out of sources of usable water. The decade must see the development of workable desalination and recycling processes, and better methods of preventing waste by evaporation and other causes.

b. Almost every lake and stream in the Nation is becoming more and more polluted. Half-hearted standards for averting water pollution should be raised, so as to require everywhere water good enough for people to enjoy. Our present programs to eliminate pollution from municipal, industrial and agricultural sources are tragically inadequate. At least $30–$50 billion needs to be spent in the next five years for new municipal treatment works, separation of combined storm and sanitary sewers, industrial waste treatment facilities and for research and development of new anti-pollution methods. The response to the manifest need has been wholly inadequate. For example, Congress authorized $1 billion for water pollution treatment this year, but the appropriations request from both the Johnson and the Nixon Administrations has been for a ridiculous $214 million.

c. It is not enough to clean up our waters after they have been polluted. Effort must be made to find and eliminate sources of pollution before they begin. For example, the Government Operations Subcommittee on Conservation and Natural Resources will hold hearings shortly to determine why the soap and detergent industry continues to use phosphate as a leading ingredient of household detergents, when it is well known that these same phosphates are a leading cause of the eutrofication—death by overfertilization—of so many of our waters.

d. A new and alarming form of water pollution is overheating of water—thermal pollution—caused by fossil-fuel and atomic power-generating plants. Destructive overheating must be stopped.

e. Wetlands and estuaries are where land and water meet. Destroy them, and we destroy the areas where our fish and wildlife breed, and where the air we breathe gets its start. Yet destroy them we do, whether with the help of the Department of Agriculture in draining the prairie potholes or making drainage ditches out of streams, or with the help of the U.S. Army Corps of Engineers in filling countless estuaries and marshes. Filling or draining for unneeded farmland, or for apartments or expressways or airports which could be built elsewhere, goes on apace. The Government Operations Conservation and Natural Resources Subcommittee has recently heard the sad tale of speculators despoiling the estuaries of the Potomac and of San Francisco Bay; these hearings will continue. The looters of our wetlands should be told: stop it.

2. AIR

a. Air pollution brings emphysema, bronchitis, lung cancer and death. It blackens our skies, smarts our eyes, wrecks our food, clothing and shelter. It is getting worse.

The internal combustion engine, with its carbon monoxide and nitrogen oxides, is the worst single polluter. A pollution-free engine must be developed and used in vehicular movement. We must evolve forms of mass transportation which do not pollute our atmosphere.

b. Industrial and power plants, with their sulfur oxides and hydrocarbons and par-

ticulate matter, are the second worst source of pollution. They must be guided quickly into using clean-burning fuels and methods of production which do not ruin our environment.

c. One of the newest forms of air pollution is noise—by jet planes, by motor vehicles on the freeways, by building construction crews. In many cities and suburbs, we have already exceeded the noise levels where mental and physical health is endangered.

3. LAND

a. The earth and the fullness thereof get less full every year. Agricultural soil erosion by wind and water costs us $1 billion annually. In the next ten years, if we go on as we have, we shall lose another 15 percent of our agricultural land values to erosion.

b. To farm erosion has now been added the bulldozer of the suburban developer and the highway engineer, silting up our streams and ponds and lakes.

c. Chemical pollution of our soil (as of our air and waters and wildlife) is growing worse. Fertilizers, herbicides, pesticides, chemicals of war threaten not just the good life, but life on this earth altogether. DDT and other persistent pesticides have contaminated meat, fish, milk, vegetables, fruit. They threaten the destruction of whole families of birds. As the Conservation and Natural Resources Subcommittee found, negligence by the U.S. Army in its handling of lethal chemical weapons at Dugway, Utah, caused the death and injury of over 6,000 sheep, and with a shift of wind could have caused the death of even more human beings. Those companies and individuals which profit by chemical pollution do not give up easily. We intend to keep after them.

d. If people are going to find land on which to live and breathe and enjoy life, we must stop the senseless carving up of our landscape by the highway engineers, the suburban developer, the jetport authority. This requires regional and national planning. It requires the building of hundreds of new towns and consideration of the garden city concept with adequate open space adjacent to densely-populated areas.

e. We must expand our programs for setting aside parks, playgrounds, wilderness areas, wild rivers and seashores, and fish and wildlife areas. Yet this year's appropriation for the National Park Service is $123 million. We must alter our priorities.

f. Our land (as well as our water and air) are about to be engulfed by solid wastes and their by-products—junked automobiles, glass bottles, steel and aluminum cans, used packaging, and other detritus. We must reconsider our tax systems so as to put some of the cost of evolving new methods of solid waste disposal on the manufacturer and user of these wasteful products, so as to encourage the development of disposable and degradable containers and wastes.

g. Litter—trash and garbage and cigarette butts—are contributions to ugliness that almost all of us make almost every day. Here is something on which every individual should be taking the pledge.

4. *Wildlife.* Due to the skill of our game and fish scientists and managers, many of our fish and wildlife populations are in better shape today than they were 30 years ago. The American bison herd, for example, is up from 4,000 to 25,000. But the pollution of our land, our waters, our air, the destruction of wetlands, the increased use of chemicals, and above all, the inexorable grab at wildlife habitat by our increasing population, pose a clear and present danger. Already 89 birds and mammals are on the list of endangered species, and man himself may not be exempt. We must preserve more wildlife habitat, and particularly we must massively assist our marine resources.

5. *Mineral and forest resources* are being rapidly depleted by our industrial technology. We must conserve our non-renewable minerals; particularly, we must recycle the wasted iron, aluminum, copper, zinc and other metals with which we now fill our dumps. Our mineral leasing policy for public lands must be updated. Our forests are endangered as we increasingly exceed the allowable cut. It will cost more money to attain better management of our timber resources. We must provide it.

6. *People.* All of these environmental resources must be preserved not only for themselves, but for the life, liberty and happiness of our people. Environment *is* for people.

a. Population—how many people, and where they reside—can affect our environment equally with what we do, or fail to do, with it. Our studies of Florida's Everglades, for example, show that too many people living at the headwaters which moisten the Everglades, could dry up and ruin this priceless national ecological marvel. In our metro-areas, where most of us live, our slums, our traffic jams, our noise, our foul air and water, our sprawling suburbs, point an ominous warning. We urge that the President's new commission on population problems takes into account the effects of population on the environment as well as on other aspects of life.

b. If the environment is for people, it is also people—mostly private citizens, not just the government—who must lead the fight to preserve our environment. Surely, the government must reorder its structure for an all-out fight during the Environmental Decade: the federal executive branch must have a top-level Council on Environmental Quality, and the Committees of Congress with which we are associated must redouble their efforts. Federal, state and local legislatures and courts must erect the framework for the battle. But citizen activity must lead the fight.

c. Among citizens, we turn to youth as the great hope for the Environmental Decade. Young people are understandably outraged by the cynicism and materialism of their older generation. We urge them to substitute constructive impulse for negativism, and to build for future generations an environment worthy of free men and women. We hope they will conduct studies, sponsor educational forums, initiate petitions, support court suits, pressure administrative agencies, draft legislation, and do the many things needed to help protect against environmental destruction.

d. We turn, too, to the people not just of the United States but of the world. Pollution of our environment threatens to engulf not only America, but all the land and seas and air. We welcome the Environmental Conference of the United Nations scheduled for 1972, and urge the United States government to take the lead in making ours a Model Planet.

Let the 1970's, then, be preoccupied with life and the quality of life. Before we starve, or choke on polluted air, or poison ourselves with our ruined waters, let us fight all who get in the way of a decent environment. Let man in the Environmental Decade assume his proper stewardship over pure water, blue skies, and a habitable earth.

---

## UNITED MINE WORKERS OF AMERICA RESPONSE TO DEPARTMENT OF LABOR CHARGES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from West Virginia (Mr. SLACK) is recognized for 15 minutes.

Mr. SLACK. Mr. Speaker, on November 28 the Department of Labor chose to make known to the press a memorandum which contained statements damaging to the present leadership of the United Mine Workers of America. Predictably, those Labor Department statements became a prime source of campaign propaganda for a faction which opposes the present union leadership in an election to be held this week.

The union has now replied to these Labor Department charges—yet unproven—in some detail. Of course the response can never be circularized among the union membership in sufficient time to give them both sides of the picture prior to the voting. But I believe, and I am sure an overwhelming majority of the Congress believes, in a fair and balanced presentation of all pertinent facts bearing on major public controversies. I am, therefore, placing in the RECORD the rebuttal to the Department of Labor's widely publicized but unproven charges, as contained in a letter to Secretary of Labor Shultz from Edward L. Carey, general counsel of the United Mine Workers of America:

UNITED MINE WORKERS OF AMERICA,
*Washington, D.C., December 5, 1969.*

HON. GEORGE P. SHULTZ,
*Secretary of Labor,*
*U.S. Department of Labor,*
*Washington, D.C.*

DEAR SIR: On November 28, 1969, the Department of Labor took the unique and unusual action of releasing to the press an *inter-office* memorandum between two officials of the Department. The subject of the memorandum was identified as Summary Report of Financial Investigation of United Mine Workers of America.

This memorandum was an obvious attempt by the Department of Labor to inject itself into the election campaign now being conducted within the United Mine Workers of America. Such political action by officials of the Department of Labor constitutes improper, unwarranted and brazen interference into the internal affairs of the UMWA. It is already too late to take corrective action to avoid influencing the election, but this abuse of governmental power by such officials should not go unpunished by your office.

The memorandum states that increases in employees' salaries were not reported to the UMWA's International Executive Board. This is completely untrue. The UMWA makes six-month audited reports of all its financial activities, including the salaries and expenses of every employee. Your investigators examined these reports and were aware that these six-month reports are furnished to the membership of every Local Union and to every member of the International Executive Board. However, the Department's memorandum states to the contrary.

Furthermore, in addition to the above distribution of six-month reports, the UMWA furnishes a complete report annually to the Department of Labor, and this report is available to the public.

It is startling to note that one of the employees who received a salary increase was Joseph Yablonski, a member of the International Executive Board. Yet, Mr. Yablonski is now using the Department's memorandum as "proof" that such increases in salary were improper, unlawful, unauthorized and constitute evidence of corruption on the part of the President of the Union, W. A. Boyle. This illustrates how the Department's memorandum is being used as an instrument in Joseph Yablonski's lie-and-smear campaign.

The memorandum states that "grants" of money were made to employees without authorization. Actually, no such grants were ever made. No doubt, the memorandum was referring to bonuses given to two lawyers for assuming an exceptionally heavy workload and making personal sacrifices over a prolonged period in defending the Union against lawsuits brought by non-union coal operators who sought to destroy existing wage

standards, the UMWA Welfare Fund and, ultimately, the Union itself.

The memorandum further states that hotel expenses of some officials were paid when they were at their place of residence. However, as your investigation disclosed, the expense vouchers used by the employees do not provide spaces for the listing of all expenses, and the column marked "Hotel" is used for reporting other legitimate expenses. Actually, Union employees are not reimbursed for all of their expenses, and a great amount of such expenses are paid out of their salaries.

It is strange that the memorandum criticizes the Union for not issuing instructions to employees concerning reimbursement for expenses because, first, the law does not require such instructions, and, second, this matter is covered by the UMWA Constitution which was written and ratified by the membership at its conventions.

The memorandum states that the "Agency Fund", which was established to provide pensions for the International Officers, has never been adequately disclosed in the annual financial reports. This is false. All assets of that "Fund" have been included in every report to your Department. In order to comply with regulations of the Internal Revenue Service, these assets had to be placed in an agency account, but they still belong to the Union.

Honest disclosure of the facts by your Department would have reported that this pension fund was approved by the Internal Revenue Service, by the UMWA International Executive Board, of which Joseph Yablonski was a member, and by the entire membership of the Union at its 1960 Convention (Proceedings, pp. 260–62). The Proceedings also show that Joseph Yablonski was Chairman of the Committee which approved this pension fund. Yet, Joseph Yablonski uses your Department's release as "official proof" of his smear charges that the International Officers, including President Boyle, are guilty of corruption in establishing this pension fund. The truth is that President Boyle was not even an officer of the Union at the time this fund was established. Joseph Yablonski was! The only man who has received a pension from this fund was John L. Lewis, and no amount of pension money could have expressed the gratitude of the coal miners for his leadership through the many years of toil and strife.

The memorandum further charges that UMWA financial reports concerning Lewmurken, Inc., filed with the Department of Labor showed "improper reporting." At the time this matter was discussed in the UMWA Secretary-Treasurer's office with the Department's two representatives, I was also present. The difference of opinion at that meeting was merely a disagreement between the certified public accountant of an outstanding firm in this city, employed by the UMWA, and the Department's accountant as to the cost value of certain assets. At no time was a question of "improper reporting" raised.

Finally, at the end of the memorandum, the Department listed salaries and expenses of certain UMWA employees who are related. Assuming these people are qualified by their education and experience to hold these positions—and assuming their salaries are no more than others receive for similar work—then there is absolutely nothing wrong with the UMWA employing them. In fact, their origin from a mining family makes them more knowledgeable about and sympathetic to the needs of miners.

There can be no question that the release of this memorandum at this time was an attempt to influence the outcome of the UMWA's election. The Department's release to the press of such a list of salaries and expenses of related employees would invariably cause readers to assume that the Department was accusing the leadership of fraud. Actually, with two exceptions, all of those listed were employed long before President Boyle's term in office.

This intent to influence the election is even more obvious in the Department's omission of salaries and expenses of Joseph Yablonski and his family. The amounts received by the Yablonskis in 1967 and 1968 are as follows:

| | |
|---|---|
| *Joseph Yablonski* | |
| 1967: | |
| Salary | $25,000.00 |
| Expenses | 12,568.00 |
| 1968: | |
| Salary | $25,000.00 |
| Expenses | 14,807.00 |
| *Leon Yablonski* | |
| 1967: | |
| Salary | 11,000.00 |
| Expenses | 8,725.60 |
| 1968: | |
| Salary | 11,000.00 |
| Expenses | 10,437.35 |
| *Kenneth Yablonski* | |
| 1968: | |
| Retainer and Fee | 7,250.00 |
| Expenses | 881.80 |

Their salaries were not meager nor were their expenses light. Why were these figures of the Yablonskis omitted from the memorandum? It would seem that the Yablonski family's salaries and expenses would be equally as relevant as those of other families, if the Department actually intended to present an unbiased report.

I suggest that in fairness to the members of this Union, in fairness to its officers and in fairness to the Department of Labor, these salaries and expenses of the Yablonskis should be made available to the members of this Union and to the public with the same official imprimatur that the Department placed on its memorandum released on November 28, 1969.

The Department of Labor has demonstrated its partiality and lack of objectivity on the eve of this election and should disqualify itself from any statutory right to pass upon the validity of the UMWA's election.

Incidentally, our attention has just been directed to the fact that Leonard J. Lurie's sister is employed by the law firm of Rauh & Silard, of which Joseph L. Rauh, Jr., is the senior partner. Mr. Rauh is also the campaign manager and attorney for Joseph Yablonski. Acting Director Leonard J. Lurie of the Department of Labor's Office of Labor-Management and Welfare-Pension Reports, is the one who prepared the memorandum which was later released to the press by your Department. Under these circumstances, it is my opinion that an investigation should be made immediately to determine under what circumstances the report was prepared and what other information may develop as a result of an inquiry under your supervision.

Sincerely yours,

EDWARD L. CAREY.

## ALLEGED MEDICAID AND MEDICARE ABUSES

(Mr. SCHWENGEL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHWENGEL. Mr. Speaker, I have received a number of inquiries in recent months relative to alleged medicare and medicaid abuses in Iowa. The letter I received in this respect from Mr. Clarence J. Math of Davenport, Iowa, is typical of those inquiries. His letter follows:

DAVENPORT, IOWA,
*October 29, 1969.*

Hon. FRED SCHWENGEL,
*House Office Building,*
*Washington, D.C.*

DEAR CONGRESSMAN FRED: There has been a great deal of publicity in the press and on radio and television having to do with what seem to be abuses of Medicaid and Medicare by those providing medical care. No doubt you too have seen and heard these reports and have looked into the effectiveness of these programs here at home. I would appreciate it very much if you could let me know whether you have looked into this and, if so, provide me with some indication of the extent of the problem.

Respectfully,

C. J. MATH.

ALLEGED MEDICAID AND MEDICARE ABUSES

In responding to these inquiries, I have relied heavily on information provided to the Iowa Legislature's medicaid study committee. My response to Mr. Math gives a good overview of the results of my study of this problem. Since there have been similar problems on a national basis, I would like to share this correspondence with my colleagues. My response to Mr. Math follows:

DECEMBER 3, 1969.

Mr. CLARENCE J. MATH,
*Davenport, Iowa.*

DEAR CLARENCE: I was pleased to receive your recent letter concerning the publicity about reported abuses of Medicaid and Medicare by those that are providing medical care. I already had my interest stimulated as a result of these reports, but I have looked into them further with respect to Iowa and the operation of such programs in Iowa since receiving your letter.

I find that the Iowa Legislature's Medicaid study committee has been following this situation and I would like to quote for you some comments made to this committee by Doctor William Krigsten of Sioux City who serves this year as President of the Iowa Medical Society. I believe it gives a good overall review and puts in focus the problems. Dr. Krigsten said:

"Medicaid is one important aspect of the total health care program in the state. I emphasize that Iowa physicians vigorously support the Medicaid philosophy, namely, that health care should be available to those who need such care but who are unable to afford it. A sound program which embodies this humanity-serving philosophy is essential, in the judgment of the medical profession.

"With you and your fellow members of the General Assembly, Iowa's medical doctors believe the best possible health care should be available to all citizens of the state. Providing these services is a formidable task for which there is no magic formula. We have somewhere in excess of 50,000 persons working as members of Iowa's health care team. This team uses its brainpower, modern medicinals and sophisticated equipment to care for approximately 75,000 patients each day. We are talking about a 500 million dollar annual endeavor.

"As you know, the means selected by the Federal government to effect this philosophy have not been fully supported by physicians. With the passage of the Social Security Amendments of 1965, establishing Medicare and Medicaid, the congressional proponents declared that all of the nation's elderly and needy would now come into the mainstream of medicine. Frankly, we felt that Iowa was at the time doing a respectable job of keeping its people in the mainstream of medicine.

"Rather than assume an obstructionist role, however, in the implementation of these programs, the Iowa Medical Society has attempted to provide responsible professional leadership. In so doing, we have obviously come to be influenced and guided by the intent of the Federal congress. This intent is implicit in statements such as the one former HEW Secretary John Gardner made in a 1967 Presidential Report: 'Charity medicine is being abandoned in favor of new public programs which give needy people the resources to purchase medical care from pri-

vate physicians and hospitals on the same basis as more affluent citizens' ".

You can realize that there was an administrative problem in getting set up for a program of this size but other testimony which I have read indicates that these problems, such as long delays in the processing of paper work and uncertainties over the eligibility of individuals, have mostly been taken care of with experience in operating this program.

Dr. L. J. O'Brien of Fort Dodge, Iowa, serves as representative of the Iowa Medical Society on the Medicaid Advisory Council and also as Chairman of the Society Committee on Public Assistance. He told the Legislative Committee studying Medicaid:

"One of the most serious and acute problems from our vantage point at this time is public understanding of the program. As you are quite well aware, much recent attention has been given by the press to the matter of releasing the total amount of Medicaid reimbursement made to individual vendors. By inference or innuendo, the publishing of names and amounts places those at the top of the list in the position of being immediately suspect. Only limited effort has been made to explore that much of the listed sums goes to underwrite the substantial expense involved in the operation of a physician's office.

"The Department of Social Services and the vendor groups, including the Iowa Medical Society, share with the press the feeling the listings should be available to the public. At issue is the matter of when and how. The vendor groups have felt time should be allowed before release of the names for the organizations to analyze the payments and provide a report of their findings. As you know, this process has been widely appropriately designated peer review.

"The Iowa Medical Society's expanded peer review mechanisms are now functioning and you may be interested to know that 14 physicians whose 1968 Medicaid payments exceeded $15,000 are being evaluated by their peers to determine if their mode of practice follows or departs from an acceptable pattern. You may wish to delve more deeply into the peer review process in our discussion.

"The July decision of HEW to freeze Medicaid payments to physicians and dentists was disconcerting to Iowa's medical doctors. You may not know that there can be no increase in physician reimbursement levels under this ruling until July of 1970. This action is difficult to comprehend when only 11 percent of the $3.5 billion spent for Medicaid in the fiscal year 1968 went to physicians.

"In this respect, and relating back to the matter of public understanding, it seems most important that Iowans come to understand the physician is thoroughly regulated in the fee determination area for both Medicare and Medicaid. A computerized determination of fee levels is made on the basis of a usual, customary and reasonable formula and claims are paid at or below this pre-determined ceiling. The element of reasonableness is very much present and represents a definite cost control mechanism."

As indicated by Doctor O'Brien, the process of peer review by the Iowa Medical Society gives to doctors the responsibility for judging other doctors—not only as to the size of the fee involved—but also to the need for the services rendered to the patient, frequency of examination and treatment, the amount and type of medicine prescribed and other things which doctors are best able to judge. Of course it is fairly easy for a computer to analyze whether fees are reasonable by comparing one doctor's fees to the fees of other doctors in his community performing similar procedures. It is in more sophisticated analysis which I just mentioned where doctors are best able to judge their colleagues.

Indeed Doctor Krigsten in a statement to the press late this summer pointed out that there is virtually no way under either Medicaid or Medicare in which an excessive fee may be charged for a particular service.

This same statement by Dr. Krigsten comments on the arbitrary singling out of physicians who received a certain amount of money under Medicare or Medicaid programs without adequate explanation or without prior review. I am sure you will agree that this suggests at least by inference the presence of dishonesty, especially when words like cheating and abuse are prominent in the reports.

I would not be so naive as to think that either the computer or individuals who administer this program cannot be fooled by someone who sets out deliberately to do so. However, the review mechanism as set up in Iowa is designed to ferret out any unusual pattern of activity, any excessive fee charges and any other pattern of activity which departs from the normal.

Such activities are then given special attention by the Medical Society peer review program with recommended action being forwarded to the parties involved. If appropriate action cannot be taken at the county level, then the matter can be referred to the state claims review committee which also functions as an appeal mechanism when there is disagreement with findings at a lower level.

I was interested in the comment by Doctor Krigsten in one of the statements he has made on this subject and I believe it will be of interest to you. He said, "I would emphasize that Iowa physicians are vitally interested, as are most citizens of the state, in the wise use of tax dollars and in efficiency and economy in government—particular health services, and in all health services for that matter. The Iowa Medical Society is making available its expertise and its manpower to assist in structuring an Iowa Medicaid program which is fiscally sound and which serves the health care needs of those for whom it is intended. In situations where questions are raised as to the propriety of a physician's charge or his mode of practice, the Society is unequivocably dedicated to clearing and protecting the innocent and to identifying the guilty. We believe the broad application of the professional peer review system will do more than any single thing to assure the success of Medicaid. We are willing to accept the challenge which is present in a program such as this."

Knowing Iowa doctors as I do, I feel certain that they will be more interested than anyone else in identifying any physician who abuses the Medicaid program in taking appropriate action. I am confident after examining the mechanism as outlined in its various details in this letter, that the Medical Society has an adequate mechanism and the appropriate attitude to control not only excessive cost but over utilization.

Sincerely yours,

FRED SCHWENGEL,
*Member of Congress.*

## CONGRESS AND THE ADMINISTRATION

(Mr. ALBERT asked and was given permission to extend his remarks at this point in the RECORD and include extraneous matter.)

Mr. ALBERT. Mr. Speaker, this Congress has been the repeated target of misleading statements by administration spokesmen who have sought to undermine public confidence in Congress and to give the impression that little has happened here this session. I want to make two basic points in this respect:

First. This Congress has performed its duties, in the face of repeated administration delays, obfuscation, confusion, and lack of leadership by the administration. We ask not to be judged either by their statements, or ours, but by what has happened—by the record of this Congress.

Second. The effort by the administration to discredit this Congress is a calculated one to cover up for the lack of any comprehensive administration domestic program or policy, and in preparation for the 1970 elections. Anyone familiar with past political tactics can recognize it for what it is—the familiar trick of attacking to discredit rather presenting positive programs.

I would hope that the press would look to the record to inform the public. The glib Madison Avenue tactics that are being used to try to blame the Congress and to distract the people from lack of executive leadership and failure to advance a cohesive program are being foisted on the public by the administration advertising experts. I would hope that the press is not so cowed by administration criticism that it accepts the handouts and the glib rhetoric of the White House admen who appear to be calling the tune of government by press release. The Congress is not cowed by such tactics.

The delays and confusion of the administration has led to its own failure to confront the problems of this Nation. Congress has been tolerant of this new and untried administration. It has accepted the confusion, the delays, the lack of clearly stated goals, the limited leadership as the struggle of an administration seeking its way. It has now become abundantly clear that there is no administration program, and no sound understanding of the problems that confront this country. It has also become clear that press agentry has been susbtituted for action. In the face of this confusion and this cohesion gap, the Congress has quietly gone about its work, and has given the administration every possible chance to outline a program and express it in tangible terms of proposed legislation. However, this administration has emerged as a "say much, do little" administration whose greatest talents appear to lie in the realm of press agentry and smooth public relations. It has been a following, not a leading, administration. It has shown a disconcerting lack of understanding of the real domestic problems of this Nation.

I have noted that this administration, while following the leadership of Congress, has sought to claim as its own many of the programs initiated here. We are willing to allow it to extravagantly claim that credit if it will move the administration into a posture of agreeing to act instead of just talking about the needs of this country. And if the administration will just continue to follow the lead of Congress and cease some of its delaying and confused efforts, this Congress will give the Nation a fine record of achievements before it finally adjourns.

I would add a personal word to the President, I would say to him: Mr. President, please advise your spokesmen to speak more coherently, to be more con-

sistent, to lessen the rhetoric and increase the substance, and to let Congress know the administration's position so Congress may more effectively work its will. And, Mr. President, we urge you to join with us, to come along with this responsible Congress, and together put our programs into action for the benefit of all the people of this country.

## THE 1970'S—A CRITICAL ERA IN NUCLEAR POWER

(Mr. PRICE of Illinois asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PRICE of Illinois. Mr. Speaker, on December 3, 1969, Congressman CHET HOLIFIELD, chairman of the Joint Committee on Atomic Energy, addressed the Atomic Industrial Forum Annual Conference in San Francisco.

His remarks on "The 1970's—A Critical Era in Nuclear Power" set out a lucid exposition of the problems and progress inherent in the development of this new energy source that promises so much for the future.

Congressman HOLIFIELD stressed to atomic industry leaders that the most important challenge in the field of the peaceful uses of atomic energy is the development of a breeder reactor. He said that this reactor will provide an almost unlimited supply of electrical energy so vitally needed to support our growing economy and burgeoning population.

He also expressed concern in regard to the administration's proposal to sell the three Government-owned gaseous diffusion plants to private industry in the near future.

Recalling the bitter days of the Dixon-Yates proposal under the Eisenhower administration, he said such a sale is premature and would create another similar bitter division.

Congressman HOLIFIELD, a charter member of the Joint Committee has broad knowledge in the atomic energy field based on his more than two decades of service on the Joint Committee. I urge each Member to read his speech to get an insight into the scope and magnitude of developments and challenges in the field of atomic energy.

I include Congressman HOLIFIELD's remarks "The 1970's—A Critical Era in Nuclear Power" in the RECORD at this point.

### THE 1970'S—A CRITICAL ERA IN NUCLEAR POWER

The Joint Committee on Atomic Energy is in its 23rd year of carrying out its legislative and oversight review responsibilities of the atomic energy program. We have completed a quarter of a century of atomic development.

From 1946 to 1954 the Committee concentrated on the improvement of weapon design and the accumulation of an adequate inventory of weapons. We also initiated and funded the first four nuclear propulsion reactors for our nuclear submarines.

Under the leadership of Senator Hickenlooper and Congressman Sterling Cole the omnibus revision of the original McMahon bill was completed. While maintaining a vigorous weapon development program, we directed that a strong second program of peacetime application of the atom be developed.

During the past fifteen years we can say with pride that we have been successful beyond most predictions in both the weapon program and the atoms-for-peace program.

The existence of your great Association and the strong attendance at this convention is evidence of the interest of a wide sector of United States industry and finance.

The private capital investment in mines, mills, reactor building facilities, research and development laboratories, and related atomic industries represents many billions of dollars. In addition the Federal government has invested billions of dollars for research and development, and for necessary construction of facilities for military and peaceful applications of nuclear energy.

It has taken more than billions of dollars, however. It has required the dedication and service of thousands of scientists, engineers, technicians, and business leaders.

In the last analysis our success in this great program could not have been made without cooperative efforts on the part of the Joint Committee on Atomic Energy, the Atomic Energy Commission and United States industry.

There is credit enough to share for the success of the atomic programs.

There is blame enough to share for our failures.

It is not my intention today to try to divide the credits or the blame between the Committee, the Commission, and industry.

I do want to stress once again that, *in the main*, our success has been made possible because of the cooperation between the three aforementioned entities. I qualified that statement by saying "in the main" because there was one time period when bitter division developed between the members of the Committee, and between the Commission and the Committee. More about that later.

Your organization, in my opinion, can render a great service in the decade that lies ahead. A sound foundation has been laid, and if cooperation continues we can bring to fruition the dream of abundant, indeed almost unlimited energy.

As I see it there are two equally important challenges:

1. developing a technically successful and economic breeder reactor.

2. solving the problem of siting of nuclear and conventional type electric generating plants, including reconciling the need for power and the goal shared by us all of protecting or enhancing the quality of our environment.

The short range challenge has taken the form of a wave of opposition to siting of all kinds of electric generating plants, whether nuclear or fossil fueled.

This opposition stems from a growing awareness of environmental pollution. The danger however is that much of this opposition is based on emotionalism without basic factual information of the relative environmental impact of conventional fossil fueled plants and nuclear fueled generating plants. Also lacking is widespread awareness of the economic cost to our society of inadequate supplies of electrical energy and the adverse impact of a power deficiency on the health and standard of living of our people. The present reaction to and arguments against the siting of electric generating plants is akin to an argument to eliminate the automobile because of automobile accidents or because automobile engines emit noxious contaminants.

Your organization is representative of almost every phase of the nuclear industry. It is your duty to defend that industry by making the facts available to the public.

#### ENVIRONMENT

I have been heartened by your response to the growing resistance from environmental extremists. This is an important challenge to future utilization of nuclear reactors. Here again we need the close cooperation of industry, the Commission, and the Committee. The Committee is determined to do its part. We have concluded Phase I of our environmental hearings in which we have established basic data on the overall impact on the environment from all types of electrical generating plants. Shortly after the first of the year, we will open Phase II of the hearings. These hearings will be open to the atomic industry people and to representative critics of the industry. It is my intention to separate sensationalism based on emotion and theoretical conjecture, from facts and objective analysis.

The Atomic Energy Commission has been responding—and must consider as part of its duty a continued response—to the public clamor against reactor siting and reactor utilization.

Working together we can allay the fears of the public and demonstrate the true value of this great technical achievement by showing the comparative impact of the effects of conventional and nuclear plants on the environment. At the same time we, of course, will support sound and non-discriminatory adjustments to protect a viable environment.

#### POWERPLANT SITING

The utilities have not accepted as yet, the facts of life.

The environmental shadow on the wall is no larger than a man's hand. It can grow to catastrophic size.

The Atomic Industrial Forum might well consider the advisability of advocating state legislation setting up State Siting Authorities for all types of generating plants. Such Authorities would represent all sectors of their respective citizenry—public users of electricity, public and private investor-owned generating facilities, as well as environmentalists. The Authority should be authorized to hold hearings and use the power of eminent domain to acquire appropriate sites deemed to be necessary for the welfare of the State's population.

Appropriate tax laws may well be in order.

New York has already moved in this direction.

I understand Vermont has taken first legal steps in this direction.

Congressman Hosmer and I have recommended to Governor Reagan and a California Assembly Committee on Space and Atomic Energy that similar action be taken in California.

#### FAST BREEDER PROGRAM

The second objective is a long range objective, but it requires a coordinated effort if it is to be achieved.

The most important challenge which faces us at this time is to develop a breeder reactor. It is of prime importance to the industry and to the future development of our nation.

It is important also to the burgeoning population of the world.

In my opinion, it is a far greater technological challenge than was the development of our present water reactors.

It will take more dollars. Industry cannot carry this massive research and development load alone.

We will be forced to rely on Federal financing for a major part of the needed dollars. Unless we have a united front of cooperative Committee, Commission and private industry support for the breeder program, we will not succeed.

This then is the great challenge. This is the game.

Unless we keep our eye on the ball and maintain our drive toward the goal, we will lose the game.

We cannot afford to block the quarterback. We cannot confuse the signals. We cannot fumble the ball.

Now gentleman, it is my intention to engage in some plain talk. I do so not in a spirit of antagonism, but in a spirit of deep conviction, based on twenty-three years of service on the Joint Committee and twenty-seven years in Congress pursuing legislative goals.

DIFFUSION PLANTS

You may recall that earlier in my statement—I said that there was "a time period when bitter division developed between members of the Joint Committee and between the Atomic Energy Commission and the Joint Committee."

That period was in 1954.

The issue was the Dixon-Yates proposal of the Eisenhower-Nixon Administration. It was presented to our Committee by the Chairman of the Atomic Energy Commission, Admiral Strauss, and his general manager. It had the backing of a substantial part of industry and the financial community.

Boiled down to its essentials the Dixon-Yates proposal would have used a national security formula, which allowed long term Federally guaranteed 25 year bonds backed by a Federal contract, to finance the Dixon-Yates private investor owned electrical generating plant costing 107 million dollars. It would have used the Federally owned T.V.A. system to transmit the power several hundred miles to Dixon-Yates customers in the city of Memphis, Tennessee.

The Dixon-Yates proposal collapsed under the pitiless glare of public exposure. But before it died, it split the Joint Committee and the Atomic Energy Commission on a partisan basis. It took a long time for the Committee to overcome the bitterness and division that proposal generated. It eventually led to the defeat of a Presidential nominee for a Cabinet position.

I foresaw the danger and warned the Republican Chairman of the Committee and the Commission against the Dixon-Yates proposal. My warning went unheeded. We all remember the result.

I believe I can see history trying to repeat itself. Another dangerous proposal is in the incubator, the sale of the three diffusion plants.

The Atomic Industrial Forum has been in the forefront in the development of plans for the disposition of the plants. I do not question their right of advocacy. I am sure they will not question my right to disagree. But, I can see another bitter division developing in the proposal to sell the gaseous diffusion plants. The resulting controversy will obstruct and delay the progress of atomic technology. Our energies will be diverted from our priority goal of developing the breeder reactor. We will be diverted by the controversy. We may fumble the ball. We may even lose the ballgame.

Why is this occurring? Why are we endangering the cooperation between the Committee, the Commission and industry?

Suddenly, we are told that it is urgent that these diffusion plants be placed in the private sector without delay. But I ask you, has this great new atomic industry been developed by free enterprise dollars? *Of course not.* Free enterprise has had its important part in nuclear development, but Federal tax dollars paid free enterprise contractors for their services. It has been a cooperative effort between the Federal Government and industry in all phases of the work—in research, development, construction and operation. These plants, represent an enormous taxpayer investment and every witness, without exception, acknowledged, in testimony before the Joint Committee, that these plants are among the most efficiently operated facilities in the world.

The Joint Committee is composed of men who believe in the free enterprise system as a goal. We have moved steadily toward that goal. We have gauged each move in relation to the status of this developing industry. We have worked toward a private mining and milling industry. We have moved toward the private ownership of enriched uranium as soon as circumstances permitted. We have encouraged and supported private research and development efforts in addition to the basic goal of building a private manufacturing and supply industry in the basic tradition of the free enterprise system.

I have talked to many people about the sale of the diffusion plants in the near future. Many have doubts, mostly on timing. Some have made their decisions on the basis of traditional belief in the theory of free enterprise—without, in my opinion, full knowledge and appreciation of remaining problems. I rather suspect some few may have reached their conclusions on the basis of what they stand to gain if they are lucky enough to participate with a select few in the windfall acquisition and monopolistic control of the jugular vein of the atomic industry.

In my opinion these few will have to wait.

Governmental actions take place today in a gold fish bowl. Every action faces critical challenge. Any action which even appears to conflict with the public interest will be criticized and if it does conflict with the broad public interest it will poison all who touch it.

The fuel material from these diffusion plants will be used in the main by investor-owned utilities. These utilities are governmentally supervised because they operate in a zone of monopoly franchise and in a zone of guaranteed, although limited, profits. They are not typical free enterprise operations, as we all know. They must justify their capital expenditures and their operational expenses, item by item to State or Federal Regulatory bodies. In my opinion most of these utilities have acted responsibly in recent decades. They have usually kept their rates at reasonable levels. Because their fuel costs are reflected in the price of every kilowatt, special consideration must be given to the price of nuclear fuel produced in Federally owned facilities.

These great diffusion plants cost a lot of money—taxpayers' money. They are the most modern separation plants in the world.

They are worth more than book value to the electrical rate payers of our country.

At the present time they are operating at only about 40 percent capacity but our best estimate is that they will be operating at 100 percent of their capacity in the latter half of the 70's.

Additional plant capacity will be needed thereafter. To have it available when needed we must start improvement and expansion of the present plants in the upcoming fiscal year. 130 million dollars should be included in the 1970–71 budget to start cascade improvement. Similar annual amounts or even more will be needed from 1971 to 1980. Such an investment cannot be justified on a short range basis by a private enterprise. It can be justified on a ten or twelve year operating period providing it is financed on a Federal cost of money basis. The product must be priced on a level which will defray costs or production and eventually capital retirement.

The stated intention of the Administration to sell the three diffusion plants in the near future is based on the ideological premise of turning over to private enterprise the one remaining link in the nuclear fuel cycle not in private hands. In my opinion it is premature to do so. It causes concern in the nuclear market place on the part of potential buyers of nuclear plants and manufacturers of nuclear reactors. It can interfere with a growing international market for U.S. reactor hardware.

We had better stop, look and listen before we are carried away with slogans or acquisitive greed.

We need some hard answers to some hard questions.

1. Is private industry really ready

a. to pay a fair market value for this total government plant and its back-up inventory of yellow cake and enriched uranium;

b. to start in 1970 a six or seven hundred million dollar cascade improvement program for the three plants over and above acquisition costs for the plants?

2. Can a private corporation assume the present international commitments for long-range fuel supply and make additional commitments under our "atoms-for-peace" program?

3. Will foreign customers have the confidence in business-to-business promises without the present Government-to-Government agreements?

4. Can free private enterprise honestly assure the Congress that competition will occur if

a. one owner purchases the three plants

b. three separate owners purchase the three plants?

These are only a few of the questions the proponents of sale will be required to face.

Under the present arrangement the industry is prospering.

Nuclear power plants are being purchased from the manufacturers. A wave of new orders are in sight.

The price of fuel is reasonable, and there is no question of fair distribution at *non-discriminatory* prices.

There has been no supportable claim that the plants are inefficient. They are being operated by top-flight private industrial companies.

The taxpaying, rate paying customers are receiving widespread benefits from their investment of public monies.

On the other hand a minimum distribution of benefits to the taxpayers would occur if a few corporate entities were allowed to establish a middleman's toll gate position between production of nuclear fuels and the ultimate buyers of electricity.

PROBLEMS IN FAST BREEDER REACTOR PROGRAM

As a member of the Joint Committee who has given dedicated service to the development of the uses of the peace time atom, I make this appeal to you today.

Keep your eye on the ball. Development of the fast breeder is of vital importance—

To industry,

To having an almost unlimited supply of electrical energy,

To meet the needs of an exploding population.

We can develop the fast breeder, only on the basis of heavy Government support—we will move forward on the basis of cooperation between the AEC, the Joint Committee and the private sector of industry and finance.

We are at a critical point at this time. Research and development funds are being cut across the board by the Administration. I do not have time to examine the ideological and economic justification for such cuts. I point at this time to the results in the breeder program. The Administration has been whittling away the fiscal year 1970 budget for the Liquid Metal Fast Breeder Reactor program from the $99 million originally requested by those responsible for the program to less than $85 million. And yet we are told that this program is the highest priority effort in our civilian power program.

Presidential Candidate Richard Nixon on October 5, 1968, in New York, in a speech entitled: "Research Gap Crisis in American Technology" opened up his comments by saying that energy was a prime requirement in our society. Then he said:

"With the goal of fulfilling that requirement, I believe we should step up the Atomic Energy Commission's breeder reactor project which could provide virtually inexhaustable energy at extremely low cost. At present this project is going forward very slowly although its promise for mankind is as great as any other likely development."

If this philosophy of cutting research and development for fiscal reasons, is duplicated in subsequent years, the fast breeder with its great promise, will *not* be successfully developed.

At this critical point we must make every

available research and development dollar count. For two reasons:

1. To obtain at present the maximum result from each available dollar.

2. To achieve steady constructive progress in order to justify increased Federal and industrial support in follow-on fiscal years.

How are we to maximize the results from each available dollar?

I am not satisfied with our progress in the fast breeder program.

My colleagues on the Committee are not satisfied.

Representatives of industry have told me that they are not satisfied.

Shortly after the first of the year, I intend to propose the establishment of a blue ribbon ad hoc Committee to analyze this current problem.

While I have no final announcement to make at this time, I can assure you that my proposal will receive serious study and I believe it will be approved by my colleagues on the Committee.

The Ad Hoc Committee should be small. It should be composed of not less than three nor more than five members. Each member must be of top capability and experience in fields directly related to analyzation of methods to solve advanced scientific problems. The Committee must have amongst its members strong engineering capability for bringing theoretical concepts into reality. It must have amongst its members a capability to specify top quality industrial standards to make fast breeder hardware.

We must use our great national laboratories in our priority programs but the national laboratories must affirm a new sense of mission and an intensity of dedication to the primary purpose for which the laboratories exist.

Unless we can attack the problems of the fast breeder with a concentration of interest—

We will be forced to conclude that the financial commitment must be channeled to more efficient activities.

I am hopeful that such a study by such a Committee will clarify the present cloudy situation.

I am hopeful that a clear set of recommendations can be given to our Committee—recommendations which will help us to make every appropriated dollar count, which will justify our Committee in requesting adequate dollars in future fiscal years.

In conclusion gentlemen,

I do not wish to belabor the points I have made.

I will reemphasize that we face a critical era in the 1970's.

We can stand still with the water reactor technology and fail to achieve the full potential of our nuclear fuel resources.

We can be diverted and divided from constructive cooperation. We can, if we choose, tilt our lances at windmills with the same ineffective results which Don Quiote had, or

We can unite in our efforts to achieve the breeder reactor and extract the maximum amount of energy from our nuclear fuels, thereby bequeathing to our progeny an almost unlimited supply of electrical energy.

## PINKVILLE—A PINK PROMOTION

(Mr. RARICK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RARICK. Mr. Speaker, with passage of time the alleged "Mylai massacre" is being brought into proper perspective and examined more closely. The people are questioning why a single incident of violence occurring during wartime in enemy territory has been so overwhelmingly blown out of proportion, and a manufactured significance for it impressed so insistently upon an unsuspecting American people.

The stories—the rumors, half-truths, innuendoes, hearsay and all—have been multiplied, expanded, embroidered, and manipulated in the lowest style of yellow journalism. Purported witnesses have been paid for their stories; yet any mention of bought witnesses is missing from the repeated reports. Nor is "Pinkville"—Mylai—described as a Communist guerrilla village known essentially as an enemy stronghold. Pinkville was a battle-ready enemy encampment, populated with crime-hardened and fanatical terrorists of all ages and sexes, and not an innocent farming village occupied by peasants peacefully engaged in tilling the soil.

The news media has made no effort to explain to those who have not experienced combat that the accepted conventional standards of behavior in the continental United States in peacetime cannot be compared to those in a country in the throes of a war—where even the simplest everyday activity may mean sudden death. Nor has the prolific media given any effort to explain to their readers and viewers the variance in the value of life to the Communists as compared with that found in our country. No one has informed our American housewives—who would probably faint at the sight of their teenager brandishing a gun—that the Communist guerrilla would unblinkingly boobytrap their own baby or arm a 5-year-old with a grenade and tell him to walk into American troops.

Now we learn that one Telford Taylor, promoted as an expert prosecutor because he worked at the Nuremberg war crimes trials, apparently has now turned expert on atrocities. The wire service, in discussing his background and qualifications conveniently omits any reference to his long history of involvement with communism and specific Communists in this country. He came to Washington in the early thirties and enjoyed the phenomenal success of becoming a senior attorney with the Agricultural Adjustment Administration just 2 years after his graduation from law school—even more remarkable considering this occurred in the middle of the depression. As an AAA attorney he enjoyed a close working relationship with such other Department of Agriculture employees as Alger Hiss and Lee Pressman—luminaries of the Ware cell engaged in Soviet espionage in the Department of Agriculture.

To supply the "in depth" coverage which the news media seems to have missed, I include news clippings and a biographicall sketch on Mr. Taylor which follow as part of my remarks:

[From the Manchester Union-Leader, Dec. 4, 1969]

MASSACRE STORY RUBBISH: AUSSIE

SONG MY, VIETNAM.—An Australian officer said yesterday the women of My Lai hamlet "knew how to cut throats and the children could strip down a weapon like professionals."

Capt. John Nelson, 26, a Special Forces adviser to South Vietnamese troops, said he thought reports of an American massacre against the civilians of My Lai were "rubbish."

I don't believe a massacre ever happened," Nelson told a newsman. "I've been in the field around here for four months, and this is the first I've heard of any massacre.

"The charges are rubbish. That place was in enemy territory. The women moved around at night and they knew how to cut throats and the children could strip down a weapon like professionals."

In Da Nang, Sen. Tran Van Don said his investigation was unable to come up with a conclusion that U.S. troops slaughtered civilians in May Lai in 1968. One difficulty in weighing evidence was the strong Viet Cong influence there, he added.

On the strength of what he had learned, Don said, he had formed no opinion on whether a massacre occurred or the extent of the killing if there was one.

[From the Christian Science Monitor, Dec. 1, 1969]

NÜRNBERG LESSON SEEN IN VIETNAM

NEW YORK.—An American prosecutor at the Nürnberg war crimes trials, asked to comment on the alleged massacre at My Lai, South Vietnam, says the lesson of Nürnberg is "really coming home to roost."

Attorney Telford Taylor said the Nürnberg trials of Nazis after World War II showed that atrocities were not committed by "individual monsters" but by "very, very ordinary people. And the terrible thing about it was that it showed ordinary people can get into circumstances where they behave in this fashion," he said.

"I'm afraid we're beginning to find the lesson driven home in a very direct way."

The Army has charged Lt. William Calley with the murder of 109 civilians "without justification or excuse" in an American sweep through My Lai March 16, 1968.

Mr. Taylor said the plea of being under orders was not recognized as a viable defense under American, British, or German military law. But, he said, "there are many circumstances where the soldier simply cannot be expected to know what the ins and outs and rights and wrongs of the thing are."

[From Human Events, Dec. 6, 1969]

THE "PINKVILLE MASSACRE"

The Red appeasement faction in this country is using the alleged "Pinkville massacre"—where American soldiers are said to have executed up to 500 innocent Viet Nam civilians in a Viet Cong stronghold—as a pretext to blacken the reputation of the United States and pressure the U.S. into hastening its troop withdrawals from South Viet Nam.

The liberal news media, including the New York *Times*, the New York *Post*, etc., are now suggesting or proclaiming there is no difference between the U.S. and the Viet Cong and are even likening America to Nazi Germany. Pete Hamill of the *Post* wrote that the government should sentence not only the handful of men responsible for Pinkville but "Lyndon Johnson, Hubert Humphrey, Walt Rostow, the Bundys and all the rest." The trial, he said, should be held in "a town called Nuremburg."

Yet experts on the subject of communism in the Nation's Capital classify these hysterical verbal outpourings by the liberals as so much self-serving hogwash. For one thing, it is pointed out, the U.S., unlike the Communists, has not made it a policy to murder innocent civilians. Quite the contrary.

Each American soldier in Viet Nam, in fact, is handed, upon arrival, special rules which are read to him twice a year and specifically oppose harsh treatment for civilians. One provision reads: "All practicable means will be employed to limit the risk to the lives and property of friendly forces and civilians; and to avoid the violation of operational and national boundaries. This directive will not be modified by subordinate commanders, nor will directives modifying or interpreting substantive rules in the directive be published by subordinate commands."

Another provision reads: "Mistreatment of

any captive is a criminal offense. Every soldier is personally responsible for the enemy in his hands. It is both dishonorable and foolish to mistreat a captive. It is also a punishable offense. . . . Fair treatment of captives encourages the enemy to surrender." These rules were in effect long before the alleged massacre.

Equally important, the U.S. Army—as far back as March—began vigorously investigating the incident, even to the point of sending investigators to Pinkville and preventing the discharge of Lt. William L. Calley, now charged with murdering 109 Viet Nam civilians. These actions were taken long before the press in recent weeks began to blow up the incident into a sort of American Buchenwald.

Assuming even all the charges against Lt. William Calley are true—and his side has yet to be heard from on the matter—the hard fact remains that such incidents are clearly isolated phenomena.

The Communists in Viet Nam, on the other hand, have not only engaged in isolated atrocities, but have made it official policy—as Communists have the world over—to engage in the murdering of hundreds of thousands of innocent men, women and children.

While the news media was playing up the Pinkville incident, a former North Vietnamese Army officer, Lt. Col. Le Xuyen Chuyen, who defected to the south after 21 years of Communist party leadership, revealed to a Scripps-Howard reporter in Saigon last week that the Communists had at least five million—*five million*—on what he called the Communists' "blood debt" lists.

Col. Chuyen declared that for every 100 on the lists 10 to 15 would pay with their lives, another 40 would be imprisoned and the rest would undergo "thought reform." Included on the lists are a million Catholic refugees who fled North Viet Nam, some two million South Vietnamese troops, government officials down to the hamlet level and paramilitary groups, more than 100,000 North Vietnamese and Viet Cong defectors, some 100,000 South Vietnamese working for the Americans and numerous elements of the "bourgeois" class.

Captured enemy documents substantiate the claim. "Even after the Fatherland is completely liberated the fight will continue, fierce and complicated," reads one such document. It continues: "Then the real tasks of eliminating reactionaries, informants, American henchmen, religionists, etc., will begin."

That massacres and atrocities have become official policy of the Communists in North Viet Nam has long been known. Ho Chi Minh systematically slaughtered an estimated half-million peasants during his land reform program in the '50s, while some 20,000 civilians, including village chieftains, priests, government officials, hospital workers, etc., have been murdered by the Reds since the Viet Cong unleashed their terror campaign in the south.

In relation to the Hue massacre, the Communists have boasted about their "execution squads" having systematically murdered some 3,000 civilians—men, women and children. A Red document called the Hue massacre a complete success, stating: "Hue was the place where reactionary spirit had existed for over 10 years. However, it only took us a short time to drain it to its roots." On April 27, 1969, a Hanoi radio broadcast boasted that the bodies then being discovered in the Hue area were "hooligan lackeys who had owed blood debts. . . ."

As one observer summed up the situation last week: "Only a liberal would fail to distinguish between what happened at Pinkville and the calculated atrocity policy of the Communists."

The newly formed Dispatch News Service, which generated such wide publicity for the "Pinkville massacre," is a propaganda medium for the New Left and its allies. Seymour Hersh, who helped set up the service, located in the National Press Building in Washington, has been the recipient of a $1,000 grant from the Philip M. Stern Foundation, a chief contributor to leftist causes. The "service" is also prepared to employ the writings of Prof. Seymour Melman, a unilateral disarmament advocate. It has also distributed to various newspapers a series on the Viet war by author Richard Barnet, co-director of the tax-exempt Institute for Policy Studies, a radical think-tank in Washington. (For more on IPS, See *Human Events*, October 25, page 8). Barnet, while visiting North Vietnam recently, was quoted by Hanoi radio on November 13 as welcoming a Communist victory in South Viet Nam. Hanoi radio quoted Barnet as saying to the North Vietnamese:

"In the few days that we've been in Hanoi and in the provinces, we have good reason not to despair and the message that we would bring back with us is the message that the Vietnamese will continue to fight against the aggressors, the same aggressors that we will continue to fight in our own country. . . ."

---

[From American Opinion]

BIOGRAPHICAL DICTIONARY OF THE LEFT—VOLUME II

(By Francis X. Gannon)

Telford Taylor was born on February 24, 1908 in Schenectady, New York, son of Marcia Jones and John Taylor. He married Mary Walker. He is an alumnus of Williams College (A.B., 1928; A.M., 1932) and Harvard University (LL.B., 1932).

In 1928 and 1929, Taylor was an instructor in history and political science at Williams College. In 1932 and 1933, he was a law clerk to the U.S. circuit judge in New York.

In 1933, Taylor began a career in government service which lasted until 1952. He was an assistant solicitor in the U.S. Department of the Interior (1933–1934); a senior attorney with the Agricultural Adjustment Administration (1934–1935); an associate counsel to the U.S. Senate Committee on Interstate Commerce (1935–1939); a special assistant to Attorney General of the United States (1939–1940); and, general counsel to the Federal Communications Commission (1940–1942).

Taylor became a military intelligence officer in 1942. From 1945 until 1949, he worked at the "war crimes" trials as a staff member for the chief of counsel and as United States chief of counsel. In 1951 and 1952, he was the administrator of the Small Defense Plants Administration. Taylor was a visiting lecturer at Yale Law School and Columbia Law School; then, in 1963, he became a professor of law at Columbia. He is the author of *Sword and Swastika, Grand Inquest, The March of Conquest, and The Breaking Wave*. He has also practiced law.

Taylor has been a national board member of Americans for Democratic Action, the center of the radical left in American politics. He has been chairman of the National Committee for an Effective Congress, a group which, since 1952, has campaigned for and financed ultra-leftist candidates for the House and Senate. His activities in NCEC brought about this comment in "On the Left" (*National Review*, February 1, 1956): "This paper has been honored by the so-called National Committee for an Effective Congress. An appeal for funds, signed by Telford Taylor, asks for financial aid to combat the nefarious designs of 'the new, well-heeled publication, *National Review*.' When he was chief prosecutor at Nuremberg, Taylor was charged publicly by [U.S.] Senator [William] Langer [R.-N.D.] with maintaining a staff 'composed of leftists and men who have since been exposed as Communists and members of Communist front organizations.' At the same time [U.S.] Representative George Dondero [R.-Mich.] charged that Taylor's staff was 'loaded with Communists and fellow travellers.' Justice Curtis Shake of the Indiana Supreme Court accused Taylor and his staff of hasty and ill-conceived action in threatening witnesses and engaging in unauthorized searches. Dr. Theophil Wurm, German Protestant Bishop, stated that Taylor's prosecuting staff employed 'criminal methods and abominable tortures to obtain testimony and confessions.' The same charge was repeated by Judge E. Van Roden of Pennsylvania. The *Daily Worker* of May 11, 1947, insisted that Taylor was an 'honest prosecutor.'"

Taylor's continuing activities with the National Committee for an Effective Congress caused Donald J. Lambro to write in *Human Events* (July 1, 1967): "Telford Taylor . . . was associated with the defense of left-wing union leader Harry Bridges in 1953 and authored the book, *Grand Inquest*, an attack on congressional investigations of communism which was favorably reviewed in the *Daily Worker*. Taylor, in addition to defending Bridges, defended Junius Scales, North Carolina Communist Party chairman in 1956, on his appeal to the U.S. Supreme Court after conviction under the Smith Act. [Taylor's] defense of other leftist clients, including the Communist-controlled International Union of Mine, Mill and Smelter Workers in 1957, has won the applause of the *Daily People's World* and the *Daily Worker*.

"Taylor is known as '. . . a perennial champion of leftists, whose professional talents have aided such individuals as Harry Bridges, various Smith Act defendants and union moguls with asserted Communist leanings,' according to Edward J. Mowery of the *Newark* (N.J.) *Star Ledger*."

Mr. Mowery's comments came at a time when Taylor was being seriously mentioned as a possible head of the Central Intelligence Agency, sponsored by Walt Rostow who was then a special assistant for national security affairs to President Kennedy.

---

## DR. SPOCK ADDRESSES COMMUNISTS—CALLS HIMSELF BENEDICT ARNOLD

(Mr. RARICK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RARICK. Mr. Speaker, the Constitution of the United States defines treason in reasonably plain terms for those who choose to read it.

Treason against the United States shall consist . . . in adhering to their enemies, giving them aid and comfort.

I assume that the soldiers of North Vietnam, who are busily engaged in killing Americans, are enemies of these United States.

I assume that an American citizen who takes it upon himself to journey to a foreign land, and there to address a cheering audience described as largely made up of Communists, for the purpose of raising funds to furnish medical aid to the enemy and encouraging hostile demonstrations on our border, is giving that enemy aid and comfort.

I assume that when this same American is quoted to the effect that "his main job" is to speak in the United States, that a prime concern of his is to raise money for the defense of draft dodgers, and that "we must end this war and we must end it in the United States" he is both adhering to the enemy and giving aid and comfort to him.

Dr. Benjamin Spock will again be in the news.

Mr. Speaker, at the end of this week the American people will again be ex-

posed to the sorry spectacle of the hard-core Communists leading innocent and brainwashed dupes by the hundreds in demonstrations favoring the enemy in Vietnam. While the easily led mobs demonstrate, get high on pot and break laws, commandments, and bank windows, worthwhile Americans are in combat.

So that our colleagues will not be misled by any of Dr. Spock's lofty pronouncements this weekend, I include in my remarks the perceptive reporting of his visit to Canada by two writers for the Vancouver, British Columbia, Province:

[From the Vancouver, (British Columbia, Canada) Province, Nov. 6, 1969]

WAR PROTEST MOVES URGED

(By Fred Curtin)

Dr. Benjamin Spock spelled out a four-point program Wednesday night for Canadians who want to take up the fight against the war in Vietnam.

Speaking to a capacity audience at Queen Elizabeth Theatre—that gave him four standing ovations, Spock said it is most important Canadians continue sending medical supplies to North Vietnam.

"This is something that we in the U.S. cannot do and these supplies are dearly needed."

He urged students to hold more border demonstrations such as the one last month to protest the nuclear test in the Aleutian Islands.

"Demonstrations like this get into our magazines and it is good for the Americans to read how our policy is despised in other countries."

He asked Canadians to write to U.S. newspapers stating their position on the war in Vietnam.

"You can either critize us delicately or really spew it out. Most Americans don't realize we are doing anything wrong."

But, most important of all, he urged Canadians to "keep pressure on your government to dissociate itself from U.S. policy.

"Canada has a better record for this than either New Zealand, Australia or even Great Britain.

"I know pressure has been put on your government, and I am sure Lyndon Johnson expressed it in a most thuggish manner."

Spock, who obviously is not used to speaking to audiences largely made up of Communists, made one glaring faux pas in his talk.

He told how Nixon was an active witch-hunter in his early political career. He then referred to some of Nixon's victims and said: "They are no more Communist than you or me."

AUDIENCE COOL

The response from the otherwise enthusiastic audience was decidedly cool.

Spock told how he campaigned for Johnson in the 1964 election because he was the obvious peace candidate.

"Johnson phoned me the morning after he was elected and said he hoped he would be worthy of my trust. Three months later he had made a monkey of all of us."

Spock said that although some polls show that 55 per cent of the Americans are against the war it is only because it has not been successful or has gone on too long.

"They don't see it as something immoral and illegal.

"As children believe in their parents, people believe in their leaders.

END IN THE UNITED STATES

"But we must end this war and we must end it in the U.S."

Then, Spock said, there must be some system to end all wars.

"I think that it is in strengthening the UN.

"But for now, we still have a long, hard row to hoe, especially with Nixon's new policy of Vietnamizing the war.

"This is what Kennedy proposed and Johnson tried to do. The only trouble is the war won't Vietnamize. All the good Vietnamese are on the other side."

---

[From the Province, Vancouver, British Columbia, Canada, Nov. 6, 1969]

SPOCK SAYS NIXON CUT HIS OWN THROAT

(By Tony Eberts)

President Nixon's latest Vietnam policy speech has killed his chances of re-election, or even being a U.S. presidential candidate again, says famed baby doctor Benjamin Spock.

At a Vancouver International Airport interview Wednesday, Dr. Spock said he didn't know what group he was supposed to be speaking in support of here—"but I'm glad of any platform, and the truth is the truth whenever it's said."

He just shrugged his shoulders when told his sponsor for the Wednesday night meeting was the Committee for Vietnamese Tour and that he was sharing the platform with two Viet Cong "provisional government" officials.

"It looks to me as if the Vietnam war is going to go on for one or two more years," he told reporters, "until Nixon realizes, after his support drops to 20 per cent or so, that he has made a mistake.

"Any time the president says to the people 'we don't want to lose the war, do we?' a large number of people will go along for a while.

"But inevitably it will fall again, and this time the support is going to fall so low that Nixon will be unable to run again in the 1972 U.S. elections."

Then the tall, craggy baby doctor lashed out at American "police state laws" in dealing with Negroes and his own 1968 trial, when he was convicted of conspiring to counsel young men to avoid the draft. (An appeal court quashed the conviction this summer.)

"I think that militant black people know there is a police state for them," Dr. Spock said. "Local police, aided by FBI, lay false charges and enforce unfair laws . . . yet even the president's own committee on crime said the Chicago riot last was the fault of police."

He thanked former president Lyndon Johnson, however, "for convicting and jailing me and giving me a much stronger platform to speak from."

He said Nixon's program of gradual withdrawal of troops from Vietnam is just an effort to pull the wool over the eyes of young Americans, and the president's talk of support from a silent majority is "another self-delusion of his."

Asked about charges that he is acting like a traitor by fighting against the draft, condemning U.S. policy and appearing on platforms with North Vietnam-backed officials, Dr. Spock said:

"I'm a Benedict Arnold only if you assume that the war is to the benefit of the U.S. I think it is disastrous to the U.S. I am trying every means I can to stop the war because I'm a patriotic American."

He said he doesn't favor violence in his anti-Vietnam war programs, but he came out swinging against what he called "the namby-pamby doves who are afraid of getting their skirts soiled."

By this, he explained, he meant those who say they oppose the war, yet who won't risk their reputations or status in their opposition.

If he were president, Dr. Spock said, he would pull all U.S. troops out of Vietnam within a week.

"I don't think anything that could happen after we pull out could exceed the butchery going on in Vietnam with the U.S. in there," he said.

He said he has given up all hope of the Democratic party becoming liberal enough, or sufficiently divorced from big business, to carry out the sort of policies he and his supporters view as necessary.

"What the U.S. needs is some kind of anti-imperialist party," he said, "but frankly I don't see the slightest sign of it being formed."

Why come up to Canada to criticize U.S. policy?

"My main job is to speak in the U.S.," he said, "but support in opposition to the war from Canada is also valuable . . . I'm also trying to raise money for Vietnamese children."

In the U.S., he added, a prime concern of his is raising money to help young men, who refuse military service to fight their legal battles.

Many thousands of Americans have refused induction, he said, "but only a minority are prosecuted for there aren't facilities to prosecute them all."

---

[From the Washington Post, Dec. 7, 1969]

PROTESTS PLANNED IN 40 CITIES

A coalition of 29 private groups announced plans yesterday for 40 town meetings here and throughout the nation this month and next to discuss the conflict between domestic needs and military spending.

The meetings, sponsored by the Coalition on National Priorities and Military Spending, were endorsed by Sam Brown, a leader of the Vietnam Moratorium Committee. Brown called on moratorium backers to participate.

The coalition, whose chairman is former Sen. Joseph S. Clark (D-Pa.), said its first town meeting will be held in Chicago today. A series of meetings is planned for the Washington area Dec. 12–19.

Clark said the aim is to allow each community to find out for itself how much of its federal tax money goes for military spending and "how much comes back for desperately needed programs."

Another objective is to assess unsatisfied needs in housing, health, transportation, pollution, sanitation, welfare, and other areas, and to determine the cost of meeting such needs.

Clark said he hoped testimony taken at the meetings could be sent to the President and Congress "to indicate that the silent majority wants the war ended and the military budget cut."

Most of the meetings here are scheduled during the Dec. 12–14 weekend. Moratorium activities have already been scheduled for Dec. 12 and 13, as well as Dec. 24.

The 29 peace, religious, labor and social action groups listed as affiliates of the coalition include Americans for Democratic Action, American Friends Service Committee, the Southern Christian Leadership Conference and the United Auto Workers.

Describing the coalition as including some "establishment types," Clark said, "We feel a bridge has now been made with youth by having the leadership of the moratorium" join in sponsoring the meetings.

A "town meeting" in Room 2175 of the Rayburn Building Friday is to serve as kick-off for several meetings throughout the Washington area, said Frederick T. Merrill Jr., coordinator of the D.C. Coalition.

Merrill said community leaders and representatives will testify on the city's needs at the 10 a.m. meeting.

Several members of the House District Committee have been invited to hear the testimony, he said.

Brown, co-chairman of the Moratorium, said that in some cities the meetings will serve as the only moratorium-related activity this month.

---

[From the Washington Star, Dec. 7, 1969]

ANTI-WAR GROUPS BRIDGE GAP

(By David Braaten)

The generation gap was bridged for some peace groups at a joint press conference yesterday of the Vietnam Moratorium Commit-

tee and the Coalition on National Priorities and Military Policy.

The bridging was announced by former Sen. Joseph S. Clark of Pennsylvania, chairman of the Coalition. He said "Establishment types" in such organizations as the one he heads (United World Federalists) had established the bridgehead to what he called "intelligent, meaningful youth."

The latter was represented by Sam Brown of the Moratorium, who, while not exactly seconding Clark's statement, at least acknowledged that the Moratorium was going to cooperate with the Coalition's 29 organizations in the "town meetings" planned for next Saturday and Sunday.

GOTTLIEB IN BETWEEN

Somewhere in between was Sanford Gottlieb, executive director of the Society for a Sane Nuclear Policy. Younger than Clark, older than Brown, Gottlieb explained that the purpose of the town meetings scheduled throughout the country next week is to unite "at a grass roots level" all organizations with a common interest in reversing the trend of military spending and putting resources where they think they can do more good.

Brown pledged Moratorium support for the town meetings, and said that no peace demonstration was planned for Washington, certainly not on the scale of last month's march.

Brown announced another press conference for next Tuesday, at a time and place to be announced. When a reporter asked about the possibility of the Coalition or the Moratorium or both forming a third national party, Brown said enigmatically: "I will deal with that at the Tuesday press conference."

For his part, Clark said he was certain the Coalition wasn't giong to support a third party. The Coalition is strictly bipartisan, he said. In fact, he added, the United World Federalists are "loaded with Republicans; we need them, we want to keep them, they're very useful to us."

Asked about the alleged massacre of Vietnam civilians in My Lai, the three leaders gave slightly different responses. Brown said it was a national tragedy which should not be exploited politically. Clark said it was "one more ball of lead" around the Army's neck, helping to prove the Army's "incompetence." Gottlieb said the massacre put not only the Army on trial, but also the civilians who sent the troops to Vietnam—"Johnson, McNamara, Rostow, Bundy." The people at the top should not escape scrutiny, he said.

## LEAVE OF ABSENCE

By unanimous constent, leave of absence was granted as follows to:

Mr. EILBERG (at the request of Mr. ALBERT), for today, on account of official business.

Mr. Moss, for the period from 4 p.m., December 17 through January 2, 1970, on account of official business.

Mr. BLACKBURN (at the request of Mr. GERALD R. FORD), for today, on account of official business.

Mr. RIEGLE (at the request of Mr. GERALD R. FORD), for the week of December 8, on account of illness.

Mr. WYDLER (at the request of Mr. GERALD R. FORD), for December 8 and 9 on account of illness in family.

## SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. PUCINSKI, for 30 minutes, today.

(The following Members (at the request of Mr. HASTINGS); to revise and extend their remarks and include extraneous material:)

Mr. RAILSBACK, for 30 minutes, today.

Mr. SCHWENGEL, for 15 minutes, today.

Mr. MILLER of Ohio, for 5 minutes, today.

(The following Members (at the request of Mr. STOKES); to revise and extend their remarks and include extraneous material:)

Mr. CLARK, for 15 minutes, today.

Mr. REUSS, for 20 minutes, today.

Mr. SLACK, for 15 minutes, today.

Mr. GONZALEZ, for 10 minutes, today.

Mr. KOCH, for 60 minutes, December 10.

Mr. PODELL, for 60 minutes, December 11.

## EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. PHILBIN in five instances and to include extraneous matter.

(The following Members (at the request of Mr. HASTINGS) and to include extraneous material:)

Mr. MCDONALD of Michigan.
Mr. VANDER JAGT.
Mr. HALL.
Mr. PELLY in two instances.
Mr. ROUDEBUSH in four instances.
Mr. DUNCAN in two instances.
Mr. WHITEHURST.
Mr. WYMAN in two instances.
Mr. FOREMAN in two instances.
Mr. MIZELL in two instances.
Mr. DELLENBACK.
Mr. DERWINSKI in four instances.
Mr. AYRES.
Mr. FREY.
Mr. SCHERLE.
Mr. ZWACH.
Mr. LIPSCOMB.
Mr. ASHBROOK.
Mr. ARENDS.
Mr. BURTON of Utah.
Mr. HALPERN in two instances.
Mr. MCKNEALLY.
Mr. COLLINS in two instances.
Mr. LANDGREBE.
Mr. THOMPSON of Georgia.
Mr. BUTTON.
Mr. BURKE of Florida.
Mr. WIDNALL.
Mr. BRAY in two instances.
Mr. BOB WILSON.

(The following Members (at the request of Mr. STOKES) and to include extraneous material):

Mr. BOLLING in three instances.
Mr. MCFALL in two instances.
Mr. WILLIAM D. FORD in two instances.
Mr. FASCELL in two instances.
Mr. EVINS of Tennessee in three instances.
Mr. DINGELL in two instances.
Mr. BLATNIK.
Mr. FRASER in three instances.
Mr. ALBERT in two instances.
Mr. CHARLES H. WILSON.
Mr. RODINO in two instances.
Mrs. MINK.
Mr. STOKES in two instances.
Mr. OTTINGER.
Mr. WOLFF in five instances.
Mr. Moss in three instances.
Mr. MONAGAN in two instances.
Mr. PICKLE in two instances.
Mr. RARICK in four instances.
Mr. SLACK.
Mr. HUNGATE in two instances.
Mr. DULSKI in three instances.
Mr. MOORHEAD in four instances
Mr. PUCINSKI in 10 instances.
Mr. BURTON of California.
Mr. GONZALEZ in two instances.
Mr. BINGHAM in two instances.
Mr. HOLIFIELD.

## SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 2325. An act to amend title 5, United States Code, to provide for additional positions in grades GS–16, GS–17, and GS–18; to the Committee on Post Office and Civil Service.

S. 2869. An act to revise the criminal law and procedure of the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

## SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 118. An act to grant the consent of the Congress to the Tahoe regional planning compact, to authorize the Secretary of the Interior and others to cooperate with the planning agency thereby created, and for other purposes.

## ENROLLED JOINT RESOLUTION SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a joint resolution of the House of the following title, which was thereupon signed by the Speaker:

H.J. Res. 1017. Joint resolution making further continuing appropriations for the fiscal year 1970, and for other purposes.

## BILL AND JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on December 4, 1969 present to the President, for his approval, a bill and a joint resolution of the House of the following titles:

H.R. 14159. An act making appropriations for public works for water, pollution control, and power development, including the Corps of Engineers-Civil, the Panama Canal, the Federal Water Pollution Control Administration, the Bureau of Reclamation, power agencies of the Department of the Interior, the Tennessee Valley Authority, the Atomic Energy Commission, and related independent agencies and commissions for the fiscal year ending June 30, 1970, and for other purposes; and

H.J.Res. 1017. Joint resolution making further continuing appropriations for the fiscal year 1970, and for other purposes.

## ADJOURNMENT

Mr. STOKES. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 45 minutes p.m.), the House adjourned until tomorrow, Tuesday, December 9, 1969 at 12 o'clock noon.

## EXECUTIVE COMMUNICATIONS ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1390. A letter from the National Adjutant, Disabled American Veterans, transmitting the annual report of proceedings and the audit of the Disabled American Veterans for the year ended June 30, 1969, pursuant to the provisions of Public Law 249, 77th Congress (H. Doc. No. 91–201); to the Committee on Veterans' Affairs and ordered to be printed with illustrations.

1391. A letter from the Comptroller General of the United States, transmitting a report of observations on the Agency for International Development's administration of the excess property program in Kenya and Pakistan Department of State; to the Committee on Government Operations.

1392. A letter from the Comptroller General of the United States, transmitting a report on the need to improve project transition management by the Department of Defense; to the Committee on Government Operations.

1393. A letter from the Comptroller General of the United States, transmitting a report on management of the Project One Hundred Thousand program of the Department of the Army; to the Committee on Government Operations.

1394. A letter from the Comptroller General of the United States, transmitting a report on opportunities to improve management of primate research centers supported by the National Institutes of Health, Department of Health, Education, and Welfare; to the Committee on Government Operations.

1395. A letter from the Archivist of the United States, transmitting a report of records proposed for disposal under the law; to the Committee on House Administration.

1396. A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to amend the Public Health Service Act to provide for special project grants for the provision of family planning services and related research, training, and technical assistance; to the Committee on Interstate and Foreign Commerce.

1397. A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to amend the Mental Retardation Facilities Construction Act to extend and improve the provisions thereof, and for other purposes; to the Committee on Interstate and Foreign Commerce.

1398. A letter from the Special Assistant to the President for Consumer Affairs, transmitting a draft of proposed legislation to assist consumers in evaluating products by promoting development of adequate and reliable methods for testing characteristics of consumer products; to the Committee on Interstate and Foreign Commerce.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

*(Pursuant to the order of the House on December 4, 1969, the following report was filed on Dec. 5, 1969.)*

Mr. MILLS: Committee on Ways and Means. H.R. 15095. A bill to amend the Social Security Act to provide a 15-percent across-the-board increase in benefits under the old-age, survivors, and disability insurance program; without amendment (Rept. No. 91–700). Referred to the Committee of the Whole House on the State of the Union.

*[Submitted December 8, 1969]*

Mr. DAWSON: Committee on Government Operations. Debt collection operations of the Department of Justice (Rept. 91–701). Referred to the Committee of the Whole House on the State of the Union.

Mr. HAYS: Committee on Foreign Affairs. Senate Joint Resolution 90. Joint resolution to enable the United States to organize and hold a diplomatic conference in the United States in fiscal year 1970 to negotiate a Patent Cooperation Treaty and authorize an appropriation therefor; without amendment (Rept. No. 91–702). Referred to the Committee of the Whole House on the State of the Union.

Mr. FALLON: Committee on Public Works. H.R. 14944. A bill to authorize an adequate force for the protection of the Executive Mansion and foreign embassies, and for other purposes; with amendments (Rept. No. 91–703). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLS: Committee on Ways and Means. H.R. 14956. A bill to amend the Tariff Act of 1930—to extend the duty free treatment of certain dyes; with amendments (Rept. No. 91–704). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLS: Committee on Ways and Means. H.R. 15071. A bill to continue for 2 additional years the duty-free status of certain gifts by members of the Armed Forces serving in combat zones; without amendment (Rept. No. 91–705). Referred to the Committee of the Whole House on the State of the Union.

Mr. DELANEY: Committee on Rules. House Resolution 740. Resolution for consideration of H.R. 15095. A bill to amend the Social Security Act to provide a 15-percent across-the-board increase in benefits under the old-age, survivors, and disability insurance program (Rept. No. 91–706). Referred to the House Calendar.

Mr. MATSUNAGA: Committee on Rules. House Resolution 741. Resolution for consideration of S. 740, an act to establish the Cabinet Committee on Opportunities for Spanish-Speaking People, and for other purposes (Rept. No. 91–707). Referred to the House Calendar.

Mr. PASSMAN: Committee on Appropriations. H.R. 15149. A bill making appropriations for foreign assistance and related programs for the fiscal year ending June 30, 1970, and for other purposes (Rept. No. 91–708). Referred to the Committee of the Whole House on the State of the Union.

Mr. ROONEY of New York: Committee of Conference. Conference report on H.R. 12964 (Rept. No. 91–709). Ordered to be printed.

Mr. O'NEILL of Massachusetts: Committee on Rules. House Resolution 742. Resolution for consideration of H.R. 15149. A bill making appropriations for foreign assistance and related programs for the fiscal year ending June 30, 1970, and for other purposes (Rept. No. 91–710). Referred to the House Calendar.

## PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. DANIEL of Virginia:

H.R. 15112. A bill to repeal several obsolete sections of title 10. United States Code, and section 208 of title 37, United States Code; to the Committee on Armed Services.

H.R. 15113. A bill to prohibit the use of the name of any of certain deceased servicemen unless consent to so use the name is given by the next-of-kin of the serviceman; to the Committee on the Judiciary.

By Mr. FRASER:

H.R. 15114. A bill to amend the Social Security Act to provide increases in benefits under the old-age, survivors, and disability insurance program, to provide health insurance benefits for the disabled, and for other purposes; to the Committee on Ways and Means.

H.R. 15115. A bill to amend the Social Security Act to provide a 15-percent across-the-board increase in benefits under the old-age, survivors, and disability insurance program; to the Committee on Ways and Means.

By Mr. KASTENMEIER:

H.R. 15116. A bill to amend the Food Stamp Act of 1964; to the Committee on Agriculture.

By Mr. KING:

H.R. 15117. A bill providing for Federal railroad safety; to the Committee on Interstate and Foreign Commerce.

By Mr. McCULLOCH:

H.R. 15118. A bill to provide for the striking of medals in commemoration of the 100th anniversary of the founding of Ohio Northern University; to the Committee on Banking and Currency.

By Mr. MATSUNAGA:

H.R. 15119. A bill to amend section 8340 of title 5, United States Code, to provide a 5-percent increase in certain annuities; to the Committeee on Post Office and Civil Service.

By Mr. MATSUNAGA (for himself, Mr. CONYERS, Mr. KOCH, and Mr. REES):

H.R. 15120. A bill to repeal the law prohibiting abortions in the District of Columbia; to the Committee on the District of Columbia.

By Mr. O'KONSKI:

H.R. 15121. A bill to prohibit the use of the name of any of certain deceased servicemen unless consent to so use the name is given by the next-of-kin of the serviceman; to the Committee on the Judiciary.

H.R. 15122. A bill to amend title II of the Social Security Act to permit the computation of benefits thereunder on the basis of the worker's 3 years of highest earnings; to the Committee on Ways and Means.

By Mr. O'NEILL of Massachusetts:

H.R. 15123. A bill to impose an additional excise tax on cigarettes, with the proceeds being used for cancer research programs through a newly established Cancer Research Fund; to the Committee on Ways and Means.

By Mr. RAILSBACK (for himself, Mr. ADDABBO, Mr. ANDERSON of Illinois, Mr. ANDREWS of North Dakota, Mr. ANNUNZIO, Mr. AYRES, Mr. BIAGGI, Mr. BINGHAM, Mr. BOLAND, Mr. BROCK, Mr. BUCHANAN, Mr. BURKE of Florida, Mr. BURTON of California, Mr. BUSH, Mr. BUTTON, Mr. BYRNES of Wisconsin, Mr. CAHILL, Mr. CEDERBERG, Mr. CLAY, Mr. COLLINS, Mr. CONTE, Mr. CONYERS, Mr. CORBETT, Mr. CORMAN, and Mr. COWGER):

H.R. 15124. A bill to amend title 18 of the United States Code by adding a new chapter 404 to establish an Institute for Continuing Studies of Juvenile Justice; to the Committee on the Judiciary.

By Mr. MIKVA (for himself, Mr. CUNNINGHAM, Mr. DADDARIO, Mr. DELLENBACK, Mr. EDWARDS of California, Mr. ERLENBORN, Mr. ESCH, Mr. FINDLEY, Mr. FISH, Mr. FRELINGHUYSEN, Mr. FULTON of Pennsylvania, Mr. FULTON of Tennessee, Mr. HALPERN, Mr. HANNA, Mr. HECHLER of West Virginia, Mrs. HECKLER of Massachusetts, Mr. HELSTOSKI, Mr. HOWARD, Mr. HUNGATE, Mr. JACOBS, Mr. KLEPPE, Mr. KUYKENDALL, Mr. LOWENSTEIN, Mr. McCLOSKEY, and Mr. McDADE):

H.R. 15125. A bill to amend title 18 of the

United States Code by adding a new chapter 404 to establish an Institute for Continuing Studies of Juvenile Justice; to the Committee on the Judiciary.

By Mr. BIESTER (for himself, Mr. MCDONALD of Michigan, Mr. MCKNEALLY, Mr. MACGREGOR, Mr. MADDEN, Mr. MANN, Mr. MATSUNAGA, Mr. MESKILL, Mr. MICHEL, Mr. MOSHER, Mr. MOSS, Mr. MYERS, Mr. OTTINGER, Mr. PELLY, Mr. PETTIS, Mr. PODELL, Mr. PRICE of Illinois, Mr. QUIE, Mr. REES, Mr. RIEGLE, Mr. RODINO, Mr. ROTH, Mr. RUPPE, Mr. RUTH, and Mr. ST. ONGE):

H.R. 15126. A bill to amend title 18 of the United States Code by adding a new chapter 404 to establish an Institute for Continuing Studies of Juvenile Justice; to the Committee on the Judiciary.

By Mr. SANDMAN (for himself, Mr. SCHEUER, Mr. SCHNEEBELI, Mr. SMITH, of New York, Mr. STEIGER of Wisconsin, Mr. STOKES, Mr. SYMINGTON, Mr. TAFT, Mr. THOMPSON of Georgia, Mr. TIERNAN, Mr. WIGGINS, Mr. CHARLES H. WILSON, Mr. WYATT, and Mr. MURPHY of Illinois):

H.R. 15127. A bill to amend title 18 of the United States Code by adding a new chapter 404 to establish an Institute for Continuing Studies of Juvenile Justice; to the Committee on the Judiciary.

By Mr. RIVERS:

H.R. 15128. A bill to provide that the antitrust law exemption for agreements by professional sports leagues relating to telecasting of sports contests involving their members will not apply to an agreement which prohibits the telecasting in the home territory of a league member of a sports contest involving such member which has been sold out more than 3 days before the day on which it is to be played; to the Committee on the Judiciary.

By Mr. ST GERMAIN:

H.R. 15129. A bill to amend the Social Security Act to provide increases in benefits under the old-age, survivors, and disability insurance program, to provide health insurance benefits for the disabled, and for other purposes; to the Committee on Ways and Means.

By Mr. WHALLEY:

H.R. 15130. A bill to amend title 10 of the United States Code to provide that members of the Army who have been wounded a certain number of times in Vietnam may not be involuntarily reassigned to combat in Vietnam for a certain period; to the Committee on Armed Services.

By Mr. BARING:

H.R. 15131. A bill to declare that certain federally owned lands in the State of Nevada are held by the United States in trust for Reno-Sparks Indian Colony, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. CELLER:

H.R. 15132. A bill to implement the Convention on the Recognition and Enforcement of Foreign Arbitral Awards; to the Committee on the Judiciary.

By Mrs. CHISHOLM:

H.R. 15133. A bill to amend title XVIII of the Social Security Act to provide payment for chiropractors' services under the program of supplementary medical insurance benefits for the aged; to the Committee on Ways and Means.

By Mr. CRAMER:

H.R. 15134. A bill to amend the River and Harbor Act of 1960 and the Act of August 13, 1946, to increase certain authorizations with respect to small projects; to the Committee on Public Works.

H.R. 15135. A bill to amend the Public Health Service Act to extend for 3 years the program relating to heart diseases, cancer, stroke, and related diseases; to authorize training and clinical demonstration programs for related chronic diseases; and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. GREEN of Pennsylvania:

H.R. 15136. A bill to amend title XVIII of the Social Security Act to provide payment for chiropractors' services under the program of supplementary medical insurance benefits for the aged; to the Committee on Ways and Means.

By Mr. JARMAN:

H.R. 15137. A bill to amend the Clean Air Act to authorize appropriations to carry out such act through fiscal year 1973; to the Committee on Interstate and Foreign Commerce.

By Mr. LANGEN:

H.R. 15138. A bill to amend the Social Security Act to provide an increase in benefits under the old-age, survivors, and disability insurance program, provide for automatic benefit increases thereafter in the event of future increases in the cost of living, provide for future automatic increases in the earnings and contribution base, and for other purposes; to the Committee on Ways and Means.

By Mr. MCCLOSKEY:

H.R. 15139. A bill to create marine sanctuaries from leasing pursuant to the Outer Continental Shelf Lands Act in areas off the coast of California adjacent to State-owned submerged lands when such State suspends leasing of such submerged lands for mineral purposes; to the Committee on Interior and Insular Affairs.

By Mr. MONAGAN:

H.R. 15140. A bill to provide for a coordinated national boating safety program; to the Committee on Merchant Marine and Fisheries.

By Mr. RANDALL:

H.R. 15141. A bill to amend title II of the Social Security Act to increase, in the case of individuals having 40 or more quarters of coverage, the number of years which may be disregarded in computing such individual's average monthly wage, and to provide that, for benefit computation purposes, a man's insured status and average monthly wage will be figured on the basis of an age-62 cutoff (the same as presently provided in the case of women); to the Committee on Ways and Means.

By Mr. RIVERS:

H.R. 15142. A bill to authorize any former Chairman of the Joint Chiefs of Staff to recompute his military retired pay under certain circumstances; to the Committee on Armed Services.

H.R. 15143. A bill to amend title 10, United States Code, to provide the grade of lieutenant general for an officer serving as the chief of the National Guard Bureau, and for other purposes; to the Committee on Armed Services.

By Mr. ROUDEBUSH:

H.R. 15144. A bill to amend the Tariff Schedules of the United States with respect to the rate of duty on whole skins of mink; to the Committee on Ways and Means.

By Mr. WHALLEY:

H.R. 15145. A bill to amend the Social Security Act to provide a 15-percent across-the-board increase in benefits under the old-age, survivors, and disability insurance program; to the Committee on Ways and Means.

By Mr. CONYERS (for himself, Mr. DIGGS, Mr. EDWARDS of California, Mr. KASTENMEIER, Mr. MIKVA, and Mr. RYAN):

H.R. 15146. A bill to prohibit certain prerequisites to the right to vote in Federal, State, and local elections; to the Committee on the Judiciary.

By Mr. DINGELL:

H.R. 15147. A bill to amend the Marine Resources and Engineering Development Act of 1966 to establish, within the Department of the Interior, a comprehensive and long-range national program of research, development, technical services, exploration, and utilization with respect to our marine and atmospheric environment; to the Committee on Merchant Marine and Fisheries.

H.R. 15148. A bill to amend the Marine Resources and Engineering Development Act of 1966 to establish within the Department of the Interior a comprehensive program with respect to oceanographic and atmospheric research, development, and exploration; to the Committee on Merchant Marine and Fisheries.

By Mr. PASSMAN:

H.R. 15149. A bill making appropriations for foreign assistance and related programs for the fiscal year ending June 30, 1970, and for other purposes.

By Mr. CORMAN:

H.J. Res. 1021. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. MOSS:

H.J. Res. 1022. Joint resolution authorizing the President to proclaim the period February 8 through February 14, 1970, as "Active 20–30 Week"; to the Committee on the Judiciary.

By Mr. ROUDEBUSH:

H.J. Res. 1023. Joint resolution proposing an amendment to the Constitution of the United States relative to equal right for men and women; to the Committee on the Judiciary.

By Mr. VAN DEERLIN:

H.J. Res. 1024. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. FOREMAN:

H. Con. Res. 464. Concurrent resolution providing for congressional recognition of the Goddard Rocket and Space Museum; to the Committee on Science and Astronautics.

By Mr. DELLENBACK:

H. Res. 743. Resolution establishing a Select Committee on Congressional Mailing Standards; to the Committee on Rules.

By Mr. DENT:

H. Res. 744. Resolution providing for the printing of the proceedings in the Committee on House Administration incident to the presentation of a portrait of the Honorable Samuel N. Friedel; to the Committee on House Administration.

## PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII,

Mr. FREY introduced a bill (H.R. 15150) for the relief of Godfrey Stewart Gray, which was referred to the Committee on the Judiciary.

## PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

349. By the SPEAKER: Petition of Henry Stoner, York, Pa., relative to congressional representation for the District of Columbia; to the Committee on the District of Columbia.

350. Also, petition of Allan Feinblum, New York, N.Y., relative to Vietnam; to the Committee on Foreign Affairs.

351. Also, petition of Mrs. Geraldine M. Williams, et al., Lynden, Wash., relative to appointments to the U.S. Supreme Court; to the Committee on the Judiciary.

# EXTENSIONS OF REMARKS

## SWEET ADELINES VISIT HAWAII

### HON. PATSY T. MINK

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mrs. MINK. Mr. Speaker, one of my most pleasant recent activities was to welcome the 23d annual International Sweet Adeline Convention and Quartet Competition to Hawaii. Prior to the convention a group of members visited with me to discusss plans and preparations for their visit to my State, and at that time I extended the hospitality of Hawaii to the entire membership.

I was especially pleased that the convention was a great success and wish the Sweet Adelines every good fortune in the future.

The organization is sometimes described as the female equivalent of the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America. At this point in the RECORD I am pleased to insert my remarks concerning the Sweet Adelines visit to Hawaii, along with letters to the editor of the Honolulu Advertiser and Honolulu Star Bulletin, published in the November 26 and November 27 issues, respectively:

STATEMENT BY REPRESENTATIVE PATSY T. MINK

I am proud that the Diamond Head Chapter of Sweet Adelines, Inc., Honolulu, Hawaii, will hostess the Twenty-third Annual International Sweet Adeline Convention and Quartet Competition, October 29 through November 2, 1969.

Sweet Adelines, Inc. is an international, non-profit independent, educational and service organization with approximately 20,000 women dedicated to the promotion, instruction and enjoyment of 4-part barbershop style close harmony for women. Their Theme is "Harmonize The World".

Five hundred active chapters exist through the United States, Canada and the Panama Canal Zone. Chapter members attend regularly scheduled chorus rehearsals. Quartets are formed within each chapter.

A community service organization, Sweet Adelines offer their specialized chorus and quartet talent for entertainment at civic events and charitable functions. In addition, the group strives to promote harmony—both vocally and spiritually—among all women.

The members maintain and support a staffed international headquarters at Tulsa, Oklahoma, where the organization was formed in 1947. The International President is Mrs. Helen Ryan of Decatur, Illinois.

Sweet Adelines, Inc. publishes its own magazine, musical arrangements and instructional items. International conventions, competitions, music schools and regional meetings are held on a regularly scheduled basis.

Convention activities will begin on Sunday, October 26, when the 13-women International Board of Directors begins its three-days of meetings held for conducting the business of the organization.

The Regents of each of the 15 geographical regions of Sweet Adelines will meet concurrently for the purpose of exchanging ideas in regard to governing the individual regions.

The highlight of the Convention will be the Quartet Competition for the selection of the 1969 "Queens of Harmony" on Saturday, November 1, 1969. The Quartet Competition will be held at the beautiful Honolulu International Center.

In order to be eligible to compete in the International Quartet Competition, each quartet must have placed first or second in quartet competitions on the regional level. Each of the 15 geographic regions has quartet competition in the spring of each year, producing its regional chorus champions as well as representatives for the International Quartet Competition. This year will see approximately 43 quartets from all over the country vieing for the title "Queens of Harmony".

Quartets are judged in the categories of music, sound, expression and showmanship by a panel of organizationally trained judges—one in each category for regional competition. The regional championship chorus is judged in the same categories. For the International Quartet Competition, there are three judges per category.

"Queens of Harmony" is the quartet accumulating the most points during the competition session. All quartets sing in Quartet Finals, Thursday, October 27. The 20 placing highest, compete on Friday, October 28 in the Semi-Finals, and the 10 with the highest scores compete in Saturday's Finals. The "Queens of Harmony", during their year's reign will sing on shows throughout the country, and many of these quartets have entertained our servicemen overseas.

This is the first time a Sweet Adeline Convention has been held in Hawaii. For many of the Sweet Adelines, who represent the women of our Nation, it will be their first look at the beautiful Aloha State. These women, from all walks of life—teachers, nurses, homemakers, secretaries, professionals, all have a common bond: a love of music and harmony.

The Diamond Head Chapter has a membership of approximately 40 active women, whose President is Carmela Blank of Honolulu. The Chorus is directed by Pat Chellin of Honolulu.

The Diamond Head Chapter has worked hard to insure a successful convention and have arranged tours for their sister Sweet Adelines to the many beautiful islands and monuments in our 50th State. I am confident that the Sweet Adelines will leave this Convention with dreams of a return visit.

---

[From the Honolulu Advertisers, Nov. 26, 1968]

SONG OF APPRECIATION

The 40 women whose views are represented in this letter are among the proudest and happiest residents of Hawaii. We are the Diamond Head Chorus, only Hawaii chapter of Sweet Adelines, Inc., the four-part harmony organization for women that recently concluded its week-long International Convention and Quartet Competition at the Ilikai and the H.I.C. Concert Hall.

As hostesses for the more than 2,000 members and guests who came from the Mainland for this convention, we had told them about the "Aloha Spirit" before they came. We are thrilled and happy to report that the cordial welcome and warm personal experiences they had while here said much more about Hawaii's aloha than all the words we used . . .

Though our medium is normally music, this letter will have to serve as our sincere thanks to your readers for whatever part they may have had in our visitors' enthusiasm. We are enormously proud, grateful and eager to sing you our thanks next time you hear us.

Mrs. VIRGIL BLANK,
*President.*
Mrs. ALFRED STORY,
*General Chairman, 1969 Convention.*
Mrs. RAYMOND ENGLE,
*Cochairman, Public Relations.*

---

[From the Honolulu Star-Bulletin, Nov. 27, 1969]

HAPPY ADELINE

Sir: The 40 women whose views are represented in this letter are among the proudest and happiest residents of Hawaii We are the Diamond Head Chorus, only Hawaii chapter of Sweet Adelines, Inc., the four-part harmony organization for women that recently concluded its week-long International Convention and Quartet Competition at the Ilikai and the H.I.C. Concert Hall.

As hostesses for the more than 2,000 members and guests that came from the Mainland for this Convention, we had told them about the "Aloha Spirit" before they came. We are thrilled and happy to report that the cordial welcome and warm personal experiences they had while here said more about Hawaii's aloha than all the words we used.

Perhaps because Sweet Adelines are singers they are fun to have around. The stories many told us about outstanding thoughtfulness and unusual generosity shown by our people in Hawaii warmed and cheered us and made so so proud Hawaii is our home! And their standing ovation when we presented our Salute to Hawaii's Music demonstrated the aloha THEY have for us and for you!

Though our medium is normally music, his letter will have to serve as our sincere thanks to your readers for whatever part they may have had in our visitors' enthusiasm. We are enormously proud, grateful and eager to SING you our thanks next time you hear us!

Mrs. VIRGIL BLANK,
*President.*
Mrs. ALFRED STORY,
*General Chairman, 1969 Convention.*
Mrs. RAYMOND ENGLE,
*Cochairman, Public Relations.*

## PRAYER BREAKFAST ADDRESS BY SENATOR TALMADGE

### HON. B. EVERETT JORDAN

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

*Monday, December 8, 1969*

Mr. JORDAN of North Carolina. Mr. President, a few days ago I had the privilege and pleasure of attending a prayer breakfast at which the distinguished Senator from Georgia (Mr. TALMADGE) was the leader and speaker.

His remarks were so inspiring and timely that I thought as many people as possible should have the opportunity to read and ponder them. I, therefore, ask unanimous consent that they be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR TALMADGE

Americans are now in the midst of a time for giving and receiving. But more than

that, this is a time for brotherhood when people the world over pray for peace and good will.

Last week, we sat at the table of great abundance and offered thanks for God's blessings on each of us and on this nation. We took time from our work to recognize that all good things come from God . . . to acknowledge what God has meant to the American nation . . . and to seek Divine Guidance in all the things yet to be done.

From Thanksgiving on, we move into the holy season of Christmas, when we proclaim our faith in the Christ child and in the hope that He brought to mankind.

Thanksgiving and Christmas are times to think seriously of the heritage of America. It is a religious heritage. It is based on the ideal that "blessed is the nation whose God is the Lord."

So it has been since the Founding Fathers first touched these shores. So it is today, when the power and the influence of the United States reaches to every corner of the world.

God governs in the affairs of men and state. During this season . . . especially at this critical period in American history . . . all of us would do well to strengthen our vow never to depart from this principle.

Because these are times that demand courage and conviction, perhaps greater than ever before, let us also pray for a renewal of faith.

And in so doing, may we invoke inspiration from the deeply religious men of God who set the course for this nation, that has come to be the most free and prosperous in all history.

Let us call forth the statesmanship of George Washington, who paid homage in his First Inaugural Address "to the Great Author of every public and private good."

Let us endeavor to re-kindle the patriotism of Patrick Henry, who preferred liberty over life, and who knew that the American colonists could call upon a strength far greater than their own.

Let us nurture the wisdom of Benjamin Franklin, the oldest and wisest of the framers of the Constitution. Major William Pierce, a Georgia delegate to the Constitutional Convention, wrote thumbnail sketches of his contemporaries. He said of Franklin:

"All the operations of nature he seems to understand, the very heavens obey him, and the clouds yield up their lightning to be imprisoned in his rod."

People throughout all the world and this nation could profit today from the reverence of this great man.

The American society has changed much since Franklin's day.

As we continue to grow and prosper, it will always be subject to change, some of it rapid and even drastic. So advanced has our society become, that we can now reach into the very heavens themselves, and just last week men returned from a second voyage to the moon.

But in spite of all of this, the principles in which Franklin believed and to which he dedicated his life and soul are the same today as they were more than 200 years ago when this nation was being founded. In fact, they are the same today as they were when pronounced to Moses atop Mt. Sinai.

Principles of morality . . . personal conduct . . . and individual responsibility . . . of right and wrong . . . Godliness . . . stand like a rock for all ages.

I say this in full recognition of the fact there are movements afoot in this country that have to do with a so-called "new morality." Many of the followers of this doctrine say down with the old, and up with the new.

I say, my friends, that if this country needs anything today, it needs above all to return to what we cherish as the "old morality."

In the midst of record prosperity . . . at the pinnacle of unparalleled national greatness . . . and for all our freedom I know of no other time in modern history when such strife and discord and even violence, were rampant in the land.

I am reminded of the words of the angel Gabriel when he spoke to the Lord in the play, "Green Pastures":

"Everything what's nailed down is coming loose."

We see moral values falling to the ground. They are being trampled by the high and low—

By prominent figures in government, past and present;

By courts that act like justice means permissiveness and indulgence;

By criminals who have sent the nation's crime rate sky high;

By parents who cannot, and apparently don't even try, to control their children; and

By a great horde whose chief claim to fame is a dirty beard, long hair, and a proclivity for spouting meaningless mumbo-jumbo.

We see lessons of history ignored. We see our national heritage scorned. We see tradition cast aside.

At a time when there ought to be national unity and strength, there is strident discord that has weakened the backbone of this nation. We found it increasingly difficult to deal with national problems. We are foundering abroad . . . in Vietnam and in our relations with other nations.

Such is the state of the American nation today. This cannot be denied or ignored. But to succumb to despair is to further ignore the lessons of the past. To forsake all hope is to back down in abject surrender.

There has been worse trials, and this has never been the way of America. It is not now the way.

The confidence that I have is based on my great faith in the fundamental strength of the American people. My faith is based upon what I know to be the people's faith. The vast overwhelming majority of Americans still subscribe to the ideal that ours is yet a nation under God.

And in this abiding belief lies the wellspring of the strength and determination of the American nation.

A hallmark of the American government and our society has always been this fact:

Out of adversity, trial and tribulation come forth renewed resolve. We have seen this truth become manifest throughout all the history of our nation.

Emerson wrote:

"When it is dark enough, men see the stars."

In crisis after crisis, domestic and foreign, the best in our people has always emerged . . . always under the sure hand of God.

Let us seek consolation in the exhortation of Moses to the people of Israel on their dangerous and difficult journey to the Promised Land.

"When thou art in tribulation, and all these things are come upon thee, even in the latter days, if thou turn to the Lord thy God, and shalt be obedient unto his voice; (for the Lord thy God is a merciful God), he will not forsake thee, neither destroy thee, nor forget the covenant of thy fathers which he sware to them." (Deuteronomy 4: 30.)

We need but to continue to search for divine guidance. We need but to believe as did the poet, that hope springs eternal.

The Apostle Paul admonished us "to rejoice in the hope of the glory of God." And he also wrote:

"We glory in tribulations also; knowing that tribulations worketh patience; and patience, experience; and experience, hope." (Romans 5: 6.)

So during this Christmas season, on the eve of a new year, may we find new hope in the strength of the American people. It is derived from faith in God. It can . . . if we will but let it . . . work wonders, and assure our nation of the triumph of right over wrong . . . of lasting security over dissolution.

But let us never forget, that for all of our troubles, social, economic, and international, we have much for which to be thankful. In the words of the poet George Herbert:

"O God, Thou hast given so much to us, give one thing more—a grateful heart."

---

## WRONG TIME, WRONG SALE

### HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. EVINS of Tennessee. Mr. Speaker, the President recently proposed the ultimate sale of uranium enrichment plants at the Atomic Energy Commission in Oak Ridge and other localities to private electric power interests.

This proposal is not in the public interest and in this connection I place in the RECORD herewith an excellent editorial from the Tullahoma News which points up the importance of retaining these plants as a part of the AEC facilities.

The editorial follows:

[From the Tullahoma (Tenn.) News, Nov. 14, 1969]

WRONG TIME, WRONG SALE

President Nixon's proposal for the eventual sale of the K–25 gaseous diffusion plant at Oak Ridge and two other plants that enrich uranium for use in atomic reactors is incredible for several reasons.

It is incredible, for one thing, that the President would not realize by now that the American people will not countenance what amounts to giveaways of our national resources to big industry.

It is incredible, for another thing, that the President would not have profited from the Dixon-Yates controversy that erupted some years ago when Mr. Nixon was vice president.

And, it is incredible that, now as President, Mr. Nixon would lack the information he surely must have concerning the taxpayers' investment in the three gaseous diffusion plants and to the potential they continue to hold for future uses of atomic energy.

His proposal calls for the government to continue operating the plants for the present, but for the facilities, which need modernizing, eventually to be sold to private industry. Apparently one reason is that, with the need for nuclear arms declining and with increasing use of nuclear-fired electric power generators, it is supposedly time for the government to divest itself of such atomic facilities.

But it is hardly believable that, with nonmilitary uses of atomic energy still in the developing stage, such a major facility as the gaseous diffusion plants—which achieved a real breakthrough for both the United States and international science in World War II and which are still restricted from public view of their operations—should essentially be abandoned by the nation and turned over to private interests.

* * *

Even if the plants are approaching the need for modernization, the fact remains that they have operated for about a quarter of a century with an enviable degree of automated efficiency. Since the job is far from done on the peaceful use of atomic

energy, the plants obviously have not outlived their usefulness; to the contrary, it should seem equally obvious that their role as production and research tools can only be enhanced in the future. They should be modernized as needed and kept as such invaluable public institutions.

As we have said before, the automated gaseous diffusion process, in addition to being a way for producing the material from which atomic power is created, also holds strong promise for pointing the way for making an automated combination nuclear plant that will both produce electricity and efficiently remove salt from ocean water. This has enormous potential for the future of the whole world, and especially for making productive regions out of naturally arid regions like the Middle East.

This is only one example of the type of technological breakthroughs that can benefit all the people, which can be produced by natural resource facilities founded by public investment. There is a direct comparison with the power that has been harnessed from America's water resources, a benefit that might have been lost had not the battle over Muscle Shoals been won in the early 1930's and the Tennessee Valley Authority and other agencies been established.

It is because of the nature of the basic resource in the atom and the power in it that is yet untapped that the gaseous diffusion plants and their companion institutions are among the facilities which are far better developed and operated under public rather than private ownership. Despite the occasional oratory of the far right, this has been shown to be workable and fully compatible with the American economic system.

* * *

Top officials of President Nixon's administration have indicated that they are going to go all-out to defeat Sen. Albert Gore in the senatorial race next year, and the leading contender appears to be Rep. William Brock of Chattanooga, a Republican.

But GOP efforts to place a second Republican in the Seante from Tennessee are going to be beaten from the start if the Nixon administration persists in its course of abandoning what is really a priceless atomic energy facility to private business interests.

The Welfare of the country and the realities of the Tennessee political scene show, as both Rep. Joe L. Evins and Sen. Gore have indicated, that this is the wrong time to come up with another Nixon-Dixon-Yates deal.

## SENATOR SCOTT HAILS RELEASE OF ISRAELI CITIZENS

### HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

*Monday, December 8, 1969*

Mr. SCOTT. Mr. President, I am extremely pleased that negotiations to effect the release and repatriation of the two Israelis detained in Syria following the hijacking of a TWA airliner last August have proven successful.

On September 16, I joined 31 other Senators in condemning this criminal and wanton hijacking and in urging the immediate release of Mr. Saleh Mousalem and Professor Samueloff by the Syrian Government.

Due to the efforts of our Department of State, the International Red Cross, and others, these men will be reunited with their families.

## AFTER THE MORATORIA WHAT'S THE NEXT STEP?

### HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. ROUDEBUSH. Mr. Speaker, many Americans are unaware of the true implications of the continued revolutionary demonstrations in the streets of Washington, D.C.

Mr. Holmes Alexander, a respected syndicated columnist writing for the Indianapolis, Ind., Star, has provided his readers with a true picture of what went on here in mid-October and mid-November.

Mr. Alexander mingled with the mob here last month and his observations are highly revealing and offer a chilling insight into the purposes and motivations of those guiding these uprisings against our elected Government.

The article follows:

HOLMES ALEXANDER SAYS: AFTER THE MORATORIA WHAT'S THE NEXT STEP?

WASHINGTON.—Jack Knight of the Knight newspapers, a venerable mogul of the press, says that civil disorder has reached the stage of "insurrection." Spiro Agnew, second citizen of the land and privy to all the information that the President gets, compares the uprising to that which eventually overthrew the Russian Czar in 1917. Writing more wisely than I knew a few weeks back, I questioned whether this nation is any longer "governable" by democratic consent.

This month, as in October and November on a rising rate of revolutionary strategy, the capital city will be invaded (there is no other word) by anti-government forces, and invested (the military term must be used) by guardsmen and Federal troops in support of the metropolitan police.

Plain speaking is necessary. Your capital city is in a state of siege and countersiege. This is not how self-government works. It is how self-government breaks down. Month by month, phase by phase, the screws of revolutionary strategy tighten. Only the ignorant deny it. Only the bamboozled take it lightly. Only the collaborators pretend it isn't so.

The country is ungovernable, but not as yet uncontrollable. That was the revelation in the mid-November three-day siege when upward of 300,000 ill-wishers saturated the city and played with this seat of government as a cruel but cunning cat plays with a helpless mouse.

To repeat, during some 36 hours the town was not governed, but it was controlled. The honor system of the Constitution, which pledges free speech and peaceable assembly on the assumption of good faith by the citizens, was mocked and vulgarized. An ad hoc garrison state, a Caesarian deployment of military legions, kept the lid on, and conducted a countersiege, and maintained a strained discipline.

Advance detachments of infantry were entrenched inside of nearly every government building; the White House was barricaded with end-to-end vehicles, behind which troops kept watch on the President's life; reconnaissance helicopters hovered above; reinforcements stood by at the armory. "The ghetto might blow," a Justice Department official had told me, as it "blew" from spontaneous combustion in 1968 when a Negro leader was killed. Herb Klein, the President's communications chief, had that event in mind when he later told a TV panel:

"Had it not been for the highly effective work of the Washington police, of the National Guard . . . for the reserve forces of the Defense Department and the complete co-operation of all elements of the government . . . the damage to Washington would have been greater than (in) the riots after the death of Martin Luther King."

Thus the insurrection was contained—what choice was there?—by para-military tactics. This—in America? Yes, and the Caesarian legions were able to show "restraint" only because the cleverly led demonstrators refrained from major provocation.

If you were in the streets, as I was, you could watch the cat-and-mouse game of the revolutionaries. They had the numbers to crack the city's vertebrae at will, but meanwhile they were teasing. It was "Yes, sir," with many a cherubic smile amid the greasy hair when I talked with groups on Friday and Saturday mornings. As an experiment, I struck an American flag in my breast pocket and went out again at noon and evening. The showing of the colors made the difference, and now it was "Hi, pop," and "Howzit, dad," and "the kids" were not at all polite to this elderly man. Reporters came in from the cold to eat and drink on these two days, and I heard them tell how well-mannered and non-violent the demonstration was, with a couple of exceptionable outbursts by the irresponsibles. Editorialists for next morning swallowed the bait, hook, line and sinker.

Looking toward December, I venture a different report. This insurrection has the planning of a phased campaign. The melange of Gandhi non-violence and Bolshevik violence in one of calculation. The smiles on the young faces were sycophant, not sincere, toward the press. These were not attractive "kids," but unkempt in their persons, ugly in their garbs, licentious in their morals, incredibly and unquotably foul-mouthed, and (as nobody else has said) often scared that their leaders would provoke the "brutality" of nightstick, cannister and gunfire.

Moratorium in October, mobilization in November, and in December and thereafter, what?

## A DREAM COME TRUE

### HON. ROBERT DOLE

OF KANSAS

IN THE SENATE OF THE UNITED STATES

*Monday, December 8, 1969*

Mr. DOLE. Mr. President, last Sunday, it was my pleasure to speak at the dedication of the Ida Long Goodman Memorial Library in St. John, Kans.

For Mrs. Goodman, it was a 28-year-long dream come true.

Mrs. Goodman, who celebrated her 81st birthday anniversary on Saturday, is a good example of the type of person the Nation needs more of: She is dedicated to people.

Her gift to her hometown included the land and more than $200,000 which made possible the construction of a combination school-municipal library. Attentive to details, she also worked hard to secure the passage of the special legislation required to build the library.

An article published in the December 6 Wichita Eagle-Beacon recounts some of the dedicated work this amazing woman has performed as a teacher and educator. I ask unanimous consent that it be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A DREAM COME TRUE

(By Elma Byrne)

ST. JOHN, KANS.—Mrs. Ida Long Goodman has had a dream and a goal for 28 years. She has wanted her "home community" to have a library, "a new and beautiful library."

And now that dream has come true as this southwestern Kansas farm community observes the formal dedication Sunday of the $300,000 Ida Long Goodman Memorial Library.

A native of St. John, Mrs. Goodman said: "My parents were a pioneer family here and lived here all their lives. I had an inherited debt to this community."

But the building of this library was really more than a payment of a debt—it was the further fulfillment of Mrs. Goodman's life which has been directed to education.

Mrs. Goodman was a rural schoolteacher for eight years in the St. John area. "I enjoyed teaching and I realized that to hold a good position I had to further my education," she explained.

And so she received a bachelor of philosophy of education degree from University of Chicago in 1921. After graduation she taught at Bryn Mawr College and Omaha University.

She was head of the training school department of education at Chicago Teachers College and supervising principal of two schools in Elmhurst, Ill.

She has a master's degree from University of Chicago. When she moved to Denver in 1947 she taught for nine years at two independent schools there.

And for nine years she has voluntarily taught English to foreign born adults who are patients at Denver's National Jewish Hospital.

"The reason I became interested in library work was that I recognized when a child was called 'dull' it was because of a reading problem. My philosophy is that there are no dull children," Mrs. Goodman said.

She added, "A child becomes frustrated, confused and discouraged in his reading and consequently there are many dropouts and children who fail. I believe a child can correct his own reading ills through reading library books."

In 1941 when she and her husband, William Roe Goodman, retired to St. John "we tried to develop some kind of library," she said.

But construction on the library was not begun until January of 1969 and then only after special legislation allowing funds for a school-municipal library, Mrs. Goodman explained.

The library is a combined city and school library.

"I never thought this would come about. It doesn't seem true to me. Mr. Goodman would be so proud. He would be sky high," she said with a hint of tears in her eyes.

Mrs. Goodman gave a $215,000 gift toward the construction of the library which cost $340,000 when completed last November, according to Evart Garvin, attorney to Mrs. Goodman and the St. John school board.

Garvin said Mrs. Goodman's gift included the site on which the library is built and most of the construction costs. He added that at her death another $100,000 will be given toward any existing debts on the building.

Mrs. Goodman said that the completion of the library was "a wonderful way" to celebrate her 81st birthday on Saturday.

"This library is the greatest thing that has happened to our school and community in a long time," said George Highfill, superintendent of schools.

Garvin added that the previous library, established in 1925, was housed on the top floor of the old brick city hall building. "It was makeshift, stacked full and there was no people room," he said.

Highfill explained that the some 400 elementary and high school students from the St. John school transported the 30,000 volumes from the city library and 8,000 volumes from the school libraries into the new library in less than a week.

The Ida Long Goodman Memorial Library is dedicated to the memory of her parents, Mr. and Mrs. Noah Long, and her husband. It sets on a site one-half block from the town square and directly adjacent to the school.

The most impressive aspect of its brown brick and metal exterior is the antiqued, avocado main door with carvings of the zodiac. At the northwest corner of the library is a brick wall enclosed garden area.

The building is 60-feet by 90-feet, fully carpeted and air conditioned. The main floor walls and carpet are a soft gold tone and the basement is done in red carpet and rose beige walls. The major pieces of furniture are done in matched grain mahogany.

The main floor has an adult and a children's section. The adult section includes a lounge, periodical room, study carrels, a curriculum library and two conference rooms.

One conference room is named the Mater Kansas Room after Mrs. Leslie Mater, longtime city librarian who will retire after the first of the year. The room contains a collection of Kansas history books and artifacts.

The other conference room is the Ida Long Goodman Room and it will contain some of her personal art holdings.

A story well is the outstanding attraction of the children's section and it is for the use of kindergarten through third graders. It consists of four carpeted stairs on which the children sit while they listen to storybook readings from a teacher situated on a stage area.

The basement is more than that as there is a student lounge and community room in addition to the storage and maintenance rooms. The community room is used for meetings and art exhibits. Exhibits can be hung on three of the walls that are covered from floor to ceiling with display board.

Architects for the library were Miller, Hiett, Dronberger, Arbuckle & Walker of Hutchinson, Kans.

Sunday's dedicatory ceremony will begin at 1:30 p.m. and will include an address by Kansas Sen. Bob Dole.

Perhaps the appreciation stated on Sunday's program best expresses the feelings of most of the 1,808 residents of St. John. That is:

"The Ida Long Goodman Memorial Library stands today and will continue to stand as evidence that Mrs. Goodman loved those who preceded her, those who are contemporary with her, and those who are to follow after, and that she wished to make life richer and better today, and in the days to come."

---

## HAYNSWORTH AFTERMATH

## HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. SCHERLE. Mr. Speaker, an excellent analysis of the behind-the-scenes congressional maneuvering, which led to the defeat of Judge Clement F. Haynsworth for a position on the U.S. Supreme Court, is reported in the November 26, 1969, Dallas Morning News by its chief Washington correspondent, Robert E. Baskin.

The article sums up Judge Haynsworth's defeat with a quote from a leading labor lawyer that "the defeat of Haynsworth was simply a rejection of a man for ideological and sectional reasons. The case against his ethical standards was of no consequence." The article follows:

LAWYER LAMENTS HAYNSWORTH DEFEAT

(By Robert E. Baskin)

WASHINGTON.—There are a good many afterthoughts and soul-searchings in Washington on the Haynsworth case.

While perhaps a majority of the liberal-labor element in town is rejoicing that President Nixon's attempt to put a conservative Southerner on the Supreme Court failed, there are others who regard the matter much more soberly.

A leading labor lawyer, who may reflect rather general views in legal circles, expressed dismay over the Senate's rejection of Clement F. Haynsworth by a 55-to-45-vote margin.

The lawyer, who must remain unnamed, has known Haynsworth for many years and had been an adversary lawyer to him before Haynsworth became judge and later practiced in Haynsworth's jurisdiction.

He regards the South Carolina judge as one of the most honest and able men he has ever known in his field.

CASE OF NO CONSEQUENCES

"The defeat of Haynsworth," he said the other day, "was simply a rejection of a man for ideological and sectional reasons. The case against his ethical standards was of no consequence.

"I disassociated myself completely from labor's effort to beat Haynsworth and let everyone I know, including Haynsworth, be aware of this.

"I think the Senate's action was a great tragedy for the man and for the law."

LEGALLY QUALIFIED

Suggestions have been advanced, particularly by one national newsmagazine, that President Nixon impanel a blue-ribbon committee to examine anew Haynsworth's qualifications and submit its findings to the Senate, in the hope that the body will repair the damage it has done.

Nothing, of course, is expected to come of this. The Senate has worked its will, as the saying goes, and the battle for Haynsworth has been irretrievably lost.

A question arises on whether the Senate has set a new precedent on how it evaluates presidential nominations. Does it base its judgment on qualifications or on ideology?

This issue has disturbed Texas Sen. John G. Tower, a supporter of Haynsworth.

"Traditionally in the Senate," he says, "we have not looked at a man's judicial philosophy but rather at his qualifications. Judge Haynsworth had great qualifications."

Tower points out that he voted to confirm the nominations to the Supreme Court of Arthur Goldberg and Thurgood Marshall, neither of whom agree with him ideologically. But he felt that they were legally qualified to sit on the bench.

The Texas Republican says that from now on "I am going to be more reluctant to vote for Supreme Court nominees who are not of my own philosophy."

President Nixon is expected to appoint another Southern conservative in January, and it may be that the same group of mostly Northern senators will want to fight that nomination on disguised ideological grounds.

But the investigation of the next nominee is likely to be so exhaustive that questions of ethics will be impossible to raise. In that event, it will be interesting to see how many

senators want to oppose the nomination on frankly ideological grounds.

If they do, the Senate, as Tower points out, will have broken its traditional method of considering nominees and will be moving to polarize ideological differences between its members.

## YOUTH IN 1970: A NEW SOCIETY

### HON. J. CALEB BOGGS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

*Monday, December 8, 1969*

Mr. BOGGS. Mr. President, Better Living, an employee publication of the Du Pont Co., this month has an issue which is extremely interesting and challenging to the business community.

The entire issue is devoted to the subject, "Youth in 1970: a New Society."

It includes a careful study of the younger generation, a case study at the University of Michigan and an examination of the impact of youth upon the company. Many of the guest authors are residents of Delaware or relatives of Du Pont Co. employees.

I believe the company and Better Living's editor, Mr. Dave Morrison, are to be congratulated for this issue—one which provides a better understanding of the differences between young people and the business community.

I ask that three brief articles from this issue be printed at this point: One written by Miss Elizabeth Cairns, a Cornell University student, entitled "Our Quarrel With the Establishment," and one entitled "Does Business Really Care?" written by Miss Marilyn Mather, a reporter for the Wilmington News-Journal newspapers; and one written by Mr. Jack W. Lewis, a staff member of the Senate Committee on the District of Columbia.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

OUR QUARREL WITH THE ESTABLISHMENT

In colonial times the established order was one to be admired; it was composed of the established economic and civic leaders who were also the great revolutionaries and intellects. In the late nineteenth and early twentieth centuries the Establishment referred to the eastern financial monopoly that controlled the fiscal resources of the society and, concurrently, enjoyed the political advantage.

The Establishment of the fifties and sixties, now under attack by members of my generation, is a complex system of institutions: financial, governmental, religious, military and educational.

Youth's present view of this Establishment can be suggested by some examples: the city council ignorant of the newest studies of urbanization; the church that cautions its faithful to go slow in its impulses toward social reform; the schools that stifle creativity with inflexible curricula; the military that commands the greatest portion of a democratic government's finances and yet is the most rigid and autocratic system in the country.

Youth have come to believe that the apparatus created for an essentially rural society two hundred years ago and which has evolved into its present form, no longer works. It has become too complex.

Youth's impatience with current methods of effecting change does not, however, signify a rejection of old values. The young today seek goals that have been the ideals of every generation. We want a country free from want, with absolute freedom of thought, equality, peace, and human dignity.

But we want to find our own way because we have seen that the Establishment is fallible. It has failed at most of its major tests in our lifetime. We have watched a war that only kills; it is our generation that dies there and no one can tell us why. We have seen what began as peaceful pressures for equality turn into a blood-bath of hate, and no one knows quite how it happened. We have seen our last massive try at reconciliation with the Established political order end in the streets of Chicago.

Youth are determined that out of the chaos of the sixties we will find an order that embraces the ideals we feel the Establishment has abdicated responsibility for achieving.

DOES BUSINESS REALLY CARE?

The trouble with business, many young people feel, is that the corporation has no conscience.

Young people understand that profits are necessary, and that profits do contribute to society.

The criticism is that the almost total focus on profits has resulted in neglect of other considerations Youth believe are too expensive to ignore.

Pollution is one of those considerations. People of all ages are concerned. But young people are willing to make greater noises about it.

Youth ask, for example: "Why didn't industry, with all of its resources—money, brains, and facilities—recognize or admit the problems of pollution many years ago and take the lead in bringing this issue to public attention? Why did industry wait for public awareness to force it to action?"

There also are other areas in which business seems to pursue profits without regard for society as a whole for example:

Auto safety: Despite new legislation it appears that the manufacturers are still dragging their heels.

Price-fixing: The rules seem clearly spelled out, yet several firms and their executives in recent years have been indicted for price-conspiracies.

Marketing products of questionable value: The drug industry which, in effect, markets the health of its customers, recently had to call many drugs off the market because they didn't perform according to the claims for them.

Planned obsolescence: New models of cars, appliances, etc. incorporate changes which are not genuine improvements or else space out improvements so that customers discard former purchases without getting full use of them.

Advertising excesses: The exploitation of sex to sell anything and everything. Youth believe the television industry is too involved in ratings to worry about quality of programming, and accepts social responsibility only because the government requires this.

All of this is what Youth see business doing. And then we look around to see the terrible problems of our society and the world. We look longingly at the tremendous potential of business to do good for society, but we see no one turning to put that potential to use—until forced to by public pressure.

THE NEW LEFT

However radical the younger generation's taste in hair styles and clothing, the majority of today's young people continue to conform to traditional political patterns. They get their politics, like their religion, from their parents. And like younger generations before them, they tend to be moderate in their views and only passingly interested in political issues. Only a small minority belong to the hard core radical groups discussed here as the New Left. Students for a Democratic Society (SDS), the largest of the radical student organizations, claims a membership of about 30,000 out of a total college enrollment of 7 million. Only 6,000 of these are dues-paying members.

A much larger group are those who share many of the concerns of the radicals but who stop short of their tactics. For the most part, they are inclined to work within the established rules for bringing about change. However, on any given issue, the radical minority has shown a capacity to mobilize this non-New Left activist group.

If the radical fringe has any definable strategy, it is the radicalization of the moderates. As accepted leaders of the broad student base, forming alliances with disaffected groups elsewhere, the radical movement could be a potent political force.

Like radical movements before it, the New Left has little use for capitalism. It looks upon capitalism as an organized system of exploitation which corrupts other power centers—government, the press, the military, the university—in a vast conspiracy to control and manipulate the masses.

To attack capitalism, the New Left has invoked the tactics of confrontation, disruption and violence.

The great weakness of the radical youth movement, however, is that it has no answers to the practical problems of life. Anyone who has tried to discuss issues with these young people knows how vague and evasive are their suggestions for solution.

The strength of capitalism, on the other hand, is its capability for dealing with social problems of all kinds.

First, however, it is essential to recognize what is legitimate in the radicals' list of grievances. To the extent they have focused attention on the declining quality of modern life and the diminishing role of the individual, I believe they have made a great contribution to us all. The task now is to do something about it.

## COMMUNITY COLLEGE AND DAY CARE CENTER JOIN FORCES

### HON. JOHN DELLENBACK

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. DELLENBACK. Mr. Senator, one of the major roadblocks to meeting day care needs in this country is the lack of trained manpower available to staff centers. This information was relayed to the Republican task force on education and training recently, by Laurence Feldman, executive director of the National Day Care and Child Development Council of America.

Lane Community College in Eugene, Oreg., has initiated an exceptional new program to help remove this obstacle. I would like to commend to my colleagues' attention the following article from the Eugene Register-Guard of November 16, 1969, describing Lane Community College's combination of on-the-job training with classroom instruction for students interested in child care.

The program, administered by Mrs. Jill Halpern, not only demonstrates yet another community service which community colleges can perform, but also offers a sound answer to the question of

how to secure trained staff for day care centers.

The article follows:

UP-TO-DATE DAY CARE CENTER AIDS LCC STUDENTS, CHILDREN

(By Cynthia Anderson)

Finding adequate child care is a worry for any mother who works. Finding adequate child care at reasonable cost is an acute worry for low income or welfare mothers who want to take job training or employment.

President Nixon acknowledged this problem in August when he outlined his domestic program. Calling for a "major expansion of day-care centers," he asked Congress for massive federal funding for child care facilities to help women get off welfare and into training for jobs.

Suppose Congress actually appropriated funds for child care centers. Suppose a rash of new day care centers and after-school centers was set up as envisioned in Nixon's message.

Who would staff them?

A new program at Lane Community College is attempting to answer a part of that need. At the LCC Child Care Center, 13 students enrolled in a Child Care Services Program are receiving on-the-job training along with classroom instruction in preparation for careers in child care.

In addition to training students for the future, the center offers here and now service. Day care is provided at the center at low cost for children of students in LCC training programs. Many of the students are mothers on welfare enrolled in government programs of job training.

Coordinator of the Child Care Center is Jill Halpern who considers the center a partial fulfillment of a long-time personal dream.

Mrs. Halpern has championed nursery and pre-school programs since World War II when she worked in a residential nursery school for children evacuated from London. During her career she has worked with children in the slums of London, with deprived children in Australia and Canada.

"Research has shown that the pre-school years are all-important in the development of children," Mrs. Halpern said recently. If you care at all about what happens to little children, you will recognize the need for more day care centers, more good home care facilities for infants and more after-school programs for youth," Mrs. Halpern said.

"Look around and see how many mixed up young people we have. Something went wrong and who's to say where it all started? If we could only detect the trouble early . . ."

To provide the quality of child care Jill Halpern speaks about takes more than up-to-date physical plants, hot lunches and supplies for teaching and playing. It takes trained staff personnel, says Mrs. Emory Ellingson who is in charge of the trainees in LCC's Child Care Services program.

The program offers a one-year certificate in child care services after completion of 26 classroom hours and 15 hours a week working in the nursery school. A second year will be added to the program soon, according to Mrs. Ellingson. The two-year program wll result in an associate degree. Credits from the program are also used for college transfer if students plan to work for bachelor's degrees, she said.

"At last we have recognized the fact that people need to be trained in child care," Mrs. Halpern said.

"There is government money available for child care facilities now, but under federal regulations, only facilities meeting high standards—in plant, materials and staff qualifications—can receive the funds.

"I am hoping these regulations will upgrade the quality of child care in the country."

## THE GYPSY MOTH

## HON. RICHARD S. SCHWEIKER

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

*Monday, December 8, 1969*

Mr. SCHWEIKER. Mr. President, I recently had the pleasure of addressing a Washington meeting of the National Gypsy Moth Advisory Council which had met to discuss ways of curbing the widening threat of the Gypsy moth insect pest. In recognition of the fact that DDT and other persistent pesticides can no longer be used, the council called for a plan of action including the necessary research to provide a more reliable method of controlling the Gypsy moth. The Gypsy moth is an insect of foreign origin which presently inhabits the Northeastern United States, but is rapidly being transported to other parts of the country where it continues to defoliate hardwood and softwood forests. Since trees are such an important part of our environment, I invite this situation to the attention of the Senate and ask unanimous consent that my address before the council and the remarks of Mr. Donald Shepherd, U.S. Department of Agriculture Research Service, and Dr. R. K. Arnold, U.S. Department of Agriculture Forest Service, be printed in the RECORD:

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

GYPSY MOTH REPORT

(Presented by the Honorable RICHARD S. SCHWEIKER)

It is gratifying to see a group of people representing so many varied interests come together today to start planning for a united effort to combat a most serious insect pest of our trees. Trees to some people mean forest land, to others they mean shade trees around their home, to still others they mean relief from the steel and concrete of the city or urban area, regardless, they are trees and we are so happy to have people representing anyone interested in trees at this meeting today.

In the Northeast we are all aware of the dense population area referred to as megalopolis. Some forty million people live in the coastal belt which extends from Boston to Washington, D.C.

Yet in spite of rapid urbanization, trees still cover nearly 50 percent of this highly inhabited region. Man is literally surrounded by trees—from a national standpoint, 120 million trees on our city streets and another 80 million trees in our city parks. A high percentage of these trees are susceptible to the voracious appetite of the Gypsy Moth.

It is difficult to put a monetary value on trees in our urban areas. For each man values these for what they provide him—beauty, tranquility, shade, and protection. However, experts estimate that 200 million city trees are worth more than 30 million dollars and this investment is increasing at the rate of 7.5 percent yearly.

In my own State of Pennsylvania there are more than 15 million acres of forest land—ten million of which are susceptible to attack of the Gypsy Moth. Prevention of spread of the moth serves as a protection for this vast forest resource as well as jobs for thousands of people employed in forest related industries. Forest products produced in Pennsylvania are valued at 1.8 billion dollars annually and the payroll of this industry amounts to 440 milion dollars each year. As the Gypsy Moth moves Southward and Westward from Pennsylvania, it will eventually eat its way through the hardwood forest areas of the Appalachians and into the Ozarks, an area which encompasses more than 100 million acres of timberland.

Now due to restrictions on pesticide use, the Gypsy Moth is really on the march. A great new research effort is needed. Cooperation between industry, state, and federal agencies will be of utmost importance if we are to move ahead with the kind of funds and the kind of research that is going to be needed to meet this problem immediately.

Many facts and figures have been presented regarding the destructiveness of this particular forest pest. Those who have not lived in the New England States, New York, New Jersey, or Pennsylvania should learn more about this problem. I am sure today information will be presented that will bring you up-to-date and will show you very graphically the problems facing you as this potential forest defoliator moves into your area.

We are concerned today in Pennsylvania with the effect of this defoliator on the tourist industry, on those people who normally would look forward to moving into an area for camping in our recreational parks, to those who want to go to our beautiful mountain resort hotels, who may shy away from these areas because of the problems connected with the Gypsy Moth as it defoliates the forest area. And, as a U.S. Senator, I am concerned about the rapid spread of the Gypsy Moth to the states that have never had this pest previously.

People who already own homes in forested areas are becoming increasingly aware of the problems associated with Gypsy Moth infestations both from an esthetic and a nuisance standpoint. The problems presently facing the people in the Northeastern states, particularly in southwestern New York, southern Connecticut, and northern New Jersey where defoliation is severe, will be *OUR* problems throughout much of Pennsylvania in the near future and will be inherited by our neighbors to the South and West in five to ten years. As a matter of fact only this past week, I was told Gypsy Moth egg masses were found on a house trailer in Virginia. Chemical sprays alone can no longer be depended upon to contain the pests. We need newer and more efficient tools to work with—newer approaches.

Again, I want to point out—we are here for one purpose—to meet the Gypsy Moth head-on, to develop and support a research and method development program that ultimately will enable us to cope with this insect pest. Meanwhile, I am sure you will want to carefully study every available control, old and new, to choose that combination that will best meet your objectives pending the outcome of further research.

Those of you who have been invited to serve on the Gypsy Moth Advisory Council have an important stake in the problem. The organizations which you represent no doubt are affected financially in one way or another. So I challenge you today to examine this problem objectively. Let's not be biased by individual prejudices of the past, but instead, let's get together on a sound research program that will provide the answers we need.

CURRENT STATUS OF GYPSY MOTH SURVEY, REGULATORY, AND CONTROL PROGRAMS

(By DONALD SHEPHERD)

To those of us in plant protection work, the gypsy moth represents many firsts. It was really one of the first major pest introductions into this country from foreign lands. The early control was the first organized effort to eradicate and later to confine an important pest, and it was the first plant pest to be the subject of a Federal domestic quarantine. The initiation of the cooperative

control program in 1906 was the first time that the Federal Government appropriated funds to cooperate with the States in a control program. The first case of pest control litigation to establish the right to conduct pest control work on private property involved the gypsy moth. "Private rights may be abridged by the exercise of police power and must give way to the public interest. Individuals must yield to the requirements of the public as a whole."

The early effort to deal with the moth problem in the Medford, Massachusetts, area where it was introduced was very successful and, and at one time, it appeared that eradication was practically accomplished.

I suppose the early success of that effort was largely responsible for the control program's undoing. As so often happens after a successful effort, the interest waned, workers became complacent and, by early 1900, the gypsy moth was again off and running. It was found in many new locations.

It was because of that explosive spread that the Federal Government entered the program in 1906. That buildup and spread also largely responsible for the promulgation of the Federal Quarantine Act of 1912.

Until 1938, the gypsy moth was contained east of a line extending along Lake Champlain and the Hudson River from Canada to New York City by a containment program in a barrier zone along that line. It is thought that in that year, egg masses were carried on debris into New York by hurricane winds, and many new infestations appeared in the next few years. By 1950, buildup had reached epidemic proportions as far west as the eastern counties of New York State and spot infestations occurred in New Jersey and Pennsylvania.

By 1953, nearly 1½ million acres were defoliated in the infested States. The infestation encompassed about 40 million acres at that time.

With the introduction of chlorinated hydrocarbon chemicals in the mid-1940's, it was thought that there was at last a panacea that would provide a simple method of containing this pest. DDT at the rate of 1 pound actual toxicant in 1 gallon of oil to the acre did accomplish eradication. It was the tests with this chemical in the early 1950's in Pennsylvania that gave encouragement to the proposal to eradicate the infestation once again at least back to the barrier zone along the New York-Connecticut line.

Eradication treatments were begun in 1956 on the outer periphery of the infestation in Pennsylvania, New Jersey, and New York. In a 2-year period, more than 4 million acres had been successfully treated. However, the program had to be discontinued in 1958 because of the opposition by conservation agencies and the problem, too, of DDT residues in milk in the New York milkshed. There had not been any serious effect on wildlife values.

So our rejoicing was short-lived. Since that time we have been fighting a losing battle in our effort to stem the spread of this important pest.

For years our scientists and our control and regulatory officials have worried about what would happen once the gypsy moth infestation became established in the mountains of Pennsylvania. We no longer have to wonder about that question. There is evidence now that the gypsy moth has found an ecological situation especially to its liking. Infestation was found for the first time this year in Delaware and Maryland, and there was new spread into Centre County, Pennsylvania. A single moth was trapped as far south as Free Union, Virginia, on the Skyline Drive. We can expect under our current technology that it will continue to spread each year further south in the Appalachian range. Infestation now occurs, too, in Canada in eight counties in the southern part of the Quebece Province. The only bright spot is the continuing evidence that the infestation in Michigan has been eradicated.

Now, what are some of our problems:

In this program we have depended upon sex attractant traps to detect gypsy moth infestation to determine distribution and to check on the efficacy of control operations. Sites where male moths are caught are subsequently scouted for egg masses during the fall and winter months to determine the extent and intensity of infestation. Nearly 50,000 of these traps are used annually.

Division personnel in recent years have gone to Spain and other foreign countries infested with gypsy moth to collect the natural female sex attractant material. In addition, female tips are collected in this country in order to replenish the depleted supply of lure. The foreign collecting is costly and there is no assurance of a continuing supply. Detection even with effective traps is extremely difficult in the rugged, mountainous territory. In fact, the first evidence of infestation in the rugged country could be an area of defoliation.

There are problems, too, with the regulatory program. Where heavy infestation occurs, gypsy moth egg clusters and/or pupae may be found on a variety of articles such as mobile homes, military shipping crates, cable reels, and scrap metal—to mention a few. These articles are certified for movement from regulated areas on the basis of nonexposure to infestation, negative inspection, chemical treatment, or processing that renders the end product pest free. Providing adequate safeguards to prevent artificial long distance spread has become increasingly difficult.

A relatively new and serious problem centers around the growing popularity of mobile homes and campers. In recent years, gypsy moth egg clusters and pupae have been found on mobile homes in States well outside the regulated area—some as far away as Texas and Minnesota. Prompt control measures had to be employed to prevent the establishment of infestation in those States. Currently all trailer parks in known infested areas are under close surveillance by Federal and State inspectors to guard against spread by this means. Ideally, all infested mobile home parks and campsites, including the environs, should be treated by helicopter following gypsy moth hatch. Here, however, we are faced with restrictions on the use of pesticides, particularly when applied by aircraft.

Despite the growing problems confronting our regulatory operations, it is noteworthy that, outside of a few isolated instances, the quarantine measures appear to have been effective in retarding the spread of this insect by artificial means. In fact, this has been a success story for which regulatory officials can be proud. It has been here for 100 years and still occupies a relatively small part of the susceptible host forests.

I am certain that our speakers representing the States of New York, New Jersey, and Pennsylvania will outline in detail the problems that we face in the control operations. With the loss of DDT in 1958, we recognized we were in for difficult times. The insecticide controversy, among other things, pointed to the need for intensive investigation of problems in the field and was a principal factor in the establishment of a Gypsy Moth Methods Improvement Laboratory on Cape Cod, Massachusetts, in 1961. This Plant Protection facility is filling a long-standing need for development ways of dealing with this important pest. Current activities at the laboratory are aimed at improving chemical and biological control techniques, survey procedures, and regulatory operations.

Special emphasis is placed on developing techniques for rearing various parasites of the gypsy moth. At the Hicksville, Long Island, New York, laboratory this year, more than 10 million gypsy moth egg parasites were reared and subsequently released by State personnel in New Jersey, New York, and Pennsylvania. In addition, nearly 100,000 specimens of a larval parasite were turned over to the States for release. Mr. Philips, supervisor of the work at Otis Air Force Base, will elaborate on activities of the laboratory this afternoon.

The history of this pest and the control and eradiction efforts of the past 100 years are very interesting and, in fact, very intriguing. Much knowledge has been gained about the biology of the gypsy moth and its control. Even so, with all this background we find ourselves today without the necessary technology to deal with the problem at hand. We can continue to prevent the spread of this insect by artificial means through regulatory action, but we know that the present control measures are not adequate to cope with its continued spread by natural means. That is why we are here today—to dramatize, if you please, the seriousness of the current situation—to try to find some direction for dealing with this important pest in the future.

---

### Current Status of Gypsy Moth Research

(Presentation by R. K. Arnold at the National Gypsy Moth Advisory Council Meeting, Washington, D.C., November 13, 1969)

Since its introduction into the United States 100 years ago, the gypsy moth has intruded inexorably into the forest and urban environments of the Northeast. It has done so in spite of our best efforts to halt, suppress, and eliminate it. We have appeared to win the battle at times, but as Don Shepherd has shown, the gypsy moth is now well established in most of its present distributional range and is continuing to spread. This is an unusually well documented case history of man's attempt to protect an important segment of his environment and, in so doing, causing further disruption of the natural ecosystem. This is also an excellent example of the interrelationship acting on forests and urban areas as their environments interact.

Our efforts thus far have had one benefit—beyond the temporary successes in putting the insect down. We have learned the size, scope and complexity of countermeasures required to combat it effectively; and we have some of the tools needed to do the job. Both research and practical experience have led to the inescapable conclusion that an unilateral approach to gypsy moth control is doomed to failure. The insect's ability to disperse and establish itself on a large number of host tree species, its capability for rapid increase to outbreak numbers, and the diversity of its impacts on forest and urban uses and values, call for a comprehensive, flexible, ecologically sound approach. At the same time, we know that the insect is responsive to physical factors in the forest environment and is vulnerable to a wide spectrum of natural control agents—all of which may be manipulated to some degree—in addition to its susceptibility to chemical insecticides.

We have both the need and opportunity, therefore, for a broad program of integrated control to minimize the chances for spread and population buildup of the gypsy moth in new areas and to contain it at tolerable levels where it is established. Dr. Campbell this afternoon will outline a plan for the research needed to bring such a program to fruition. I will describe to you at this time—very briefly—where we now stand in our knowledge of this serious pest. No specific credits will be given—our knowledge today derives from the work of many individuals,

past and present, in the USDA, state agencies, universities, and other private organizations.

I. POPULATION DYNAMICS

Although it is an introduced species, the gypsy moth is now subject to quite a sequence of mortality-causing agents. Insect parasites, birds, and cold winter temperatures kill the eggs. Heavy rains may even cause further mortality.

When populations are sparse, dispersal losses of the small caterpillars and predation of the larger ones largely determine whether the insect remains endemic or its numbers increase. In dense populations—where the foregoing have failed to keep the gypsy moth in check—diease is the major mortality factor.

The aggregative behavior of the caterpillars is an important factor in the population dynamics of the insect. For example, those that aggregate on the tree during daylight hours survive in greater proportion than those that crawl to the ground for rest and shelter.

Genetic variation in disease susceptibility, dispersal behavior, and other characteristics are important in the population system of the gypsy moth.

This fundamental knowledge of the dynamics of gypsy moth populations—the effects of specific factors and their interplay in natural population—provides the ecological foundation for the integrated control program now conceived.

II. BIOTIC CONTROL

Approximately 50 different parasites and predators of the gypsy moth have been imported and released throughout the northeastern states. Twelve of these have become established. In addition, a large number of parasites and predators native to the United States have found the gypsy moth a suitable host. There is some field evidence that certain parasitic wasps with a bent for stinging many hosts without necessarily laying eggs in them may vector the virus disease of the gypsy moth.

Microbial control has been attempted, with promising results. Commercial preparations of the bacterial insecticide, *Bacillus thuringiensis*, have been tested intensively in the laboratory and field, and studies are still in progress on this and other bacterial pathogens that may be useful for direct control. Small-scale field trials with the polyhedrosis virus have indicated that it can reduce gypsy moth numbers markedly, and it has the great advantage that it is carried over into subsequent generations. Work is underway to develop a means of maintaining living gypsy moth tissue to mass produce the virus. Research to date indicates that the virus is innocuous to other insects and higher organisms.

Because the gypsy moth female mates just once and does not fly, the sterile-male release technique is feasible—at least in spot infestations or, possibly, following chemical control operations where residual numbers are low.

A similar approach, suggested by early basic research on the genetics of the gypsy moth, would involve the use of males of certain Japanese strains. These Japanese males when mated with native "American" strain females produce offspring of which all females are sterile and one-half of the males carry the lethal factor. In this case, the genetic information is known, the Japanese stocks are available, but no actual field trials have been carried out as yet.

As many of you know, there has been some difficulty in isolating and identifying the pure sex attractant of the gypsy moth. This problem is near solution, I understand, and with the knowledge and technology to synthesize the active material, we will have yet another means of inducing the insect to destroy itself.

III. SITE MANIPULATION

Ecological studies of the gypsy moth have provided much information on the influence of certain site factors such as stand composition, host tree form and size, and microclimate on survival rates of the insect. At different times recommendations have been made regarding removal of preferred tree species and of old and injured trees with many bark flaps and branch stubs that provide favorable conditions for survival. There has not been sufficient testing to fully evaluate the effectiveness of this silvicultural approach.

IV. CHEMICAL CONTROL

Creosoting of egg masses, application of lead arsenate dust by ground equipment to kill the caterpillars, aerial dusting, the advent of DDT in the 1940's, and its proven effectiveness, all added up to what appeared to be the solution to the problem—virtual elimination of the gypsy moth from the United States. This was not successful, and we are now well aware of the hazards of continued, extensive use of broad spectrum and/or persistent insecticides.

Intensive screening of candidate chemicals led to the selection of carbaryl, a carbamate, as the successor to DDT. The presently recommended dosage of ½ to 1 lb. actual toxicant per acre is considered relatively safe, but it is not as effective as DDT. More recently, another carbamate, Gardona, has been shown to be reasonably effective and safe to use. With the past and present involvement of the gypsy moth in the pesticide controversy, it seems clear that special emphasis must continue to be given to safety aspects in the testing and development of chemical insecticides for gypsy moth control.

Another approach with chemicals may be feasible. Host preferences of the gypsy moth are mediated by substances in the foliage that stimulate or inhibit feeding by the caterpillars. Researchers at the Forest Service's Hamden (Connecticut) Laboratory are attempting to isolate and identify these substances. If the repellent-deterrent constituents, or other chemicals with similar action, can be synthesized and produced inexpensively, they might be very practical and effective as protective sprays.

CONCLUSION

Let me sum up this sketchy outline of where we stand in research on the gypsy moth. The ecological and economic impacts of this pest on the environment of the Northeast, and the threat that it poses to the valuable forests and urban areas of the Midwest and South, justify strong action. A comprehensive, integrated program of surveillance and control is needed to cope with the diversity of ecological conditions involved and the multiple forest and urban values at stake.

There is a definite and proven threat to the quality of man's environment. Ultimate control will be possible only when man understands that environment, so that he can manipulate it in ways which make it uninhabitable for the gypsy moth.

## WITHDRAWAL IMPOSSIBLE

### HON. LAURENCE J. BURTON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. BURTON of Utah. Mr. Speaker, from time to time it is well to remember that those who would bug out of Vietnam, leaving our allies to the mercies of a merciless enemy are a relatively new breed.

Even those they hold in reverent memory never went so far. Certainly Robert F. Kennedy was aware of the dangers of precipitate withdrawal.

The National Review of December 2 quotes from "To Seek a Newer World" by Robert F. Kennedy, published in 1968.

The quote is attached:

Withdrawal is now impossible. The overwhelming fact of American intervention has created its own reality. All the years of war have profoundly affected our friends and our adversaries alike, in ways we cannot measure and perhaps cannot know. Moreover, tens of thousands of individual Vietnamese have staked their lives and fortunes on our presence and protection: civil guards, teachers and doctors in the villages; mountain tribesmen in the high country; many who work for the present benefit of their people, who have not acceded to the Vietcong even though they may not support the Saigon government. Many have once already fled the dictatorship of the North. These people, their old ways and strengths submerged by the American presence, cannot suddenly be abandoned to the forcible conquest of a minority.—(*To Seek A Newer World*, Robert F. Kennedy, 1968; excerpt in 12/2 *National Review*.)

## A LITTLE MORE ENCOURAGING

### HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. BOLLING. Mr. Speaker, I am certain that there are days when each Member of Congress feels the weight of so many problems confronting this country that it seems there is "no light at the end of the tunnel." Reading the Wall Street Journal for December 4, 1969, I felt a little more encouraged because of bitter-sweet observations made by a newspaperman that were carried under the caption "Notables and Quotables." I would like to share these remarks with my colleagues. The article follows:

A LITTLE MORE ENCOURAGED

(By Joseph B. Cummings, Jr.)

Something remarkable has happened in the South in those fifteen years (1954–69). The American idea worked. Careful now, I did not say the racial problem was solved or that prejudice was banished. Problems of human society are not "solved"; they are whittled down to workable size. The founding fathers calculated quite explicitly on the flawed nature of man, and what we have seen in the South is an important example of how their plan works, how ingeniously the machinery can function to bring us a little closer to the ideal. It has been a long slow process over the years of America, but history has produced enough response for people to believe that it can work. And this is the magic ingredient: That enough people believe it can work. The Civil War was a great test; Teddy Roosevelt busting up the corrupting accumulation of power of big business was another. Legal recognition of the rights of labor unions in the '30's was another. None of these victories brought perfection. America is not Disneyland; it is a nation in the act of becoming, an Idea being tested. The silver thread must hold; continuity is a gift only time can give. Each crisis that ends with America coming closer to the Idea instead of further away adds strength to the Idea. The impatient radicals today do not believe in the long slow correcting process. They have a point: For this country

to have suffered the existence of slavery in the face of a declared belief that all men are created equal and endowed by their creator with certain inalienable rights. . . . It seems to them prima facie hypocrisy. But these zealots are steeped in the sweet Rousseauistic notion that human nature is not so imperfect and destruction of the clumsy machinery of Government that now exists would produce a twilight garden of gentle simplicity. They have not talked to the hunter or the Cadillac dealer. The destruction of the American Idea would mean the death of freedom with no guarantee that all the flaws would be made straight.

Because of what has happened in the South, I tend to be hopeful that this nation has the vitality to respond and strengthen the working system. Yet I must admit sometimes on the back roads in the land of despair I imagine how it might be to hear the chilling eternal swoosh, feel the cellar-cool breath of the closing of a great book.

"Oh well," God sighs, "it was just an idea."

## THE VOICE OF AMERICA

### HON. G. WILLIAM WHITEHURST

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. WHITEHURST. Mr. Speaker, on the anniversary of the Japanese attack on Pearl Harbor in 1941, I participated in a memorial service at Rosewood Memorial Gardens in Norfolk, Va. While I was there a survivor of the Pearl Harbor attack, Mr. Arthur Strickland, presented me with a poem which he wrote the day after the Pearl Harbor attack.

Mr. Speaker, I take pride in submitting for publication in the RECORD Mr. Strickland's verse:

THE VOICE OF AMERICA

(By Arthur Lown Strickland, U.S.S. *Dobbin* (AD 3), December 8, 1941)

(Dedicated to the memory of my shipmates who died at Pearl Harbor, December 7, 1941)

Listen, oh sons of the tyrant's rule, to the voice of America;
To the voice of the poor;
To the voice of the rich;
From the man in the manse;
From the man in the ditch;
To its ever increasing victorious pitch,
As they rise up to meet the foe!

Listen, oh keepers of slav'rys chains, to the sound of the marching feet;
As they tramp from the farm;
As they tramp from the town;
To the free navy blue,
And the brave khaki brown
Who are fighting defending our liberty's crown
As it rests on the land and sea!

Listen, destroyers of liberty, to your answer from men born free;
As it rings from the East;
As it rings from the West;
As it rings from the hills
Where the heroes do rest;
As it rings from a mother with grief in her breast
For a Pearl Harbor navy boy!

Listen disciples of war and hate, to the guns of America;
As they roar on the sea;
As they roar on the land;
As they roar on the wings
Of a raiding air band;
As they roar from Bermuda to Philippine strand
Where the ramparts of freedom stand!

Listen, betrayers of honored trust, to the voice from the silent graves;
From the lips of the roll
Of the missing and dead
As they pass on the flag
For whose cause they have bled
To the hands that have lived through the bombs bursting red
At the Pearl Harbor battle line!

Listen, oh fiends of a strife torn world, to a voice from our ages past;
From the Lexington green;
From the great Alamo;
From wherever the roots
Of our liberty grow,
And again we shall answer the challenging foe
At the place where they choose to strike!

Listen, oh foes of the God we love, to the prayers of the trusting ones;
As they call upon Him
To be Leader of all;
Of those who will live;
Of those who will fall;
Of the men who have heeded the challenging call
Of the Saviour of all mankind!

Listen, you lovers of brutal greed, to the sound of a day to come;
To the beat of the drum;
To the bugle's blare;
To the victory cheers
As they trill through the air;
To the sound of the breeze in the banner still there;
The American flag we love!

## COURAGEOUS ACTION OF GARY E. O'NEAL HELPS WOMAN ESCAPE

### HON. LOUIS FREY, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. FREY. Mr. Speaker, recently an incident was brought to my attention by the editor of the Orlando Sentinel, which I would like to relate to my colleagues. I am sure most of us have read news media accounts of citizens standing by and doing nothing while major crimes were being committed in their presence. On November 26 an Orlando high school senior, Gary Eugene O'Neal, was driving along a main street when he observed a group of eight teenagers pelting a car with bricks and concrete. It happens that the car, which was at a four-way stop sign, contained a woman and her two young children. This young man immediately stopped his car and raced to a nearby telephone booth to call police. Then the gang of youths turned on him and began stoning the booth. As Gary left the booth to run back to his car, the youths hit him in the face from close range with bricks and pieces of concrete. Gary was released from the hospital last Friday after he underwent plastic surgery the day of the incident, his birthday, and spent Thanksgiving there recovering from severe face and head cuts.

To date six boys, ranging in age from 14 to 17, have been arrested in the incident and charged with either aggravated assault or destruction of property.

The courageous action of this young man allowed the woman and her children to escape uninjured to a nearby service station, where she in turn called police. This should be an inspiration to all of us.

## OKLAHOMA PRODUCES TOP MEN—CONGRESSMAN CARL ALBERT IS ALSO PROUD OF HIS FELLOW OKLAHOMANS

### HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. ALBERT. Mr. Speaker, a friend of mine has been kind enough to send to me a clipping from the Baltimore News-American. It appeared in the issue of December 3, 1969. It is entitled "Oklahoma Produces Top Men." At this time I offer the entire article for publication in the CONGRESSIONAL RECORD:

[From the News American, Dec. 3, 1969]

OKLAHOMA PRODUCES TOP MEN

(By John F. Steadman)

Not wanting to plagiarize but willing to paraphrase Will Rogers, the greatest humorist of our time, let it be said:

"We never met a man from Oklahoma we didn't like."

Our respect for Oklahoma goes back to our infamous days as a minor league baseball player. The first roommate we had was Lloyd Randall, who was so kind he wouldn't kill a mosquito. He'd ask him to leave.

Then over the years, we had the chance to know such other Oklahoma natives as Billy Vessels, Jim Owens, and Buck McPhail, Lloyd and Paul Waner, the only brother act in Baseball's Hall of Fame; Jerry Adair, Harry Brecheen, Eddie Fisher, Wayne Chambers and other Oklahomans too numerous to mention.

But one significant fact has always made itself prevalent. Oklahoma turns out a special breed of man. Honest, forthright, decent.

They have all the good qualities; none of the bad. We once met a Oklahoma citizen we thought we didn't like but it turned out he was originally from Texas, which kept the record clean, and preserved the contention that Oklahoma consistently produces high class individuals.

We never felt where you happened to be from in any way influenced the kind of man you might be. Geography, it would seem, couldn't be credited or blamed, with producing a winning or losing type of personality.

All we can say about Oklahoma is that it's the best. It is indigenous to good people.

We have tried to probe into the history of Oklahoma to see if there is any connection with its historical birth and the sterling citizens it turns out.

It's interesting to know that the name Oklahoma is derived from a Choctaw Indian phrase meaning "red people." Oklahoma gained statehood on Nov. 16, 1907, which means it is still a young whipper-snapper in the family.

The state bird in Oklahoma is a scissor-tailed flycatcher. How do we know that? You have to be an expert on Oklahoma or be able to read Collier's Encyclopedia, Volume 18, page 100.

We once paid a visit to the Will Rogers Memorial in Claremore, Okla., and while hitch-hiking back to Tulsa had a bad experience.

Still, we had a chance to see a lifelike statue of Rogers and to press a button that, through the magic of recordings, allowed one to hear highlights of his speeches and entertaining dissertations.

It was one of the most memorable days of our life to be able to visit the area where

Will was born. And certainly one of the most tragic moments we experienced was that day in 1935 when word came over the wire from Point Barrow, Alaska that Rogers had been killed in an air crash with Wiley Post.

Just because Will Rogers was a great American doesn't give Oklahoma a corner on producing unforgettable men. But certainly Rogers stands tall in any Hall of Fame you want to collect.

Most Oklahomans we have met are solid and sound. They don't make it a habit of telling lies or stealing another man's horse.

We once asked our friends Vessels and Adair why it was Oklahoma had such reputable and revered individuals. "I never did think much about it," said Adair.

"You got me," answered Vessels. "We just do the best we can with what we have."

Obviously, the most admirable quality to be found in a man from Oklahoma is that he's a nonbraggard. And when you are good you don't need to tell the rest of the world—just like we're doing for Oklahoma right now.

Being called an "Okie" once had a connotation that wasn't exactly a compliment. But to us it was always symbolic of the strong and the hard-working who were only trying to make an honest living off the land, regardless of their lot in life.

The spirit of Oklahoma has been put in verse and song. The musical works as the "Oklahoma Hills" and "The Rose Of Pawnee" will forever remain classics.

We just happen to believe Oklahoma is one of the best places in the world. If we couldn't be in merry old Maryland we'd sure be there, way out on the range riding a pinto pony and enjoying life under the Oklahoma heavens.

## P.S.—HE LOVED OUR COUNTRY, DO YOU?

### HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. HALL. Mr. Speaker, it is the month of December, a time when the thoughts of many traditionally turn to the celebration of the birth of the "Prince of Peace."

It continues to be a paradox that during this time, in many parts of the world, there is no peace.

While America's young men continue to die in the rice paddies and jungles of Vietnam, other Americans march in support of those they oppose. Many of those who march in protest are naive and well meaning, while others know exactly what they are doing; giving aid and comfort to the enemy.

As a reply to those who openly support the aggressive and terrorist attacks of the Communists from the North, I offer a letter from a Neosho, Mo., family. A family whose son, Terry, gave his life for the cause of freedom and self-determination.

The letter follows:

Instead of writing to my son tonight, in Vietnam, I find I'm trying to express myself in hopes this may be a bit of help for someone else who may one day be in the same situation. Just 11 days ago, three soldiers came to our home to deliver a message we didn't want to hear.

Our son, Terry, had paid the supreme sacrifice, the necessary telegrams received, the return of the soldiers (bless them, what a thankless job they have). The many friends, without them this would be unbearable. Finally the word of our son's body arriving.

Our first impulses were bitter, very, very bitter, then came a letter from him writing three days before he died. This letter, put our thinking back into proper focus. In part it said—

"Dad, I believe you understand by your letters, but if the people, including my generation, would just unite for a couple of months, this war would be over and I and all could come home, but guess that's asking too much—"Charlie knows he's beaten here but his people in the United States will win it for him. Dad if it's right, let's win it, if it's not let's get out of our mess honorably. Sorry to get off on all this, but we just got first briefing, why we are here."

I had to put out the good old American Flag again. If it was good enough for him to die for, it surely was good enough for me to live for. Not condoning every policy, but we are there let's get all our Terry's home in an honorable fashion and not by protesting.

As Terry's parents, we want to express our appreciation to the city and to our many friends for all the kindness and sympathy shown to us. Words are not adequate for this expression.

P.S.—He loved our Country, do You?

HARLEY ZUMALT AND FAMILY,
*421 E. McKinney St., Neosho, Mo.*

## TRIBUTE TO CIVIL DEFENSE VOLUNTEERS LONG OVERDUE

### HON. EARL F. LANDGREBE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. LANDGREBE. Mr. Speaker, yesterday I had the great privilege of addressing a convention of the Indiana Civil Defense Directors Association, Inc., in Indianapolis. It was brought to my attention that these volunteers are seldom if ever given nationwide recognition for their long hours of service to their community and to their Nation.

In my small way, I would like to do my part to correct this injustice today. The civil defense volunteers—in Indiana and elsewhere—are, I believe, great preservers of peace. By their vigilance and preparedness to minimize the damage that would be wrought by nuclear war, they have perhaps staved off the threat of such a holocaust.

Operating on limited funds, giving of their leisure time, serving selflessly in so many ways, often risking their own safety in their peacetime services at the scenes of fires, explosions, and other disasters, the men and women of Civil Defense deserve our undying gratitude.

I ask at this time to insert into the RECORD the names of 12 of these great Americans who were given special recognition at yesterday's meeting. They received "Thank You Plaques" for 10 or more years' service as county civil defense directors. These men are:

Loring Russell Stott of Johnson County, who has served as civil defense director for 18 years and who was in 1951 a cowinner with the late Robert Wolf of the Freedoms Foundation Gold Award;

Andrew K. Houk of Boone County, past secretary of the Indiana Civil Defense Association;

Marshall I. Sipe of Delaware County, past president of the Indiana Civil Defense Association;

Charles J. Walker of Miami County, present president of the Indiana Civil Defense Association;

Paul D. Smith of Wayne County, past president of the Indiana Civil Defense Association;

Samuel Hughes of Hancock County;

Crayton Holderead of Marshall County;

Richard H. Giannini of Vanderburgh County;

Roscoe Eller of Jasper County;

Richard R. Gregory of Crawford County;

D. O. Dulin of Montgomery County; and

William H. Grossman of Ripley County.

## TELEVISION'S OPPORTUNITY

### HON. WILLIAM L. HUNGATE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. HUNGATE. Mr. Speaker, with regard to the continuing controversy on the media, I call the attention of my colleagues to the following two articles from the Christian Science Monitor.

[From the Christian Science Monitor, Nov. 22, 1969]

AGNEW ON TARGET

(By Roscoe Drummond)

WASHINGTON.—If we didn't have a Spiro Agnew at large today, sure as anything we would want to invent one.

At times he may hurl his arrows at the wrong targets and overweight them with heavy adjectives, but we wouldn't want to see him muzzled. There is only one man in the United States who could muzzle him and he has no intention of doing so.

DEBATE ON FAIRNESS

It isn't debate which divides the nation. It is one-sided debate which divides the nation. Too many people too often remain silent and thus leave most of the headlines to the protesters.

Now, the Vice-President is at it again and he has started a debate on the fairness—or lack of fairness—of network television news and commentary which will be with us for some time. That's healthy.

As one who thought that the "effete snobs" speech was not well-conceived or well-timed, this time on this issue I am almost entirely on Agnew's side.

The Vice-President is simply saying, more bluntly and more baldly than others have been disposed to say it, that the big-audience evening TV news shows reveal considerable bias and unfairness—sometimes deliberate as at the Chicago convention, sometimes accidental, often with a raised eyebrow or a lowered voice.

It's true and it seems to me all to the good to have Mr. Agnew speak out in a way which further alerts listeners to this fact and causes them to indicate their dissatisfaction to the networks.

VALID CRITICISMS

Thousands of listeners did exactly that in the wake of the Agnew speech, and while that kind of stimulated write-in and phone-in is not a balanced cross-section of listeners, it is a kind of spontaneous "Nielsen rating" of the news shows which the networks will not lightly ignore.

I was eager to see what the network executives would say to rebut the Agnew criticisms. But there was no rebuttal. They devoted themselves almost wholly to knock-

ing down mythical strawmen by firming replying to statements he didn't make. To me at least this was confession that Agnew's criticisms were essentially valid and that rebuttal wasn't possible.

The network presidents argued that government censorship would be bad. It would. Agnew never proposed censorship. He simply urged listeners to be alert to news and commentary bias and to let the stations know how they felt.

There is also the empty contention that Agnew said there was a network "conspiracy" to shape the news. He never said there was any conspiracy. He simply said that the power to shape the news which has a nearly captive audience of some 40,000,000 viewers nightly is in the control of so small a group of producers and editors and commentators as to constitute a near-monopoly and that their performance should be subject to public scrutiny and public criticism.

This is exactly what Freedom House, a national organization, where liberals and conservatives unite to strengthen the cause of a free society at home and abroad, is preparing to undertake. It is preparing to create an institute which will provide a continuing appraisal of how well TV and the press perform so that the media, free of government censorship, will still be subject to responsive criticism—and responsive.

GOOD ALERTER

There is one important, balancing point which the Vice-President neglected to make in his speech. Perhaps he did not want to blunt the force of his argument. Anyway, it is encouraging to realize that the American people are not easily pushed around by high-powered, mass-audience commentators. Bias in the news is always dangerous and pernicious, but the barrage of one-sided analysis of Nixon's Vietnam peace-plan speech was followed by a Gallup Poll which showed 77 percent of the people backing the President and another poll reporting 79 percent support.

This is no justification of prejudice and one-sidedness in TV news and commentary which, cumulatively, could shape opinion in its own image.

It won't, if listeners remain alert. Agnew is a good alerter.

---

[From the Christian Science Monitor, Nov. 26, 1969]

TELEVISION'S OPPORTUNITY

The television networks should hardly have been surprised at Vice-President Agnew's criticism of their news coverage and commentary. Almost the same thing happened in Britain when Prime Minister Wilson and Labour ministers thought, rightly or wrongly, that television was zeroing in pretty sharply against them and their policies. A couple of protesting "shots across the bow" were fired by Labour spokesmen. Britain's two networks survived the assault, even though the country has no press freedom guarantee imbedded in a written constitution.

Mr. Agnew was opening up discussion aimed at evaluating a number of media practices.

For instance, is it a good idea, immediately after the nation's president—be he Kennedy, Johnson or Nixon—has finished speaking, for television commentators to give their instant, briefed-down versions of what the president said? How has anyone a chance to make up his mind? Wouldn't it be better—say, a half hour later—to assemble a panel (as the British do and American networks occasionally do) to discuss the presidential speech pro and con, with all viewpoints represented? To have only Averell Harriman commenting following Mr. Nixon's Vietnam speech, as did one network, isn't enough, for Mr. Harriman has been steadily critical of the President's policy.

Another question is whether a small group of network newsmen and analysts do not, almost unconsciously, influence America's millions to their outlook and viewpoint. And indeed whether the liberal-establishment Eastern press in the United States does not, by the strength of its coverage and the far-reaching writ of its editorializing, exert more of an influence than is realized.

Perhaps David Broder, writing from Cambridge, put his finger on an essential problem when he said: "No journalistic medium has yet made an effective effort to exploit the rich variety of regional viewpoints and voices to help its readers or viewers to examine the conventional wisdom of their own area." The TV commentators live and work around New York and Washington. The New York Times' Tom Wicker is from the South, but when he says the American protest movement "may or may not be a majority" he is not paying much attention to the polls, which show protestors to be a minority.

The press, the networks, should pay more attention to what solid citizens are thinking elsewhere, should seek the reasons why these outlanders, far from the East Coast, may be wrong or right. A little travel into Texas, Oklahoma, California would reveal opinions very different from those held in New York City.

Another question, raised often, is whether television coverage is not sometimes stacked in favor of unrest and protest. Not only the Chicago convention scenes but the TV panels and debates. Television has wrought splendidly in uncovering hunger in America, in pointing up civil-rights abuses. But on a number of panels, including those featured by educational television, the spokesmen for disorder seem to carry the day.

There is probably virtue in allowing speakers on Boston's black program "Say Brother" to denounce, unchallenged, the United States as imperialist. That is giving black activists their say. But there is less justification for giving some of modern society's wild men the TV publicity they crave.

We can't expect the networks to be the moral influence that the Royal Family is asked to be in Britain. But one can expect all of the news media to heed the various warnings about American polarization issued lately: polarization of the intellectual East against the Midwest, South, and West; polarization along generation lines, the bright collegians against their elders.

The networks, the news media, wield enormous influence. Through presenting all sides of a case, through letting everyone be heard, through indicating ways to agreement, through seeking out spokesmen for constructive solutions as well as for smash-the-Establishment, the news media can do much to heal and save the nation.

---

## THE LATE HONORABLE CHARLES B. DEANE

### HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 4, 1969*

Mr. EVINS of Tennessee. Mr. Speaker, I want to join with my colleagues from North Carolina and others in paying a brief but sincere tribute to the memory of the late Honorable Charles Bennett Deane of Rockingham, N.C., who passed away recently.

Charles Deane and I were "classmates" in the 80th Congress—we came to Congress together and served together for many years. He was an able, talented legislator—modest and unassuming. He was a man of high principles, a Christian gentleman, who served as president of the Baptist State Convention of North Carolina for 2 terms, a high honor and tribute.

Charles Deane, through his selfless, devoted service to his district, State, and Nation, added stature to the Congress. He will be greatly missed and I want to take this means of extending and expression of my deepest and most sincere sympathy to Mrs. Deane and other members of the family.

---

## BILL TO PROHIBIT PUBLIC OFFICIALS FROM OPERATING DUAL SCHOOL SYSTEMS

### HON. FLETCHER THOMPSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. THOMPSON of Georgia. Mr. Speaker, enclosed is a bill which I plan to introduce soon and in order that those who read the CONGRESSIONAL RECORD may have an opportunity to see it, I include it in the Extensions of Remarks:

H.R. ——

A bill to prohibit public officials from operating dual school systems, and from requiring racial balance in school systems, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "Freedom From Force Act."

TITLE I—GENERAL PROVISIONS

SEC. 1. The right of elementary and secondary education students to attend their neighborhood schools shall not be abridged by any person or authority based upon the race, creed or color of the student.

SEC. 2. Each local "unitary school system" shall have the right to determine their own attendance zones without interference from Federal authority as long as they are reasonably drawn so as to serve the needs of the community and no effort is made by drawing such attendance zones to force a student to attend a particular school because of his race, creed or color.

SEC. 3. Each local "unitary school system" shall have the right to determine the placement of any new school or school facility without interference from Federal authority so long as the new school or facility is placed so as to reasonably serve the needs of the community and no effort is made through its placement to discriminate against any student or group of students based upon race, creed or color.

TITLE II—DEFINITIONS

SEC. 1. For purposes of this Act:

(1) The term "unitary school system" whenever applied to any school system receiving public support means a school system wherein all schools comprising the system function as a part of an overall single administrative unit and in which there is no force or discrimination present, based upon race, creed or color, in establishing the make-up of the student body, faculty or in the allocation of funds, books and facilities to the respective schools.

(2) The term "dual school system" whenever applied to any school system receiving public support means any school system other than a unitary school system (as defined in subsection (1) of this section).

The term "pairing" whenever applied to any school or school system receiving public support means any act required by any governmental authority or person or board acting pursuant to such authority to cause the merger of schools or the alteration of the grade structure for the purpose of altering the race or ethnic make-up of the student body.

TITLE III—ILLEGAL ACTS

SEC. 1. (a) The operation of a dual school system shall be illegal.

(b) The pairing of schools shall be illegal.

(c) The closing of any school for the purpose of forcing any student into a different school so as to alter the racial or ethnic make-up of the student body shall be illegal.

(d) Forcing a child to leave his neighborhood school to attend another more distant because of his race, creed or color shall be illegal.

TITLE IV—PENALTIES

SEC. 1. Any person who violates Section 1 of Title III of this Act shall be subject to be imprisoned for not more than one year, or fined not more than $1,000, or both.

## VOCAL VEEP

### HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. ROUDEBUSH. Mr. Speaker, several weeks ago Vice President AGNEW stunned the television network moguls by questioning their news coverage.

AGNEW hit the nail so square on the head that the leftist-liberals did everything but jump out of their New York ivory towers.

Every pollster in the country, except the leftwing Lou Harris poll which was given lucrative Government contracts in the last administration, attest to the overwhelming support for AGNEW throughout the United States.

To the utter dismay of the networks, AGNEW does not have anybody in his corner except the American people who have waited years for someone with his courage, intelligence, and integrity to pull the chain on the leftist propaganda efforts of the networks.

The Indianapolis Star describes the character-assassination attempts on AGNEW now underway by the networks, and why, for the sake of America, the smear efforts must fail.

The editorial follows:

VOCAL VEEP

Vice-President Spiro T. Agnew said in Harrisburg, Pa., Oct. 30, "A little over a week ago, I took a rather unusual step for a Vice-President—I said something."

What's more, he has gone on saying something. In Des Moines, Ia., Nov. 13, he took on the networks. And on Nov. 20 at Montgomery, Ala., he jousted the press—or some of it.

And by and large the public loved it.

Of course, Mr. Agnew has built-in pizazz. He's a first-generation American and a self-made man. That's why regular folk relate to him like a topsides dogwatch to hot buttered rum. And that's why he can ditch political doubletalk and say what the "silent majority" has been longing to hear.

How is it then that his remarks have attracted censure that reverberates from a great height and seems accompanied by a steely glance down a very long nose?

For instance, Dr. Frank Stanton, president of Columbia Broadcasting System, commented: "Apparently the Vice-President is embarked upon a campaign . . . to intimidate the news media into reporting only what he wants to hear."

Leonard H. Goldenson, president, American Broadcasting Company, said: "Again I leave it to the public to determine whether the Vice-President's renewed attack . . . is an attempt to intimidate and discredit not only television news reporting but other major news media. Personally, I believe it is."

A resolution passed Nov. 21 by the National Small Business Association, with 35,000 members in all 50 states, may indicate that the public inclines more to the Vice-President than to Mr. Goldenson. The resolution states that "members of the executive committee . . . meeting in special session Friday, Nov. 21, 1969, commend the Honorable Spiro T. Agnew, Vice-President of the United States, for his efforts to secure more truthful, complete and responsible reporting by the nation's news media."

Mail to The Star on the subject has been running at least eight for Mr. Agnew's stand to one against.

The opposite side wrap their words in odd-shaped packages. They avoid the issue. Instead, swathed in injured innocence—the customary attitude of one caught with his fingers in the cooky jar—they leave a chimera hanging in the air, the dark hint that high office is being used to threaten censorship.

On this score Mr. Agnew said: "I am opposed to censorship of television or the press in any form. I don't care whether censorship is imposed by government or whether it results from management in the choice of presentation of the news by a little fraternity having similar social and political views, I am against censorship in all forms."

As a matter of fact, what has the Vice-President been talking about that's caused all the fuss?

"I am not asking immunity from criticism. That is the lot of the man in politics . . . But my political and journalistic adversaries seem to be asking . . . that I circumscribe my rhetorical freedom while they place no restriction on theirs.

"Just as a politician's words . . . are dutifully recorded by the press and television to be thrown up to him at the appropriate time, so their words should likewise be recorded and likewise recalled . . . And when their criticism becomes excessive or unjust, we shall invite them down from their ivory towers to enjoy the rough and tumble of public debate."

In a nutshell, fair play. That's what Mr. Agnew has been talking about, that boots grown accustomed to stomping should themselves expect to get mashed now and again.

A reasonable enough position, right? Wrong? Wrong to the "liberal" fraternity, that is. A fair exchange is the last thing a "liberal" wants. He doesn't debate. His tactic is to plug one line until people believe it. But there must be no other side.

The United States is one of the last countries where people are still individuals with enough sense of justice to buck the march of "liberalism." All the same, under the New Deal, Fair Deal, New Frontier and Great Society, the business of brainwashing Americans has prospered beyond belief. That is why a man, able to speak for the fair-minded, down-to-earth majority against the debilitating dogma that has plagued them too long, is a major threat to the "liberal" fraternity.

Such a man is Vice-President Agnew. And that is why "liberals" will not debate him, but only terminate him by character assassination if they can.

If they cannot, it is just possible a new era may be on the way when the American people can hope to see their affairs run with sanity and a degree of consideration for the industrious majority who make everything possible.

## THE AMERICAN WAY

### HON. J. HERBERT BURKE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. BURKE of Florida. Mr. Speaker, all the talk we are hearing now concerning the alleged massacre of South Vietnamese civilians by American troops is, of course, disturbing to the American people.

But I do feel it is important that we examine this talk and put it in its proper perspective rather than be carried away by emotion. The talk and accusation may well be valid but if not, it does an injustice to the accused as well as unjustly points the finger of guilt at the majority of those who are members of the armed services and at our country's military policy.

No decent human being would approve or condone the wanton killing of innocent civilians as a necessary act in any war.

I would like to call to the attention of my colleagues an editorial which appeared in the November 28 edition of the Fort Lauderdale News. I feel that this editorial is truly an excellent analysis of this unfortunate matter and an honest analysis as to how we can now deal with it.

I agree with the statements made in the editorial that the alleged massacre could very well have occurred but as it suggests, I am sure that this incident is an isolated one and certainly it does not now represent, nor has it ever in the past, the policy of our Nation or its leaders—it just is not the American way.

It is for these reasons that we must not allow ourselves or anyone else to put such a barbarian stigma on our American fighting men. To do so is completely erroneous and unfair.

I am glad to commend the following editorial to my colleagues:

FEW VICIOUS GI'S MUST NOT SMEAR VAST NUMBERS WHO SERVE HONORABLY

(By Jack W. Gore)

With public interest and demands for a thorough investigation of the alleged massacre of South Vietnamese civilians by U.S. troops continuing to mount, it would be well today for all Americans to keep a proper perspective about this incident.

As we pointed out in this space last Tuesday, this affair, if it did happen in the manner in which various eyewitnesses have reported it happened, cannot be justified under any provocations.

It was a ghastly affair completely untypical of the normal reaction of U.S. troops under battlefield conditions, and it adds up to something which cannot go uninvestigated or without those involved being brought before a proper tribunal to answer for their deeds.

At the same time, however, it should be kept in mind that this was but an isolated incident in a pretty bloody and horrible war and which reportedly involved only a very small number of U.S. combat troops attached to one particular unit.

With all this publicity this incident is receiving, both in this country and abroad, it is easy enough to lose sight of the fact that for every GI who participated in this affair, there are thousands who are still in Vietnam or who have served there in the past, who have conducted themselves in an impeccable

manner despite the strains of combat and who have gone far out of their way to win the friendship of the people of this war-torn land.

We, for instance, have read innumerable stories of GI's spending almost all of their off-duty time working in orphanages and writing letters back home asking their friends to send some items of food, clothing and toys to be distributed among these orphans.

Other GI's have risked their own lives going to the rescue of wounded civilians or helping them get out of a war zone.

These incidents, however, seldom rate the news space that is devoted to the other side of the coin, and thus they become easy to forget in the justifiable furor created over the alleged slaughter of 100 or more unarmed civilians.

It must also be kept in mind the alleged atrocity, indefensible as it might be, can't hold a candle to the terror campaign waged by the enemy in Vietnam in which thousands of innocent civilian noncombatants have been cruelly slaughtered.

Just the other day, for instance, there was a report which indicated that over 2,500 innocent civilians had been murdered by enemy troops in the town of Hue during the TET offensive, yet many of the newspapers in this country which devoted a large amount of space to the alleged U.S. atrocity, hardly mentioned this report.

This is what we mean by maintaining a proper perspective over this incident. We don't doubt that it happened nor that its disclosure came as a shock to most Americans. But the entire Defense Department and the hundreds of thousands of members of our armed forces who are a part of it can't fairly be blamed for the misdeeds of a very few, any more than a whole community can be blamed if a single one of its citizens runs amok and kills a bunch of innocent people.

There's also this point to remember. Any time a large number of men are taken from their civilian pursuits and trained to be professional killers, there are going to be some who aren't going to be particularly selective about who they kill. Nor is it easy to predict how any certain individual will react to a long exposure to a kill or be killed environment.

Men who have been through combat can better understand how this alleged atrocity could have happened than those who have never been subjected to such an ordeal. Not many combat veterans will condone the wilful slaughter of women and children even in a war zone and under battle conditions, yet they can understand how such incidents can occur, and particularly if ordered by higher authority.

In the days ahead there is little question but that this incident is going to be given a great deal of public exposure. That is perhaps as it should be, but in passing judgment on this regrettable affair it should be kept in mind that it was an isolated incident; it does not reflect the overall attitude of our combat forces in Vietnam, and it involved just a few of the million or more American fighting men who have served or who are still in Vietnam.

The many shouldn't be judged by the actions of the few, but unfortunately this could happen if this incident isn't viewed in its true perspective.

## NUCLEAR POWER ON THE MOON

### HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. HOLIFIELD. Mr. Speaker, we are well aware of how magnificantly the Apollo 12 flight progressed once the astronauts overcame the initial problems at liftoff. As in so many activities in this Nation's space program, another first was achieved on this mission—the generation of electricity by nuclear means on the moon.

The Apollo Lunar Surface Experiment Package—ALSEP—is powered by a nuclear generator which uses the heat of decay of plutonium–238. The heat is applied to one side of a series of thermoelectric devices and they in turn create electricity directly. This nuclear generator, which has no moving parts, is called the SNAP–27. I would like to point out that the SNAP–27 generator will still be functioning when the experiments it is now powering have ceased operating.

The SNAP–27 is the power source for a passive seismic experiment, a lunar surface magnetometer, a solar wind spectrometer, and a suprathermal ion detector, as well as the central station and transmitter which sends the data back to earth.

I would like to recall other successes with space nuclear power sources, namely, the SNAP–19 which is providing most of the power for the Nimbus satellite, our most sophisticated weather satellite, and the grapefruit-sized SNAP–3 navigational satellite which was launched in 1961 and is still operating. It, in fact, is our oldest operating satellite.

Mr. Speaker, if there is no objection, I would like to insert in the RECORD the characteristics of the SNAP–27 and a description of the experiments it is powering on the moon.

The item follows:

SNAP–27 GENERATOR

SNAP–27 consists of a generator and fuel capsule with total weight of 40 pounds.

FUEL CAPSULE

Weight: 14.8 pounds.

Size: 16.48 inches long, 2.51 inches in diameter.

Operating temperature: 1300 degrees Fahrenheit.

Thermal power: 1480 watts.

Nuclear material: Plutonium–238.

GENERATOR

Housing: Beryllium structure including fins.

Size: 18.23 inches high, 15.67 inches in diameter across the fins.

Weight: 25.2 pounds.

Power output: 56.2 watts three years after assembly.

Voltage: 16 plus or minus 0.2 volts.

Thermoelectric Material: Lead Telluride.

Powered Devices of the Apollo Lunar Surface Experiment:

Central data collection station and moon-earth transmitter-receiver.

The four scientific experiments are:

*1. Passive seismic experiment.*—This is intended to gain information in lunar physical properties. It will determine the frequency of moon quakes and measure approximate azimuth and distance to seismic epicenters. The location and frequency of meteorite impacts on the moon can also be observed.

*2. Lunar surface magnetometer.*—This will indicate the deep permeability and conductance of the moon and whether it has a ferrous core. It will yield information about the interaction of solar wind with the moon and since the conductivity of rock is a strong function of temperature, inferences may be drawn as to the deep subsurface temperature of the moon.

*3. Solar wind spectrometer.*—Provides information as to how solar wind(s) react with the lunar surface as to close-in shock fronts and directional changes. This will provide information on the confinement of plasmas in the laboratory, electrical conducting of the moon, the moon's availability to retain an atmosphere and the effects on the lunar surface of charged particle bombardment.

*4. Suprathermal ion detector with cold cathode ion gauge.*—This experiment measures characteristics of positive ions at the lunar surface. Its purpose is to gain information about the lunar atmosphere as well as the low energy portion of the solar wind(s). The effect of electric fields near the lunar surface can also be observed.

The cold cathode ion gauge will indicate the density of the lunar atmosphere and detect any variation of particle density associated with the lunar phase or solar activity.

## MANY PARENTS OBJECT TO DEMONSTRATORS USING THEIR SONS' NAMES

### HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. BOB WILSON. Mr. Speaker, during the recent Vietnam moratorium, many parents of servicemen killed in Vietnam were deeply disturbed by the use of their sons' names by the demonstrators. This father speaks poignantly for many families who have given a son or husband for their country and I would like to share his strong feelings with my House colleagues. The letter follows:

[From the Las Vegas Review Journal, Oct. 16, 1969]

"WHEN THEY READ THE NAME OF MY SON"

When the peace demonstrators read my son's name, let them know how he felt about the Vietnam war, and how the parents who shaped him feel about it.

It is we, the parents, who said goodbye to him when he went away to fight—not the peace agitators.

It is we, the parents, who wrote long, anxious letters to him during his three months of almost continuous combat—not the agitators.

It is the ones who saw his body returned in a flag-draped coffin who first should be heard—not the protesters.

These transparent propagandists were not there to see my son buried, nor do they accompany me on my trips to lay flowers on his grave.

My son was killed while fighting for his country.

America cannot be permitted to perpetually persuade its citizens to instill in their sons a sense of patriotism, loyalty and a determination to defend the oppressed, and then after the sons have died, suddenly change her mind and yield to those who killed them.

Most of the peace demonstrations and name-reading ceremonies across this nation are an obvious propaganda device designed to influence the President of the United States into surrendering South Viet Nam to an enemy which admittedly and openly seeks to conquer it by any and all means.

When they read my son's name to advocate peace at any price—the price being defeat—let them remember that he whose name they read did not surrender.

When these pretentious mourners read my son's name, let them realize that their grief would be better served if applied to the Viet Cong whose flag they wave even as they burn the one which graced my son's casket. Let

them apply their bogus sorrow to those aggressors felled by my son as he won his posthumous Silver Star for heroism in ground combat.

And when they read the name of my son, let them know that he advocated an increase in the bombing of the ammunition depots in North Viet Nam—not a cessation so that his enemy would receive unlimited war supplies with which to kill him.

When they read the name of Gregory Malcolm Thompson, let them realize that they are proving before the world the truth of the oft-repeated Communist claim that many Americans have become soft, decadent and yielding to any determined force which opposes them.

And when these weak, gullible ones read his name in their avowed pursuit of peace, let them remember that a peace purchased at the price of surrender is but a brief Munich-type peace lasting only until the aggressor's appetite demands more victims.

Finally, when these hypocrites read the list of the dead who defended South Viet Nam, let them know that they have reached the ultimate low in the world-record of human infamy, in that they willfully and cunningly utter a dead man's name to achieve the defeat of the cause for which he died.

MALCOLM THOMPSON.

## EDITORIALS SUPPORT PRESIDENT ON GERM WARFARE DECISION

## HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. ARENDS. Mr. Speaker, the President's decision to renounce the use of "germ" warfare has won broad acclaim.

From every part of our land I have received editorials supporting the President's action.

These editorials have come from papers that otherwise might be described in some cases as "hawk" and in others as "dove."

They come from the East, South, North, and West.

Mr. Speaker, I submit a sampling of these editorials for inclusion in the RECORD, as follows:

[From the Richmond Times Dispatch, Nov. 27, 1969]

DEMOBILIZING GERMS

Some of the world's great powers possess a terrifying arsenal of biological weapons capable of killing or crippling vast populations, and the horrendous possibility of germ warfare has hovered over mankind for years.

Available for use are biological agents capable of causing such deadly diseases as plague, anthrax, tularemia, botulism, Rocky Mountain spotted fever and encephalitis. In a single pass over New York City, one fighter plane could drop enough anthrax bacteria to wipe out half the city's people. Cities the size of Richmond could be rendered lifeless with no trouble at all.

Now the shadow seems to be lifting, thanks to PRESIDENT NIXON'S renunciation, on this country's behalf, of the use of bacteriological weapons under any circumstances. This unilateral decision, coupled with MR. NIXON'S pledge that the United States would never be the first to use chemical warfare weapons, should rid all but the most cynical of the notion that the United States is an imperialistic nation. The President's action indicates the *defensive* nature of this country's military posture.

Some might attempt to disparage MR. NIXON'S act by insisting that the biological weapons he has renounced were impractical anyway, that he really hasn't forsworn the use of a single weapon of value. It is true that any country that resorted to biological warfare would run a grave risk of unleashing deadly germs upon its own people or upon friendly countries. But a country convinced of the military necessity of using biological weapons might not allow such a chilling possibility to stop it. MR. NIXON'S decision could persuade other nations to forgo the development of a cache of bacteriological weapons, and this, of course, would reduce the chances of germ warfare.

Other critics are upset by MR. NIXON'S failure to include tear gas and defoliants, now being used in the war in Vietnam, on the list of chemicals this country does not intend to use first. In other words, they want the United States to stop using tear gas and herbicides altogether, now.

A ban on such chemicals may ultimately prove to be desirable, but the President was right not to abandon them precipitately. Of course they are damaging and reprehensible. All weapons of war are. But tear gas is not deadly, and the controlled use of defoliants doesn't have to pose a major threat to human life.

[From the Charlotte Observer, Nov. 27, 1969]

PRESIDENT NIXON TAKES SANE STEP

President Nixon has moved to put sanity back into United States policy on chemical and biological warfare (CBW).

For years now, CBW developments have gone their own mindless way. Neither the public in general nor its most responsible leaders have realized what was afoot in this field.

There is evidence, for example, that President Nixon himself didn't know about stockpiles of nerve gas on Okinawa during his first months in office. As Rep. Richard D. McCarthy writes in his new book, "The Ultimate Folly", the majority of congressmen knew little about the CBW program even though they appropriated money for its operations.

One of the few informed CBW supporters in the House was a congressman who also happened to be a major general in the Army's chemical reserve and the representative of a district which was home to a major Air Force CBW laboratory.

But thanks to the Okinawa disclosures and, more important, the accidental gassing of 6,400 sheep near Dugway, Utah, Rep. McCarthy and a great many others recognized what was happening in both the chemical and biological fields. What they saw wasn't pretty.

The United States was not only stockpiling weapons that most of the rest of the civilized nations of the world had agreed not to use under the Geneva agreement of 1925. There were pressures in the Pentagon for exotic new developments such as a synthetic germ that would create epidemics for which there was no medical defense.

In a dangerous world, this country must often take defensive moves it would rather forego. But it is not in our defensive interests to play the role of the brilliant scientist who creates a CBW monster that can easily get out of control.

As President Nixon said, CBW weapons are too unpredictable and uncontrollable to be made "options" in any nation's arsenal. It is time this country concentrated on ridding the world of their grotesque threat rather than on carrying it to a more hideous perfection.

The President has proposed the basic steps for a sane policy: Ratification of the 1925 Geneva agreement with a tough amendment to ban weapons unknown in 1925; destruction of our biological weapons; and concentration on genuine defense measures against biological weapons through research outside the Defense Department.

These steps can take our CBW program out of the dark corners of the Pentagon where it has flourished so dangerously. And with our own policy in order, we can join a worldwide effort for genuine CBW defense by seeking the mutual elimination of all CBW weapons stockpiles.

[From the Oregonian, Nov. 26, 1969]

GOOD, BOLD EXAMPLE

President Richard M. Nixon's statement on gas and germ warfare is a major initiative toward elimination of world-devastating warfare.

The President not only asked U.S. ratification of a 1925 Geneva protocol prohibiting use of chemical and bacteriological weapons, he proposed that America join Great Britain in seeking a reaffirmation of that principle in a newly drafted convention. And of even greater immediate significance he:

Flatly renounced any further U.S. research in bacteriological weapons;

Said America would not employ such germ warfare even if an enemy were to do so;

Ordered a study leading to the destruction of all existing U.S. stockpiles of bacteriological weapons;

Promised that future bacteriological research would deal only with countermeasures against germ weapons used by others, with the research administered by the Department of Health, Education and Welfare rather than the Defense Department;

And reaffirmed America's long-standing commitment against first use of lethal chemical, as distinguished from germ, weapons, and extended the commitment to incapacitating chemicals.

America should long since have ratified the 1925 Geneva protocol, which was an outgrowth of the use of gases in World War I. The belated action, coupled with the other unilateral intentions listed by the President, should encourage wide adherence to the convention updating the 1925 pact. These actions set a bold and admirable example for others who possess or aspire to gas and germ offensive weapons.

The U.S. risk is in the possibility of surprise attack by an enemy with such weapons. The safeguards emphasized by the President are an alert U.S. intelligence with respect to such foreign research and the perfection of counter measures. The risk, so limited, is well worth the prospect of eliminating a kind of warfare that not only threatens the very existence of man on earth but also who a brutalizing influence on those who have the power to wage it.

[From the Houston Chronicle, Nov. 27, 1969]

AN END TO CBW HORRORS

For more than a decade, the United States has secretly been preparing for chemical and germ warfare—a potential killer which some scientists say makes The Bomb look like a toy.

The amounts spent and details of the grisly chemical and biological weapons (CBW) have for the most part been concealed. The horrors that have been developed began to be known with the accidental killing of sheep in Utah last March; with the discovery that nerve gas was stored on Okinawa; and the disclosure of the army's plans to dump obsolete stocks of chemical agents in the ocean.

This year it was learned that about $2.5 billion has been spent by the United States for CBW work since 1960 with little debate in Congress and with most congressmen not being aware of what was being done.

Public revulsion to silent killers evoked from the Pentagon the response that CBW was a deplorable weapon but we must have

the capabilitty to use it so other nations will be deterred from doing so.

Now, after an intensive review, President Nixon has taken another stand, one which shows a far better understanding of the frightful hazards of CBW.

"Mankind already carries in its hands too many of the seeds of destruction," Mr. Nixon said. "Biological weapons have massive unpredictable and potentially uncontrollable consequences. They may produce global epidemics and impair the health of future generations."

The President has ordered a halt to the creation and stockpiling of more odorless, tasteless, kill-in-seconds materials. In addition, the gruesome stockpilers are to be destroyed.

Instead of becoming a CBW power to deter other nations, the United States will find ways of countering any germ warfare attack. The President wisely decided on the shift in research and placed the responsibility in the Department of Health, Education and Welfare, rather than the Defense Department.

In addition, the President extended U.S. policy to foreclose the first use in a war of chemicals that incapacitate. A policy against the first use of lethal chemicals in a war was adopted by the United States decades ago.

The presidential announcement was well-timed. It came on the same day the Russians pushed for consideration in the United Nations of a draft treaty banning chemical and biological weapons.

Also, redirecting the research on CBW towards a more humane approach took place when Americans were reeling from disclosures about the massacre at Pinkville. Mr. Nixon's action on CBW will not affect the lesion on our national honor caused by the slaughter of women and children at Pinkville. But it does show that this nation still has a basic abhorrence for the horror that man can create and perpetrate.

---

[From the Chicago Today, Nov. 17, 1969]

ENDING THE GERM-WAR RACE

Good News about armament stockpiles is rare, and we're grateful to President Nixon for providing a double helping of it. The President announced Tuesday that the United States is renouncing the use of bacteriological weapons under any circumstances—even in an attack by an enemy using them—and will destroy its stocks of germ-war components as quickly as the job can be done in safety. [The defense department says it hopes that will be "well within a year."]

Nixon also formally renounced the first use by this country of deadly or incapacitating chemical weapons, and called on Congress to ratify the 1925 Geneva convention banning them.

All this is an immensely hopeful change—a decisive step away from the nightmare of gas and germ warfare, after many years of determinedly pushing toward it. Moreover, the new policy shows a basic shift in the thinking that has governed military decisions for decades: The compulsion to pile up more and deadlier weapons because, if we don't, the other side may be able to annihilate us more times than we can annihilate them.

That fear-thinking has led to a self-accelerating race that, sooner or later, could only make the nightmares a reality.

There is no other way to stop this spiral than to stop it; to declare that, since it takes two to make a race, this particular race is over as of now. Taking the first step required some courage, as does every first step, and we're glad Mr. Nixon has it.

Nixon exempted from the self-imposed ban on chemical weapons such riot-control agents as tear gas and its modifications. That left room for further discussion, and the Communists promptly moved into it. Shortly after he spoke, the Soviet Union and seven other communist nations submitted a resolution before the United Nations asking for a complete ban on chemical and biological weapons, presumably including these.

If that means the thrust has been reversed, and that east and west now will start trying to outdo each other in denouncing gas-germ weapons instead of stockpiling them, it's the best news in that sector yet.

---

[From the Nashville Banner, Nov. 26, 1969]

NIXON SPELLS IT OUT—ON BIOLOGICAL WARFARE, THUMBS DOWN

"Germ Warefare," and biological methods, have been so repugnant to conscience that civilized people—by common consent—have refrained from their use, though other weaponry has developed in volume and destructive power.

The United States has meticulously shunned bacteriological use—confining research in that field to preparedness for purely defensive purposes. The fact is underscored, and policy as the national guideline emphatically spelled out, in President Nixon's statement on the subject yesterday. He has moved also to correct a 44-year oversight, by proposing Senate ratification of the 1925 Geneva treaty prohibiting first use in war of "asphyxiating, poisonous, or other gases, and bacteriological methods of warfare."

This nation has abided by that rule, though not a signatory to it. The record in that particular speaks for itself.

* * * * *

The United States' activities in that field will be restricted, by this order, to maintaining a defensive research program. That does not alter the policy, it simply defines and formalizes it. In the area of international affairs, it also substantiates further this nation's commitment to leadership for world security and peace.

In addition to renouncing "first use" of lethal chemicals, President Nixon extended the American position forbidding first use of incapacitating chemicals. Again, as he stipulated, any research or resources in these will be for defensive purposes only—and reserved strictly for possible retaliation.

The policy is clear and valid, as was the one on which the ABM decision was based—recognized for what it is, a national defense mechanism.

Mr. Nixon has made his case. It will be understood in the chancellories abroad. It should be understood, even by chronic policy-needlers, at home.

---

[From the San Francisco Chronicle, Nov. 26, 1969]

CB ABOLITION A MORAL VICTORY

(By Royce Brier)

In 216 B.C. Hannibal with 40,000 men routed a Roman army of 86,000 at Cannes, one of the most extraordinary pitched battles of all time. The story is he slaughtered 60,000 survivors, but it's a Roman story, not his.

Anyway, ancient battles and sieges were often total. Today we have nuclear weapons, but we're scared to use them. They are being hoarded for survival conflict, but experts concede that in nuclear warfare victory is impossible in any rational sense.

The technology which begot nuclear energy had spinoffs devising other forms of warfare, possibly as total as nuclear. Indeed, it started a little earlier when the Germans used poison gas in World War I, with only local success.

Notwithstanding, the military outfits of the several great powers created sections to devise and experiment with non-detonation war, chemical and bacterial, called CB in the trade. Since World War II the CB activity has been intense on a small scale, and millions have been dumped into it by the United States, and probably by the Soviet Union.

The method was to assemble specially trained brigadiers and colonels with technical and scientific aides who teamed with private industries to produce the junk.

They were put in fenced compounds, and it was so secret the personnel couldn't tell wives what the duties were. Testing grounds were set up in isolated areas, one in Utah. If anything went awry, the administrators were required to lie about it by their superiors, disclaiming that their work had anything to do with a given mishap.

Manpower and money were wasted, because the weapons they fashioned were potentially unusable on both moral and practical grounds.

* * * * *

So it was a child's game, designed chiefly to snuff out civilians. President Nixon in a highly commendable move has now renounced it.

He said he is unilaterally ordering the destruction of bacteriological and offensive chemical stocks. The only exceptions are tear gas and other riot-control agents, and some chemicals used against plant life. Only defensive production and testing will remain. Apparently the manpower will be diverted to other military duties.

The gases, including nerve gas, are subject to the caprice of air movement in close combat, and even in remote bombing are unreliable. Very few Americans wish to behold the inhabitants of even an enemy city reduce to quivering and dying paralytics. Spreading germs, cholera for instance, is even more repugnant, and there is no guarantee an epidemic could be confined to enemy territory. Defensive medical science is not that exact.

There will be wails the Nixon decision undermines national security. Nonsense. In a survival war we have nuclear weapons. Genocide by detonation is bad enough, without casting about for bizarre ways to accomplish it.

Renunciation of CB warfare can't have anything but a salutary world effect. It may be a turning back from the extermination of mankind the doomsday folk postulate as the end of the technological road we pursue on all fronts today.

---

[From the Seattle Post, Nov. 28, 1969]

GERM WARFARE

President Nixon's decision to renounce the use of lethal and incapacitating chemical weapons and to destroy existing stockpiles of even more dreadful bacteriological weapons is a welcome initiative for Americans and all mankind.

Soviet negotiators at the strategic arms limitation talks in Helsinki can hardly interpret the President's action as anything but a sincere move toward sanity in the ever escalating world arms race.

Even though the United States has never formally ratified the 1925 Geneva Treaty prohibiting firse use in war of "asphyxiating, poisonous or other gases and bacteriological uses of warfare," we have always adhered to the principles of the pact.

The President's message now makes feasible an explicit U.S. commitment toward limiting the possibilities of chemical and biological warfare through action in the Senate.

It is an entirely sensible move on our part. A defensive research program in "germ warware" is an adequate deterrent to guarantee safety from potential aggressors.

---

[From the Denver Post, Nov. 26, 1969]

WISE DECISION ON GERM WEAPONS

President Nixon has acted wisely and humanely in pledging that the United States will never engage in germ warfare and in renouncing the use of chemical warfare weapons for all but defensive purposes.

The fear of bacteriological warfare has

been with the world for many years. The President's decision, announced Tuesday, to destroy all existing U.S. stockpiles of bacteriological weapons should alleviate much of this fear. But similar statements from leaders of the Soviet Union and other major powers are needed to set the world at ease on this matter.

We wish that President Nixon had also been able to announce plans for destruction of chemical warfare weapons—most notably of such lethal gas supplies as those stored at the Rocky Mountain Arsenal near Denver. In our view, these chemical weapons represent as great a threat to the people of the United States as they do to any possible enemy.

The President certainly could strengthen his hand at the SALT talks in Helsinki if he also proposed to phase out the supplies of lethal gas.

The subject of germ and chemical warfare is not likely to be raised at the Helsinki talks, which are concentrating on nuclear disarmament. But the ongoing general disarmament conference in Geneva would be appropriate for such a discussion.

In the meantime, we hope that Congress promptly heeds the President's request for ratification of a 1925 Geneva protocol prohibiting the first use of "asphyxiating, poisonous or other gases and of bacteriological methods of warfare."

Such action, coupled with U.S. backing for a British draft treaty on the banning of biological weapons, would definitely enhance the cause of worldwide disarmament.

---

[From the Seattle Post, Nov. 26, 1969]

BOTH NIXON AND U.S. MAY GAIN FROM BAN ON GERM WEAPONS

(By Robert M. Smith)

WASHINGTON.—By the time President Nixon made his speech yesterday on chemical-biological warfare, there was nearly unanimous agreement among the top members of his administration on the decision he announced.

This was because Nixon gave up a few untested weapons in the American arsenal to gain possible real advantages of security for the nation and prestige for himself.

Informed sources here say Nixon's decision on chemical-biological weapons was both shrewd and quick. They are asking people to look at what the President really gave up, and they suggest that he will now take other important steps, though probably with less splash.

What the President gave up, they say, was—

The first use of incapacitating chemicals. The U.S. has only one "incap" chemical—a gas called BZ. BZ enters the body through the lungs and interferes with the normal mental and physical processes. But BZ, the Pentagon has admitted, is terribly expensive ($20 a pound, and it takes thousands of pounds to knock out, say, a battalion), and its effects vary; while it makes some people passive, it may send others beserk. In addition, it can—in certain cases—kill its victims.

The use of germs to incapacitate and kill in war. It has been American policy that biological agents would be used to "retaliate in kind" against an enemy who used them on American forces or population.

However, experts in chemical-biological warfare (CBW) point out that there were several problems that would probably have prevented the U.S. from ever using germs as weapons, even in retaliation.

In the first place, the germs and toxins (the dead but poisonous products of bacteria) stockpiled in refrigerated igloos at Pine Bluff Arsenal in Arkansas have never been tested; it is not clear what effect they would have on enemy forces or population.

Secondly, there is a central problem of "retaliation in kind": identifying the attacker. How could the U.S. tell whether it was, say, Peking or the Soviet Union that had spread a particular disease?

Thirdly—and this is probably the most common argument of those opposed to the stockpiles at Pine Bluff—how could the U.S. distribute germs against an enemy so that it could be sure that the germs stayed in hostile territory. How, they ask, could the diseases be kept from spreading into neutral or friendly territories or even from triggering a world-wide "pandemic" that would boomerang on the U.S.?

In light of all these uncertainties, the experts say—and Secretary of Defense Melvin R. Laird apparently agreed—both the incapacitating agent EZ and the arsenal of germs have very dubious strategic value. And it is only these weapons that Nixon foreswore the use of yesterday.

On the other hand, the gains to the nation and to Nixon personally appear substantial, according to informed sources.

First—and perhaps most importantly—biological and chemical agents neither cost as much nor require the technical ability of nuclear weapons to produce. By maintaining a stock of biologicals and refusing to sign the Geneva protocol banning the use of gas and germs, the U.S. may have been engendering interest in CBW weapons on the part of small, poorer countries keen to create their own arsenals.

In addition, the U.S. has been criticized at the Geneva Disarmament Conference and at the United Nations for refusing to take a strong stand on CBW. This week, the Political Committee of the United Nations is scheduled to discuss CBW.

At the same time, domestic pressure on the administration has been mounting. Some of it has come from the academic community, some from a public troubled by accidents involving gas, and some from the Congress.

The American Academy of Arts and Sciences and the Salk Institute sponsored a conference on CBW. In July in Boston; Rep. Max McCarthy, a New York Democrat and outspoken critic of CBW policy, has a new book, "The Ultimate Folly" which comes out today, and a House subcommittee is in the midst of hearings on CBW.

The administration made clear that it did not regard tear gas as banned by the protocol, pointing out that Australia—which is also fighting in Vietnam—shares that view.

---

[From the Akron Beacon Journal, Nov. 26, 1969]

NIXON'S CBW WEAPONS BAN STEP TOWARD PEACE, SAFETY

Criticism of the American military establishment's continuing emphasis on the weapons of chemical and biological warfare (CBW) was mounting in Congress and in scientific circles when Defense Secretary Melvin R. Laird answered it rather roughly last July.

In a statement which seemed to reflect official policy, Laird said that the best way to ensure that the United States is not attacked with chemical or biological weapons is for it to maintain its own weapons as a deterrent. The U.S. he said, would never be the first to resort to CBW, but it would continue research and production of gas and germ weapons.

If that was official policy then, it is no longer.

President Nixon yesterday announced changes in this country's CBW program which should satisfy all reasonable critics.

With respect to chemical warfare, the U.S.—

"Reaffirms its oft-repeated renunciation of the first use of lethal chemical weapons" and "—Extends this renunciation to the first use of incapacitating chemicals."

Accompanying this pledge was an announcement by the President that he will ask the Senate to ratify the 1925 Geneva Protocol which prohibits the first use in war of "asphyxiating, poisonous or other gases and bacteriological methods of warfare."

With respect to biological weapons, Mr. Nixon said:

"Biological weapons have massive, unpredictable and potentially uncontrollable consequences. They produce global epidemics and impair the health of future generations. I have therefore decided that—

"The U.S. shall renounce the use of lethal biological agents and weapons, and all other methods of biological warfare.

"The U.S. will confine its biological research to defensive measures such as immunization and safety measures.

"The Department of Defense has been asked to make recommendations as to the disposal of existing stocks of bacteriological weapons."

Beyond this, the President said the U.S. "associates itself" with a British proposal to ban not only the use of bacteriological weapons—already covered by the Geneva Protocol of 1925—but also their development and production.

The new policy announced by Mr. Nixon is praiseworthy as "an initiative toward peace." It also may be valuable as a means of protecting the United States against accidents which could be devastating.

CBW weapons are, in fact, worse than useless. Rep. Charles A. Mosher (R-Oberlin) and three other Republican Congressmen recently made this point in a 37-page report.

"Our study clearly shows," said Mosher, "that CBW (chemical and biological weapons) do not contribute in any meaningful or effective way to our national defense; in fact, our possession of these volatile weapons may severely restrict our ability to negotiate significant arms limitations on conventional and nuclear weapons systems.

"The fact is that chemical and biological weapons are even more dangerous to those who have them than to any potential enemy," Mosher continued. "There is simply no reliable, foolproof way to produce, transport and store them safely."

As for ratification of the 1925 Geneva Protocol, Senate Majority Leader Mike Mansfield (D-Mont.) predicted that this could be accomplished before the end of the year, despite a crowded Senate schedule.

"I see no reason why there should be any controversy," he said. "It's 44 years overdue."

---

[From the Buffalo Evening News, Nov. 26, 1969]

A CRUCIAL "INITIATIVE TOWARD PEACE"

Only last June the White House announced a detailed review of chemical and biological warfare, including the U.S. position on arms control and the question of ratifying the 1925 Geneva protocol renouncing the use of such weaponry.

Now, in what he properly calls an "initiative toward peace," President Nixon has put the U.S. on record with an explicit and emphatic policy position that not only reaffirms renunciation of the first use of lethal chemical weapons, but goes beyond that to spell the end to production and stockpiling of biological agents of destruction.

As an appropriate punctuation to this contribution to an "atmosphere of peace," moreover, Mr. Nixon will seek a belated Senate confirmation of the Geneva Protocol.

What must be even more gratifying to Rep. Richard D. McCarthy of Buffalo, as one of the first and most articulate critics in alerting the nation to the perils of disease-spreading weapons, is the President's decision to outlaw lethal germ agents even for deterrent and retaliatory purposes.

Mr. Nixon firmly supports the basic and uanswerable argument for a total, unequivocal ban—that biological weapons inherently have "massive, unpredictable and uncon-

trollable consequences" that could "produce global epidemics and impair the health of future generations."

In ordering the destruction of present stockpiles, the President has gone far beyond, if indeed he has not actually overruled, what has been generally understood Defense Department doctrine that the U.S. must maintain such weapons for their "defensive and retaliatory capability." The effect of this now is to align the U.S. closely with the British proposal at the 18-month disarmament conference for a convention that would strengthen the 1925 Geneva Protocol by prohibiting the production and possession of biological agents for hostile purposes.

In the area of gas warfare, the President goes far enough for now, we think, in renouncing first use of lethal and incapacitating gas while making an exception of tear gas. Here we suspect Rep. McCarthy is barking up the wrong tree in trying to get even tear-gas added to the banned list.

The President has done a good day's work for peace. It affirms the determination of this country to do its part in easing the universal sense of horror generated by disease-spreading weapons which rival in risk to humanity the thermonuclear weapons whose control is the subject of current U.S.-Soviet talks in Helsinki.

---

[From the Cleveland Plain Dealer, Nov. 27, 1969]

STEP TO PEACE

President Nixon's renunciation of any use of biological weapons and first use of lethal chemical weapons is a laudable step that advances the cause of world peace.

The Senate should follow through with prompt ratification of a Geneva protocol prohibiting first use of these weapons. This action is 44 years overdue; the protocol was achieved in 1925 but the United States and Japan remain the only major nations that have not ratified it.

The next advance should be an international agreement prohibiting any use or stockpiling of these terrible weapons. Disarmament negotiators are now working toward that end. Their task is a difficult one, but Mr. Nixon's action should make international agreement easier to achieve.

---

[From the Baltimore News American, Nov. 27, 1969]

GERM WARFARE

President Nixon's decision to renounce the use of lethal and incapacitating chemical weapons and to destroy existing stockpiles of even more dreadful bacteriological weapons is a welcome initiative for Americans and all mankind.

Soviet negotiators at the strategic arms limitation talks in Helsinki can hardly interpret the President's action as anything but a sincere move toward sanity in the ever escalating world arms race.

Even though the United States has never formally ratified the 1925 Geneva treaty prohibiting first use in war of "asphyxiating poisonous or other gases and bacteriological uses of warfare," we have always adhered to the principles of the pact.

The President's message now makes feasible an explicit U.S. commitment toward limiting the possibilities of chemical and biological warfare through action in the Senate.

It is an entirely sensible move on our part. A defensive research program in "germ warfare" is an adequate deterrent to guarantee safety from potential aggressors.

As the President declared: "Mankind already carries in its own hands too many of the seeds of its own destruction. By the examples we set we hope to contribute to an atmosphere of peace and understanding between nations and among men."

## HUGH DOWNEY

### HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. BOLLING. Mr. Speaker, a magnificent private effort has been underway for some time in Ethiopia that deserves the commendation of all of us. I refer to the efforts of Hugh F. Downey, a young man from Kansas City, Mo., who has organized a program of community action in rural Ethiopia. I have known this young man just as I have known his father, Hugh B. Downey, himself a responsible and conscientious community leader, for many years. I admire them both and I can understand by knowing the father why the son is the diligent, capable, and talented person he is. Last Thursday, national recognition came to the younger Hugh in the form of the Lane Bryant Volunteer Award. The program brochure carries a citation supporting Mr. Downey's achievement. It follows:

HUGH DOWNEY—CO-WINNER, $5,000 INTERNATIONAL AWARD

In a remote province of Ethiopia 3,500 feet about sea level, a 28-year old native of Kansas City, Missouri labors in the hot, arid terrain. He is working to help people who are fighting not only the natural enemies of poverty and disease, but the human hostilities that exist in the unsettled areas as well.

Hugh Downey came to Ethiopia as an enlisted man in the United States Army. A chance meeting with a priest introduced the young soldier to the poverty of the remote villages. From that moment he was committed to teach the villagers how to help themselves in every way possible.

After Mr. Downey's discharge from the Army in 1965, he only returned home long enough to marry his childhood sweetheart and to seek support from among his friends and family for the people of Ethiopia. Then the Downeys returned and, despite tremendous obstacles, have recorded an impressive list of achievements.

Through their efforts, 10 schools, currently educating 1,000 pupils, have been built, equipped and staffed. Ten brick making machines, imported from the United States, have been loaned to villages to transform grass hut structures into sturdy, clean homes. One village has a church, council hall and many residences and, as a reward for its progress, has been presented with a gasoline powered generator for electricity. An orphanage of five buildings, designed free of charge by an American architectural firm, houses 100 orphans. A school connected with the orphanage is open to an additional 100 day students from poor families in the area. Its scholastic standing is recognized as among the best. A public library of over 5,000 volumes was established in Keren. It was so popular that the municipality has taken over its operation.

The Downey's personally combatted two serious malaria epidemics, obtaining quantities of medicines, organizing and supervising a distribution system. They have organized and taken part in medical safaris, carrying aid into remote areas never before having the benefit of modern medicine. They continually minister to the sick and afflicted in a large area surrounding the town of Keren. Presently, they are building a 75-bed hospital in Keren, a modern structure designed by an American architectural firm. Joining with the officials of Keren, the Downeys have helped establish an obstetrical clinic which is nearly ready for use.

With all this incredible activity, the Downeys have also managed to maintain a home, providing room, board and tuition for secondary school students who otherwise would be unable to continue their education. They have financed young native businessmen in establishing trades for which they are suited. In addition, Mr. Downey has conducted small, but successful agricultural experiments.

These accomplishments have taken their toll. Mrs. Downey lost her first baby in Keren and was once wounded in the leg by a stray rifle shot. Happily, the Downeys welcomed the birth of their son, Hugh Michael, on March 3, 1969.

Mr. Downey has been commended by His Imperial Majesty Emperor Haile Selassie. H. H. Ras Asseratte Kassa, Governor General of Eritrea, stated that even more important than Mr. Downey's physical accomplishments, is his moral force. Governor Kassa pointed out that he is a man of peace and of much creative ability, compassion and intelligence. Hugh Downey conveys to the people the need for commitment to self-government, the need for hard work in a spirit of sacrifice and growth. He actively trains Ethiopian citizens to take over the various projects he initiates, and inspires others to start similar projects on their own.

Praise for Hugh Downey does not come from high places alone. A river near Keren has been renamed . . . The River Hugh.

---

## PARITY FIGURES FOR NOVEMBER 1969

### HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. ZWACH. Mr. Speaker, as is my custom since I have been in Congress, I am today inserting the latest parity figures for November 1969.

The parity figure has gone up from 72 percent in January 1969, to 76 percent in November 1969. This is a step in the right direction. I sincerely hope that Congress will do all it can at the Federal level to keep moving toward the goal of 100-percent parity.

Mr. Speaker, I hereby insert the November 1969, parity figures with January and October figures to show comparison:

PARITY, NOVEMBER 1969

[Percent]

| Commodity | January | October | November |
|---|---|---|---|
| Wheat | 47 | 46 | 46 |
| Corn | 65 | 65 | 62 |
| Cotton | 41 | 45 | 44 |
| Milk | 83 | 81 | 82 |
| Butterfat | 74 | 75 | 75 |
| Wool | 44 | 42 | 41 |
| Barley | 65 | 61 | 62 |
| Flax | 67 | 62 | 61 |
| Oats | 69 | 60 | 61 |
| Sorghum | 64 | 68 | 69 |
| Soybeans | 70 | 61 | 63 |
| Beef | 78 | 81 | 79 |
| Hogs | 74 | 95 | 96 |
| Lamb | 85 | 90 | 89 |
| Chicken | 67 | 66 | 64 |
| Turkeys | 65 | 69 | 72 |
| Eggs | 83 | 75 | 89 |
| Average | 72 | 74 | 76 |

## STOCKTON-BASED FOUNDATION REDUCES MEDICAID COSTS

### HON. JOHN J. McFALL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. McFALL. Mr. Speaker, in a recent issue of the Washington Post there appeared an article concerning the unusual and fine work being done by California's San Joaquin Foundation for Medical Care in providing excellent patient care and at the same time saving money on medicaid.

Possible application of the system established by the foundation to other areas of the State and Nation now is under study at Sacramento, Washington, and Baltimore.

In view of the necessity to broaden the availability of good medical care, the results of the foundation's pioneering work are of particular interest.

The foundation was established in 1954 by the San Joaquin County Medical Society in attempting to accept the challenges of the future by instituting bold new programs. These programs have come into being as a result of thorough analysis of the public needs and desires and reflect the social changes of our times. The purposes of the foundation are to encourage adequate comprehensive prepaid medical care programs for the entire population of the four counties in California it serves, to study ways and means of bringing the highest quality of medical care to all segments of the population regardless of their ability to pay, and to accept the responsibility for professional discipline so important in medical care programs and to medical discipline.

Nearly one-half of the population of San Joaquin, Amador, Calaveras, and Tuolumne Counties now is covered under the Foundation for Medical Care-sponsored programs.

One of the earlier and most successful of these programs involves a contract between the foundation and the International Longshoremen's & Warehousemen's Union-Pacific Maritime Association Welfare Fund to provide medical and surgical care to the longshoremen of the Stockton area. It began 14 years ago as a 1-year program and is still in effect, providing comprehensive services to between 600 and 700 longshoremen, ships' clerks, and walking bosses.

Other coverage to large groups has been arranged through contracts with private organizations and public bodies.

The foundation has initiated an experimental program for agricultural workers. The program allows for care in a physician's office in the patient's resident area as well as care through fixed and mobile clinics. The program, now in its third year, has been funded through three separate grants. These grants were from the Office of Economic Opportunity, the Migrant Health Section of the U.S. Public Health Service and from the California State Department of Public Health. One of the basic purposes is to determine the cost of medical care of migrant workers in order that Congress may have factual information upon which to base decisions on possible national programs of this nature.

The medical society through the foundation continues to look for ways by which quality of medical care programs can be improved and quality medical care made more accessible to the poor.

The story of the successful achievement by the foundation is presented in good detail by the article entitled "Stockton Cuts Medicaid Costs," written by Harry Nelson of the Los Angeles Times and appearing in the October 12 issue of the Washington Post.

I am very proud that one of the most progressive medical societies in the country is in my congressional district and commend to the attention of Members of the House the Washington Post article which follows:

STOCKTON CUTS MEDICAID COSTS

(By Harry Nelson)

STOCKTON, Calif.—Physicians here are doing what nobody else apparently has been able to do: Saving money on Medicaid.

While the Medicaid program (called Medical in California) is under increasing fire almost everywhere because of spiraling costs and questionable quality, 330 Stockton physicians are providing high quality treatment without using up their allotted funds.

They expect to return $220,000 to the state of California out of $5 million they will handle this year.

The program's success here has attracted observers from Medicaid and Medicare headquarters in Washington and Baltimore and from state medical societies where the medical care program for the poor is in trouble.

HOW IS IT DONE?

Everyone wants to know how it is done in Stockton.

The answer lies in the San Joaquin Foundation for Medical Care, an organization of 330 physicians in private practice, which runs the program here.

Much of the foundation's success is attributed to a peer review system under which the doctors carefully examine each other's claims. Certain other plans use peer review also, but the thing that makes the San Joaquin plan more effective, according to its supporters, is its "personal" touch.

All 330 physicians in the program are familiar with one another's practice and type of patients. Consequently, each doctor thinks twice before submitting a claim which might be questioned.

This does not mean that nobody ever submits a questionable claim. About 10 per cent of all claims go to the medical review committee. About half of these are handled by letters which ask the doctor for information which will either justify the claim, or if it is not justifiable, let him know for future reference that the review committee is doing its job. About 1 per cent of the doctors are asked to come into the claims office for a personal talk.

Doctors who are familiar with the program say that its chief controls are the informal, friendly, man-to-man confrontations between doctors who are doing things right and those who show signs of abusing the program.

Dr. Donald C. Harrington, who started the foundation, believes the savings in money is not its most important feature. He is more interested in the quality of medicine provided and he is convinced the plan builds quality.

Eighteen months ago the foundation signed a contract with the state to do a pilot study involving about 33,000 Medicaid beneficiaries living in the four-county area the foundation serves.

It agreed to give all the medical services needed by the beneficiaries for one year in return for a fixed amount of money that the state pays the foundation each month.

RETURNED AFTER YEAR

This produces a monthly amount of money out of which all physicians' services are paid. If the need outstrips the money available, the doctors must work for nothing. If there is an excess, the amount is carried over to the next month.

If there is an excess at the end of the year, it is returned to the state.

The prospect of achieving savings on a program which last year cost $3.5 billion nationally—and some say will be costing $12 billion to $16 billion within five years—is what keeps the government and organized medicine representatives streaming into Stockton for a closer look.

Dr. Harrington says the potential savings for other communities is even greater than it has been for the area served by the foundation.

He believes that transplanting the foundation's program across the country would result in a saving of approximately 12.5 per cent of Medicaid's cost.

Backers of the San Joaquin plan believe that its personal touch, with doctors reviewing other doctors' claims, is far more effective than a program conducted under mandates from Sacramento or Washington.

It not only achieves its purpose, they say, but keeps doctors in the Medicaid program, rather than quitting in a huff because of resentment over interference in the private practice of medicine.

## KNOXVILLE SOLDIER KILLED IN VIETNAM

### HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. GAYDOS. Mr. Speaker, it is with deep regret that I announce the death of another of our brave fighting men, Sp4c. James F. Polusney, of Knoxville, Pa., who was killed in Vietnam.

We owe a profound debt of gratitude and appreciation to our dedicated servicemen who sacrificed their lives for this great country. In tribute to Specialist Fourth Class Polusney for his heroic actions, I wish to honor his memory and commend his courage and valor, by placing in the RECORD the following article:

KNOXVILLE SOLDIER KILLED IN VIETNAM

A Knoxville medic who left for the Army two days before he was to receive his college diploma from Duquesne University was killed in action in Vietnam, the Defense Dept. announced.

Sp4c. James F. Polusney, 25, son of Mr. and Mrs. Harry F. Polusney of 236 McKinley St., was killed Monday while on patrol northwest of Saigon with an element of the 1st Air Cavalry Division.

Specialist Fourth Class Polusney finished his degree work at Duquesne in January, 1968, and was a management trainee for Sears, Roebuck and Co. before he was drafted into the Army.

He left for training on May 28, 1968, two days before his graduation ceremonies.

He was assigned to Vietnam in May.

Mrs. Polusney said her son "never complained about the war" but felt sorry "for the little children that had to be involved.

"I'm only glad he never had to kill anyone," she said.

She also said her son was engaged to marry Susan Dieckman of Mt. Oliver.

Besides his parents, he is survived by a brother, Eugene.

## SOME FACTS RELEVANT TO MYLAI

### HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. TEAGUE of Texas. Mr. Speaker, many of us in the Congress are alarmed over the outcome of the Mylai incident and it is hoped that all of the salient facts will be made known, as well as the imponderables, before final judgment is rendered upon the principal figures. Under leave to extend my remarks in the RECORD, I wish to include this short article written in a way easily understandable to all, by retired Gen. Ira C. Eaker.

SOME FACTS RELEVANT TO MYLAI

(By Ira C. Eaker)

Before anyone joins the left wing and pacifist press in condemning without a trial the U.S. Army operation at Mylai as a massacre, there are certain relevant facts which should be considered.

There is little question that more civilian non-combatants, proportionately, have been killed in Vietnam than in World War II. There are several reasons for this which should be understood and remembered in any judgment of U.S. atrocity charges.

The initial efforts in the Vietnam War was made by the Vietcong, local Communist forces in South Vietnam, always supplied by Russia, China and North Vietnam. It was only when this effort was not succeeding that North Vietnamese regular divisions came down from the North.

A prime Vietcong strategy is to gain control over a village or an area through terror, murdering local leaders, police, and teachers and abducting sons and daughters for military service or labor. It is also standard Vietcong practice to use South Vietnamese women and children as hostages against attack or reprisal.

Vietcong guerrillas seldom wear military uniforms. Those who plant mines and booby traps and conduct terror raids against South Vietnamese villages by night often become simple, peasant rice farmers, innocently tilling their paddies at sunrise.

Adding to the problem of discriminating between friend and foe in Vietnam is the difficulty in identifying men and women a few hundred yards distant. Both sexes wear the same conical straw hats and trousers.

The Vietcong, in a deliberate effort to turn the people against the Americans, often come into a village by night and at daylight open fire upon U.S. reconnaissance planes or helicopters. Before the bombers arrive, the Vietcong return to their forest hide-outs leaving the village inhabitants at the mercy of the retaliatory attacks the guerrillas have assured.

It was because of the difficulty of identifying friend and foe that the U.S. Command has made such extraordinary efforts to prevent attacks on friendly villages. Before any attack can be made on any locality, even after our planes and forces have been fired upon, the local South Vietnamese civilian government head as well as the local South Vietnamese military commander must approve. That policy was followed prior to the attack on Mylai.

Any charge or inference that U.S. forces are guilty of frequent atrocities is completely disproven by Chu Hoi figures and facts. This is the program which urges, by leaflets and loudspeakers, that Red forces defect to U.S. or allied South Vietnamese troops. During the past four years nearly two hundred thousand Reds have crossed over. More than 70% of these have surrendered to U.S. forces rather than to South Vietnamese troops. The rate of defection is higher now than at any earlier time, despite Mylai, and whenever there is the opportunity for preference, the defecting Reds always surrender to U.S. troops.

In any assessment of U.S. troops conduct in Vietnam it should also be remembered that more than half the draftees sent to Vietnam were minors. So long as our government persists in sending its adolescents to do its fighting, it can scarcely expect that they will always use mature judgment especially under the stress of battlefield conditions, with wounded and dying buddies in view.

When a reporter in Vietnam is asked why he reports any evidence of U.S. cruelty, while neglecting to file stories on Vietcong atrocities, he promptly points out that it is news when Americans commit atrocities since they so seldom do, while it is not news when the Reds commit such inhumane acts because that is their standard practice. He may also add candidly that U.S. atrocity stories are solicited by his paper since this supports its demand for immediate withdrawal of all U.S. forces.

This judgment is confirmed by the fact that the anti-war press has devoted more than ten times the space to the 300 killed at Mylai than the 3,000 civilians butchered by the Reds in Hue.

## MODESTO RESERVISTS HELP THE NAVAL DISTRICT WIN AWARD

### HON. JOHN J. McFALL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. McFALL. Mr. Speaker, the 12th Naval Dstrict recently received the E. V. Richards Memorial Trophy for having the most outstanding Naval Reserve program in the Nation. It was the first time the district had been so honored since the competition began in 1960.

Rear Adm. L. B. McCuddin, commandant of the 12th Naval District, was justifiably proud of the accomplishment during the fiscal year of 1969 which was announced October 23. He sent a message of congratulations and appreciation to "all hands" in his district encompassing central and northern California, Nevada and Utah, complimenting each unit for its part in bringing the award to the 12th. In all, there are 12 Naval Districts competing for the trophy sponsored by the Navy League of the United States.

Two Naval Reserve units in my congressional district, in Modesto, Calif., are doing their part to keep the trophy in the 12th during the current fiscal year. In this respect, it gives me a great deal of pleasure to place in the RECORD an article from the October 31 issue of the Modesto Bee, noting the city's two Naval Reserve units were rated excellent by a visiting inspection team.

The article follows:

MODESTO NAVY RESERVISTS EARN "EXCELLENT" RATING

Ratings of "excellent" were given to the Modesto Naval Reserve training facility and its two units in a three-day inspection conducted by Naval officers here this week.

Conducted by Cmdr. Richard E. Butcher, Naval Reserve program officer, and Lt. Cmdr. John Gainey, Naval Reserve surface program officer, the inspection was to determine the proficiency of the facilities and units in the areas of personnel, administration and training.

"It's been a long time building these units," a sailor attached to the facility said, "But now we're really going places." Ratings were high in all of the inspection phases, he said.

The Modesto-based units, Surface Division 12–16 and 12–17, have a total of 80 enlisted men and 10 officers. Division 12–16 is commanded by Lt. Cmdr. John Rasmussen of Turlock and Division 12–17 is commanded by Lt. Cmdr. Stephen Henry of Fresno. The units train newly enlisted reserve personnel for one year prior to the reservists' two years of active duty.

## HOW ABOUT SIBERIA?

### HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. BRAY. Mr. Speaker, the following lead editorial from the December 8, 1969, Indianapolis Star gives that newspaper's opinion on a current and controversial issue:

HOW ABOUT SIBERIA?

Congressional doves and parading peaceniks think it is all right to openly attack the United States effort to stop Communist aggression in Vietnam.

But to them it is unthinkable that an American soldier who escaped after five years in a Viet Cong prison camp should be so brash as to tell the American people how Hanoi turns dove-peacenik dissent into propaganda to help break the spirit of U.S. prisoners of war and boost the morale of the Viet Cong.

This is not the logic of Moscow, Peking and Hanoi. It is the argument of Senator Stephen Young (D-O.) and Representative William F. Ryan (D-N.Y.), who were enjoying the privileges, pleasures, comforts, security and ample pay of American lawmakers while Maj. James Rowe of the Green Berets was sweating it out in captivity in a Red base camp in a Mekong Delta jungle.

If anyone should know about what it is like to be a POW in Red hands, Maj. Rowe should. He said American POWs took little notice to Hanoi's propaganda until 1967 when it began spouting news reports of states-side anti-war demonstrations and quoting the dove words of U.S. senators including J. W. Fulbright (D-Ark.), George S. McGovern (D-S.D.) and Mike Mansfield (D-Mont.). That got through to the POWs, knowing that Americans safe at home, including senators and congressmen, were cutting the ground from beneath them and saying their pain and sacrifices were in vain, for an unworthy cause. Why shouldn't it?

Maj. Rowe has a double reason to hold the peaceniks in low esteem. During years of interrogation his captors, intent on squeezing information out of him that would fit into their intelligence picture, starved, abused and tormented him. But Rowe, day after day, refused to give more than his name, rank and serial number. At length, a U.S. peacenik group supplied the Viet Cong with Rowe's military background information.

Soon afterward, Maj. Rowe escaped.

In November he told the House Armed Services Committee: "The peace demonstrators and the disheartening words of these (dove) senators made our life (as POWs) most difficult. It helped to break the spirit of Americans and boost the moral of the Viet Cong."

He has been telling his story to other Americans as well. Because of this, said the Honorable Senator Young:

"Maj. Rowe should be silenced or assigned to some other post of duty outside Washington. A tour in the Aleutian Islands or some post in remote Turkey might cause his mouthings to be silenced."

How about Siberia? The Communists no doubt would like to have him silenced too. Perhaps, as a courtesy to their peacenik *poputchiki*—their fellow travelers—they could arrange it.

Or maybe the peaceniks who ratted on him could have him shipped back to that Red prison camp in the Mekong Delta.

---

## BAN LETHAL CHEMICAL AND BIOLOGICAL AGENTS AND NUCLEAR WARFARE

---

### HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. PHILBIN. Mr. Speaker, the conference report on S. 2546, the military procurement authorization bill, contains among other things an explanation of the bill relating to chemical and biological warfare.

I was pleased with the extensive consideration given this important subject in this bill because many people have been greatly concerned by incidents relating to lethal substances getting out of control, endangering people and in at least one case destroying animal life in large numbers.

The problems in this area were ably discussed and publicized by our able, distinguished friend and esteemed colleague, the able gentleman from New York, Congressman RICHARD D. MCCARTHY, who gave a great deal of time, energy, and ability to presenting the case for adequate safeguards with reference to these very dangerous, harmful chemical and biological agents, so hideous and horrible in their effects in the event they should be carelessly handled in any respect, much less used in military operations.

I want to commend my friend, Congressman MCCARTHY, for his persistent efforts in alerting the country to the threats and dangers to life and property that are presented by these terrible agents of destruction.

In a recent article in the Manchester Guardian, it was stated that the Secretary of Defense is reported to have endorsed a secret memorandum stopping production of all germ warfare weapons, and I take it by that is meant also the terrible agents associated with them.

It is anticipated that the National Security Council will review this matter in the near future pursuant to an interdepartmental report considered recently by senior officials at the Pentagon, State Department, Central Intelligence Agency, and Arms Control and Disarmament Agency.

It is not clear whether the Secretary of Defense will gain the support of the Joint Chiefs of Staff, who in the past have taken a position that production of biological agents was necessary to deter any such biological attacks by the enemy.

It is anticipated that the arguments now adopted by the Pentagon that the dangers inherent in the offensive use of germ weapons, and the lesser risks involved in stockpiling, are expected to move toward total ban on germ warfare as one of the first proposals to be submitted by the United States at the long delayed arms limitation talks.

It would be a great benefit and relief to all humanity if some enforceable agreement could be reached banning the use, and regulating the testing, possession, and deployment of these dreaded weapons and agents.

In the conference on the military procurement bill, conferees agreed to uniform use of the term "any lethal chemical or any biological agent," without barring such materials as may be harmless to man, or used for public health disease control, or for medical research, development, test, evaluation, or diagnosis.

The conferees were clear on setting forth the procedure, specifying that the Secretary of Defense must determine that the proposed transportation, or open air testing is necessary to national security, and he must notify the Secretary of Health, Education, and Welfare of the proposed action.

The latter may then direct the Surgeon General and other qualified persons to review the proposed action and to recommend what precautionary measures are necessary to protect public health and safety. The Secretary of Defense is required to implement any precautionary measures recommended, and must notify the President of the Senate and the Speaker of the House 10 days prior to any transportation and 30 days prior to any open-air testing.

In addition, the Secretary must notify the Governor of any State through which such agents will be transported appropriately in advance of such transportation.

It is not proposed to vest the Department of Health, Education, and Welfare with any powers to make national security decisions or impede testing. If these measures prove so burdensome as to prevent proposed action, or should the President determine it is necessary to national security, there is nothing in the bill that would affect the authority of the Department of Transportation with respect to the shipment of hazardous materials, as established by 18 U.S.C. 831–835 and 46 U.S.C. 170. The protections afforded by subsection (b) are intended to supplement these provisions.

In the event of future overseas deployment, or storage of agents and delivery systems, the conferees agreed that prior notice must be given to the host country. Where the deployment or storage will be on territory or under the jurisdiction of the United States, prior notice must be given to the President of the Senate and the Speaker of the House of Representatives.

With regard to future overseas handling of agents the Secretary of State determines if international law will be violated. He must report these determinations to the President of the Senate, and the Speaker of the House, as well as to appropriate international organizations in the event such report is required by treaty or other international agreement.

I am of the opinion that the conferees' language should go a long way, not only in maintaining effective protection at home with respect to lethal chemical and biological agents, but may well point the way to action by our Government to spark international action barring these agents in the arms limitation meetings.

The world has long been hung up on the refusal of the Soviet Union to agree to international control of nuclear substances and weapons based on inspection by a duly constituted, impartial, international body. Presumably, the Soviet has some good reasons of its own for taking this position, which for many years now has militated against effective control of the production, military utilization, and weaponry relating to nuclear substances, weapon delivery systems, so this may be the hour for us to strike once again for effective control in this field, and in the field of lethal, chemical, and biological agents, in another most urgent effort to bring sanity into our international programs to protect the human race and its world civilization from widespread mass murder and perhaps utter destruction.

In pursuing these problems and questions which are of great moment, I believe that we have taken another most important step forward, looking toward peace and the elimination of barbaric weapons and lethal agents, even as we take action to make sure that the Nation is prepared adequately to meet any and all contingencies that may be directed against us, designed to bring about our destruction and conquest.

The bill was constructive in many other ways which are dealt with in the conference report of the committee and the debate. I was particularly happy that the House agreed concerning section 402 of our own bill striking language that might well have put colleges or universities engaged in Government research in the unenviable position of having to report upon their cooperation on military matters for which these institutions might not be entirely responsible, and might be construed as accusatory, by implication, of officials having no connection with instances of lack of cooperation complained of.

I think that the conferees came to a very good decision regarding the handling of this section by stressing the fact that the American people should be fully informed as to the manner in which defense dollars are being spent on research and development contracts in various universities and institutions of higher learning, and the identification of personnel entrusted with vital, classified, security information. I think that this Government has the right to expect that all persons engaged in these important functions and responsibilities of such great magnitude and value to the defense of this country shall give every assurance that this vital work will be done satisfactorily under classified conditions where necessary, and that arrangements are made to insure that no persons who are poor security risks should be permitted to participate in this work, or be

in a position to acquire and distribute classified information.

If we can ban chemical and biological agents and agree upon international control of nuclear weapons and substances under an impartial international tribunal such as I have worked for since 1947 in the House, we shall have taken a giant stride forward toward the elimination of horror and fear among the peoples of the world and the prospects for the establishment of universal peace would be greatly enhanced.

The article previously referred to follows:

[From the Manchester, England, Guardian, Nov. 25, 1969]

U.S. GERM BAN NEAR

(By Adam Raphael)

Mr. Melvin Laird, Secretary of Defense, is reported to have endorsed a secret memorandum recommending that the United States should stop production of all germ warfare weapons.

This shift by the Pentagon, which as up till now insisted on the maintenance of an offensive germ warfare capability, is expected to swing the balance against biological weapons at a National Security Council review next month. An inter-departmental report which has been considered this week by senior officials from the Pentagon, State Department, Central Intelligence Agency, Arms Control and Disarmament Agency is also said to have reached similar conclusions.

It is not yet known whether Mr. Laird will be able to gain the support of the Joint Chiefs of Staff, who in the very recent past have taken the position that production of biological agents such as anthrax, the plague, and tularemia was necessary to deter any such biological attacks by the enemy.

The arguments now adopted by the Pentagon of the dangers inherent in the offensive use of germ-weapons and the lesser risks involved in stock-piling are expected, however, by informed observers to carry the day. A total ban on germ warfare could in fact be one of the first proposals submitted by the United States when the long delayed arms limitation talks get underway.

The Administration has already moved to cut back sharply on military spending over the next five years. Two brief National Security policy statements distributed to key Government departments last week are believed to have projected a less ambitious global strategy. In particular the doctrine that has underlaid defense planning for a decade that American forces must be prepared to fight two major and one minor wars concurrently has now been modified to a commitment of one major and one minor brush fire action.

---

## THE UGLY AMERICANS?

### HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. ROUDEBUSH. Mr. Speaker, an interesting question is raised by the Indianapolis, Ind., Star concerning the events at Songmy in South Vietnam.

Every Member of Congress should read this challenging editorial.

The editorial follows:

THE UGLY AMERICANS?

The massacre of Vietnamese civilians at Song My proves that war is hell, human nature is capable of evil as well as good and that most Americans have an incomparably greater sense of honor, justice and honesty than their adversaries in the Vietnam war.

But one thing it does not prove, and that is the charge being made by the Vietnamese Communists and their sympathizers and supporters that "the ugly Americans" have a monopoly of wickedness and that the Song My killing is further proof that the United States should leave all Vietnam to the kindly Reds, as Senator J. William Fulbright says it is.

The Red international *apparat* has gone into action around the world, seizing upon Song My as an atrocity comparable to the Nazi annihilation of 6 million "enemies of the state" and evidence of the "Fascist nature" of Americans.

But it was Americans who brought the slayings to light. It is Americans who are investigating them. It is the United States Army that is seeking out those responsible and taking legal action against them. And it is certain that before all is said and done, the American people and the world will have a thorough, true account of what happened at Songmy, including how it happened and why and the motives of the men involved.

However, there is no Senator Fulbright in North Vietnam to point a finger of guilt at the systematic Communist slaughterers of thousands of South Vietnamese civilians at Hue, or the Red killers of 50,000 North Vietnamese civilians after the Red takeover, or the Viet Cong butchery of 35,000 civilians in the South during the conflict.

Again the world observes in the failure of Red sympathizers even to acknowledge these inhumane mass murders, let alone to denounce them, the strange double standard by which these always-vocal moralizers judge Americans and judge Communists fighting for world domination and breaking every moral law ever known to the human race to do it.

The question is why?

---

## THE MESSAGE

### HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. WOLFF. Mr. Speaker, the lessons of history are ones from which we all could learn. Although technology has advanced life for us to a point far beyond the dreams of persons generations ago, we still face problems which are heavily embroidered with the thread of the past.

The younger generation, focal point of so much consternation and too often the target of bitter criticism, has heeded the lessons of history more often than we have. They have looked to the past, to the words and promises that have been made throughout history, and they have seen little consistency between promises and action.

History, it is important to note, has also chronicled a spirit which, in today's light, has caused much of its brilliance to be misinterpreted and feared.

Mr. Speaker, the editor and publisher of the Locust Valley Leader, Mrs. Edith Wyckoff, a very close friend of mine for a number of years, is one of the few persons I have known who has looked to and learned from the lessons of history. Recently, Mrs. Wyckoff offered her readers a most sensitive and lucid discussion of this matter. Since it offers all of us a message, I include her editorial in the RECORD:

THE MESSAGE

In these days of turmoil which many fear, resent and misunderstand, it is well to relax, sit back and try without rancor to discover what really is happening and why. There is more good than bad in it but you have to listen carefully to get the message of the dissenter. Of course it is impatient. Talk has led to nothing but more talk and when that happens unwanted action is certain to follow. And no amount of censorship or retaliatory action will still the voice that pleads a cause it believes in.

Look at the burning issue—Viet Nam. 15 years of intervention in a civil war in a country no one heard of. 300,000 U.S. casualties and the list growing every day until soon, in destruction of young life and limb, it will be rivaled only by World War II. The majority of these boys were not killed or wounded after the cry began to end the war. It has been a slow, relentless erosion that many properly resent because no one yet has given a convincing reason for it. When a man is asked to lay his life on the line he should be given a good reason or be excused if he does not choose to die for a cause he does not believe in or understand. To do otherwise is insane.

No one needs to be reminded that we live in history's most affluent era when more people have more of everything. Our children, pampered, spoiled and indulged, have been robbed of their responsibilities because we give them everything and ask nothing of them. This is not their fault but ours. Nevertheless, they are people—our own creations—and in time they will grow older and take from us the torch of leadership, something many of them already are doing. Freed from the need to scratch to survive, they have looked around thoughtfully and seen much that does not measure up to what they have been taught. They are saying you teach us one thing and do another. Your institutions are riddled and rotten with the hypocrisy of a double standard. You tell us to be honest but you are not honest and you rarely demand that those who lead you be honest. You claim the war you have asked us to fight is a crusade to make a better life for a people who live on the other side of the world and yet the truth is that the war is a scandal that no one has yet clearly understood. You opt for the rights of others, make the laws and then say let's wait before we enforce them. And while you are waiting you expect the laws to be forgotten. It was this kind of thing that made the moderate George Washington in July, 1774 say, "Shall we, after this, whine and cry for relief, when we have already tried in vain?" And so when the talking failed the young found another way to get things done—now. They had to do it because it was the only way to make people listen. And it is because of their sometimes shocking dissent that much has been accomplished during the decade just ending.

If you think today's dissenters are a noisy, callous bunch you might do well to dip into the pages of history, look at the old pictures and old stories that tell what happened in the late 1700s when a young nation was suffering pangs of birth that would pull it forever from the mother country. It is an exciting, sometimes horrifying, lusty and brilliant story. The basis for understanding much that is happening today can be found in the story of the years before the American Revolution, one of history's few true revolutions.

Today our young are shoving us toward the bright world envisioned by the founders of this nation where all men can live in peace with "liberty and justice for all". But the dream, simple as it sounds, is too complex and too potent for most of us to accept or understand. It is a hard row to hoe for it demands the absolute best in all of us and sometimes that is more than most of us know how to give. But give it we must if we are to fulfill the dreams of our founders. To do less will move us to the place of an also-ran nation that, unable to live up to its own

noble aspirations, must slide back to second best which asks little of its citizens and as a consequence gets nothing.

## THE DEVIANT UNIVERSITY

### HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. ASHBROOK. Mr. Speaker, the autumn issue of the University Bookman which is edited by Russell Kirk, the respected educator and author of long standing, carries an extremely interesting commentary on the present state of the university which is worthy of consideration. Written by Dr. Donald Marquand Dozer, professor of history at the University of California at Santa Barbara, the views of Dr. Dozer place in proper perspective the influencing of education by the state:

The university has already sacrificed its status as a bastion of true liberalism by "cozying up" to the state. In exchange for government monies it has accepted the concept of captive scholarship, has allowed the fine art of teaching to be either neglected or prostituted to noneducational ends, and has converted the social sciences, in some cases the physical sciences, and even religion into handmaidens of the state. It has abdicated its independence and true "academic freedom" in exchange for support by government agencies, while insisting that the academic freedom to be protected must be only the freedom to conform within a narrow academic and official ambit.

Dr. Dozer emphasizes the utter necessity of reestablishing the true idea of the university and setting forth on this monumental task:

The university must be made again a place where old truths, glimpsed for the first time by young people, may be seen in a new light and may be grasped as tools for successful living. It must recover its mission of articulating the unity and singleness of purpose of all learning and must exert itself to fulfill once more its role as a spiritual force and as least a partial revealer of the vision infinite.

The effect of Federal control of education has had its subtle and debilitating effort on many of our institutions of learning. Dr. Dozer's analysis of the situation in the area of higher education merits consideration and for this reason I insert it in the RECORD at this point:

THE DEVIANT UNIVERSITY

(By Donald Marquand Dozer)

The university today is being subjected to the brutal searchlight of inquiry and criticism. Ironically, at a time when education has acquired a new mystique and is the method offered for curing most of the ills of society, this mystique is not associated with institutions that should embody it. The lauding of education as the best means of promoting progress is accompanied by a denigration of the academic. In some quarters the university, indeed the very idea of a university, is considered to have lost its *raison d'être*. The attack upon the university cannot be airily dismissed as springing simply from know-nothingism or anti-intellectualism. It has deeper causes.

A generation ago, public reproaches of university life were directed against its narcissism. In college and university communities the principal aim that was sought was the life of the mind, unsullied by contact with the market place. Members of those communities made their living, it seemed, only by taking in each other's intellectual washing. Now, however, public criticism is pointed not at the indifference but at the activism of the university, at the brash attempts by professors and students alike to use the university to destroy "middle-class morality" and to control and revolutionize society. In their efforts to do so, a minority of student leaders boast that they will destroy the university as an institution, "not pull it apart brick by brick, but bring it to a complete stall." In their hands the torch, traditional symbol of education lighting the way of the future, has become a firebrand. So serious have these gestures become that the public is no longer able to dismiss them as mere harmless acts of exhibitionism.

The traditional preoccupation of universities with reasoned solutions of society's problems has given them and their leaders within the past generation admittance to the seats of power in a political system that sought to identify itself with science, objectivity, and intelligence. Is it possible that those who are now trying to wrest control of the university away from its lawful authorities recognize it as an essential element in a national political system and are ambitious to take advantage of its privileged status to elevate themselves into positions of power? In other words, as universities have become engrossed in the political game they have become pawns in a power struggle. Some of the protesters, particularly those who are ensconced in positions of leadership, appear to believe that they can retain leadership positions or gain higher ones in a new socialist society. While striking out existing agencies of power, for example the selective-service system, the police, and educational administrators, they aspire to gain absolute control over them for their own use.

Such self-seeking revolutionaries, constituting a small minority, can and must be dealt with forcibly by agencies of social control. They must be disabused of their predilection to seek changes in education through methods of violence. When they equate progress with incendiarism and confuse dynamism with dynamite, they must be restrained. Somewhere a line must be drawn in these matters.

On the other hand, it is precisely because the university has so long and so effectively played the political game that some of the rebellion against it now takes the form of an emotional indictment of the university as an arm of the state. For at least a generation colleges and universities have been teaching that our only salavation lies in governmental centralization and bureaucratic controls. It is against this so-called "liberal" ideology that many of our modern campus nonconformists are now protesting. When they see that those dogmas result in war and regimentation which adversely affect them, they resist. Many of the protesters simply desire to return to a more libertarian type of society. They feel an outraged sense of having been conned. They have been tricked and short-changed by the university. They are crying out against the identification of the university with public authority, against higher education as a nationalized industry, against Big Brother in Washington and the Holding Company, the universities. The world they have inherited is not the world they desire. The "thing" that each one of them wishes to do is not the "thing" that others in society wish them to do. They are convinced that they are opening the way for a dynamic revival of the American dream by opposing the policies and practices of government. Their protests, though seemingly devoid of any objective except rebellion for its own sake, nevertheless, insofar as they have rebellion itself as an objective, represent a rejection of the system with which the university is identified. This is their method of announcing that they are not "with it," that they have unplugged themselves from it. Why?

For many years the university has been alienating itself from the kind of world that these young rebels intuitively aspire to see and live in. They want a better system than the system to which the university has been gradually accommodating itself. The university against which they are protesting is not the university of the open mind. It has disappeared and no longer exists. "The president of Columbia," chanted the students in New York in their demonstrations in May 1968, "is the president of the United States," naming him. "What I mean by revolution," declared the president of the student body of Washington University in the three-day conference at the Center for the Study of Democratic Institutions in August 1967, "is overthrowing the American government and American imperialism and installing some sort of decentralized power in this country." At the later convention of "hippies" in Philadelphia, some of the conferees declared it to be their objective to restore to this nation the kind of free society that existed at the time the Constitution was adopted in the 1780s.

The university has already sacrificed its status as a bastion of true liberalism by "cozying up" to the state. In exchange for government monies it has accepted the concept of captive scholarship, has allowed the fine art of teaching to be either neglected or prostituted to noneducational ends, and has converted the social sciences, in some cases the physical sciences, and even religion into handmaidens of the state. It has abdicated its independence and true "academic freedom" in exchange for support by government agencies, while insisting that the academic freedom to be protected must be only the freedom to conform within a narrow academic and official ambit. If the university is indeed committed to academic freedom and is fulfilling its historic functions as an open forum of ideas, how does it happen that the academic communtiy presents a nearly monolithic front on all major social, economic, and political questions, and that front remarkably coincides with the collective "liberal" syndrome, which is and has been for a generation the dominant ideology in our society?

The university has failed to fulfill the requirements of academic freedom because it has too strongly and too uncompromisingly identified itself with a single all-encompassing ideology, the dogmas of statism camouflaged as modern liberalism. It has become, in this sense, a doctrinaire institution, committed to the principle of the closed mind. "Today," Professor Isaiah Berlin wrote in 1950 in words as true now as then, "the tendency to circumscribe and confine and limit to determine the range of what may be asked and what may not, of what may be believed and what may not, is no longer a distinguishing mark of the 'reactionaries.' On the contrary, it comes as powerfully from the heirs of the radicals, the rationalist, the 'progressives' of the nineteenth century as from the descendants of their enemies." ("Political Ideas in the Twentieth Century," *Foreign Affairs*, vol. 28, p. 382.)

In the area of the so-called social sciences, for example, the university has deplorably narrowed its conception of its mission. It has largely accepted the postulates of a modern ideology—that man is motivated entirely by his economic interests; that economic factors are decisive in society and in history; that the proletarian class, defined in economic terms, is involved in a necessary struggle with the bourgeois, also defined in economic terms, for control of society and for its share of the economic benefits of the in-

dustrial revolution; that capitalism as a system is inseparable from exploitation and is responsible for international wars; that government must dedicate itself to social justice and can achieve it by mechanistic and legal methods; and that socialism (that is, centralized authority) will inevitably triumph over capitalism as a form of social organization. And these ideas are held and propagated with passionate conviction, for one of the many paradoxical aspects of modern university life is the emotionalism of the "intellectuals." For the troubles of our time the teachings of the self-styled intellegentsia, not the upthrusts of the ignorant, are responsible.

A man is free to the extent that he knows intellectually what he is dealing with. But he remains still in fetters if he only emotionally *feels* what he professes to know and reacts with passion to pressures for change. When men such as this, lacking the essential attribute of freedom, come to dominate university life they subtract from the contributions which the university can make to a free society. The university should be a place of both informed and disciplined thinking, and among its members logic must prevail. "Logic," wrote Professor Alfred North Whitehead, "is the olive branch from the old to the young." (*The Aims of Education*, p. 122.) If it does not prevail in an educational institution, then that institution is intellectually bankrupt, however involved it may be in society and its problems. Under these circumstances the defense of academic freedom and of the university as a free market place for ideas is disingenuous and irrelevant.

The rightful role of the university in freely exploring all facets of knowledge is not under attack. For young people, who aspire by nature to undertake difficult tasks, to cultivate their creative impulses, and to make the world a better place in which to live, the ideologue-dominated university presents no opportunity and no challenge. The university, like the state that is controlled by these dogmas, is therefore exclusively preoccupied with the conditions of living, not its values or ends. College and university leaders have failed abjectly in making a case for educational values; they are wandering farther and farther from this, their primary mission, in their preoccupation with finance and budgets. They have allowed their institutions to sink into a morass of educational inadequacy and even to contribute to the destruction of society rather than to its enlightenment and vision. The university has rejected Matthew Arnold's sage advice to educators, "Teach a whole." It has become instead a place of half-truths masquerading as the whole truth, unresponsive therefore, to all phases of society's complex needs. It has forfeited its commitment to the rational examination and the never-ending reconsideration of all principles.

Because universities have attached themselves too firmly to the state, they have, despite their fine protestations to the contrary, become politicized, and they have consequently succumbed to a debilitating servitude to the present. As a result, the notion has become widespread that it is scientifically and intellectually immoral to accept anything from the past as valid. Truth and reality can be found only in the present and in the future. This view is imposed even upon higher education by its own administrators. "Education," decrees the president of one of the New York State University colleges, "should be geared primarily to the future with the only reference being made to historical events as a means of enlightening the students' understanding of current events and the production of future social problems." Guidelines such as this have rendered the university an officialized fatuity. Pressures for compliance with such guidelines, usually unexpressed but tacitly sensed, are not long in rigidifying an academic system.

It is always difficult to explain why Renaissance man was both a humanist and a classicist. How could Erasmus, for example, find in the authors of antiquity a justification for his concern with modern man? The answer, of course, lies in this—that permanent truths are as valid today as yesterday; or that, differently expressed, history is the very essential structure of humanity.

But modern humanitarianism ignores the relevancy of yesterday's truth to today's problems and is substantially committed to a creed of anthistoricism. Under this creed it attempts to construct intellectually a detailed "modern" system and to absolutize it, making man and society static and stifling all possibility of progress.

Whenever truth is embodied in a neat package of clichés fobbed off as intellectualism, the validity of all rational processes and of the ideas emanating from them begins to be called in question. This condition, climaxing a generation-long process of abdication of responsibilities in education, accounts for the degradation of university life around which so much controversy today swirls. The university has allowed itself to become preoccupied with means, not ends; with the materials but not the substance of education; with political compliance rather than the task of animating youthful vision. As a consequence it is failing to carry out its civilizing function and has become fair game for immature absolutists who cling with intolerant passion to their false "certainties." But behind these juvenile "certainties" lurks the conviction, often unrecognized even by those who trumpet them on college campuses, that the university has been perverted from its true purpose. If the values of education cannot or are not demonstrated, then obviously the institutions which are expected to exemplify those values will not receive and do not deserve support.

Much of the unrest of students is really attributable to their need for finding alternatives to the statist trap in which they are caught. Their world was fashioned by their statist-minded elders, and in rejecting it they also reject them, causing the present acrimonious generation conflict. Some of them simply dismiss the present society out of hand without bothering to analyze it or to label it anything except unredeemably bad. Despite the fuzziness of their resentment, many of the student activists see the status quo against which they rebel as a totalitarian creation. Although they sense it only vaguely as such, their feeling of frustration is basically directed against a collectivist mode of life which was considered desirable by the older generation and which has now been fixed upon them. It is the older generation now which is committed to authoritarianism, centralism, and socialism. From this system the young rebels, the exponents of individual enterprise, and all those who are young in heart and spirit today find it necessary to dissent.

What these protesters desire is complete disengagement from a system that is manifestly failing. They are seeking the true freedom which has traditionally been associated with university life but which the modern university denies them. Some of them unfortunately fly off into an eccentric libertarianism, even into bacchanalian libertinism. They have succumbed to the blandishments of the apostles of decline and have accepted the solution of utter negativism and surrender. These are, in the language of students in Latin American universities where the same phenomenon is occurring, the *nadaistas* or exponents of nothingness. They are the pitiable casualties of a deviant educational system, a system that has done little to further the quest of the human spirit for progress toward something higher and better than itself, toward the "divinity that shapes our ends."

The university has abetted its own absorption into the state. For obvious reasons, the public university could not resist this process, but while accepting it academic leaders have failed to educate the public to the uses of a university broadly and traditionally conceived. With less justification, the private university also has connived at its own subordination to the state and consequent distortion of purpose. The university, like the individual in modern society, is suffering from an identity-crisis; it has melted into its environmental background to become an undifferentiated thing. In April 1968, the Association of American Universities, composed of both public and private universities, voted to depart from its time-honored policy of eschewing open political activity and to launch a frankly politically motivated campaign to obtain a larger chunk of government monies from Washington, representing their cause as almost a life-or-death matter for higher education in the United States.

The current protest against higher education may be viewed as a wholesome upthrust by the victims of ideology against the ultimate logic of that creed. Their discontent, if properly channeled, may succeed in thwarting the death-wish of modern liberalism for our socity. Though it is devoid of explicit philosophical pretensions, it may result in a redemption of faith and of values. They may be yearning for a refurbishing of old absolutes to serve their modern needs. In their strange and often incoherent argot they are complaining of the general misplacement of value priorities in our society and of the failure of our educational institutions to restore them. Every university, whether public or private, is a public instrumentality. It must serve public ends. But in order to fulfill its best public purpose it must remain a place of free inquiry unidentified with the political climate of the moment. A university as a many-faceted social entity will necessarily reflect certain aspects of society, but if it would fulfill its fundamental purpose it must seek to ennoble all of them. In doing so it will be criticized for thinking, for helping, for acting in unorthodox ways, but only by doing so can it properly perform its mission.

The purpose of a university, simply stated, is to educate and enlighten. It must not, as Jacques Barzun warned us, confuse its role with that of the Red Cross. It is a place for searching out the truth and leading others to see that truth. It is a place for growing in wisdom. Its objective should be to strive to understand the whole of life and to foster the proven best. It invites each new generation to acquire as individuals the best possible understanding of that which is good and valid in the past and at the same time to acquire the desire to go forward to better things. It must show the past as present and bring the distant near. Upon the university has been placed by society an obligation to show a worthwhile way of life and to uphold the ideals of civilized man. It can and should respond to the demands of students for relevancy in their university experience, not by discouraging them from playing a part in the "happenings" of their time but rather by encouraging them to play an intelligent part in these "happenings."

Within the walls of the university both tradition and change should be encouraged. "It is a place," wrote John Henry Newman, "where inquiry is pushed forward, and discoveries verified by the collision of mind with mind, and knowledge with knowledge." The university is the temple of the open mind. It must always be free to develop new ideas and to counter them with better ideas. Without such true liberalism, education and the society which it must serve closes its doors to new prospects. At the same time the university must impose cautionary restraints upon experimentation because it teaches the

importance of reckoning with the consequences. These restraints follow logically from the experience of other persons, some long since dead. The university must encourage each new generation to look steadfastly at the vision which it sees and to fulfill that vision, controlled and guided by an understanding of both the accomplishments and non-accomplishments of past generations. It must supply the material for critical judgment and perception of ultimates which the fulfillment of every vision demands.

The element of the word university that needs to be stressed is the first syllable *uni*, implying unity, integrity, harmony. But now this traditional concept has been abandoned in favor of the multiversity, the implication being that it cannot be unified around anything, either nuclear research or medicine or philosophy or even "the thought divine." Whereas the ideal of integration, of a common ethos, is being stressed in many areas of modern life, the university has moved in the opposite direction and is consequently falling apart. Even the possibility of restoring integrity to the university is denied by educational leaders. It is "not the job of a university in its institutional capacity," a university president has declared, "to have any rigid total system of 'morality' except to teach that a fact is better than a rumor, [and] logic better than confusion." Such a pinched conception of a university denies that there is any single ultimate value or set of values, any goal or goals toward which all men strive, any aspiration for intrinsic personal fulfillment, any need for an individual to feel that he is worthwhile to himself and to others. The university viewed in this light is a positively destructive and fragmenting force in society. It is antagonistic to a genuine humanism.

The deliberate rejection by university leaders of the need to supply the unity without which the university remains only another computer in a computerized society explains the disillusionment of students, overwhelmed and intimidated by the mechanistic and materialistic logic of higher education and by its scatterbrained diversity. This situation has resulted in large part from the aforesaid politicization of universities both public and private, that is to say, from their total involvement in government, their utter commitment to a mechanistic liberalism, and their resulting inability to serve society in ways in which universities have traditionally performed their centuries-old function.

In tribute to the British universities, the late poet laureate of England, John Masefield, wrote:

"There are few earthly things more beautiful than a University. It is a place where those who hate ignorance may strive to know, where those who perceive truth may strive to make others see; where seekers and learners alike, banded together in the search for knowledge, will honor thought in all its finer ways, will welcome thinkers in distress or in exile, will uphold ever the dignity of thought and learning and will exact standards in these things."

To what modern university can such a lyric description now be applied?

The university must be made again a place where old truths, glimpsed for the first time by young people, may be seen in a new light and may be grasped as tools for successful living. It must recover its mission of articulating the unity and singleness of purpose of all learning and must exert itself to fulfill once more its role as a spiritual force and as at least a partial revealer of the vision infinite. It must reclaim its traditional role as a sublimating influence in society, upholding ideals of the true, the noble, and the beautiful. It should begin again to vindicate the ideals of education, which, as it happens, are also the ideals of youth.

## VOCATIONAL INDUSTRIAL CLUBS OF AMERICA

### HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. CHARLES H. WILSON. Mr. Speaker, recently two young representatives of the Vocational Industrial Clubs of America—VICA—Ron Pearson and Ed Benavidez, dropped by my office to acquaint me with the plans and activities of their organization. They were accompanied by Mr. Jim Allison who is the supervisor of the California Association of Vocational Industrial Clubs of America. Mr. Allison comes by this position as a result of his being with the bureau of industrial education of the State department of education which sponsors the California division of VICA.

Ron, Ed, and Jim, as well as other members and supporters of the organization contend that America can make a sound investment in its future by investing now in the development of the young men and women who will be tomorrow's craftsmen and technicians. These youths need opportunity—to acquire marketable skills and to develop to their fullest potential as citizens and individuals. The key to a sound investment in their future—and ours—is the combined support of business, industry, and organized labor for programs that encourage youth to achieve.

VICA offers concrete programs that develop and encourage youth in their critical growth as workers and citizens. On April 21, 1967, the Youth Development Foundation was established by VICA to seek the "key," the support of business, industry, and labor for activities that directly benefit the trade, technical, industrial, and health occupations student—activities such as leadership development conferences, national competitive activities, leadership awards, an individual achievement program, and the publication of leadership development materials.

While industry cries for skilled manpower, hundreds of thousands of our youth hopelessly seek employment. An obvious solution to this problem is training. For many years, education, business, and labor have engaged in various types of skill training—apprenticeship, on-the-job, up-grading and in-service—but the problem still exists: Industry needs personnel, and youth cannot find jobs. Where is the gap? The problem is that many young people who will not be entering academic and professional fields are leaving the public educational system without preparation for a vocation. Often, they are taught to look down upon industrial-technical opportunities. What is the answer? The answer is one of communications, emphasis, and status. Youth must be made aware of the opportunities in industry, that there is dignity in work, and that a substantial income can be earned by the use of one's hands as well as with one's mind. VICA, Mr. Speaker, is attempting to meet this challenge and it deserves our support and recognition. The purposes of the organization are to advance the educational development of students enrolled in trade, industrial and technical education in the United States, its territories and possessions, to assist in the creation and development in the youth of America of interest in the pursuance of trade, industrial, and technical occupations and to promote and stimulate interest in trade, industrial, and technical education on the part of the general public. VICA's programs are an outgrowth of its goals. Central to all of these programs is the concept of the total development of the individual. Judging from the caliber of the fine young men who visited my office, the Vocational Industrial Clubs of America is meeting its purposes and performing a most worthwhile service to America. Let us hope that they keep up the good work.

## NEW CHEERS FOR OLD NOTRE DAME

### HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. DERWINSKI. Mr. Speaker, as disruptive and harmful demonstrations on college campuses continue, few institutions of higher education have coped with them. An excellent approach to the situation has been taken by Notre Dame University.

WBBM–TV, channel 2, Chicago, carried a proper editorial on Friday, November 21, on the Notre Dame policy of handling student anarchism:

NEW CHEERS FOR OLD NOTRE DAME

There are cheers for Notre Dame these days. Many of these cheers are for the University decision to accept a football bowl bid. But there was another action for which Notre Dame should receive cheers.

The University carried out the dictum of its President, the Rev. Theodore M. Hesburgh, that students engaged in disruptive demonstrations should be given 15 minutes of meditation to cease and desist. There was a demonstration over first a CIA recruiter, and then a Dow Chemical Co. recruiter. The Dean of Students, acting on terms of Father Hesburgh's statement ruled . . . those refusing to stop demonstrating should be suspended after 15 minutes, and expelled if they demonstrated at the end of another 5 minutes. Five students were ordered expelled, five suspended. They have until next Tuesday to decide if they want to appeal, and if they do, they will go before a student-faculty-administration board.

The University has obtained an injunction against interference with recruiting of any kind. The CIA recruiter left the first day, the Dow Chemical recruiter left the next day.

The University's position is that it should be voluntary whether or not a student wants to talk to a recruiter. But there should be no interference with the student's rights.

The University permits dissent. It acts only against *disruption*. We must stress again that Father Hesburgh in enunciating his rule said also there are legitimate reasons for protesting, but this must be done with rationality and civility, not force and violence.

We believe it is important that the rules of a University are made known to a student on entrance and throughout his career there.

We believe there is no place in a University for disruption or interference with the rights of other students, or the operation of the University. We believe it particularly important when such a rule as that laid down by Father Hesburgh is enunciated, it be enforced without any equivocation. We believe it will result in a healthier more productive University . . . and suggest other universities follow this method of handling disruptions.

## BONABOND HELPS EX-ADDICTS AND EX-CONVICTS

### HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. STOKES. Mr. Speaker, last Wednesday evening, I was afforded the unique opportunity of speaking to what may be the least known, most unusual, and most effective social action agency in the District of Columbia.

The name of this group is Bonabond. Its purpose is to rehabilitate drug addicts. The staff, organized 3 years ago by Mr. Petey Green, is composed entirely of ex-addicts, most of whom are also ex-convicts. The group was originally conceived to provide fiduciary bonds for ex-convicts seeking employment. However, with the assistance of a small grant from HEW, the scope of the project was expanded to include the rehabilitation and placement of addicts.

Since that time, Bonabond's success has been extraordinary. Under the excellent directorship of Mr. Hiawatha Burris, the group has compiled a record for outstripping those made by larger, better-financed agencies. For example, of the more than 250 persons who have been released by the courts to Bonabond during the past year, only five skipped bail. Eighty percent were placed into jobs. Mr. Burris attributes this success to staff understanding of the addict's problems.

The Washington Evening Star Sunday supplement of November 30, 1969, printed an excellent article on Bonabond, by Mr. Mike McManus. Since the article does such a fine job of relating the accomplishments of the agency with society's supposed incorrigibles, I insert the full text in the RECORD for the benefit of any of my colleagues who might have missed it:

KICKING THE HEROIN HABIT—BONABOND, A BONDING AGENCY RUN BY MEN WHO HAVE BEEN THROUGH THE DRUG SCENE, IS PROVIDING EX-CON ADDICTS A CHANCE TO END THE PHYSICAL CRAVING FOR DRUGS AND TO GET A DECENT JOB

(By Mike McManus)

Steve Matthews didn't look like one of the city's most successful dope peddlers when he appeared on television recently. Clean-cut and solidly built, the 24-year-old spoke precisely, his face animated by the glint of intelligence about the eyes. It was easier to imagine in that face his bright beginning as a high school graduate and son of hard-working middle class parents.

But shortly after he was graduated from high school in 1963, someone gave Steve a shot of heroin. "It was a feeling I couldn't forget," he says.

First, he shot only once a week, then two or three times a week, always thinking he could stop when he wanted to. Instead of going to college to become a doctor or lawyer, as he had dreamed, Steven began shoplifting and picking pockets to pay for his growing habit.

"I didn't have the stomach for robbery, so I turned to peddling drugs," Steve comments matter-of-factly, in a soft voice. "It was challenging. I always had to use my mind to know how to get people to buy my product. I had to learn how to spend less and make more by cutting the white powder with weakened solutions of lye or formaldehyde. In the beginning, I would not sell to young boys and girls, but after the money got good, it didn't bother me at all. I started earning $200 a week.

"After two years, I became a transporter, going up to New York docks to buy from longshoremen. I'd spend $1,000 to $1,500 to buy drugs which sold at street prices of $3,000 to $5,000. My habit grew bigger—$80 to $90 a day at street prices. Of course, I cut my drugs off the top, and soon I was earning $350 a week on top of that. I'd see my father coming home at the end of the week, tired and barely making ends meet on a job that didn't have any enticement for me.

"It seemed there was nothing I couldn't do. But I was putting something over on myself. True, people using drugs were my slaves. But somebody bigger than me made me *his* slave. I was using something in my arm. Though I wasn't a field hand, I was a houseboy, the head slave. If my drugs were cut off, I'd be like the lowliest addict in the street, sick and crying. My marriage broke up because my wife didn't want my three boys brought up around drugs. Many times I wanted to kick the habit, but couldn't."

Things changed for Steve last summer. He's had no drugs since August. Levitt & Sons, the construction firm in Bowie, Md., now pay him $125 a week as a carpenter's assistant. He is dating Thelma Williams, a girl who never used drugs, so he thinks he won't be tempted to associate with friends "strung out" on heroin. Now his dream is to marry Thelma, and buy one of the Levitt houses.

"I'm breathing easier," he says.

He's also using his knowledge of drugs to help others. Steve advises Levitt on which ex-addict job applicants have kicked the habit, and which are hopeless. He's spoken to high school students, a Kiwanis Club, the Bowie narcotics squad and appeared on television—telling his personal story without pulling punches.

"I feel it's my obligation to help a lot of people who wouldn't have turned to drugs if it hadn't been for me," he says. "I want to pay society back for the people I addicted."

Steve Matthews is one of the few addicts who has managed to break the dreary cycle of dope, crime, arrest, prison, dope, crime. It is a very difficult thing to do, to kick the heroin habit. Matthews did not do it alone. He was helped significantly by an organization named Bonabond.

Bonabond has no official status. It receives none of the District's $650 million budget, nor any support from the United Givers Fund. Though it works with about 100 addicts at any time, Bonabond has no treatment facilities, nor any "professionals" on its seven-man staff.

Every Bonabond worker is an ex-convict.

Unlike many professionals in the crime prevention business—policemen, probation officers, psychologists—Bonabond staffers don't look down on the criminal. And offenders look upon them as symbols of hope, not reminders of failure. Bonabond's expertise is unique. "No one can understand the problem better than us; because for years, we *were* the problem," says its executive director, Hiawatha Burris.

Bonabond was created three years ago, the brainchild of Petey Green, an ex-addict, ex-wino and ex-con who worked as a job coach for the District's anti-poverty organization and who already had formed a voluntary group of ex-offenders to help find work for men coming out of prison. This group, Efforts From Ex-Convicts, kept running into employers who refused to hire persons with criminal records on grounds that bonds would be necessary to protect employers from possible losses from thefts. No ex-con is able to get a fiduciary bond on his own. This meant that only the dirtiest, most menial, and lowest paying jobs were open to the men trying to go straight.

Green's solution was to create a small agency which would investigate the backgrounds of ex-convicts, and put its name behind those if found trustworthy. Aetna Insurance agreed to provide a bonding service, if a staff were hired to do the research.

The Department of Health, Education and Welfare, appropriated a modest $63,000 for the experiment. Under the initial supervision of a lawyer, a group of EFEC members, including Burris, were hired to do the legwork. The attorney wanted to call the program Trustworthy, but as first board chairman, Petey opposed it.

"We didn't want that, cause they never thought we was trustworthy before!" he complained. Eventually, they settled on Bonabond (or, "good bond").

The program was so successful that the agency almost put itself out of business. None of the 60 former prisoners backed by Bonabond caused the agency to forfeit bond money. More important, employers stopped using the bonding issue as an excuse not to hire ex-offenders, opening up hundreds of jobs.

When Burris became executive director, he turned the group's focus toward bail bonding—taking responsibility for people arrested for crimes pending their trials. At any given time, Bonabond has 100–125 people under supervision (without charge) as "third party custodian." This responsibility led to the creation of a drug program for addicts trying to kick the habit, a job placement operation, probation supervision, and a social club for ex-offenders.

The importance of Bonabond's work was made crystally clear last spring when Maryland Sen. Joseph Tydings' District Committee conducted a remarkable set of hearings on crime in Washington. During these hearings, Dr. Murray Grant, then the director of the District Department of Health, told the committee that half of the men and three-quarters of the women in D.C. prisons are drug addicts.

Most were not imprisoned for narcotics offenses, but for crimes they committed in order to pay for drugs—offenses ranging from shoplifting and prostitution to armed robberies which led to dozens of killings. In other words, more than half of the District's crime was related to the use of drugs.

This was not always the case. Kenneth Hardy, director of the Department of Corrections, told the committee that the number of known addicts arrested this year would be double that of 1968, and seven times as many as in 1965. Clearly, there has been a flood of drugs into the city in recent years. And since an average addict requires $200 to $300 a week in cash just to pay for drugs, he either has to sell drugs to feed his habit, or steal. And he can't simply steal three $100 suits to pay for a week's supply of heroin, for "fences" rarely pay more than 25 percent of an article's value on the black market.

A man with a $50-a-day habit has to steal $200 in goods every day of the year. Or he turns to armed robbery to get hard cash.

The result was predictable: between 1966 and 1969 the number of armed robberies shot up five-fold. In the early sixties, the city had no more than 1,000 robberies a year. But there were 1,049 robberies for the single month of July, 1969, and 1,226 for August. A

spokesman for the Board of Trade told Sen. Tydings' committee that most of the $80 to $150 million worth of goods stolen from area stores are believed to have been pilfered by addicts.

It is facts like these that make the following recitation of the policies and attitudes of official District government agencies more than a little hard to understand:

Between 1952 and the summer of 1969, the District police department participated in the breakup of only one major drug trafficking ring (in 1964). Yet, when President Nixon ordered a coordinated attack to be launched this year, it took only a few months to indict 41 of the city's biggest traffickers.

The department's tiny (21-man) narcotics squad apparently was more interested in stopping the sale of marijuana than of heroin. At the request of the Senate District Committee, the squad's record for the last three months of 1968 was surveyed, and it was learned that only 15 cases were prosecuted for the sale of heroin, while 23 marijuana cases were prosecuted. Furthermore, the heroin cases prosecuted were for "street sales"—sales typically made by addicts to support their habit—not for wholesalers like Steve Matthews.

The Department of Corrections ran no programs in its prisons to rehabilitate drug addicts, though some 1,000 of those imprisoned each month are addicts.

Up until the Senate hearings, Health Department Director Grant did not even ask the District government for funds to treat addicts. Asked why, Dr. Grant said funds were "not needed" because D.C. General Hospital had a 35-bed ward for addicts. Yet this facility has been both underused and ineffective. Between 1964 an 1967 it lacked even the minimal facilities necessary to check a patient's urine for the presence of heroin, and the ward was open to anyone, making it child's play for a pusher to sell dope to patients.

And, it is by reason of facts like the above that few knowledgeable people were surprised last March when General Sessions Judge Alfred Burka told the Senate District Committee:

"The only, single, effective method existing at the moment to break the cycle of addiction, crime, imprisonment, release and crime again is an organization known as Bonabond."

Such words of praise for a little-known agency were a distinct embarrassment to the heads of three government programs set up to process and rehabilitate the 12,000 drug users arrested each year: The D.C. Bail Agency, Probation Department, and the Drug Addiction and Treatment Center. Bonabond competed with each of these agencies and demonstrably outperformed them.

The Bail Agency was established to administer the Bail Reform Act of 1966. The Act was passed to allow people arrested to return to everyday life before their cases came up in court, if they could prove deep enough community roots: family, job, home. Young law students employed by the Bail Agency interview the "lockups." The agency is more careful about whom it releases than is generally realized. Only 10,500 out of 22,000 prisoners were set free in the agency's first two years.

The problem is, criminals soon learned they could give the young, white students phony names, addresses and phone numbers. The overworked Bail Agency staff may not have time to check the facts. Or they may end up calling an addict friend of the arrested person, who says, "Oh yeah, he works here." When those released fail to show in court for trial, police must rearrest them. Many can't be found. By last summer, 1,000 lockups had vanished from the view of the law. And, of course, these persons were free to commit more crimes.

Compare that record with Bonabond's performance. Its staffers also go to the cell block of the Court of General Sessions to interview "lockups" about getting released pending trial. Bonabond doesn't bother with those approved by the Bail Agency or by professional bondsmen. It works with what's left—the dregs of the dregs of society, two-thirds of whom are addicts. Only a few will be picked each day, those the staff feels are trustworthy.

In three years, Bonabond became the "third party custodian" for 380 criminals. Only four of the 380 failed to show up in court at their appointed time; and Bonabond found all of them, and turned them in. Furthermore, not one person in Bonabond's supervision has been rearrested for a felony (though 10 percent have been picked up for misdemeanors).

How does Bonabond perform so impressively?

Begin with the fact that Bonabond's ex-con staff members speak the same language as those arrested. They know many of the lockups personally, and are more likely to spot phonies than college-educated professionals.

And Bonabond has a program geared to help the offender help himself.

As soon as an addict is released from jail, Bonabond sends him to the city's only narcotic detoxification facility with proven effectiveness, a 20-bed ward in St. Elizabeths Hospital. (As noted, D.C. General has a 35-bed ward used by some addicts, but most of the patients are alcoholics; and, as noted, pushers easily gain access to the ward to make sales to patients). There is virtually no hope for killing a drug habit until the physical craving is eliminated—a task which can be accomplished in two weeks under medical supervision with little pain.

More than 90 percent of the referrals to St. E's come from Bonabond—which means that a host of other agencies in town are making few referrals. Bonabond developed this program with St. E's, and has sent 305 people to the hospital over the past year. Most of the referrals were of people who simply were seeking Bonabond's help, not those released from jail.

Once an addict is "clean," Bonabond will find him a steady job or job training. With economic security, an ex-offender is obviously less likely to return to crime. So Bonabond has made employment referral a major activity, helping about 300 find full-time jobs with pay averaging $100 a week.

By contrast, the Drug Addiction and Treatment Center (DATRC), operating on a $600,000 yearly budget had referred only 100 out of 876 addicts to jobs in its first year. DATRC also failed to refer its patients to a hospital for "drying out," except in rare cases. Result: 90 percent of the addicts referred to DATRC by parole officers were rearrested within six months.

Once a person is working, Bonabond becomes for him the strictest probation or parole office in the city. Everyone is required to call the agency once a day, every day. Box scores are kept with a red pencil on a big chart on the wall. Each of the 100 people in Bonabond's custody at a given time must attend a Wednesday night Bonabond meeting. In addition, addicts are asked to attend group therapy sessions on Tuesday nights. The atmosphere of the meetings is much like that of Alcoholics Anonymous. People going straight stand beside those in trouble and recite this pledge at the opening and close of the meeting: As a member of Bonabond.

I want the opportunity to prove my faith in myself;

I want to earn the respect of others;

I want to help my fellow man;

I want my future to be a good example of the meaning and purpose of human life;

With God's help, I accept this challenge.

Some slippage is permitted with Bonabond's regulations. A typical weekly meeting will have only 20–30 people present. And if a person arrives "high" from a heroin fix, no one would think of throwing him out. But a person out on bail must be demonstrating a genuine effort to help himself. If he continues to be "strung out" on drugs, is absent from work, or fails to call in regularly and attend meetings—Bonabond washes its hands of the case, turning him back to the courts to be thrown back in prison. The threat of reincarceration probably does more than anything else to induce those in its custody to toe the line. It is no mere threat. Some 62 of the 380 placed in Bonabond's custody were voluntarily surrendered.

That's a far tougher approach than is practiced by the Probation Department of the Court of General Sessions. It terminates only five percent of its cases, compared to Bonabond's 14 percent. Why is Probation less strict? Its director, John Bindl, told this reporter: "The majority of our time is spent in writing reports for the court. No one really supervises. The case loads are too big." Each probation officer has 115 cases, despite a growth in numbers of officers from nine to 29 in the last two years.

But the issue goes deeper. Not one of Probation's staff members is an exoffender. None would dare walk along 7th or 14th Streets NW late at night to make contact with individuals on their case lists. This is where the addicts hang out, and this is where Bonabond staffers operate. Thus the "professionals" are less likely to know who among their cases is using drugs. Further, many become numb after a while, and cease to care. They develop an attitude which can be tersely paraphrased: "He can't make it," they say to themselves. It becomes a self-fulfilling attitude. The bureaucrat's success, after all, is not measured by the number of offenders motivated to go straight, but by fidelity to proscribed procedures in processing criminals.

By contrast, the Bonabond staff member's only security lies in measurable performance with the hardest of the hard core recidivists. Oddly, perhaps, he is naturally a more stern disciplinarian than his middle class counterpart. The reformed ex-con has fallen just as far as his clientele into crime, but managed to pull himself out of the cycle into a legitimate job. So his attitude is: "If I made it, you can too."

"We will knock ourselves out for a guy trying to get himself together, but won't waste time with someone jiving about his interest in making it," says Nightlife Young, Bonabond's deputy director.

The ex-offender's signal advantage is his ability to understand and communicate in a way no middle class person can. One need only sit in the Bonabond office and listen. Early one morning recently, Young was talking with a man he'd known for 20 years who was then on probation. Their friendship beban when both were addicts. For two years, Fred (as I'll call him) managed to kick the habit, inspiring Nightlife to get clean. Nightlife recalls: "I saw him dressed, and clean—looking good, with money in his pocket." Now the tables were reversed:

"It look to me like you ain't even trying," Nightlife said to the shabbily dressed man. "I seen you up on 14th Street last night. You don't never need to go there."

"I can't get no job. No one let me be an ex-addict," said Fred, his head nodding from the effects of a recent fix.

"You can't get no job 'cause you ain't clean. I coulda had you a job," Nightlife said in a calm voice. Pipe smoke swirled above his head.

"You gotta give me a chance."

"You haven't give *yourself* no chance! Man, this is the fourth time I've given you a chance. I had to threaten you. I don't dig this. If I keep letting you get away with this, *I'll*

be out on the street. I been sticking my neck out—putting the whole organization on the line . . . Me and you walked together, shot dope together. I ain't stupid. You can't function."

"I tried to make those meeting, but . . ."

"I don't want to ———. You mean you couldn't put in an *hour* of time? We got you out on probation, and you ain't even trying to get yourself together. Now, I want you to go to the hospital on Monday. If you don't go down there, we'll surrender you. This is your last pass to success."

Fred gratefully looked at Nightlife: "Bonabond is the only organization which has ever did anything for me. The only reason I didn't progress was because it was my fault. When you see me next, I'm going to be fit. I'm going to the hospital with good intentions."

The good intentions of an addict are notoriously unreliable. Though Fred did show up at St. Elizabeths, on the tenth day of his stay he was caught offering a patient a fix. It had been mailed to him. Thrown out of the hospital, Fred returned to Nightlife the next day. He was shrewdly dressed in his best clothes and a $50 pair of shoes. And he had a good excuse: "All my life I've had so many things going against me."

This time, it didnt wash. Within a week Bonabond staffer Ike Mallard, a man who had forged several hundred-thousand dollars worth of checks in his time, took Fred back to Judge Charles Halleck and said: "He's not showing enough initiative in himself. That's the biggest problem." A few days later, Fred was back in prison.

In this case, Bonabond failed. Or, rather, Fred failed. He was offered all the understanding and compassion which could reasonably be expected. But once he refused to help himself, Bonabond had the guts to turn him in. It's hard to imagine a better rehabilitative approach, or a staff more qualified by experience to know how to practice it. Bonabond offers the ex-con more concern, greater firmness, more services, and demands more of staff and those it helps than any and all of the traditional agencies.

Judge Halleck put it best: "Bonabond is performing a function which ought to be performed by the court system itself. The court (and its attendant agencies) has abdicated its duties and responsibilities. We are fortunate that the void has been filled by organizations like Bonabond. It ought to be five times bigger than it is."

But Bonabond has come perilously close to floundering. Practically its only source of support is the $63,000 grant from HEW, channeled through UPO. The District government has refused to support Bonabond. And getting the grant renewed each year is a harrowing experience. In 1967, funds ran out. Every staff member continued to work for weeks without a payroll, or even a promise that the agency would survive. According to Merrill Collett, a white businessman on Bonabond's board of directors, "UPO had doubts about giving a grant to Bonabond because of its lack of a professional staff."

Fortunately, this attitude seems to be changing. The traditional system seems to be learning from Bonabond and from other operations staffed by ex-addicts, such as Col. Hassan Jeru-Ahmed's Blackmen's Development Centers. For the first time in its history, the Department of Corrections has put ex-offenders on its staff—20 of them.

"We are following in Bonabond's footsteps," says Dr. Robert Dupont, an engaging, 32-year-old psychiatrist who is associate director of corrections.

"Bonabond pointed the way to us for the effective use of ex-offenders in correctional programs," he says. "The ex-offender is dedicated in a way professionals are not. They will work harder—longer hours and weekends—because they have something to prove to themselves and the world. I won't let my work intrude in my private life as they will. But then, I don't have to. I have security."

Furthermore, the ex-con will work at half the salary of a college-educated professional. Corrections is paying $5,500 to $6,200, which means Corrections can have twice as many counselors.

They'll be working in a new form of correctional facility, an operation halfway between the total isolation of prison and the loose control of parole. By mid-December, about 100 convicts will be serving part of their sentences in five Community Correctional Centers, houses scattered in the inner city. "Inmates" will live in the centers at night, but hold down regular jobs during the day. While living in the centers, offenders will earn their own upkeep, pay taxes and live in a therapeutic community with other ex-cons who've shaken lives of crime. A pilot experiment with this creative rehabilitation approach has been extraordinarily successful.

Dr. Dupont also plans to try a unique experiment with Bonabond itself. At present, Corrections gets only $1.10 a day to supervise a man or woman on parole. In order to find if Bonabond can do a better job at parole supervision, Corrections has plans to contract with Bonabond for the same figure to see how well it does with 50 parolees. If Bonabond outperforms middle class parole officers, its role will grow, Dupont says.

When asked last summer if his Probation Department planned any such experiments, Probation Director John Bindl responded: "Our first need is to hire *professionals* to handle case loads adequately." He was afraid that if an ex-con was hired, he might slip back into crime—a valid fear. Today, however, probation officers are talking with Bonabond about recommending ex-offenders who might work as probation aides.

Equally important, there is a growing interest in helping Bonabond expand. The Meyer Foundation has given the ex-convicts $10,000. The Calvary Baptist Church, which has been sponsoring a "prayer luncheon" on Tuesdays for people working on the drug problem, may sell Bonabond a house at low cost for conversion into an informal "halfway" house for addicts. And Bonabond even has a possibility of getting National Institute of Mental Health funds to operate a 100-bed half-way house in a converted motel. Hiawatha Burris, the former confidence man who now heads Bonabond, has gained the confidence of District judges to such an extent he now lunches with them weekly.

Recently Burris received a "degree" for his achievement from Gov. Raymond Shafer of Pennsylvania, full of phrases as "know ye" and "by the authority vested in me." Like any other professional's degree, it hangs from the wall of his office. But this is no M.D. or Ph. D. It is a legal pardon wiping clean his record of five indictments for "burglary, fornication, operating a motor vehicle while under the influence of liquor, larceny, receiving stolen goods, conspiracy, and receiving stolen goods in 1951, 1952, and 1953."

It is a degree in crime *and* in self-rehabilitation—eminent credentials for helping other ex-cons catapult out of the desperate dope-crime syndrome. Three years ago, it was literally illegal for him to meet with the felons on his staff: people convicted for such crimes as armed robbery, prostitution, check forgery, and dope peddling.

Today, these ex-offenders are setting a new standard of "professionalism" in the crime prevention business: performance.

## NATIONAL HEALTH INSURANCE

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. DINGELL. Mr. Speaker, the November 24, 1969 issue of "Memo from Cope," the publication of the Committee on Political Education, AFL–CIO, carried an article on the situation with regard to medical care in the United States. In the article it is noted that AFL–CIO President George Meany has stated that national health insurance "is the only system that will provide truly adequate health care to all Americans."

So that my colleagues may have an opportunity to read this article, I insert it at this point in the RECORD:

IT'S TIME FOR NATIONAL HEALTH PLAN

Sixty billion dollars a year for medical care is a good chunk of money. That's what was spent in fiscal year 1969 in the U.S. It's seven percent of our gross national product, a larger percentage of GNP than any nation spends. It almost approaches our defense budget.

Yet concern over the quality as well as the cost of medical care in the United States is mounting. In 1950, the nation was sixth in the world in infant mortality. Now it is 18th. We have dropped in recent years from 13th to 22nd in life expectancy at birth for males, from seventh to 10th for females. Death rate of middle-aged males is higher here than in any Western European country.

With this, doctor's fees soar. Hospital fees go out of sight. In a short time, it will cost an average $100 a day to put up in a hospital, according to the American Hospital Association. Medical costs have been going up faster than any other item on the Consumer Price Index.

Medicare and Medicaid, so bright in promise at their inception, have been tarnished by the incredible leap in health costs that reduces the protection these programs should provide.

Meanwhile, there are not enough doctors. Medical schools graduate only 7,400 physicians a year and some medical schools are closing shop, making the squeeze even tighter.

These are just some statistics that add up to a crisis in health care in the United States, one which President Nixon described this way last summer: ". . . unless action is taken both administratively and legislatively . . . we will have a breakdown in our medical care system affecting millions. I don't think I am overstating the case."

What to do?

AFL–CIO President George Meany posed the key question before an Industrial Union Department conference on health care: "Can we get good medical care for all Americans at a reasonable cost?"

The answer, he said, is national health insurance, "a program that would provide comprehensive health care for every American . . . that would include every kind of treatment that is necessary to maintain or restore good health . . . preventive services, all types of physicians' services, hospital and nursing home care, home health services, rehabilitation."

Meany said such a system would be financed like social security but with a government contribution. While "doctors would continue to practice medicine without any interference, we would expect the national health insurance system to encourage the highest quality of medical care, improvements in the efficiency of its delivery and effective controls on its cost."

Development of pre-paid group practice plans would be integral, Meany stressed, pointing out such plans provide good health care "at lower costs than the usual fee-for-service arrangement of doctors in solo practice."

Meany said proper health care has three fundamental objectives:

To prevent unnecessary illness.

To have the best possible treatment for all persons when they are sick so they will recover quickly and completely.

To keep medical cost at a reasonable level so that people are not denied needed care simply because they can't afford it.

He concluded national health insurance "is the only system that will provide truly adequate health care to all Americans."

## WORLD FEDERALIST YOUTH PETITION

### HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. BINGHAM. Mr. Speaker, it has come to my attention that the World Federalist Youth, U.S.A., the student division of World Federalist U.S.A., of which former Senator Joseph S. Clark is president, has submitted a most commendable petition to Secretary General U Thant. The petition calls for every nation of the world to use 1970—the 25th anniversary of the United Nations—"to examine its own national priorities and military policy as well as it relationship to the United Nations in its role as a builder of peace." It also calls for "establishment of a permanent U.N. peacekeeping force with the power and authority to accomplish its duties" in the hope that such a force might eventually render national conscription armies unnecessary.

I want to extend my congratulations and applause to the authors and signators of this petition, and to the high principles it sets forth. I commend it to my colleagues in the House and other readers of the RECORD.

The World Federalist Youth petition and a letter to its U.N. representative, Mr. Donald F. Keys, from Secretary General Thant, expressing his similar feelings, follow:

TO THE SECRETARY GENERAL OF THE UNITED NATIONS

As concerned youth of this nation and citizens of the world, *we petition you* to present our views to the General Assembly of the United Nations for consideration and implementation. We stand together in our affirmation that man is at all times more sacred than property and we condemn both the use of warfare and the use of violence as a means of settling disputes.

We wish to see each nation use the year 1970—the 25th Anniversary of the United Nations—to establish a commission to examine its own national priorities and military policies as well as its relationship to the United Nations in its role as a builder of peace. Concurrently, we desire immediate establishment of a permanent U.N. Peacekeeping Force with the power and the authority to accomplish its duties. Such a force will eliminate the need for conscriptive armies in all nations. This, we believe would be a most positive step in our efforts to free mankind.

OCTOBER 24, 1969.

Mr. DONALD F. KEYS,

*United Nations Representative, World Association of World Federalists, United Nations Plaza, New York, N.Y.*

DEAR MR. KEYS: Thank you for your kind letter of 21 October. I would be grateful indeed if you could transmit to the leaders of your youth organization my deep appreciation for the world-wide appeal they are launching in support of the United Nations.

While it would not be proper for me, at a time when the General Assembly is engaged in the consideration of the report of the Preparatory Committee for the twenty-fifth Anniversary, to endorse each individual proposal contained in the petition, I applaud without hesitation the fine spirit which has moved these young leaders to undertake this great effort on behalf of world peace and progress through the United Nations.

With kind regards,

Yours sincerely,

MAUNG THANT.

## YOUTH BECOMES PREY TO DRUGS

### HON. MARTIN B. McKNEALLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. McKNEALLY. Mr. Speaker, the evidence of an appalling crisis among our youth increases day by day. I refer to the large and growing use of drugs by a large and growing section of young men and women. This is a phenomenon of tragic impact, especially when one notes that our youth have been the most favored in history and yet they have become somehow prey to one of civilization's most fateful habits—the use of drugs. There was published in the Times Herald Record of December 1, in Middletown, N.Y., a lively newspaper in my district, an editorial which included a letter from Dean Ward of Amherst College. It is a letter of lamentation, but it is also a plea for all of us to take immediate steps of prevention of narcotics use among our youth. I bring this editorial to your attention and to the attention of all the Members of this House for their education and action:

A "MEANINGLESS DEATH" ON CAMPUS

On Oct. 11, a 19-year-old Harvard sophomore visiting at Amherst College took LSD, jumped 70 feet from the top of a four-story dormitory, and died.

The case, containing a parallel with that of Art Linkletter's daughter in California, is notable for several reasons, not the least of which is the following letter, written by Robert A. Ward, dean of students at Amherst, and sent to all undergraduates, alumni, and others.

Composed during the week after the first Vietnam Moratorium, the letter represents an articulate, compassionate plea to young people on the subject of drug use.

Dean Ward, 35, and himself an Amherst graduate, addressed the letter to undergraduates. But the statement is gaining wide notice across the country. Here is his letter:

"He was not an Amherst man; he was a visitor. But his death occurred in our community and we shared in the loss. We were shocked by the tragedy and stunned by the senselessness of it. He was young and bright—too bright to surrender his life in the foolish madness blighting a generation. In a week in which we paused to reflect on the waste of life half a world away, it may have been a strange irony that we were starkly faced with meaningless death on our campus.

"But that week is nearly gone—one memory fades.

"I will not rehearse the statements made in the past about drugs. Many of us for some time have been apprehensive that a tragedy would come—and last Saturday night it did. Repeated warnings had gone unheeded; it couldn't happen here.

"I only wish those who ignored those warnings could have spent part of that horrible night waiting in Cooley Dickenson Hospital while the student's life ebbed or part of Sunday afternoon in my office while his parents struggled to comprehend the reality of that day.

"I did not become a dean to watch a generation of students pollute their sanity or distort their lives, and I confess to a numbing and depressing sense of helplessness. Words are inadequate and deeds seem fruitless. More than ever students have taken on themselves the individual responsibility which shapes their lives in all areas. It should be so, but the judicious exercise of such responsibility demands wisdom.

"I see no wisdom at all in the growing and indiscriminate use of drugs. I also see a danger that one major tragedy may obscure other tragedies, smaller perhaps but no less frightening.

"On a beautiful Saturday afternoon which was in itself a natural stimulant, why the need for some artificial or uncertain drug? And where were we all on that night or on any night and when will we awake to the need to replace a distinterested privatism with a sustained concern for troubled people in our community? And why do we tolerate in our midst the profiteers of poison?? And by what moral right do we pass into the hands of others substances which can threaten their well-being and even their lives??

"What in God's name is happening to us?

"Last Sunday in a scriptural lesson the timeless chastisement of Thomas was repeated: 'Because you did not see, you would not believe.' Last Sunday we did see. Now I plead as never before—please believe."

## FLOOD-STRICKEN TUNISIA FACES A 5-YEAR RECOVERY TASK

### HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. FRASER. Mr. Speaker, the catastrophic floods being experienced by Tunisia are a tremendous setback to that progressive North African nation. A few years ago I visited that fiercely independent country and was impressed by the progress being made without resort to a dictatorial regime of the left or the right.

I am dismayed to learn of Tunisia's current plight. The rains have been unbelievable, and a recent New York Times article indicates that the recovery period will be at least 5 years. U.S. relief has been provided. Some of it is described in the Times story which follows. The U.S. citizens assisting in the emergency are to be commended. But, clearly, we must be prepared to continue to assist the recovery of this admirable people.

FLOOD-STRICKEN TUNISIA FACES A 5-YEAR RECOVERY TASK

TUNIS, December 4.—After weeks of nearly constant rain and floods, Tunisia is facing a recovery task that is expected to take at least five years and cost more than $40 million.

In some places the rainfall, between Sept. 24 and the end of November, totaled more than eight and a half inches a day. It left behind new lakes, and cut new rivers through the central regions of the country. Olive trees, one of Tunisia's sparse natural resources and the livelihood of many of her people, were uprooted and carried away.

But despite the picture of desolation and disaster left by the retreating waters. Tunisia has not been plunged into chaos. Her immediate appeal for help met with a prompt response from her North African neighbors, most European countries and the United States, which carried the biggest burden of aid beyond the $40-million the Tunisians expect to pay.

RIVER BECOMES A TORRENT

French, Moroccan, West German and United States helicopters have been flying relief supplies and anti-typhoid vaccine to disaster areas. Teams of engineers from Belgium, France, Spain and West Germany began the task of re-establishing communications; repairs to 125 miles of highways and 60 miles of railroad track are under way.

The Zeroud River, which even in winter is little more than a modest stream in central Tunisia, became a torrent, more than a half mile wide and 40 feet deep. Experts estimated that it had a bigger instantaneous flow than the Rhine in France and Switzerland after the melting of the winter snows. Near the Islamic city of Kairouan, the river left its shallow bed, normally a few hundred yards wide, and became a 10-mile-wide expanse of raging floodwater that swept away all before it.

In the Plain of Kairouan, two other streams, the Merguellil and the Nebhana, were transformed beyond recognition with the same disastrous effects. Concrete blocks weighing about 100 tons each were torn out of wrecked bridges and hurled 50 to 100 yards downstream.

BRIDGES WASHED AWAY

Nearly 30 rail and road bridges were washed away. In the worst-hit area of Sousse, artesian wells and water-supply pipes are in urgent need of repair. Muddy rivers invaded villages and towns in the south, engulfing livestock. Dwellings crumbled, leaving 542 dead and some 300,000 people without shelter. Most Tunisian industries have been at a standstill since the beginning of the floods. The export of phosphates, Tunisia's chief earner of currency, was interrupted because of damaged railway track.

The railroad which carries phosphates from the mines of the Gafs a region to the port of Sfax, is being repaired by French engineers of phosphate exports. The repairs seem to be proceeding in record time, as the officials of the southern region are to announce shortly the completion of the task.

In the Sousse region, Spanish teams are building a bridge across the Zeroud at Sidi Bou Ali, a small town that suffered more than any other area. The Dutch are undertaking the rehabilitation of mud-filled artesian wells and the Sousse water supply.

The people of Kairouan and adjoining villages, which had geen cut off from the rest of the country at the onset of the floods, have been kept alive by the uninterrupted flow of supplies and vaccine by United States Navy and Army helicopters. Their crews told of the human suffering they witnessed on the hazardous missions.

WOMEN IN DESPAIR

A member of one Navy helicopter crew said: "Down below a handful of people were gesticulating to attract our attention. We lowered the craft; we could clearly see women tearing their clothes and scratching their faces in despair. We dropped our supplies. People scrambled and fought for food like a pack of hungry wolves."

Another crew was forced to land on a railroad track, slightly denting the rear of the helicopter, to unload food supplies to about 20 Tunisian peasants who had taken refuge from the muddy river on the track and had been without food for four days.

Members of the United States Embassy staff in Tunis worked around the clock on the relief program. Supplies of blankets, food and vaccine were flown to Tunisia immediately. One million dollars was donated for the construction of emergency bridges in the north.

Medical teams from the hospital ship Hope, anchored in the Tunis harbor, went to the Sousse and Sfax areas to vaccinate the population. So far no cases of typhoid have been reported.

The World Food Program, an organization affiliated with the United Nations, has undertaken to feed 100,000 refugees for the next six months. Food, blankets and donations in money continue to arrive from many countries.

One expression of sympathy for the victims of the floods came from the children of United States servicemen at the Wheelus air base in Libya. They sent 500 pounds of candy for the children of Kairouan.

---

## AGNEW AND THE MEDIA

### HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. FRASER. Mr. Speaker, any number of positive things may be said about Vice President SPIRO AGNEW'S recent dissertations on the mass media: It is good to remind the media from time to time that they cannot expect to be exempt from powerful attack; the speeches could prompt a useful public dialog about the role and performance of the media as partner institutions in our democratic society; one result of the speeches could be an invigorated examination within professional ranks of the shortcomings of the media; the resulting, widespread, enlightened discussion could make us all more intelligent consumers of media information.

These positive effects may, indeed, be forthcoming from the Vice President's speeches. But if they are, it will be a case of good wine being made from bad.

The Vice Presidential habit of viewing the world as one unrelieved melodrama led a national news magazine recently to conclude that Mr. AGNEW may go down in history as the great polarizer. In the Vice President's world there are the impudent snobs and the good Americans. The good Americans support the President, the snobs demonstrate in the streets. Reason is on the side of the one, corrupt mob instinct on the side of the other. In the case of the broadcast communicators, it is a handful of Northeastern liberals versus the views of America.

This melodrama syndrome is not characteristic of the Vice President alone, of course. There is Mrs. Mitchell's assessment of the two kinds of participants in the antiwar demonstrations; such demonstrators are obviously either members of the liberal Communist element, whatever that may be, or they are kids out for a lark. One must admit a certain progress in this Nixonian dichotimization: one always used to face three choices.

Even a practitioner of instant analysis might be able to see, however, that such neat classifications of the world have a tendency to be overly simplistic. It would seem at least possible that any crowd of a quarter of a million people might contain more than two kinds of individuals. It is at least academically possible that there are more than two ways out of Vietnam. And there at least used to be a time when there was some middle ground between noble loyalty to the unquestionably right course of the government and villainous dissent against the American values.

Mr. AGNEW'S speeches on the media suffer from this delusion of simplicity and from other delusions which one charitably assumes are the products of an information deficiency. Mr. AGNEW seems to be working from several odd assumptions when he talks about the media: First, that he is daring and original in his attacks on the media; second, that the deficiencies Mr. AGNEW finds in the media have not been thought of or discussed by media professionals; and third, that as Vice President he exercises the same powers of free speech that any ordinary citizen in, say, Des Moines, Iowa, exercises.

None of these apparent assumptions is true.

The media have been under strong attack ever since the earliest days of the Republic, and not one of the Presidents has missed the opportunity to express his bitterness about the media at some point in his administration. Thomas Jefferson wrote:

A truth now and then projecting into the ocean of newspaper lies serves like headlands to correct our course. Indeed, my skepticism as to everything in a newspaper makes me indifferent whether I ever see one.

Grover Cleveland said in an address at Harvard College in 1886:

. . . the President of the United States should not be put beyond the protection which American love of fair play and decency affords to every American citizen. This trait of our national character would not encourage, if their extent were fully appreciated, the silly mean and cowardly lies that every day are found in the columns of certain newspapers, which violate every instinct of American manliness, and in ghoulish glee desecrate every sacred relation of private life.

Woodrow Wilson wrote in a letter to a relative:

Do not believe anything you read in the newspapers. If you read the newspapers I see, they are utterly untrustworthy. They represent the obstacles as exciting which they wish to have exist, whether they are actual or not. Read the editorial page and you will know what you will find in the news columns. For unless they are grossly careless the two always support one another. Their lying is shameless and colossal!

When Mr. AGNEW says as he did recently: "The day when the network commentators, and even the gentlemen of the New York Times, enjoyed a form of diplomatic immunity from comment and criticism of what they said is over," he speaks of the passing of a time which never was. When he speaks of an unelected fraternity of newsmen, he speaks with equal ignorance. Vice Presidents are elected once every 4 years; newsmen are put to the popular test every day. The daily pressures from readers, news sources, and advertisers determine whether they will survive, and if there is a problem of media monopoly today, it is at least in part because the pressures have been too strong and too successful.

There is no more substance to the apparent assumption that professional broadcast and print journalists have not already thought about and sought reasonable solutions to the problems Mr. AGNEW discusses. For all of his brawny rhetoric, Mr. AGNEW has yet to say anything as perceptively critical as this, by one of the fraternity members he so ardently attacks:

> The journalism we throw on our screen is still two-D journalism, the flat fact accompanied by flat opinion. That was never good enough, and it is perilously inadequate now. We have not really moved into the era of three-D journalism, although some are trying; we are not providing the depth, not illuminating the background, making it a living part of the picture with the third dimension, which is Meaning.

The Vice President, for all his gusto, has yet to say anything half so constructive as another of the men he so arrogantly attacks:

> The problem is to present the great issues as a series of practical choices: let the people look at the alternatives as the President has to look at them and try at the end to decide among the hard and dangerous courses. We need simple case-study outlines containing, first, a statement of the facts of the policy question; second, a definition of one course of action, followed by arguments for and arguments against; and so on through definition of a second course, and a third and a fourth. The difficulty with the presentation of foreign policy news today is that it comes out a jumble of important and trivial things and personalities, so that the people cannot quite get clear the questions for decision and end up either by giving up or by choosing up sides for or against the President . . . If I may engage in a little heresy, it may be that news and analysis of news in a democracy are too serious to be left to newspapermen.

These men, Eric Sevareid and James Reston, and hundreds of their colleagues have long been engaged in a serious examination of their performance, an examination to which the Vice President, unwittingly, has come lately and clumsily.

Still a third apparent assumption of the Vice President's is that he holds the same powers of free speech that any average citizen does. When he says, as he did in Montgomery the other day, "This is a great country—in this country every man is allowed freedom of speech, even the Vice President," Mr. AGNEW is not precisely correct, because the fact is that Vice Presidents have freer speech than most citizens. To write a Congressman or to publish a letter in a local newspaper, to add a body to the numbers at a protest march or to wire the President, to vote in an election or to discuss politics with one's friends: that is about all the free voice the average citizen has. But when Mr. AGNEW exercises his right to free speech, he gets thousands of letters of comment, and he gets them because his words are carried live on television and played back on radio and discussed widely in print. The Vice President's voice is louder than most people's voices, no matter how softly he speaks, because it is amplified thousands of times all across this country by the great and small media he attacks.

The mass media, because they are vital institutions in our democratic system, must willingly expect to be tested and tempered by public criticism; at times they must even expect their conduct to be found wrong and at such times the mass media must be prepared to correct themselves. It is the same with the Presidency. Presidents must have the courage of leadership to accept the possibility that they may be wrong, and when they are wrong they must have the vision and the courage of spirit to correct their policies. When Mr. AGNEW finds grave fault with a distinguished servant of our Nation simply because he appeared on television "challenging and contradicting the policies of the President of the United States," when the Vice President finds television commentators seriously at fault simply because they contradict a President's statement, or challenge his abilities as a politician, or claim that the President follows some agency's line—when these actions are found to be per se a disservice to the country, then the democratic system in this country is at an end, because one of its fundamental liberties, the right to free speech, is at an end. Apparently Mr. AGNEW seeks to invest the Presidency with an infallibility and an imperviousness to criticism that are antiethical to democracy. The right to free speech means nothing if it does not mean the right to criticize, and the right to criticize means nothing if it does not mean the right to criticize the highest policymakers of the Nation.

Mr. AGNEW is right when he says that the power of the great broadcast networks to distill the information the Nation gets, to inspire its imagination, and to color its opinions is unprecedented. He is right when he suggests that this vast new power has the serious potential to undo an essential element of the right of free speech, the right to have access to numerous and multifaceted channels of communications. One of the assumptions about the efficacy of free speech is that the truth in a democratic society will out not by official proclamation but rather by free competition among a variety of versions of the truth.

But the same thing is true of the modern Presidency. Armed with the bureaucratic apparatus of the modern Presidency, equipped with the symbolic power of his office, burdened by a responsibility and authority in the world community not envisioned by the Nation's founders, the modern President has at his hand unprecedented power. And this power is immeasurably enhanced by the availability to the President of the equally unprecedented power of the mass media. By informal convention the President has available to him the immediate attention of the Nation through the very communications networks Mr. AGNEW attacks. When the President chooses to make use of this enormous communications power to further the ends of his administration, as he did recently in behalf of his Vietnam policy, he must properly, out of respect for the massive power he wields, and with an eye to the maintenance of a healthy democratic balance, encourage the fullest and most prompt discussion of his views, even when this discussion is critical.

To himself take advantage of the awesome authority of the mass media while simultaneously impugning the integrity of those who later take exception to his views before the very same audience, as he did the other day through Mr. AGNEW, is for the President to deal a double blow to the free inquiry which is the basis of our democratic political system. The media as an instrument of power cuts many ways. The President shares with the other manipulators of the mass media a responsibility for its proper use, and that shared responsibility is, regrettably, no part of the Vice President's speeches.

Mr. AGNEW's talks have been dangerous in another way. The Vice President finds that the views of the news media do not represent the views of America and concludes:

> As with other American institutions, perhaps it is time that the networks were made more responsive to the views of the nation and more responsible to the people they serve.

This is perhaps the most alarming sentence in the Vice President's recent pronouncements. Professional newsmen have rightly believed that they should be representative of no one. They have been perceptive enough to realize that the phrase "the views of America" is for all practical purposes an empty phrase, that there is not any single right and proper opinion for an American to hold, that the strength of a democratic society such as ours lies in the diversity of its views and talents and peoples. Ours is a heritage of strength through diversity; the views of the majority have been strengthened at times, at times changed, and often tempered and clarified by the views of the minorities. One of the most vital features of a democratic system such as ours is that its communications networks facilitate the regular and orderly hearing of minority voices. To give all this up in place of a polarized, acutely stereotyped picture of U.S. opinion as divided into two neat little camps, "the views of America" and the views of the rest of its citizens, would be to give up a fundamental aspect of our democratic national character.

And finally, I am alarmed by the Vice President's recent speeches because they have liberally distorted and falsified the facts, and the surest way to circumvent the free flow of information on which our society depends is to promote confusion about what the facts are. Mr. AGNEW in his Des Moines speech characterized Mr. Harriman's appearance on ABC thus:

> All in all, Mr. Harriman offered a broad range of gratuitous advice—challenging and contradicting the policies outlined by the President of the United States. Where the President had issued a call for unity, Mr. Harriman was urging the country not to listen to him.

There is a certain exquisite irony in Mr. AGNEW calling the advice of Mr. Harriman on a matter of public policy gratuitous while he himself is offering advice to a profession in which he has absolutely no experience. But aside from that, what Mr. Harriman actually said bears no resemblance to what Mr. AGNEW claims he said. Mr. Harriman began his discussion with words, "Well, John,

I'm sure you know that I wouldn't be presumptuous to give a complete analysis of a carefully thought out speech by the President of the United States. I am sure he wants to end this war, and no one wishes him well more than I do," and ended it with the words, "There are so many things we'd like to know about this, but I want to end by saying I wish the President well. I hope he can lead us to peace. But this is not the whole story we've heard tonight." Such a discussion simply cannot be characterized as one in which the public has been urged not to support the President.

Other aspects of the Vice President's speeches are no more fair or accurate: commentators exploring the concept of news objectivity are characterized as admitting their guilt, the President facing Vietnam is likened to Churchill facing the Germans, television analysis of President Kennedy's Cuban missile crisis speech is made to disappear, New York Times coverage of congressional support for the President's Vietnam policy is obliterated. Such sloppiness, if, indeed, it is only that, confuses the facts and makes rational discussion much more difficult. If the Vice President is truly concerned about the free flow of information, he will in the future confine himself in his speeches to honest remarks.

The issues raised, for better or for worse, by the Vice President are basic to our political way of life, and we will be wise, now that the initial flurry of emotional reaction is over, to give them the thoughtful consideration they deserve.

---

## POLLUTING OUR ENVIRONMENT

### HON. GUY VANDER JAGT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Mr. VANDER JAGT. Mr. Speaker, on November 8 I had the great privilege and tremendous personal satisfaction in celebrating my third anniversary as a Member of this legislative body. In this 3 years I have grown, I believe, in my understanding of the House of Representatives and the forces which motivate its actions. On November 13, for example, President Nixon had the opportunity to thank the House for its strong support of his course of action concerning Vietnam. Both the President and the House of Representatives recognize this course of action to be one to which the vast majority of the people of our Nation subscribe. In the difficult problem of Vietnam, with its grieviously complicated foreign policy implications, the people have a basic understanding of what is best for America.

However, I am not making this speech to discuss the Vietnam war. I have done this on other occasions, at other times. But what I do want to talk about today is another great challenge to our Nation. It is the challenge of the problems which we have created for ourselves in the pollution of our environment. Rather than the death and destruction of Vietnam I want to talk about the death and destruction of our rivers and lakes, the degradation of the air which we breathe, the depletion and waste of our natural resources, the irresponsible behavior of us all in our treatment of the environment in which we exist and in which our children and our children's children must exist.

There has been a vast awakening in this Nation in recent years to these problems. The people have become aware of this destruction. They have become aware of this destruction and they have begun to cry out for answers. They want to know what can be done to solve these problems, they want to know when it can be done, and they want to know why it is not being done.

There are those visionaries who have long recognized the lack of interest which man has had in his environment. One such man was Aldo Leopold who wrote "A Sand County Almanac," published in 1949, 1 year after his death. The book is a classic. At the time of its publication it was a cry in the wilderness, if you will pardon the irony in that expression, for an understanding of the essential unity which exists between man and the land.

In his introduction of a 1966 edition of the book, Aldo Leopold's son, Luna, states:

> This generation of Aldo Leopold's grandchildren is rebelling on college campuses, demonstrating and working for social causes, and fighting on foreign soil. This same youth is maturing at that moment of time which is pivotal in the struggle to preserve "things wild and free" that Aldo Leopold understood so wisely and expressed so eloquently.
>
> Of all the causes that attract the attention of these young people, the plight of nature is one which may be truly a last call. Things wild and free are being destroyed by the impersonality of our attitude toward the land. What better way to fight the destruction of nature than to place in the hands of the young this powerful plea for a land ethic?

With the Vietnam moratorium so recently at hand need more be said? The concern and dedication and idealism of the young have a potential role of great responsibility in this battle to improve our environment.

The history of our Nation has been one of growing concern. From Gifford Pinchot and Teddy Roosevelt to our conservation leaders in the House of Representatives today—and I hesitate to mention any names because there are many, but JOHN DINGELL and JOHN SAYLOR deserve special praise—we have grown in concern. The Congress has passed meaningful legislation in the past. Accepting of the House-Senate conference report last week in approving $800 million for construction of water pollution control facilities, points out our growing concern. It is not often that more than 40 different conservation minded organizations, "The Citizens Crusade for Clean Waters," can get together behind one legislative proposal, but they showed iron resolution on this one.

We have not contaminated our earth and sky knowingly and intentionally. Our vast and immensely fruitful technology has grown more rapidly than our understanding of all of its implications.

Rachel Carson in "The Silent Spring" threw down a gauntlet, along with many others. She helped to stimulate interest in the need for this undertsanding. Our education on the need for pollution control and conservation has caught up with our unmatched abilities to produce material wealth.

And the citizens of this Nation have recognized the need to do battle in this war on pollution. They have illustrated this willingness in many ways including in many States the ultimate in the expression of interest: overwhelming support of bond issues for construction of pollution control facilities, at a time when the screams against higher taxes have been the loudest. The people want to wage a war against pollution and I am totally convinced that we must wage this war and I would at this time like to declare my own personal war against the continuing pollution of our environment. I call upon the Congress and the administration to join me in this declaration. We must get with the people in this great conflict.

The question then becomes can we win this war? Can we cleanse our rivers and our lakes and our air? Can we halt the waste of our resources? Can we bring human populations into a state of balance, a state of unity with the land? Does man bear in him the seeds of his own destruction which are now germanating in an irreversible growth? It is the challenge of man. In this Nation it is the challenge of free men. But we are free to make the toughest kinds of decisions. We are free to control our own future. We are free to accept the responsibilities for voluntarily limiting our freedoms, for our own long-term good, for the long-term good of our children and our children's children.

I have often heard someone say "wouldn't it be wonderful to have a benevolent dictator who felt this way or that way and imposed his will upon the populous." And in this situation that thought will frequently occur. But there is no such human being and there never will be such. We must recognize the fact that only in freedom can men respond to the need for change in a manner which does not impose upon the dignity of the human spirit. Freedom is an explosion of ideas and incentives and an ever growing stimulus to human betterment. Freedom allows man to do in a voluntary way those things which he ought to do, for his physical and spiritual well being and the physical and spiritual well being of his children and his children's children.

The objectives of this war are simple. I envision an America and a world where man and earth are in basic harmony. We have seen enough in our triumphs in space to know that there is great hostility to the existence of life on other planets in our solar system. If there is life in the far reaches of space it may well be that distance alone will prevent benefits from that knowledge to man from earth for many generations. It is time to give up ideas of escape from this planet which God has created for us. It is time to use our God-given abilities and create a world of harmony.

We must establish goals to accomplish this harmony. Our water after use by humans or industry must be returned to

its natural course to the sea as clean or perhaps in better condition than when it was first used. But under any circumstances we must understand what the effects are of changes we bring to that water. We must give ourselves the opportunity to decide what is in our own long-term best interests in water use.

Is it better to pay a small amount more for a car today knowing that in so doing a Lake Erie can be saved? Is it better to pay a few cents more for a dress or a suit knowing that in so doing a Grand River can be saved? Is it better to pay a few dollars more in income or property tax knowing that in so doing the "old swimming hole" will once more be clean and safe for our children? Our goal must be restoration of our water resources so that they exist in a condition which will allow maximum human use and the quiet, tranquilizing beauty of an environment where man is in harmony with nature.

We must establish as a goal clean air—air which will not cause disease and suffering, air which will not choke and irritate, air which does not carry needless dirt and waste and contamination. But we must develop a better understanding of the air we breathe, the air which supports the food we grow, the air which helps to warm the earth and protect us from space-born radiation. Should we continue to burn our fossil fuels at prodigious rates? Can we burn our waste products with continued impunity? What are the long-term relationships of oxidation and photosynthesis with respect to our atmosphere? We want clean air, and we must learn what it is.

The littering of our landscape with junk cars, and other forms of human waste is a tragic illustration of another grave problem facing this Nation. There is irony in this problem because we are proud of the fact that America consumes more raw materials and natural resources than almost all of the rest of the world put together. We are the most efficient producers on earth. And this is a great tribute to our people and our system. But we must become something more. We must become the most efficient users of natural resources.

It is time for this Nation to take inventory of its natural resources and the natural resources of its supplier nations. And then we must do more. We must explore methods for resource conservation. Can we afford to lose our basic metals through disposal in city dumps and land fills or in automobile graveyards or along our roadsides? Can we afford disposable products today made from raw materials that will be scarce tomorrow? Can we allow automobiles to lie in ravines and barnyards rusting into pools of nothing? Can we dump cans and broken tricycles and battered refrigerators in a city dump and ever expect to use their basic metals again? We cannot. The concentrations of basic ores took billions of years to develop on our earth's crust, and we have the audacity to scatter them to the winds in a few minutes of geologic time.

There are answers to these problems. Reynolds Aluminum has begun pilot programs for the salvage of aluminum cans—$200 a ton in Los Angeles and Miami, 40,000 cans to the ton, one-half cent a can. I understand the program has been so successful that it will be expanded. I hope so. And I would hope that steel manufacturers and glass manufacturers would find similar programs possible. The problem is not just one of waste, of course. It is also one of gross impairment of the beauty of our roadsides and backwoods trails and lawns and lakeshores and river banks and cities.

I have been told that automobile manufacturers require high-grade steel for their products and that scrap steel has too much impurity in it for use in producing the sheet steel automakers need. And what is the basic source of scrap steel? Junk automobiles. Too much copper and nickel and chromium in a No. 2 bundle of scrap steel—one junked car. The copper comes from the wiring in the car. The nickel makes steel stainless. Chromium makes the bumpers shiny.

The answer is greatly complicated. But the goal is the return of all possible scrap metals to the use cycle. To use our raw materials efficiently we must use them over and over again. In some way we must develop incentives for greater salvage and reuse of our basic raw materials so that our children and our children's children will not curse us for our selfishness and lack of foresight.

We must encourage efforts to limit the number of people who will share the resources of this earth. There are a few million over 200 million people living in this Nation today. By the year 2000 the forecast is for 300 million people. That is 50 percent more in only 30 years. And the earth's population may well double in that same period, from 3 to 6 billion. The problems of today are nothing compared to the problems tomorrow will bring if this uncontrolled growth continues. Our goal must be a stable human population on this earth.

Mr. Speaker, it is a relatively simple matter to state the problems which face us. It is another matter to solve those problems. And I am not presumptuous enough to claim to know the answers. But there are some paths which have been laid by those before us in the accumulation of human knowledge which we have followed in other matters. We do not really have to strike out into any great unknowns. Granted, some of the studies remain to be made and some of the technologies need to be further developed. Our communications techniques need to be improved. But by and large I believe that what we need most is the incentive to wage this war.

Let me just suggest a few steps which might be taken if my logic and perspective are correct.

We need to establish a Department on the Environment in the executive branch of Government. Only in so doing will we be able to concentrate Federal Government attention in this war on pollution. The Department would have the responsibility for establishing and carrying out programs to control air, water, and noise pollution, and to preserve our natural resources including our minerals and our soil. The Department would have new responsibilities in our Federal Government to include the encouragement of land use planning, raw material use planning, population planning, and related international programs.

I would envision the transfer to this new agency of the Federal Water Pollution Control Administration, Health, Education, and Welfare's solid waste disposal program and National Air Pollution Control Administration, the Soil Conservation Service, the Pesticide Regulation Division and small community and rural area water systems and waste disposal programs of the Department of Agriculture, and Housing and Urban Development's waste disposal programs. It would seem in order to give this agency some final word on a multitude of Federal programs affecting the environment such as highway construction and location, Corps of Engineers dredging and construction programs, airport construction and location, agriculture irrigation and drainage programs, powerplants location and operation, certain military weapons testing, and so on. We have reached the point where someone must evaluate the effects of Federal programs on other than those who receive direct benefits.

There can be little doubt that such an agency would have great powers over human activity. But the Congress would retain basic control to direct these activities as the people see fit. And what is the alternative?

To provide this basic control I would recommend the establishment of House and Senate Standing Committees on the Environment. Give them responsibilities for air, land, and water management including the research, education programs, and facilities involved. They would have the basic responsibilities for our natural resources. They would establish the broad framework within which assistance would be provided to State and local governments to carry out related programs. I would anticipate that such committees would find an immediate need for substantial increases in the funds for water pollution control facilities. I would anticipate that such committees would find an immediate need to revise FWPCA priorities to match the dire threat to the Great Lakes of continued pollution. I would envision a maximum use of tax sharing in these programs.

How can we finance all of this considering the great inflation and budgetary problems of today? Mr. Speaker, we are all aware of the great needs in education which the Congress recognized several weeks ago in adopting the Cohelan amendment to the continuing resolution covering HEW. We recognize the great need for welfare reform and the high initial cost of the President's program to break the welfare cycle. We have supported the President in his plan to end the Vietnam war and should not count on funds from that source until an honorable peace has been achieved. But there are Federal programs which are low priority if not altogether wasteful and I would suggest that these programs be substantially reduced or eliminated so that we can effectively fight this war on pollution.

I am speaking of the $4 billion which can be saved annually in our farm subsidy programs. Adopt legislation to help the marginal farmer train for meaningful employment and phase out those price support programs which only encourage high prices to consumers and low prices to farmers.

There are the possibilities of substantial cutbacks in public works projects. Substantial savings can be made through a reduction in our Armed Forces in Europe with a greater share of the defense burden then falling on those there whose interests are equal to our own, but whose contribution to their own defense has been insufficient.

At least $5 billion each year could be made available from these sources. Could that amount of Federal dollars each year for the next 10 years help to win this war on pollution? I am confident that it could and I am confident that the American people want their tax dollars spent in this way. Mr. Speaker, you know and I know that this war on pollution will not reach its full force without a total commitment from the public, without the encouragement of individual participation, without the vigor and idealism of our college students, without business and labor and industry support and a great deal of help from local, State, and National Government.

We need to enlist every civic organization in this Nation to play a specific role. We need to call on as many individuals as possible to fight in this war on a voluntary basis.

Congressman JIM O'HARA has just distributed to Members of Congress the story of volunteer efforts to clean up the Clinton River in his district. A magnificent job has been done here by civic organizations and individuals to clean up the accumulated wastes and evidence of human misuse of this once beautiful stream. The citizens of Owosso, Mich., had enough of junk and old tires and despoiled banks along the Shiawassee River there and voluntarily pitched in and cleaned up the mess. BILL STEIGER has a great program in his district. And no doubt there are hundreds of other examples of such individual and civic effort when the idea has been presented and developed.

We need to ask business and labor and industry to take on specific objectives. State and local governments have obvious tasks.

It will take a tremendous organization to accomplish the monumental job of bringing all of the forces of free men to bear for victory.

My Government Operations Subcommittee on Conservation and Natural Resources has suggested the establishment of a privately supported task force to carry out our objectives, to marshal the support we must have. I would strongly encourage that proposal.

I would like to see this committee act as a watchdog on the progress in this war. We should set up a long-term systematic program for followup. As a corollary to this it would be helpful to the Congress, I believe, if a regular report were inserted in the CONGRESSIONAL RECORD indicating our progress. It could be something reported in a similar way to the thermometer in a United Fund fundraising drive. What is our national goal for nutrient removal from our lakes and streams and how far along the path to reaching that goal have we come? Could it be reported on a weekly basis as pollution control facilities come onstream? On a monthly basis?

Mr. Speaker, we cannot wait longer to make this all-out effort to bring man into harmony with his environment. I cannot see why the next decade would not be the proper time framework in which to fight and win this war. He might want to call them the sobering seventies because it will not be an easy struggle. It will not be without wrought emotion and anguish and distress. It will not be without political battles and narrow vision conflicts and legitimate differences. But let us set January 1, 1980, as the date for victory over pollution and waste and the ecologic follies of the past.

And just one other thought, Mr. Speaker. This war requires a theme song, a rallying cry, if you will. There is such a song. It is called "America The Beautiful." And I will insert the words to that great national hymn at this point in the RECORD. I would like to recommend that it be made our national anthem—on January 1, 1980.

AMERICA THE BEAUTIFUL

Oh, beautiful for spacious skies, for amber waves of grain, for purple mountain majesties above the fruited plain! America! America! God shed His grace on thee, and crown thy good with brotherhood from sea to shining sea!

Oh, beautiful for Pilgrim feet, whose stern impassioned stress a thoroughfare for freedom beat across the wilderness! America! America! God mend thy ev'ry flaw, confirm thy soul in self control, thy liberty in law!

Oh, beautiful for heroes prov'd in liberating strife, who more than self their country lov'd and mercy more than life! America! America; may God thy gold refine, till all success be nobleness, and every gain divine!

Oh, beautiful for patriot dream that sees beyond the years thine alabaster cities gleam undimm'd by human tears! America! America! God shed his grace on thee, and crown thy good with brotherhood from sea to shining sea!

Mr. Speaker, the people have a basic understanding of what is best for America. They want an end to the filth in the air we breathe, in the waters of the earth, on the land where we live. Let us get with the people.

## SOVIET MISTREATMENT OF JEWS—A FERVENT PLEA

### HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. PHILBIN. Mr. Speaker, the country has been shocked, and all of us are dismayed, by the reports we receive from time to time concerning mistreatment of Jews by Russian officials under the Soviet regime in Russia, and that these outrages have been confirmed by documentary evidence corroborated by statements of officials and the people.

I am pleased to join with my distinguished friend from New York, the Honorable JONATHAN BINGHAM, and other esteemed colleagues, in associating myself with them in asking the State Department to urge the Secretary General of the U.N. officially to recognize and circulate among its members the request of the Israel Government on the specific case they cite, and to refer the matter for action to the Human Rights Commission.

In addition, Secretary of State Rogers is being requested to urge New Zealand Ambassador Baxter to the U.N. to recommend to the Secretary General that this matter be officially referred to the Commission and placed on the Commission's agenda for consideration at the earliest possible date.

Further, it is recommended that the concern of the U.S. Government be expressed immediately over Soviet anti-Semitism with a firm request for thorough investigation.

I strongly endorse this protest and action, and respectfully urge Secretary of State Rogers to take this matter up with the U.N. and do everything in his power to achieve official U.N. action on this serious problem, which disturbs so many people all over the world, particularly in our own country where all men and women are equal under the law and are entitled, regardless of race, class, creed, or status, to be treated fairly, justly, and honorably, and to be protected in all their individual rights.

Anti-Semitism is a curse and a scourge to humanity and it must be banished by all mankind, and this Nation must set the example, as we have done in the past.

The Jews must be freed from the cruel bondage of Soviet discrimination and mistreatments, and I urge our Government to take a determined lead in striking down these crass violations of ordinary human rights and plead with all my heart with the Soviet Government and the Russian people to end these deplorable practices that shock world conscience.

## TIME FOR START ON TENNESSEE-TOMBIGBEE WATERWAY

### HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. EVINS of Tennessee. Mr. Speaker, as our population soars above the 200-million mark, our Nation's waterway transportation network must be expanded to relieve congestion and pressures on land transportation routes.

In this connection the proposed Tennessee-Tombigbee Waterway would perform a vital and important function by linking Tennessee and the Midsouth to the Gulf of Mexico.

The Nashville Tennessean in a recent editorial underlined the importance of this project and I am placing the editorial in the RECORD because of the interest of my colleagues and the American people in this most important matter.

The editorial follows:

TIME FOR START ON TOMBIGBEE

Federal Budget Director Robert P. Mayo has promised that his department will try to find room in next years budget for funds to begin construction of the Tennessee-Tombigee waterway.

Officials from five states met with the budget director Thursday to urge some move on the long-awaited project. Rep. Joe Evins of Tennessee's Fourth District, a member of the House Appropriations Committee, said the group would like to see $5 million in the budget for the beginning of construction.

Although there is no assurance that construction funds will be included in the new budget, Mr. Mayo's reaction is the most promising sign that has been seen in some time.

Even if the full $5 million figure mentioned by Mr. Evins is not realized, an amount of $2.5 to $3 million would be encouraging. The important thing is to make some beginning on construction. After this is done, it should be less difficult to acquire funds later for continuation of the construction.

The Tennessee-Tombigbee project—which would open up a direct water route from Middle Tennessee to the Gulf of Mexico—has been in the planning stage for many years. It is time that all the planning and hopes that have gone into this needed project are brought to fruition. It is hoped the budget director's try to include construction will be more than just another putoff.

---

## THE MINERAL KING CONTROVERSY

## HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. BROWN of California. Mr. Speaker, shortly before he died, Walt Disney was quoted as saying about the Mineral King Valley of California:

I thought it was one of the most beautiful spots I had ever seen and want to keep it that way.

Much as I agree with Mr. Disney's opinion, I do not find myself in accord with his means of sharing Mineral King's natural values.

Mineral King already represents a major battle between commercial interests and environmental protectors, between conservationists and recreationalists. While the Disney organization moves ahead with plans for a huge $35 million resort complex in Mineral King, conservation groups such as the Sierra Club are attacking the project as a travesty upon the public interest.

The issue at Mineral King is not that of development or no development; all sides concur that the recreational and natural values Mineral King offers can be built up and protected. The key question is one of degree.

I recognize the desire for additional recreational facilities in southern and central California, but I believe a complex of the size planned by the Disney organization would cause irrevocable physical damage to this region—which includes the surrounding Sequoia National Park.

For that reason I have introduced H.R. 13521, a bill, which, if enacted, would include Mineral King within the existing Sequoia National Park. Giving Mineral King National Park status would be the best long-range solution providing adequate protection for natural values of the area, and, at the same time, allow for new recreational development which would be more limited in scope than the Disney plans.

Over past months I have collected a valuable group of analyses, articles, and editorials concerning the Mineral King controversy, and I would like to place them in the RECORD at this point:

SUMMARY OF THE PROPOSED MINERAL KING PROJECT

(Prepared by John Rettenmayer and Albert Hill from information supplied by Walt Disney Productions and the U.S. Forest Service, revised March 30, 1969)

The mountains provide variety for our lives—clean air and water, quiet, solitude, uncluttered vistas, and beauty. These things we prize, but they must be guarded, for they can disappear as quickly in the mountains as they have elsewhere. Clean air and water can be polluted, quiet and solitude can be lost to the crowds, the vistas and beauty overwhelmed by the structures of man. That is what may happen to Mineral King.

THE DEVELOPMENT IS TOO BIG FOR MINERAL KING

*Too many people*

1. The developer, Walt Disney Productions, expects 1,000,000 visitors annually. This is roughly half the number that causes a serious overcrowding in Yosemite Valley, an area which is approximately 7 times the size of Mineral King.

2. It is primarily a *summer resort*. 60% of the total visitation is expected during the summer months—5,000 to 10,000 visitors per day. Dispersal into the back-country, which the Forest Service proposes, cannot be adequate to spare the valley, but will render the high-country unattractive for hiking, fishing, and other summer mountain recreation.

3. The acoustics of the high lake basins is excellent. Noise from hundreds of downhill hikers will degrade the quiet, remote atmosphere of the back-country. The camaraderie of the trail will be lost to the impersonality of the freeway. (The noise problem will be severely aggravated by the regular helicopter service which is planned.)

4. Trampling, littering, and pollution are other likely problems.

*Too many structures*

5. The hotel complex with 1030 rooms (the 11-story Disneyland Hotel has only 608 rooms) will dominate the valley.

6. Numerous restaurants (one atop a peak) will serve 2300 guests at one time.

7. Parking will be provided for 3,600 automobiles in an 8–10 level parking structure adorned with a heliport.

8. 22 ski lifts, penetrating into every major lake basin and to the ridge-top boundary with Sequoia National Park, will mar the landscape like powerlines. Service roads for lifts and other facilities will further scar and mechanize the back-country.

9. Specialty shops, conference center, theatre, swimming pools, and a golf course distract from the area's primary use as mountain recreation. They serve only to *attract* more people to an area that will already be too crowded to be fully enjoyed.

DESTRUCTION OF NATURAL BEAUTY

10. Walt Disney said: "Our plan for the area is being guided by one other very important consideration: Mineral King's great natural beauty must be preserved at all costs." Yet the Disney company reports state: ". . . grooming and manicuring of most slopes . . . will require extensive bulldozing and blasting in most lower areas and extensive rock removal at higher elevations" and "Extensive cuts and fills and site grading will be required in the parking area and in the village area." The result will no doubt be a well-manicured resort, but it will not be the preservation of the natural beauty of which Walt Disney spoke.

11. Other alterations of the natural scene will be the relocation and channelization of the Kaweah River (in two places) and of Monarch Creek, and the creation of a reservoir which will destroy the choice meadow land in the middle of the valley. A golf course may be located beyond the reservoir. Avalanche control will require an extensive amount of earth-moving.

IMPACT ON SEQUOIA NATIONAL PARK

12. The new high-speed highway across the park to Mineral King would endanger half of the Giant Sequoia trees which lie below the road.

13. Of great concern is the potentially dangerous precedent which would be set if this road for non-park purposes is allowed to cross the park. Precedents are important in the American system of government, and this one could well lead to further invasions of the National Park System.

14. The noise pollution in the Kaweah canyon will be greatly aggravated by heavy auto traffic and helicopter transportation in and out of the resort. It is expected that 1200 cars per hour will pass through the park during the main arrival and departure times.

15. Powerlines to service the development will be strung across the Park.

16. A separate private development planned for 160 acres adjacent to the park at Silver City will add to the impact on the area in general and on the park in particular. This development will not be under control of either the Forest Service or the Park Service.

17. Testimony presented by Disney Productions at wilderness hearings proposed exclusion from wilderness classification of portions of the park next to Mineral King and in Hockett Meadows. The company said these park areas would be desirable for expansion of their resort facilities! It is exactly this expansion-minded attitude, particularly where the park is concerned, that bothers many people.

COST TO THE TAXPAYER

18. 90% of the cost of the new highway to service the Disney development will be paid for from gas taxes contributed by Southern Californians. The rest comes from U.S. taxpayers. The stated cost of the highway is $25 million, though some highway experts think it will be closer to $50 million.

THE FOREST SERVICE ROLE

19. There have been no public hearings for the expression of responsible public comment on the appropriateness of the proposed resort development on *public land*, despite several requests for such hearings by concerned citizens.

20. While minimum standards for the development have been set, no limits on the maximum size have been indicated. Indeed, although the prospectus specified a minimum expenditure of $3 million, the bid which was accepted was for $35 million.

21. The Forest Service requested and accepted a bid for the large-scale development of Mineral King three years before completing a study of the impact that such a development would have on Mineral King.

22. The development appears to be contrary to the intent of Congress. The area was recognized by the 69th Congress as being of park quality and was given special status as the Sequoia National Game Refuge. Congress should decide whether that status should be drastically changed.

PROLIFERATION OF RESORT AREAS

23. The Spring 1969 issue of "Skiing" magazine announced that ". . . at the risk of being accused by one of its major lease-

holders of 'overbuild', the USFS has offered a prospectus on Trail Peak, another on Dunderberg, another on Yuba Gap—and is about to offer one for the development of Sherwin Bowl, practically in Mammoth Mountain's backyard." Clearly Mineral King is not the only place in the Sierra which is desirable for skiing. (Note that Trail Peak is directly east of Mineral King and is even closer to Los Angeles.) The article closed with, "Another school of thought adhered to by some Forest Service officials is that eventually the additional areas will tend to generate more business rather that oversaturate the market." We can only ask, "Is it the proper role of the Forest Service to generate business for the ski industry?"

24. Perhaps the various jurisdictions of the Forest Service should get together and arrive at a "zoning" plan for the entire Sierra. New recreation/entertainment complexes should be put in areas which are already used for that purpose. Uncommercialized natural areas such as Mineral King should not be sacrificed to local empire-building within the Forest Service.

---

[From the New York Times Magazine, Aug. 17, 1969]

PROTECTIONISTS VERSUS RECREATIONALISTS—THE BATTLE OF MINERAL KING

(By Arnold Hano)

High in California's Sierra Nevada nestles a small alpine valley, ringed by bold and snowy peaks. Towering stands of pine, cedar and fir rise up from granite beds to set the air tingling with the smell of Christmas all year round.

Mineral King Valley, located within the northern tip of the Sequoia National Forest, 228 miles northeast of Los Angeles, is a serene-appearing place. Backpackers come each summer to hike over the ridgeline into the wilderness beyond. Fishermen angle for trout in 20 emerald lakes that sparkle in hanging basins above the valley floor. A tiny community of cabin dwellers move back into their shingled shacks to escape the heat of the San Joaquin Valley towns below the Sierra's western slopes. In winter, snows sometimes bury the cabins until nothing is visible but white-mantled peaks and lonely evergreens, and the only sound is a coyote's howl.

The single road into Mineral King, partly paved, partly dirt and narrow, steep and winding as a goat path, is blocked by the first heavy snow of late fall. It remains virtually impassable until late spring. I drove the road this May, switching from car to four-wheel-drive truck to snow tractor. The 25 serpentine miles took two and a half hours.

Serene the valley appears, though serene its history seldom has been. Paleozoic seas buried the valley 200 million years ago. Volcanos later split its crests and poured molten lava down its flanks. Ice Age glaciers peeled back the volcanic magma and gouged through the rock to shape peaks, fashion stream beds, scoop out lake basins and polish the naked granite slopes until today they gleam like marble.

Now Mineral King is again the scene of a bruising struggle. If the opposing forces are somewhat less titanic, they make up for their size by their acrimony. On one side are major commercial interests, and their supporters in state and Federal governments, who have in mind developing the valley for public recreational use, at a profit. On the other side are a host of outraged conservationists, including the Sierra Club, which, on July 26, obtained a temporary Federal injunction that blocked the development. Named as co-defendants in the suit: Department of Agriculture Secretary Clifford Hardin, Interior Secretary Walter Hickel, Sequoia National Park Superintendent John McLaughlin, Regional Forester J. W. Deinema and Sequoia National Forest Supervisor M. R. James.

The valley is public land, 1,500 acres in all, superintended by the U.S. Forest Service. Its magnificent ski bowls and its dependable snow pack from fall to spring have long been eyed by skiers and resort operators. Back in 1949, the Forest Service invited developers to submit proposals to turn the valley into a year-round recreation resort. But no bids were received; the problem of constructing a new access road to the valley appeared too difficult and too expensive.

By 1965, however, when bids were again invited, interest had grown mightily, and so had Southern California's ski population. A major ski resort was badly needed; this time six developers submitted plans. One bid was approved late in 1965. The bidder, Walt Disney Productions, was granted a three-year permit to develop its master plan. Now Disney's master plan has been approved by the Forest Service, accompanied by cries of anger and anguish from such traditional protectors of the primitive scene as the Wilderness Society, the National Parks Association and the litigious Sierra Club.

Nor is opposition restricted to these groups. The public has become involved. Bumper strips have begun to appear in California—"Keep Mineral King Natural." College youngsters talk of taking their militant tactics to the Sierra hills, threatening "lie-downs" in front of the highway bulldozers to come. Letter writers, urged on by Sierra Club chapters, are pressuring Congress to help block the development. The temptation is to call this a conservation battle, but because both sides claim to be conservationists, let me try two other words—recreationists and protectionists.

At Mineral King, Walt Disney Productions intends to build a $35.3-million, year-round resort to accommodate skiers in winter and such warm-weather activists as hikers, swimmers, fishermen and campers the rest of the year. An Alpine Village will be built on the 7,800-foot-high valley floor, with five-story hotels, restaurants and shops. Twenty-two ski lifts and gondolas will rise to the magnificent skiing surfaces, 3,000 and 4,000 feet above the valley. An enclosed lift will take the hungry tourist to a restaurant midway up one peak, and the more ambitious, or less vertiginous, to another eatery, at an 11,100-foot summit. In winter there will be skiing, skating and skibobbing. Novice skiers will see their mistakes on a closed-circuit TV screen via taped replay. In summer, the valley turns into a wonderland of gurgling streams, limestone caves and grassy meadows; rugged trails to sightseeing points will permit the viewer to spot, 30 miles at a distance, Mount Whitney, American's highest peak below Alaska.

Plans have been drawn for skating rinks, heated swiming pools, horse corrals, a chapel, a theater and a five-acre sublevel parking structure for visitors' cars. A cog-assist electrict railway will transport visitors from the nine-level parking facility, cut into a natural swale, to the village, a mile and a quarter up the valley. If all had gone well, construction of a new 20-mile access road, to replace the steep goat path and reduce the two-and-a-half hour trip to 35 minutes, would have begun early next year, at a cost to California taxpayers of more than $1-million a mile. And if all had continued well, Disney hoped to collect its first $1.25 (or maybe $1.50) parking fee in December, 1973. By 1978, the resort expected to attract nearly a million persons a year, to sleep up to 3,000 each night and to accommodate as many as 8,000 skiers on its slopes at one time. All this in a valley not much more than two miles long and a mile and a quarter wide.

The protectionists are aghast. They believe that the construction of the Disney development and the access road will overcrowd and desecrate the tiny valley, pollute air and streams and compromise outdoor values. They point to the official designation of Mineral King (the Sequoia National Game Refuge) and decry the plundering of a game refuge by private development with, they say, the likelihood that wild animals and their habitats will be abused. Finally, they charge that the planned access road, now blocked by the Federal injunction, must pass through nine miles of the Sequoia National Park and violate national park values.

The road would be capable of carrying 1,000 cars an hour, at speeds up to 50 miles an hour, one lane in each direction, with occasional third or "safety" lanes for passing. Just how safe is a matter of dispute. The Clarkeson Engineering Company, in a report prepared at the request of the associate director of the National Park Service, declares "the safety-lane design proposed by California is . . . very unsafe and should not be used."

Safety aside, the road poses a threat to the national park and its vegetation, particularly the giant sequoias, those Sierran redwoods that are the earth's largest living organisms and among its oldest. Drainage from road construction might wash away the thin soil that protects the astonishingly shallow root structures of these forest giants.

Michael McCloskey, new executive director of the Sierra Club, emphasizes the probable damage to trees along the road from auto pollutants that will coat trunk, branch and leaf. "Smog has poisoned trees in the hills around Los Angeles," McCloskey points out. "Those trees are not protected by national law. These trees are." Protectionists do not pretend that the situation will be as bad as that of Los Angeles, where an inversion layer keeps contaminants from being blown away. Sierra winds will blow most of the smog away. Most, but not all. Morison R. (Jim) James, supervisor of Sequoia National Forest, in referring to the 20-mile access route leading up to Mineral King, says: "On a hot August day, you can see the smog and haze climb up the canyon from below, even now. To some extent, this will be compounded by all the cars climbing the new road."

In reply to protectionists' arguments, both Disney and the U.S. Forest Service—landlord of Mineral King—issue a general demurrer: no pollution, no erosion, no desecration, no threat to a single sequoia, no alienation of public land or of public trust. Forest Service officials insist that the designation of the area as a national game refuge in no way affects its right to put the land to other use. The Forest Service runs its land under a "multiple-use" philosophy, assigning to each area a use or a variety of uses that seems best adapted to that area. The uses are five in number—water and watershed management, timber, grazing, wild life and recreation. Understandably, this often leads to conflict between "users." Loggers see forestland as construction material; watershed people see the same trees as necessary to prevent runoff. Concessionares want to build hot dog stands where prairie dogs make their homes. At Mineral King, the Forest Service has decided that the valley can best be used for recreation.

Recreationists see in Mineral King a piece of primitive land once practically inaccessible and now about to be made available for the playtime pursuits of thousands of Southern Californians, five driving hours away, among whom are hordes of skiers with no major ski area closer than overcrowded Mammoth Mountain, 340 miles from Los Angeles. Mineral King, with its slopes shaped into the classic U-bowls that are the relics of glaciation, will provide superb skiing. Any of its five ski bowls marked for development is larger than the total ski surface of either Mammoth Mountain or Squaw Valley, scene of the 1960 winter Olympics.

The Disney people and the Forest Service are not unaware of esthetic and ecological considerations. Robert B. Hicks, an economist

hired to run the Mineral King project by Walt Disney personally, before Disney's death in December, 1966, is adamant that the natural beauty of the area will remain unblemished, and the numbers of visitors will not unduly tax the small valley's dimensions.

The Disney staff has received 37 awards for its past work in wilderness conservation. Walt Disney was a life member of the Izaak Walton League and—the observer is gently reminded—was elected in 1955 an honorary life member of the Sierra Club.

Bob Jackson, a Disney publicist, calls the project's objective "a controlled introduction to nature experience," and he emphasizes the word "controlled." Though construction has not started, Disney has plunged over $500,000 into site surveys, reports and the hiring of consultant engineers, hydrologists, architects, meteorologists, soil scientists, foresters, resort operators and ski experts. Disney snow-survey teams have lived in Mineral King the past four years, to map snow data and plot avalanche activity. In 1967, Disney people visited 22 ski resorts in five European countries. They came back contemptuous of what they had seen: overcrowded facilities, a hopeless mix of auto and pedestrian traffic, cumbersome ticketing procedures at the ski lifts, primitive luggage handling, what Disney's John Hench calls "a general disregard of a guest's comfort." All of this, of course, will be vastly different at Disney's Mineral King.

The Forest Service is elated with such super-organization, such promised efficiency. Jim James, forest supervisor, says: "For the first time, we have a developer planning everything from scratch, and planning it far better than any ski development has been planned before. We're happier with Disney than a frog in a mud puddle."

Project manager Hicks brings to his job excellent credentials. An economist, he also holds a degree in engineering. He is a one-time resident of Visalia, 55 miles east of Mineral King, so he knows the area. He has skied for more than 20 of his 47 years. He is a friend of Willy Schaeffler, director of ski events at the 1960 winter Olympics, who serves as Disney's ski conultant. The two men often ski Mineral King, learning what they can of the slopes.

Hick spends other time visiting service clubs in Southern California, speaking to Rotary, Kiwanis and the like, softly selling the Disney plan, armed with slides of the area as it now looks and as Disney artists foresee it. He devotes a few minutes of his presentation to "correcting the misstatements of the press."

One such "misstatement" is the inclination to prejudge the Mineral King project as a transplanted Disneyland—cute, colorful, supercalifragilisticexpialidocious and out of keeping with the rugged setting of the High Sierra. Nothing so infuriates the Disney people. Says Hicks: "It is unfair to think that Disney did a good job at Disneyland, but will do a bad job elsewhere. Why not assume this project will be just as appropriate for Mineral King as Disneyland was for the recreation needs of Anaheim?"

To the Disney side of the debate have come a cluster of politicians, including U.S. Senator George Murphy, Gov. Ronald Reagan and past Gov. Edmund G. (Pat) Brown; civic groups; state and Federal agencies; local newspapers; local businessmen. The Disney project will be big business, not only for Disney. The Forest Service will receive back from the Disney operation an estimated $300,000 the first year, graduating to $600,000 by Year 5–1978—based on a percentage of receipts. The building of a $23-million road is a pork barrel of much succulence. The influx of tourists means money to the gateway cities in the San Joaquin Valley below. The city of Visalia, astride a freeway that runs north from Los Angeles, is the capital of Tulare County; county officials are fairly slavering over what they expect to be $500-million in taxes, payrolls and the like within 10 years after the project opens its doors. Tulare County is afflicted by high unemployment; Pat Brown, while he was Governor, wangled $3-million from the Federal Government toward the cost of the new road because it will run through this economically depleted area.

Not that crassly fiscal advantages are the only considerations of politicians. Friendship may be another consideration. George Murphy, Ronald Reagan and Walt Disney were close personal friends. Before he left office, United States Senator Thomas H. Kuchel, long identified as a champion of wilderness, strongly endorsed the Mineral King project in words the Disney people circulate whenever the debate begins: "If we fail to develop selected areas such as Mineral King, the 50 million people who will be in California before the end of this century will spill over the sides of the coastal cities and ravage the Sierra with unplanned and undirected enthusiasm for the vanishing outdoors."

Such are the arguments in favor of the Disney development on national forest land. They are persuasive and delivered by persuasive and talented people. They know what they are doing. They are the same people who have turned Disneyland into one of the minor financial miracles of our time, with its more than nine million visitors each year. They are the same people whose films and television shows are among the most popular and financially successful of their media. At present they are building a mammoth vacation-recreation resort on 27,000 acres of former marshland and cypress forest in central Florida, to open in 1971, at a cost to Disney of $165-million. When Walt Disney died, his older brother, Roy, a bald folksy look-alike for Ed Wynn, said of the organization: "We're trying to be as smart collectively as Walt was individually." Yet even during Walt's life, Roy was the financial wizard of the team. In 1968, two years after Walt's death, the corporation had one of its finest fiscal years.

At Mineral King, they surely seem to know what they are doing. During this past winter—California's most severe in a century—avalanches crushed nine of the old cabins. Yet the site Disney had chosen for its new Alpine Village remained untouched by avalanche activity. The Disney snow-survey teams had mapped out exactly where avalaches might occur and where they would not. The winter proved them right.

Disney and the Forest Service expect to do something about future snowslides at Mineral King. The Forest Service has been experimenting with bringing on avalanches by firing blanks from 75-mm. howitzers and by dropping dynamite from helicopters. We know how to move the snow," a Disney official says. "We can make it move when *we* want, not when *it* wants."

Yet this confidence and the cold, efficient ability to manipulate nature to man's needs do not still the debate. In a sense they spur it on. Within the valley are two creeks—Monarch and Kaweah—that merge to form the east fork of the Kaweah River, one of the major watering sources of the San Joaquin Valley farmlands below.

Monarch Creek is a young stream, still carrying glacial debris as it cuts through the valley floor. It is, in fact, one of the ongoing architects of the valley, a jubilant stream that kicks up its heels once in a while. When Monarch Creek becomes bored with its old channel, it changes course and begins to carve out a new direction. Disney and the Forest Service cannot countenance such initiative that might one day send Monarch Creek waters tumbling through the lobby of a new hotel. "Disney will put the stream into a permanent channel," explains W. S. (Slim) Davis, chief of recreation for the National Forests of California, "and keep it there."

Does Forester Davis approve of this tampering with nature?

Davis chuckles. "Let's say, we'll complete nature's job sooner."

It is this chuckle that chills protectionists, the sound of smug man maneuvering nature at his whim. "That's typical of the Forest Service," says the Sierra Club's McCloskey. " 'Nature doesn't know what it is doing. We know better.' "

Protectionists point out that glaciers and streams, without the help or hindrance of man, created Mineral King. The valley knows how to survive its own catastrophies, but it is defenseless before man's. Mineral King has lived through flood, volcanoes, glaciers, changeable streams and storms, not for just a century, but for 20,000 centuries. Avalanches this winter tore out several thousand trees. To the protectionists, this is nature's way. The trees will grow back. Once, millions of years ago, giant sequoias covered most of the Northern Hemisphere. Then the Ice Age swept all before it, except for a few pockets in the west slopes of the Sierra Nevada. Only here, in all the hemisphere, did giant sequoias survive. Today their offspring live, growing and vigorous. The sequoias have lived through the Ice Age. Can they live through the Disney Age?

Strictly speaking, it is not the Disney development that threatens Sierra vegetation, but the proposed access road. Mineral King has been saved from human hands, for the large part, because of its inaccessibility.

From the town of Three Rivers, at the east edge of the San Joaquin farming valley, to Mineral King—the route of the new access road—the terrain rises from 1,200 feet to 7,800 feet, a dizzying ascent by any means, and totally forbidding in the days before any road at all existed.

In 1858, a stockman, Hale D. Tharp, made his home in a fallen redwood log in what is now the Sequoia National Park and occasionally hacked his way further east, to Mineral King. A few years later, Harry O'Farrell discovered silver in Mineral King, and through the eighteen-seventies, miners worked the land for silver, gold, lead and copper. The first road to Mineral King was a wagon trail, built by Chinese labor and completed in 1879. That year, the heyday of activity in the valley, 10 mining companies worked their claims. But when the mining claims did not pan out, deterioration set in. Just a few stubborn miners clung to their picks and their dreams.

In 1890, when the Sequoia National Park was established, Mineral King, though ecologically a part of the park, was not included, because of the miners. The national park system does not take in land where commercialism exists, and where man's works are as evident as they were at Mineral King, in the form of the primitive road and a few cabins.

Mineral King became, instead, part of the less sacrosanct national forest reserve. But all about it lay the Sequoia National Park, and to get to Mineral King, you had to cross the park.

In 1945, the Forest Service began to look on the area as a possible winter resort. Naturally the problem was access, and the solution was to persuade the State of California to allocate the funds for a new road. But with the migration of Americans to California, at the end of the war, the state had road-building projects enough. No state money was available when the Forest Service asked for bids from private developers in 1949, and no private developer would build a road with his own money.

In 1960, Walt Disney inquired whether the Forest Service might not again be putting the land out to bid. In 1965, a prospectus went out, and six developers responded. Even before the Disney bid was selected, the California Legislature voted to add the Mineral

King road to the state highway system. After Disney was picked, the pace continued to accelerate. Funds came from Federal and state coffers.

But there remained one final step before road building could begin. The Forest Service and the Park Service had still not agreed on the road's nine miles through the Sequoia National Park. The Forest Service is part of the Department of Agriculture; the Park Service is part of the Department of Interior. Historically, these two giant Federal departments have not got along well; on this project, friction has been pronounced. The Park Service, custodian of the area through which this part of the road must run, has been traditionally more protective of the natural elements than has the Forest Service. In this instance, the major question has been whether the Sequoia National Park's giant sequoias will be endangered by the road.

Nature lovers were concerned that numbers of sequoias would be cut down to make room for the road. This fear appears groundless. California highway engineers have come up with a route that will not touch a single sequoia. Another fear remains. Will road construction, with its removal of eight million cubic yards of soil, its cuts and fills and subsequent runoff, undermine the giant trees' root structures?

The answer may depend on how carefully the California Division of Highways builds its road. Large cuts presuppose large fills, which can ravel and run off, and erode the drainage channels below. In these drainage ways many of the giant sequoias stand. If cuts are kept small, and roadbuilders immediately replant vegetation to stabilize the soil, the runoff problem is mitigated somewhat.

And the care the highway division takes may depend on the money available. It has $23-million to do the job. One consultant engineer privately estimated that building such a road properly, meeting esthetic and ecological criteria, will run closer to $45-million. Protectionists fear that, if he is right, the road will prove to be a hasty job, with much runoff and devastating soil disturbance.

There are 103 sequoias along the road right-of-way, of which 45 are said to be in a position of "possible jeopardy." But not only the sequoia is in danger. The last three miles of new road within the national park will be through thick stands of redwood, incense cedar, fir and pine.

Asked what would happen here, a Disney official said, "We will avoid the redwoods."

"How about the others?"

"We'll chop 'em down."

Perhaps the most concentrated felling of trees will occur just where the road ends, at the proposed new parking facility, below Mineral King Valley. Trees by the hundreds will be axed, to make room for cars by the thousand.

So the question is not whether there will be physical change in the area leading to Mineral King, or in Mineral King itself. The question is, how much? The question is not whether there will be disruption in the valley, but how severe? Such questions, of course, are as answerable as asking how high is up. "It is all a matter of philosophy," says Jim James. "The development will change the looks of the valley. I'd be a fool to deny it. But it will not ruin the looks of the valley. It will be an acceptable change."

It depends on what you are looking at and looking for. Certain changes in Mineral King would be welcome. The development of cabins on the valley floor is today a hodgepodge of groaning slats and shattered shingles. The Disney people tell visitors that the use of pit toilets (and the bushes) by cabin dwellers and summer campers and the presence of a horse-renting stable have contaminated the river below so that it is unfit for human drinking.

Yet all this is easily changed, as the Sierra Club's Mike McCloskey points out. "A little enforcement by the Forest Service would keep the place clean." Nor does McCloskey think the river is that contaminated. "A recent park report says the water quality is excellent for fish. It can't be very polluted."

The problem at Mineral King is that recreationists and protectionists look at the same thing with different eyes. One sees public land unused and considers it a waste. The other sees the same public land unused, and considers it preserved. One sees the tampering with nature, and considers it necessary. The other sees the tampering with nature, and imagines a biotic community jeopardized. One views ski slopes and wild animals, in that order. The other views wild animals and ski slopes, in that order. One seeks immediate gratification for himself; he wolfs down pleasures and seeks out more. He is hedonist, recreationist. The other defers his gratifications, saving them for later generations. He is puritan, protectionist. The recreationist at Mineral King says: "Look beyond the ridges; there are still nearly two million acres of adjacent wilderness. What's wrong with using this tiny piece of land, this mere 1,500 acres, this less than one-tenth of 1 per cent of all the national forest land in California?" The protectionist sees population growing and public land shrinking, and he wonders where it will ever stop.

The recreationist sees public land put to use; the protectionist sees it put to auction. In California alone, 46 ski areas have been built on national forest land; throughout America, the figure is nearly 200. The only thing unique—say the recreationists—is that the Disney resort will be better than any other. The only thing unique—say the protectionists—is the magnitude of the Disney development.

One wonders, today, whether the Forest Service does not secretly agree that the proposed development is a wee bit bigger than the service originally conceived. The Forest Service prospectus, calling for bids, speaks of a development "conservatively estimated at $3-million." The Disney investment will be $35.3-million. The Forest Service prospectus suggests accommodations for "at least" 100 overnight visitors. Disney plans to bed down 1,505 the first year, and 3,310 by 1978. The prospectus calls for parking 1,200 autos; Disney's nine-level facility will handle 3,600 cars the fifth year, with plans for two supplemental parking lots in case of overflow crowds.

Do these quantum jumps give the Forest Service occasional twinges concerning the ability of the tiny valley to absorb such a crush of visitors and installations? Forest Service recreation specialist Peter J. Wyckoff says: "I'm not worried about the winter and skiing. But in the summer the country is fragile and overuse could easily destroy it." Mike McCloskey testifies to the fragility: "At this high elevation, the growing season is short, and vegetation has a tenuous hold on life. Only a narrow balance of conditions allows vegetation to thrive here. Upset the balance, and you destroy that hold on life."

So the Forest Service must know it has taken a chance.

The Sierra Club has also worried that the Disney development would trigger similar developments in the area. Even Disney had been concerned, remembering how—in Bob Hicks's words—"honky tonks and beer parlors" had sprung up on private land all around Disneyland, giving the area a cheap and garish look. Hoping to avert this at Mineral King, Disney had bought up the small parcels of private land near the site of its proposed development to insure unified control of the area. But a parcel of 160 acres within the boundary of the Sequoia National Forest, near the town of Silver City, five miles west of Mineral King, remained in other private hands.

Early in 1969, the Tulare County planning department approved an application for construction of a residential and commercial community on this 160-acre site, the Seaborn-Wells project. The development would include a 30-unit motel, a 72-unit lodge, 20 condominiums, 48 single-family units, a gas station, a swimming pool, stores and a restaurant. All virtually check by jowl with Mineral King.

Now the Forest Service finds itself in an embarrassing position. On one hand, it endorses development on *public* land by a private investor—the Disney organization. On the other, it finds itself opposed to development of *private* land by a private investor—the Seaborn-Wells people.

"We are against a development of this magnitude in the valley," says Jim James, and he is talking about Seaborn-Wells, not Disney. "It competes with the idea we have of the total capacity of the place." Jim James spoke to the Tulare County board of supervisors, and in May Seaborn-Wells was turned down. But Seaborn-Wells will now appeal.

If Seaborn-Wells wins its appeal, the Forest Sevice will institute condemnation proceedings to buy the land. But 160 acres in this area of suddenly inflated real-estate values could cost as much as $2-million. All this should have been taken care of before the Forest Service put Mineral King out for bid in 1965; the 160 acres could have been bought up for a song.

The Sierra Club fears of "piggy-back" developments were further confirmed in June when plans were announced for the construction of a 12,000-acre resort at Three Rivers, gateway to Mineral King.

Withal, the Forest Service has emerged as something less than heroic. In its Mineral King prospectus in 1965, the service estimated the cost of the new access road at $5-million. It missed by $18-million. When asked about this discrepancy, the Forest Service explained: "We were using 1953 cost figures." This is the service that superintends 186-million acres of public land.

Something else is needed. We all have suffered too long over Federal and State abuse of pubic land. Dams in the Grand Canyon; oil wells drilled in the Santa Barbara channel that seep tar over the golden beaches of Southern California and murder birds and sea life in the bargain; state tidelands in Maryland slickered away from the people and given to a real-estate developer; now, Mineral King.

You can't blame Disney or his ilk. That is the nature of the beast. But someone or something must keep a check on development; somebody must say: "All right, that's enough. Any more and the place bursts at the seams." When Disney's Bob Hicks was asked: "How come you've got a chapel in your plans? Isn't that the beauty of Mineral King—that you don't need to get inside a building to commune with God?" he answered: "I agree. I don't see the need. Somebody threw it in." The problem won't be getting Disney to leave out things, but to keep it from throwing in more. Yet there is nobody to keep it from throwing in more. The Forest Service is, by law, that check, but a Disney official says with contempt: "Our standards are higher than the Forest Service's."

What we have at Mineral King is another absentee landlord. It is easy enough to be offended by the Disney project, and its threat to the ecology of Mineral King. Something is going to be taken forever from Mineral King—nature with the bloom of creation upon it. In its place, Disney will leave another pleasure palace, for Southern Californians, who have more pleasure palaces per capita than any other people in the world. So it is easy for the protectionist to take his potshots at the Mineral King development.

But more significant is how government landlords—Park Service, Forest Service and

the like—continue to allow massive violations of public land. Yellowstone National Park—our oldest national park—is today a chaos of urbanization within a bewildered wilderness. Yosemite National Park is so overcrowded, a trip becomes more drudgery than pleasure. The scars to the terrain of our national forests, left by indifferent loggers, turn public land into festering sores.

What can be done? The President's new Cabinet-level Environmental Quality Council might help, though its first action—to suggest further oil drilling in the Santa Barbara channel—boggles the minds of protectionists in the coastal cities of California. What is truly needed is a Federal Department of Conservation, to protect all our natural resources—to handle pollution of air, water and land; to study population growth; to establish public-land policy; to meet recreation needs without disturbing wild-life ecology. All the parts tied together in one department, not sundered among a half-dozen.

As for Mineral King, the whole struggle may be past history. It is not likely the Sierra Club will win a permanent injunction against the development, although the granting of a temporary injunction may force Disney to postpone its opening. Even the most optimistic conservationists know the score—Progress always beats Protectionism. It is less likely that the Forest Service will now suggest to Disney: "Look, this is a great pleasure palace you have designed, but perhaps the valley can't take it. Can't you cut it back—leaving out the theater, the chapel, the closed-circuit TV, the restaurant on the summit, a few hundred parking spaces? Can't the people swim in the lakes; do we need heated pools? Can't it be a modest development, with five or six ski lifts, not 22; with two slopes for skiing, not five?"

But it is too late. The Forest Service will not sacrifice $300,000 the first year, and $600,000 the fifth year. Such money justifies its existence, come budget time. Mineral King has subtly changed in Forest Service eyes, from a remote and lovely alpine valley, to a playground with turnstiles.

Perhaps, then, the truest value of Mineral King is that it stands as the latest crass example of abuse of public land by the very agents to whom we entrust that land. One wonders how long America must tolerate such stewardship.

---

[From Natural History magazine, November 1968]

THE KING BESIEGED

(By Jack Hope)

Standing upon one of the treeless peaks that surround California's Mineral King Valley, surveying the wilderness of the southern Sierra Nevada, provokes a certain spirit of uneasiness. The feeling is not unpleasant, but is disturbing only in the sense that it is one that we aren't used to dealing with.

I don't think it's the height that brings about the sensation, or the vast abyss that suddenly opens in front of you. Nor is it simply a product of the powerful alpine panorama. More than anything else, it seems to stem from a feeling of inappropriateness on the onlooker's part. But then—perched atop a mass of granite that thrust its way from the earth's crust 30 million years ago; gazing down from a height of 12,500 feet upon an incredible array of jumbled, snow-streaked peaks, alpine meadows, and evergreen-covered mountainsides; recalling a passage from the guidebook, which notes that 200 million years earlier this land rested at the bottom of a sea—what can you do that "fits" the occasion? Take a picture? Identify wildflowers?

I don't mean to imply that Mineral King (commonly known as Mineral King National Game Refuge) is unique. In fact, most of the Sierra Nevada contains similar features—the mountains and the giant sequoias, the glacial lakes, and the wide eyed mule deer. However, as wilderness (with the exception of a few hundred acres) it is at least exceedingly rare. For in the United States only about 2 per cent of our land falls into this "wild" category—about one-fourth the area now taken up by cities.

One of your first reactions to Mineral King is that you would like to show it to others who have not had the chance to see it. Your friends primarily, but others as well: a delegation of lawmakers, perhaps, or the boys who drive grocery carts around Manhattan. It seems that if more people could see such places, the job of caring for them would be much simplified—people would want to protect them for themselves, for their children, and for their friends.

There is some truth to this thought, but there is a great naïvete as well. For wilderness is by definition a perishable commodity. It can easily be loved to death in the attempt to display it to the greatest number of people. Building roads, for instance, to "make wilderness more accessible to the millions"—despite its democratic overtones—is self-defeating; something like carving up Michaelangelo's statue of "David," so that each of us might own one splinter.

For another thing, not everyone looks at the land in the same way. Mineral King's 15,000 acres are regarded by different people as a setting for a beautiful photograph, a hike, a fishing trip, or as a place for the study of biology. Some see the terrain as ideally suited for a ski resort, while others welcome the wild country as a means of getting out of contact with other people for a few hours or a few days. There are those who classify the land and its creatures as "natural resources" to be used for the generation of income; and some who regard it as important in itself—whether or not it is seen, smelled, heard, touched, or tasted by humans—its own reason for being.

Each group has its own notion of what should, or should not, be done with the land, and as you might guess, these notions conflict at least as often as they coincide. Yet, within the past 20 years, each faction has come to regard itself as the champion of a cause called "conservation" (whether their real interest lies in hiking, in hunting, or in cutting trees). This is the situation at Mineral King, where, within the next few months, the proponents of one of these viewpoints will be awarded the privilege of shaping the future of this region according to their own conception of this popular term.

On the surface, it is not always clear whether a group's choice of the conservationist label is appropriate—whether it stems from a misuse of the dictionary, or whether it is, in fact, a product of a good public relations department, which knows that the word has a high "acceptance value." The story of Mineral King may be instructive in this regard; may serve as a prism through which the apparently single beam of "conservation" can be separated into its components for the purpose of closer examination.

In February, 1965, the Department of Agriculture's Forest Service issued a *Prospectus for a Proposed Recreational Development at Mineral King in the Sequoia National Forest*. The purpose of this rather stark little document was to solicit bids from private developers for the privilege of constructing and operating a year-round recreation resort within the Mineral King National Game Refuge, a 15,000 acre neck of Forest Service land protruding into the southern boundary of Sequoia National Park. In addition to serving as a wildlife refuge, the region is now used for a variety of activities—camping, hiking, fishing, and sightseeing.

This is not a new type of activity for the Forest Service, whose guiding principle of land management is that of "multiple use." What this term means in regard to the natural environment is that the Forest Service is sanctioned to be one degree less protective than is an agency such as the National Park Service. Thus, on the 187 million acres of public land administered by the Forest Service, a wide variety of activities are permitted, including lumbering, hunting, livestock grazing, mining—even some private cabin building.

And within the last decade the focus of national attention upon the country's recreational potential, combined with the spiraling magnitude of the billion dollar recreation business, has "sensitized" the federal government's largest landholding bureaus to the task of accommodating a prodigious number of special recreation interests, ranging from motorboating to motorcycling and from skiing to skimobiling. Toward this end, the Forest Service has undertaken to make much of its domain available for a multitude of uses, and in the case of skiing, has leased public lands to commercial developers who now operate such well-known ski meccas as Aspen, Vail, and Sun Valley in the west; and Mt. Snow and Sugarbush in the east.

Thirty-seven of the 190-some ski areas on Forest Service land are located in California—more than in any other state. Nevertheless, that state's current population of about 19 million is growing rapidly; it is expected to reach about 25 million in 1976, and perhaps 40 million by the year 2000. The use of the state's outdoor recreation facilities—both winter and summer—is undergoing an even more rapid expansion. The Forest Service predicts that use of California's national forests for winter sports alone will climb from the present level of about 2 million annual visits to 6 million in 1976 and 12.4 million in 2000.

An interesting aspect of the country's recreation "boom" is the extent to which it is a middle-class (or at least a "non-lower" class) phenomenon. Participation in even the simpler forms of outdoor recreation calls for a certain income level. Gaining access to a national park or forest, for example, is frequently contingent upon automobile ownership. And such pursuits as skiing, motorboating, and the more elaborate forms of camping require a considerable investment to purchase and operate the necessary equipment, and perhaps to pay for the privilege of using it.

The typical ski-family in the western states, for instance, has an annual income of $9,500 ($2,000 above the average income for that area); an adult member of this family owns about $300 worth of ski equipment, and spends over $20 per day on his ski trips. Sporting-goods salesmen, restaurant owners, and motel operators are fond of these people.

In addition to their relative affluence, ski enthusiasts are generally well organized, vocal, and therefore influential, even though they make up only 1 to 2 per cent of the total population. And, like many special interest groups, skiers have regular means of broadcasting their requests that new regions be opened to their sport—the many ski magazines, the political friends, and so on.

Influences of this sort play a part in the decisions made on what to do with the country's public land. Some twenty years ago, for example, the Forest Service decided to develop Mineral King Valley, hoping perhaps to relieve the pressure skiers were exerting to have other areas opened, such as the San Gorgonio wilderness in southern California.

But in 1949, when the first attempts were made to attract private capital to develop Mineral King, no bids were received, because the only access to the area was, and still is, a serpentine, twenty-five mile road leading from the San Joaquin Valley up into the Sierra Nevada range—somewhat difficult to drive during summer months and completely

blocked with snow during the winter. Potential developers were not interested in building a ski resort that no one could get to. No sizable recreation complex could be installed without widening and straightening the roadway.

In addition, the road winds across eleven miles of Sequoia National Park before deadending within Sequoia National Forest at the small cluster of summer cabins and public campsites that make up Mineral King village. Thus, developers may have been intimidated by the legal and political complications of interfering with a road crossing land controlled by the National Park Service.

At the time the 1965 prospectus was issued, no solution to the access problem had been found; but in the 16 years that had elapsed since the first prospectus, knowledge had spread of the Forest Service's interest in the area. Learning of the intentions to develop the area's ski potential, ski clubs, developers, businessmen, and politicians in Tulare County (where Mineral King is located) began to regard the resort, along with its access road, as a real and desirable possibility. One hopeful developer (Walt Disney Productions) had speculatively purchased a small amount of private land in Mineral King Valley. Furthermore, the rapid increase in the number of California skiers had expanded the undertaking's potential support. Thus, in issuing the 1965 proposal, the Forest Service had some cause for believing that public and political support could be mustered for both the project and its necessary road.

The optimism was well founded. During the summer of 1965, the California state legislature voted to add a new highway to the state's road system. Highway 276, from the town of Hammond to Mineral King, would replace the old access road, would be kept snow-free by the state (the old access road was county maintained), and would ostensibly be wide enough to accommodate sufficient traffic at the proposed resort. The road is planned as a relatively straight, two- to three-lane highway, capable of handling about 1,200 automobiles per hour at speeds of about 50 mph. In addition, six bids were submitted to the Department of Agriculture for construction and operation of the recreation complex. These were narrowed to two, and finally, late in the year, a winning bid was announced. In December, Walt Disney Productions was chosen to carry out the Mineral King development and was awarded a 3-year permit to perform its initial studies of the region.

Up to this point, little opposition had been expressed to the project, except by local groups of outdoorsmen and by cabin owners in the Mineral King area who would be displaced by the development. National organizations that might normally oppose the area's commercial development were preoccupied with the problems of dam building in the Grand Canyon, cutting of redwoods (in the proposed Redwoods National Park), and other well-known issues. Some feared that opposition to the Mineral King ski resort would only serve to increase pressure by skiers to develop the San Gorgonio wilderness and were therefore reluctant to take a stand. Others, thinking outright opposition too late, felt that the best strategy was to try to limit the project's size. A few were even unsure of Mineral King's whereabouts, let alone its significance. But when the magnitude of the Disney development proposal was disclosed, the traditional champions of the natural environment—the Sierra Club, Wilderness Society, and National Parks Association—quickly realized that they were confronted with another major battle.

The Forest Service's original guidelines for the recreation complex were relatively modest: three or four ski lifts, parking for 1,200 automobiles, and resort accommodations for 100 overnight visitors—tempered by the warning that all facilities would have to remain "compatible with the aesthetic values of the area." The Disney firm, however, is known for doing things in a big way, and Mineral King is no exception. The original Disney plans called for a $35 million investment to include an alpine village, a heliport, a golf course, a reservoir-skating pond, swimming pools, an auto service station, two hotels, a 500-room dormitory, 1,200 cabins, a 20-acre parking lot for 2,500 autos, and ten restaurants within Mineral King Valley and on surrounding mountain peaks. In summer general sightseeing would be the main attraction; in winter skiing would bring as many as 20,000 visitors into the valley each day, from whence they would be whisked into the high country of the Sierra Nevada wilderness aboard 20 overhead lifts, which would radiate from the valley. Some of the lifts' towers would go beyond the boundary of Forest Service land and would be anchored in adjoining Sequoia National Park. Supplemental plans revealed the firm's interest in a facility, located well within Sequoia Park's Hockett wilderness area, that could accommodate cross-country skiers. Walt Disney Productions expects an annual income of about $23 million from the resort during the first years of operation, with this sum increasing thereafter as the area's popularity grows. The Disney plans also noted that "Mineral King's great natural beauty must be preserved at all costs."

With the plans before them, opponents of the development felt pressed by a twofold threat. First, they feared the immediate damage to the alpine environment that would result from construction of a roadway and a resort, and from the heavy human traffic. The prospect of bringing 2.5 million visitors annually into the heart of the mountain country conjures up pictures of tourists picking the ground clean of unusual rock fragments, wildflowers, evergreen cones, and other portions of the alpine landscape; of skiers watching the white wrappers of their candy bars slowly floating to the ground after being tossed from the gondola of one of the aerial tramways; of erosion caused by construction activity; sewage pollution in the Kaweah River; and of the intrusion of automobiles, buildings, and large numbers of visitors upon the mountain landscape. In addition, project opponents object to the disregard by the Forest Service and Walt Disney Productions for Mineral King's current status as a national game refuge. Among naturalists aware of the development plans a favorite parlor game during the past few months has been the casting of Smokey, the Forest Service bear, and Disney's Mickey Mouse in Simon Legree roles—dispossessing their fellow creatures in order to build the Mineral King resort ("Smoking strikes again!").

The Forest Service is well aware of the potential danger to the Sierran landscape posed by the planned resort. They note that "Mineral King can 'stand' development to only a certain level," but also contend that "Walt Disney Productions does not plan, and the Forest Service would not permit, a development beyond that capacity threshold." But "capacity threshold" lends itself to subjective interpretation, and what the term means to the Forest Service is apparently quite different from the meaning given by most of those opposed to the project. To the former group, it probably means a general attempt to keep ecological damage to a minimum, whatever the level of construction and human visitation. The latter define the phrase in terms of wilderness, in which case the threshold will likely be exceeded on the resort's first day of operation.

In a way, these differences of opinion reflect the essential conflict between the protectionist groups such as the Sierra Club and those more inclined toward development. Both are aware of the perplexing problem of providing recreational opportunities for a population that doubles every forty years, while our static land supply stubbornly refuses to expand despite the demands placed upon it. However, their approaches to this situation are quite different. The development faction seems to feel that the way to alleviate this difficulty is to make increasing portions of the environment easily accessible to the current demands of the population so as to spread the "visitor impact" over a larger land area. (Walt Disney Productions, for instance, notes that "the value of much public land . . . is lost because the land is inaccessible.") On the other hand, the protectionists view the growing number of claims upon the land as reason to stiffen its protection, perhaps to the point of rationing its use. This "pinch," they hope, will forcefully focus the attention of hunters, highway engineers, wilderness lovers, and resort builders on the real source of the growing real estate shortage, and will elicit stronger public sentiment to deal with the problem before the remaining public land is consumed.

From the viewpoint of the Sierra Club and its allies, the greatest threat posed by the Disney recreation complex and its access road is the influence these developments would exert upon the future protection of wild lands of the southern Sierra Nevada surrounding Mineral King Valley. Most of this land—in both Sequoia National Forest and Sequoia National Park—meets the criteria for "formal" wilderness status as defined by the 1964 Wilderness Act, and is now being considered for legal protection according to the provisions of that act. However, the presence of a high-grade highway bringing millions of people into the heart of the region would probably diminish its wild character in short order, obviate the inclusion of this land within the wilderness system, and encourage less rigid protection of adjoining land. In addition, there is some fear that the presence of a high-standard road reaching halfway across the Sierra Nevada range will be used as a rationalization for extending the pavement another 30 miles to create a new trans-Sierra highway through one of the country's last enclaves of primitive landscape.

In a way, it is tempting to apply the philosophy of "conservation democracy," advocated by Gifford Pinchot and Theodore Roosevelt, to the Mineral King situation: "the purpose of Conservation is the greatest good of the greatest number for the longest time." This concept invariably underlies the arguments in nine out of ten land-use conflicts, but despite its seeming simplicity, it poses questions that cannot be readily answered. Who can say, for instance, whether a ski resort, a semideveloped campsite, or a primitive landscape will be of greatest benefit to people who have not yet been born?

Nevertheless, the concept stimulates some interesting speculations about the future. In the case of Mineral King, you might ask what needs will characterize Californians in 2068: The need for convenience or for diversity? For material comfort or challenge? For sociality or solitude? Which need will be most in demand and least in supply?

Even at present, there seems to be a considerable difference of opinion over the proper application of these democratic guidelines. Both the Forest Service and Walt Disney Productions maintain that a new high-standard roadway into the Mineral King country will represent an improvement over the current situation because it will permit the rapid influx of large numbers of visitors ("Many people wish to see and enjoy Mineral King but won't drive the present difficult road."). To this argument however, their opponents reply that the area's present function of providing general recreation is inherently more democratic, for it does not impose an admission fee upon visitors. They further contend that in terms of meeting California's most urgent recreational needs, the $35 million to be spent

on the Mineral King project might be put to better use by expanding the recreational facilities available to the non-mobile population in, say, the Watts ghetto of Los Angeles.

Throughout 1966 and into early 1967, the Mineral King issue continued to be fought at a local level. In that time, proponents of the Disney project succeeded in gaining political support for the venture. In September of 1966, Walt Disney and California's governor, Edmund G. (Pat) Brown, flew into Mineral King by helicopter to survey the area. Thereafter, Brown made a short speech in which he described the proposed development in glowing terms: "I hope that ten years from today I can stand here with Walt Disney again and look around at the wonderland that will have been created," and assured his audience that "we are going ahead with the [access] road." The Brown administration applied for and received a $3 million federal grant to partially finance the road's construction; the California Highway Commission then voted to provide the remainder of the needed construction money (about $20 million) from the state's highway tax fund.

These actions did not pass unchallenged. California's State Highway Engineer, J. C. Womack, attacked the financing of the Mineral King road stating that the highway could proceed only "at the expense of other critical [road building] projects," and that the use of funds set aside for other construction would prove "very disruptive to previously approved planning and scheduling of projects in the Southern Counties group." State Assemblyman Alan Sieroty assailed the proposed destruction of natural landscape, stating that the plans for the Mineral King road were "atrocious," then added: "It would be . . . outrageous for the Reagan administration [Reagan was elected in 1966] to give away more than $20 million to facilitate a private venture when it has just cut the state Parks and Recreation budget . . . from $33 million to $1 million." In addition to this objection, two bills were introduced into the California state legislature in an attempt to block construction of the access road. Both died in committee before being brought to a vote.

By early 1967, although funding had been approved for the access road and its proposed routing established, and although newspapers in Tulare County were speaking as if the Disney resort was already a fact, the National Park Service had not yet granted permission for the road to cross eleven miles of Sequoia National Park on its way to Mineral King Valley. It is still unclear whether the Department of the Interior can legally grant permission for a road to cross a national park for non-park purposes, or whether this requires an act of Congress.

In any event, Secretary of the Interior Stewart Udall disapproved of the new road. He noted that it would prove a "blighting influence" upon Sequoia Park, that blasting of rock and planned removal of eight million cubic yards of soil would scar park terrain, cause erosion and consequent siltation of the Kaweah River, pollute the air with auto exhaust fumes, pose a threat to giant sequoias and other large evergreens, and would, in general, compromise "park values." With a first-hand sensitivity to the proliferation of the nation's vast network of highways, (3.6 million miles worth) he commented that developers "will be more honored 25 years from now for the roads they do not build than for the roads they do," and suggested that the Forest Service and Disney Productions explore other means (such as an overhead monorail or tramway) of transporting sightseers and skiers into Mineral King Valley to minimize destruction to the landscape.

To answer charges of road damage, the California Division of Highways commissioned biologist Richard J. Hartesveldt, an authority on giant sequoias, to study the ecology of sequoia groves surrounding the proposed roadway. The report's objectivity, however, has provided at least as much ammunition for opponents of the project as for its advocates, and each side has quoted and paraphrased the document upon numerous occasions.

As for Udall's proposal that a monorail or tramway be used to transport visitors into the resort, this plan was rejected by both Disney Productions and the Forest Service as being too expensive. The cost of installing such a system—unlike the tax-financed roadway—would be borne by the Disney firm.

By mid-year 1967, opponents of the development had finally managed to air some of their grievances to a national audience by means of articles printed in magazines published by the National Parks Association and the Sierra Club. Within these groups, the general feeling seems to be that the only way to provide Mineral King with adequate protection against commercial development is to make it a part of adjoining Sequoia National Park. In 1926, when Congress was wrestling with the problem of what to do with this area, the decision was made to award it to the Department of Agriculture in the belief that there were minerals remaining in and around Mineral King Valley that would become "locked up" if park status were granted. But since no mineral deposits have been discovered, there is a strong feeling now that these 15,000 acres should be given to the Department of the Interior.

This type of interdepartmental land transfer is invariably an unpopular procedure on the part of the donor agency, and is avoided by Congress whenever possible. Just now, the Forest Service is especially sensitive on this count for portions of forestland are being transferred from the Forest Service to the Park Service in order to establish a Redwoods Park in California and a Cascade Mountain Park in Washington. The history of transactions of this sort carries all the flavor of a range war between sheepherders and cattlemen, and while reading these accounts, it is easy to lose sight of the fact that the ownership of federal property rests with the public rather than with the managing agency.

By this time, Secretary Udall was finding it increasingly difficult to maintain his opposition to the access road upon which the success or failure of the development depends. A hint of behind-the-scenes pressure appeared when the Secretary indicated that he would need a great deal more support from leaders of the protectionist movement than they had given him. In addition, the open opposition to Udall's position had assumed formidable proportions. California's two senators, several representatives, lieutenant governor, many state legislators, and Los Angeles Mayor Yorty now stood solidly behind the Disney plans. Senator Thomas Kuchel, who can usually be counted on to champion the position of the Wilderness Society and the Sierra Club, reversed his role in the case of Mineral King and went so far as to write an article in a ski magazine praising the merits of the Disney firm and its proposed undertaking. Real estate speculators and businessmen in Tulare County, anxious to capitalize upon the anticipated influx of tourist gold, were beginning to make impatient noises. These were echoed by Tulare County politicians and newspaper columnists, and by Secretary of Agriculture Orville Freeman, all of whom viewed Udall's reluctance to approve the access road as an obstructionist tactic.

To add more fuel to the fire, Governor Reagan sent emissaries to persuade Secretary Udall to change his stand. Although Udall remained adamant, he was misquoted by a Reagan aide as having given his approval to the Disney project. The story that Udall had conceded, followed quickly by his denial, served only to heighten tension and to increase pressure for a decision.

Of the obstacles faced by Stewart Udall and his supporters, one of the most formidable is the intangible something which Walt Disney Productions calls the "Disney Image." For after being honored by a number of nature-oriented organizations, ranging from the National Audubon Society to the National Wildlife Federation: after thirty years of producing such films as *Bambi, Beaver Valley,* and *Nature's Half Acre,* it hardly seems possible that the Disney firm would consent to undertake a project that would in any way prove detrimental to the great out-of-doors. The common conception of the Disney orientation toward the natural world, as the Disney publicity states, is one of a "proven interest in conservation." As noted in the organization's proposal for the development of Mineral King, issued to the Forest Service: "The integrity and quality image of Walt Disney Productions is *already* pre-sold in the public mind." This seems to be the case, particularly in California, where considerable fame and fortune have come to rest since the establishment of the Disney empire in that state.

In July, 1967, the nature of the suspected pressure on Secretary Udall was made public. To the consternation of those who had labored to defeat the Mineral King proposal, it was revealed that through the complicated machinery of Washington diplomacy, the fate of Mineral King had become linked to the ongoing negotiations between various federal agencies and the state of California over the size and location of the proposed Redwoods National Park. Apparently, the Johnson administration felt that Governor Reagan would be more amenable to the installation of a national park in his state if he were offered certain concessions in return. One of several concessions offered the state was the administration's active support of the Mineral King development and its access road. The nature of this transaction was spelled out in a letter of June 22, 1967, from an administration spokesman, Phillip S. Hughes, Deputy Director, Bureau of the Budget, Executive Office of the President:

"Following is the Administration position on a number of items over and above the provisions of S. 1370 [the redwoods bill introduced by Thomas Kuchel]. . . . The Administration is prepared to implement these provisions immediately."

The Mineral King proposal is listed under a section labeled "Other Conservation Program Actions."

"6. MINERAL KING

"It is in the interest of the Administration and the State that the Mineral King area . . . be . . . developed. . . . .

"The Department of the Interior has been requested to consider issuance of a permit jointly to the Department of Agriculture and the State of California for a two-lane road through the Park [Sequoia] to provide access to Mineral King."

The letter's contents provoked a volley of angry protests from the project's opponents. Senator Lee Metcalf (Montana) assailed the administration's intention to "override the Secretary [Udall's] best judgment" as raising "fundamental questions of public policy, precedent and equity." Anthony Wayne Smith, General Counsel and President of the National Parks Association stated that the Forest Service had "put to auction a priceless asset [Mineral King] belonging to the American people. . . ." California Congressman Phillip Burton perhaps best summarized sentiment against the maneuver when he angrily labeled the Mineral King-Redwoods Park trade as "a desperate effort to pay the high political price needed to get along with California's new governor" and bemoaned

the fact that the executive branch "promises to pressure the National Park Service into compromising the integrity of Sequoia National Park by accommodating the opening wedge for massive development of Mineral King."

Whatever the processes by which pressure was exerted, Burton's fears were apparently justified and the intent of Hughes' letter carried out. In December, a high-level Mineral King meeting was called. Attendants in favor of the project included: Secretary of Agriculture Freeman, California Senators Kuchel and Murphy, Congressman (and former Olympic decathlon champion) Robert Mathias, and for the administration, Philip Hughes. Attendants opposed: Stewart Udall. Shortly after the conference, Freeman issued a press release announcing that the right-of-way for a road through Sequoia Park was being prepared by the Interior Department and that the Disney development would proceed as planned.

From the point of view of the project's supporters, it probably would have looked better if the release had come from the Department of the Interior with Secretary Udall's blessing. This was not the case, however. To this day, Udall has not voiced support of the access road, leading to the conviction that this decision was predetermined by the administration. Even so, the Secretary was for a time, nobody's favorite. At a press conference in which he was criticized for "his" decision, Udall retorted that things might have been different had preservation groups spent more of their time writing to Orville Freeman than to him.

The Mineral King development is now within one step of realization. But this last step has proven time consuming. For in the year that has elapsed since Orville Freeman's announcement, the Forest Service and National Park Service—never the friendliest of "sister agencies"—have failed to reach agreement on the dimensions of the proposed access road crossing Sequoia National Park.

The delay has proven helpful to the more tenacious of the project's opponents; has given them time to begin legal investigations and to renew efforts to gather public support. During the past five months, two to three thousand signatures have been added to an antidevelopment petition circulated by the Sierra Club, network television stations have hauled their cameras into the Sierra Nevada to cover a "hike-in" staged in opposition to the project, and students from UCLA have pulled up and burned survey stakes marking the location of the proposed access road. Some of the more militant even plan to picket Disney films and to stage "lie-ins" in front of highway department bulldozers if construction begins, as scheduled, next summer.

It seems that the era of modern conservation weaponry is upon us. Whether or not this will aid the case for Mineral King will depend on public opinion and on the orientation of the new President-elect toward the issue. Resolution of the conflict will not be long in coming.

MINERAL KING FOLL

The decision to turn Mineral King Valley over to private developers exposes the essential fraudulence of the Forest Service's much-vaunted "multiple use policy." Created to protect the nation's forests from exploitation, the Forest Service has gradually evolved into the ally and protector of the private lumber companies. As a public relations maneuver, it has promoted the idea that it is developing the forests for recreation as well as profit, that is, for multiple use.

This idea is acceptable if it merely involves providing campsites or incidental tourist facilities in the national forests. But there is no excuse for turning over an entire valley to the Walt Disney interests for a gigantic recreational complex rivaling Sun Valley.

Mineral King, a lofty valley in the Sierra Nevada north of Los Angeles, comprises 15,000 acres of rare and beautiful wilderness which ought to be part of the adjoining Sequoia National Park. Into this ecologically fragile area would be intruded an "Alpine Village," ski tows, hotel, restaurants, a parking garage and thousands of automobiles. The absolutely certain result would be erosion of the land because of heavy construction, destruction of animals in what is now a game refuge, sewage pollution in the nearby Kaweah River and air pollution from automobile traffic. In addition, there would be the visual pollution caused by the building of 6,000-volt power lines to service this "Alpine Village."

The only word to describe this hideous project is scandalous. Has Southern California not been raped, polluted and desecrated enough already? Have the Forest Service bureaucrats no sense of shame about taking a wonderful portion of the nation's rapidly dwindling natural heritage entrusted to their care and surrendering it to the exploiters?

This perversion of public land to private profit would not be possible if it were not for the acquiescence of the Interior Department and the active collaboration of the officials of the state of California. It is necessary to construct a highway across Sequoia National Park to enable cars to reach Mineral King Valley and make this project economically feasible. Former Secretary of the Interior Stewart L. Udall reluctantly approved plans for a road last year, arguing that his control of the highway route would give him a veto over the size and character of the Disney project in the valley.

Now that Mr. Udall has left office, however, the Forest Service has approved a major undertaking which will attract nearly a million visitors a year. The proposed two-lane highway will soon prove inadequate and the pressure will mount for four or six lanes. Meanwhile, California plans to spend $25 million in public funds to build a highway to Mineral King for the sole purpose of benefiting the Disney interests.

The Sierra Club intends to file suit in court to block this misuse of Forest Service authority. But it should not be left to a private organization to defend the public interest. Secretary of the Interior Hickel and Secretary of Agriculture Hardin have a responsibility to review this outrageous project. If they fail to act, Congress can intervene to see that a deal of this magnitude is not approved without public hearings and explicit Congressional approval.

---

[From the New York Times, June 24, 1969]

THE SCANDAL OF MINERAL KING

The attempt of the Forest Service to turn Mineral King Valley in California over to the Walt Disney Organization demonstrates how an ingrown bureaucracy and an aggressive private developer can collaborate to defeat the public interest. The lawsuit filed against this scheme by the Sierra Club is an effort to demonstrate that citizen conservationists can invoke the power of the law to protect the public interest.

The intensive development of this valley in the Sierra Nevada would scar its natural beauty, ruin its ecological balance, and pollute its air and water. The Disney interests propose to build an "Alpine village" complete with ski tows, swimming pools, a golf course, a hotel complex, ten restaurants, and a huge underground parking lot. This would be a year-round resort with at least a million visitors annually. It would produce the same kind of serious overcrowding that has already blighted the much larger Yosemite Valley.

The stated intentions of the Disney interests make unmistakably clear what is to befall Mineral King: "Grooming and manicuring of most slopes . . . will require extensive bulldozing and blasting in most lower areas and extensive rock removal at higher elevations . . . extensive cuts and fills and site grading will be required in the parking area and in the village area."

Hundreds of resorts and country clubs already exist and more can always be manufactured, but beautiful, unspoiled Alpine valleys are rare. When the last one has been groomed, manicured, bulldozed and blasted out of existence, no human being can create another.

This unalterable fact imposes a most solemn obligation upon public officials who administer the national parks and forests. With regard to the fate of Mineral King, the Secretaries of Agriculture and Interior in the Johnson Administration compiled an abysmal record. Former Secretary of Agriculture Orville Freeman pushed aggressively for the Disney plan which his Forest Service subordinate sponsored. After considerable initial resistance, former Secretary of the Interior Stewart L. Udall caved in and granted permission for the construction of an access highway across Sequoia National Park, without which the development of the valley could not proceed.

Their successors—Secretary of Agriculture Hardin and Secretary of the Interior Hickel—have an opportunity to right this wrong. They can still quash the Disney plan. But in the absence of action on their part, the Sierra Club has taken the issue to the courts. Its suit points out that the Forest Service approved the Disney project without public hearings and without making a prior study of the ecological effects of intensive development. Moreover, the Disney project would directly involve 300 acres and indirectly involve another 1,300 even though the law forbids the Secretary of Agriculture to put more than 80 acres under long-term lease.

Who watches the watchmen? The question is as old as Plato and as modern as the Mineral King case. Private greed, bureaucratic empire building, and official irresponsibility are a recurrent threat to the common good. The Sierra Club is performing a public service in standing up to this threat.

[From the Wichita (Kans.) Beacon, June 19, 1969]

TREES VERSUS DISNEY

Man's ingenuity has resulted in wondrous things. Great rivers have been harnessed for power, and vast acreages have been reclaimed from the sea to become productive.

But marvelous as these accomplishments are, Joyce Kilmer was right—only God can make a tree.

This is not to say that there isn't a need for mass outdoor recreation, but in weighing the use of America's remaining natural assets, the wilderness needs its supporters.

In the Mineral King Valley dispute, the Sierra Club raises the issue of the wilderness' priority over commercial-recreational development.

The club, whose members are prominent conservationists, has sued government officials in an attempt to stop a commercial venture of Walt Disney Productions.

The Disney enterprises plan to make a valley—which is 8,000 feet high in the California Sierras, south of Yosemite—into a $35-million, 300-acre recreational development including ski slopes.

The Sierra Club charges that the project would violate the 80-acre limit set by federal law on national forest land projects, and that the land was set aside by Congress as a game refuge in 1926.

Conservationists fear that the heavy traffic (2.5 million people a year are expected) threatens the valley's usefulness as a water resource. In addition a new highway would have to be cut through a portion of the

Sequoia National Park, and some of those majestic old trees would have to be sacrificed.

Even if it were granted that the Disney interests could develop the valley, and somehow avoid these dangers, people swarming daily from a proposed 3,600-car underground garage cannot help but change the remote and peaceful character of the valley.

As the Christian Science Monitor suggests, there are other, already partly developed recreation sites in California. Why not apply the bold Disney concept to these?

Or better yet, why not select one of the many sections of natureland that have been gouged and scraped by mining and lumbering and reclaim them instead of sacrificing land that can hardly be improved upon?

---

[From the Kansas City (Mo.) Star, June 18, 1969]

ENLARGED THREATS TO THE SEQUOIAS

The Sierra club, an activist conservation organization based in San Francisco, has gone to battle to prevent construction of a mammoth resort in the lovely Mineral King valley of Sequoia National forest. The projected "alpine" playground also threatens Sequoia National park, one of the nation's finest public preserves.

Because of the Sierra club's record of victories, this effort must be taken seriously. In recent years, the club spearheaded both the drives to create a Redwood National park and to block two dams that were planned for the Grand Canyon. This latest move takes the form of a suit filed in United States District court with the secretaries of Interior and Agriculture as the principal defendants.

When the ski resort was first proposed by Walt Disney Productions, Inc., it was a relatively modest development. It has since mushroomed into a 35-million-dollar complex of ski lifts, shops, accommodations and other facilities. The plan also calls for a 9-mile California freeway and a 66,000-volt electric transmission line, both of which would be cut through Sequoia National park.

In addition to scarring the earth, the power line and the superhighway place at least 45 giant sequoia trees in jeopardy.

The sequoias are not only the world's largest trees in bulk, but they are believed to be the oldest living things on earth. Some of them were reaching skyward more than 1,000 years before the birth of Rome. So what if 45 of the trees are cut down to make way for a freeway? This reminds us of the quotation attributed to Gov. Ronald Reagan of California who reputedly said of the coastal redwoods, "If you've seen one, you've seen them all."

Conservationists do not agree. Since man developed the West, fire, pestilence and the saw have claimed many sequoias. Those that remain have been protected by law since 1890, when Congress established the national park.

In this era, just about everyone in the United States favors parks as long as they don't interfere with some private scheme. If they do, the public's land has too often proved expendable.

Whatever the result of this latest action by the Sierra club, it serves to alert the American people to what is being proposed for their land. A few ski lifts and cottages in a national forest make little difference. But large-scale developments that must be served by creeping freeways and power lines are out of character with the purpose of either the national parks or forests.

---

[From the St. Louis (Mo.) Post-Dispatch, June 9, 1969]

HOLLYWOOD IN SEQUOIA

The Sierra Club deserves widespread gratitude for its suit in Federal Court at San Francisco to block a $35,000,000 mass recreation development in Sequoia National Park, in California, by Walt Disney Productions. Development there should be, but the question is whether the development on so colossal a scale would leave anything of the peace and grandeur which make the park a national sanctuary.

The Disney people are proposing to build a simulated Alpine village with an eventual capacity of 3300 guests and a cog railway which would connect the village with facilities for camping, fishing, horseback riding, skating, swimming and skiing in five natural mountain bowls. The U.S. Forest Service originally proposed limiting development to $3,000,000 and the Sierra Club thinks even that is too much. The Hollywood-scale development the Disney organization plans would involve putting a 20-mile expressway through 8½ miles of the park and the club says it would also threaten destruction of 45 sequoias or giant redwood trees.

The California conservationist group stands to come out ahead regardless of the decision in the action it has brought; for the suit will serve to focus national attention on the issues and on the Sierra Club's contention that the form of development should be determined only by Congress itself and only after public hearings have thoroughly explored what will be lost as well as what will be gained.

---

[From the Christian Science Monitor, June 11, 1969]

SAVING NATURELAND

There may be real pleasure in visiting a man-developed coastline or forest margin. But the experience differs from the stillness of a remote alpine meadow or the exhilaration of a natural seashore.

This is not to say the nation's needs for mass outdoor recreation should be ignored. Nonetheless, when weighing the use of America's remaining primitive assets, the unique claims of the wilderness need vigorous support.

In the Mineral King Valley debate, the Sierra Club raises the issue of the wilderness' priority over commercial-recreational development. To make its point, the club has filed suit against the secretaries of the Interior and Agriculture and other government officials. The government has contracted with Walt Disney Productions to make the valley—which lies 8,000 feet up in the California Sierras, south of Yosemite—into a $35 million, 300-acre recreational development. The Sierra Club charges that the development would violate the 80-acre limit set by federal law on such national forest land projects, and that the land was set aside in 1926 by Congress as a game refuge and not as a recreational site.

Conservationists fear that the heavy inflow of people (25 million a year) threatens the valley's usefulness as a water source, its delicate alpine ecology, and the majestic trees of a portion of the Sequoia National Park through which a new highway would cut.

Even if, for the sake of argument, one were to grant that the Disney interests could so "develop" the valley as to avoid the ecological dangers, one would still be faced with whether the daily ant-swarms of people emanating from the proposed 3,600-car underground garage cannot help but disastrously change the remote and peaceful character of the valley. And where the developer goes, can the honky-tonk be far behind?

There are other, already partly developed recreation sites in California. The bold Disney concept could be applied to these. In fact, there are many sections of natureland that have been gouged and scraped by mining and lumbering which are ironically analogous to urban blight areas. Why should not these be reclaimed by developers, instead of sacrificing land that in no real way can be improved?

---

[From the Washington Star, Feb. 14, 1969]

DISNEY IN THE VALLEY

The National Forest Service has decided to permit the Walt Disney concern to set up a recreational facility in the King Valley area of the Sequoia National Forest. Predictably many conservationists are expressing their outrage over the decision. And one local group of conservationists, the Sierra Club, has threatened to sue the Forest Service for "alienating" this public land.

A side issue raised by the decision can be disposed of in a hurry. The Disney name does indeed evoke images of Disneyland with its plastic whale, life-sized replicas of all the well-known Walt Disney cartoon characters, and so on. There is, however, no thought of turning the King Valley into Disneyland II. The idea for this project did not originate with the Disney people but rather with the Forest Service, which in 1965 invited firms to submit their bids. The Disney firm was picked from among six organizations that responded to this invitation.

What is, in fact, intended for the King Valley are facilities for sportsmen who will eventually be able to ski, hunt, fish, skate and ride horses in these breathtakingly beautiful surroundings. And so we come down to the real issue. Should the peace and tranquillity of the valley be left undisturbed for the sake of the handful of hardy campers who seek spiritual renewal by sleeping on mountaintops? Or should sportsmen be permitted to enjoy their athletic pastimes in the valley at the cost of some of its present serenity?

Each of these viewpoints has its own special validity. So what was called for in this case was a kind of Solomonic judgment. And this, it appears, is what the Forest Service's decision is all about. The 200 or so outdoorsmen who tramp around the King Valley daily will now share their wooded haunts with an estimated 3,000 newcomers. Either that or they can do their tramping elsewhere in the Sequoia National Forest.

The unacceptable alternative is to deprive their fellow citizens of the opportunity for athletic outings and other organized activities in a setting so favored by Mother Nature.

---

## NEW CAREERS PROGRAM INVOLVES COMMUNITIES IN FIGHT AGAINST CRIME

---

## HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. BROWN of California. Mr. Speaker, crime is a razor in our freedom, a thorn in our lifeline to progress. Like virus which kills the human specie, crime's causes and antibodies do not combine to produce a simple solution.

We are all searching for ways to solve the serious crime problem, and, hopefully, the answer will be found through experimentation with various social tools. Congress must always encourage and pursue the use of relevant policies and mechanisms in an attempt to alleviate this national disgrace and dilemma.

One constructive contribution comes from the Department of Labor in the form of its New Careers program. New Careers trains and places indigent adults in jobs which have built-in career achievement levels. For example, in Oakland, Calif., 15 ghetto residents are being carefully moved up the law enforcement vocational ladder. All have been gang leaders in their crime-ridden neighborhoods; some have arrest records.

New Careers utilizes leadership abilities and energies for constructive social objectives—a most laudable and difficult task. I agree with the proposition that members of a community plagued by

crime are excellent workers to bridge the communication chasm between their neighborhood and the police. After all, who knows the criminals, the causes and remedies of crime better than those who have often been the culprits and principals of the crime community?

The New Careers approach represents a significant advance in the battle to reduce crime and increase employment and living standards. I recommend this type program very highly and I hope that it soon will be ever more widespread.

Two recent magazine articles outline in further detail these New Careers programs as they operate in Oakland and Los Angeles, and I insert the articles in the RECORD at this point:

[From Manpower magazine, April 1969]

FAMILIAR FACES BRIDGE POLICE-GHETTO GAP

(By Joe B. Kirkbride)

(Mr. Kirkbride is a U.S. Department of Labor information officer in San Francisco.)

Fifteen hard-core disadvantaged men in Oakland have started on careers as bridge builders. But the bridges they are trying to build won't span a river or a bay. They are attempting to bridge the communication chasm between their neighborhoods and the police.

Under a U.S. Department of Labor contract, the 15 men, aged 20 to 39, are being moved carefully up the law enforcement career ladder. In 2 years or so, they are slated to be full-fledged employees of the Police Department in Oakland—either as patrolmen or General Services officers.

New Careers trains and places poor adults in jobs supporting professional employees—jobs which have built-in levels of career advancement. The tasks they perform free such professionals as police officers and nurses for work which puts their training to more effective use. Many of the New Careers training slots in Oakland are with State and local government agencies and lead to positions in an existing civil service structure. The employer is reimbursed for 100 percent of the payroll and training costs of the first year of employment of a New Career trainee and 50 percent of the payroll costs and 100 percent of the training cost the second year. After that, the employer bears the entire cost.

Altogether, 155 poor adults are being trained under New Careers in Oakland. But the 15 police trainees are being watched with special interest.

Thirteen are Negroes; two are Mexican Americans; all live in neighborhoods where police are not generally welcome. Though not hardened criminals by any means, some of them have arrest records for juvenile offenses and petty thefts.

The Police Department is not overly concerned with their past records. "We wanted our guys to be somewhat hostile to the policeman," said one lieutenant. "We looked for men who had leadership traits, not gang leaders, but men who were tough and were respected in their neighborhoods."

Getting them aboard was a tricky assignment. The department was willing enough to have them, whatever the reservations of individual officers. Chief Charles R. Gain passed the word to his disciplined force of 682 uniformed officers and 263 "civilians" that he wanted the program to succeed. The department suspended educational and other professional requirements to let in men who normally could not qualify for police training.

But Oakland is the home of the Black Panthers, an extremely militant organization which has clashed repeatedly with the police. Other militant black groups are also active in the city's slums. In such a setting, conventional recruitment methods could make no headway. The ghetto is united by a strong sense of brotherhood. Nobody wanted to be identified with "the man" downtown in Oakland's Hall of Justice.

The police and the New Careers staff turned to the ghetto's auhoritative grapevine. Here they struck paydirt. The militants could not be expected to endorse jobs in the Police Department. Some of their leaders are in jail, others are fugitives from the law. On the other hand, they decided not to scuttle the program. Other types of New Careers trainees were making it in the city. The word was passed along to give the cops a try.

Last September, the 15 trainees were recruited and certified by the Employment Service. After approval by the police, they joined the force and were assigned to the Community Relations and Youth Division of the department's General Services Unit. The reaction in their neighborhoods has been mixed—but usually understanding.

"It's been quite a surprising experience," said a Mexican American trainee in his late twenties. "Sometimes people welcome me, sometimes they reject me. Right away I explain that I'm not a policeman but a General Services aide and that relieves the tension."

A 27-year-old Negro said his friends treated the whole thing as funny. "They took it in a jokin' way, knowing the feelings between the community and the Police Department," he explained. "They kinda backed up a little, but it was done in good humor. I haven't had any problems with my real friends. Our friendships are still the same."

Generally the trainees like the work and want to make a success of it. "I feel like this—if I can help my people by working here then it's my job to work here," said one older Negro. "I enjoy the work so that makes it beautiful."

The trainees' personal knowledge of the slums has already proved valuable. Because they knew where to look, they were able to locate three youthful runaways who could not be tracked down by regular patrolmen. And they are credited with cooling down explosive unrest at a black high school recently by making a series of personal home visits to students and parents.

The trainees' uniforms consist of neat blue blazer jackets with grey flannel slacks. Over the breast pocket is a police emblem and the legend "Oakland Police Department—General Services Unit." They do not carry guns, wear badges, or have the power to arrest anyone. They are being trained to help officers in non-criminal tasks including working with juveniles, locating missing persons, community relations, and the bicycle detail.

They are not expected to "rat" on their friends. Otherwise they would be shunned in their neighborhoods. "Our friends know that what they tell us won't be told to a policeman," said one Negro. "They have to confide in someone, and they don't want to confide in someone that every time they open their mouths they know you are running off and telling 'the man.' "

The educational and work history of the trainees is typical of the hard-core unemployed. Although most had attended high school at least 2 years, many scored at the seventh- and eighth-grade level on achievement tests. The highest income any of them ever earned was $4,000 a year—and this by a man with a wife and six children.

As General Services trainees, the first rung of a well-structured career ladder, their pay now ranges from $395 to $415 monthly. The next step up the ladder is General Services aide, a job paying $415 to $445. To make this grade, they must complete 6 months' satisfactory service and enroll in job-related courses at Merritt College.

The second promotion is to General Services assistant. This job pays $460 to $490 and requires a high school diploma and completion of 35 quarter units at the junior college level. The trainee is paid his regular wages for hours spent in class and the Federal Government pays his school costs. At this stage in his career, the trainee has a choice. He may, if he wishes, take the standard civil service examination and, if qualified, leave the General Services Unit for training as a patrolman.

Otherwise, he can move up to the top of the New Careers ladder as a General Services associate at pay of $555 to $585 monthly. By this time he will be bondable (a requirement at this job level), will have a junior college associate of arts degree, and will have successfully passed a civil service test.

The New Careerists are learning while on duty both in the field and at main headquarters. Though they may never have to do it themselves, they are shown how police control a rioting crowd. They are taught the structure of the police force, its mode of operation, and under what circumstances an officer may enter a private dwelling without a warrant.

This new-found expertise on law enforcement is valuable to both the trainee and his neighborhood. He gets a view of the police officer as a hard-working human being trying to keep the peace and protect lives. Hopefully, he carries this message back to his neighborhood, while arranging athletic events, counseling restless youngsters, and carrying out other community relations duties.

Said one Mexican American trainee, "I know we're doing a good job relating the Police Department into the community and at the same time helping the people."

The trainees appreciate the confidence the police have shown by giving them free run of the Hall of Justice. One older Negro said he felt the regular officers were disturbed at the outset of the program, not because so many trainees were black, but because they feared "civilians" might take their jobs. When they learned this wasn't true, they relaxed. "Policemen are nice people when you get to know them, but getting to know them is a different problem," he said.

Some of the men are still doubtful whether they really want to be police officers. "Four months isn't enough time to know," said one Negro. "I got a feeling on the job, but I don't know if I want it permanent."

New Careers in Oakland grew out of a unique experiment conducted in 1965 and 1966 at the California Medical Facility at Vacaville by J. Douglas Grant, a noted social psychologist. Eighteen young felons with histories of juvenile and adult crimes including car theft, armed robbery, and narcotic offenses were brought to Vacaville from prisons throughout the State.

Funding was obtained from the National Institute of Mental Health. The project trained the recruits in poverty program planning, operation and evaluation. It sought to demonstrate that ex-offenders could return to society in useful jobs.

The experiment was a success. Of the 18 felons, only one has returned to prison, and 12 are active in various poverty programs. Three of these men are staff members for Oakland's New Careers Development Agency, which oversees all New Careers programs in the city, including the Police Department's.

The agency's work is now funded by the U.S. Department of Labor's Manpower Administration, which has been administering New Careers for 2 years.

New Careers director in Oakland is Charles Jackson, a young black man who joined the agency 2 years ago. Jackson, a hard-driving administrator, has a staff comprised of roughly equal numbers of professionals and laymen—counselors, program developers, and social scientists.

Jackson has hammered out a variety of agreements with 17 public and private organizations, in addition to the Police Department, to open up subprofessional jobs for his 155 trainees. Some are now community workers with the State Employment Service,

others are field staff aides with the Girl Scouts. The University of California has hired several as laboratory assistants.

Once a prospective New Careers trainee has been screened, tested, and certified as meeting the poverty guidelines, the path up the career ladder begins. Starting salaries range from $330 to $480 a month. Entry workers receive heavy loads of formal and job-related education. Ideally, each man or woman spends 4 hours a day on the job and 4 hours in a classroom.

Many of the trainees attend Oakland's Merritt College to work on high school equivalencies or freshman college-level courses. They advance in their new career as they demonstrate proficiency on the job and accumulate high school and college credits.

Jackson acknowledges that his agency's path in Oakland has been rocky at times. There have been the inevitable misunderstandings that arise when job duties are carved out of established career public service programs. Feathers have been ruffled and feathers have been smoothed. But by and large, the trainees, the planners, and the employers are enthusiastic over the breakthrough that has been made.

The police feel that the program is working well. "Our guys are the best we've seen of the New Careerists," said one 18-year veteran on the force. "They're the best dressed and the smartest. They've already made a contribution to the department and we're all extremely satisfied with the progress they've made thus far."

[From Parade magazine, Aug. 24, 1969]

COPS AND COPOUTS—EX-CONS JOIN THE POLICE FORCE

(By Lloyd Shearer)

LOS ANGELES, CALIF.—What do you think of a police department which boasts among its members a wide assortment of ex-convicts—former thieves, dope addicts, prostitutes, forgers, the whole gamut of criminals?

In Los Angeles, the people and the police believe that ex-convicts can play an important and beneficial role in law enforcement, that no group knows as much about crime as ex-criminals.

Twenty men and four women who a few years ago were bitter enemies of the Los Angeles police are now their devoted colleagues.

These former felons advise rookie cops on basic underworld truths. They explain the secrets of successful thievery, why girls become prostitutes, where youngsters buy their dope. They reveal firsthand the inside story of crime.

More important, they move into the city's most depressed and poverty-ridden areas from which they themselves spring—the black and Mexican districts—and here they try incredibly hard to prevent young boys and girls from going wrong.

Because they themselves are members of minority groups and accepted as "one of us," they are most effective in reducing hostility toward the police.

Such hostility is understandably high among non-whites, who often accuse the police of being unfair, corrupt, incompetent, and unsympathetic, and yet at the same time, demand zealous protection by police who are unwelcome in their community.

The unlikely alliance between cops and robbers in Los Angeles began in early 1968. Taking advantage of a federal program (Department of Labor—Concentrated Employment Program of New Careers) which finances organizations willing to hire "hard-core unemployed," the Police Department asked for a grant of $340,000.

When the federal government came across with the money, the police advertised for "community relations aides" at $2 per hour who met the following qualifications:

1. Twenty-two years or older.
2. Fifth-grade reading level.
3. Unemployed.
4. Family income below the poverty level.
5. No homosexuals.

EXCONVICTS APPLY

Police Sgt. Lou Reiter, a graduate of UCLA and a major in political science who handled the first response, says: "You should have seen the crop of applicants we got. They were almost exclusively ex-cons. Of the first 20 we chose for the program, we had ten Negroes, eight Mexican-Americans, and two Anglos.

"Of these 20," he recalls, "18 were ex-convicts, with records for theft, assault, burglary, manslaughter, and attempted murder. Ten were also ex-heroin addicts, and one fellow, 30, had spent more than 16 years in jail."

The ex-cons didn't know what to expect from the police, and the police had little or no idea of how the men would react to training. Surprises were in store for both groups.

"On the third day," Reiter remembers, "one of our trainees held up a bank because he needed $35 for rent money. Another went back on heroin, a third died of a heart attack, a fourth simply disappeared, a fifth followed his wife back to Texas, and a sixth was jailed three times during his ten weeks of training."

What did the ex-cons learn in their ten weeks of training? They learned first that the Police Department had no intention of using them as informers or stool pigeons.

"What we plan to do with you men," one police officer explained, "is to assign you to various police divisions and have you handle the public. We want you to go into the poorer districts of the city, to organize, recruit and register kids for various athletic programs.

"We want you to talk to student forums, to parents, to help the kids go straight. We want you to tell the people about the Police Department activities and services, that you and we are here to serve them. We want to improve our image. We want you to get idle kids off the street corners and into some meaningful work, to tell them what programs are open.

"You can tell us how burglars work, how criminals think. But we don't want any stoolies. That's not your function. Once you inform on somebody in the community to which you're assigned, no one in that community will trust you. We're not going to use you in law enforcement, either. You're not going to be armed or charged with helping to make arrests. You'll be given a Los Angeles police civilian employee identification card with your photo on it. But you'll work in civilian clothes.

"After a year you'll be making $428 a month with a chance for continued raises."

CIVIL SERVICE STATUS

The first year of "The Community Relations Aides Program" has passed. It has proved so successful that the aides have been granted civil service status, and the project has been extended to include females.

Four women, all ex-dope addicts who once did "anything and everything" to feed their narcotics habit, all of them paroled from the rehabilitation center at Corona, Calif., are enrolled in the program.

Where formerly they feared the police, they now stride nonchalantly through the department, exchanging confidences with officers, but still always remembering what life was like on the other side of prison bars.

They know how to empathize with the young, how to help teenaged girls resist the lure of heroin and prostitution, how to identify with the depressed, the downtrodden, the disappointed.

To talk, for example, to gentle, soft-voiced Terry Leon, 23, one would never imagine that she was a former heroin addict who only a few years ago had wallowed in the muck of degeneracy.

"To tell the truth," she confesses, "I was incorrigible as a kid. I went to seven different schools around Los Angeles and got in trouble in every single one. Then when I was 15, I quit to get married. I married a 17-year-old boy. He was a truck driver.

"My father was also a truck driver. He came from Arizona. My mother worked as a waitress and she came from Texas. My folks never gave me much supervision as a girl. I started smoking cigarettes when I was 10.

ON MARIJUANA AT 12

"By the time I was 12, I was on marijuana. I was dropping pills, ditching schools, staying out all night. That's pretty common routine for Mexican-American kids in East Los Angeles."

At 18, Terry had her third child, then was separated from her husband.

"I was stuck in the house with three kids," she explains. "I was depressed. Life seemed hopeless. I had no skill, no ambition. To cheer myself up, I had friends come over to my house. One time I found somebody 'fixing' in the bathroom. So I said to myself, 'I'm going to see what it's like. Why is everybody always getting loaded?'

"So at first it was curiosity, just trying something to cure my depression. Heroin seemed to do the trick. So from my first fix I just kept fixing. To get the stuff I started living with this guy. He was dealing dope and I just hung on to him. Because he was living in my house and dealing from there, he used to turn me on for being his old lady, for supplying him with meat.

"One day my mother came over. I was loaded from dropping some reds (Seconal tablets) and when I went to the grocery store, she called the police. When I got back the officers were there and they brought me here to the glass house (police headquarters)."

Terry was sentenced to the California Rehabilitation Center where she had time to look back upon her life and realize that like other adolescents she had needed love, understanding, and supervision, but had been given none of these. She realized that for her, marriage and heroin had served as escape mechanisms. With the help of group therapy and individual will power, she kicked the habit. But only for two years. A year ago she reverted to heroin. "But then I had the good sense to turn myself in."

Released five months ago, Terry went to friends and asked for a job. One of them told her about the Community Relations Aides Program at the Police Department. She applied and was taken.

Since then she has been attending remedial classes four times a week, learning and earning her way to a high school diploma. She lives in a suburb with her mother, says she is good with kids. "They open up with me. They admit to using drugs. They're begging for help. And I know that by showing interest in them, getting them involved in some project, that I can help them. What minority kids want most is a little hope, a little opportunity to share in things. They want to become part of the city and not to be treated as unwanted outsiders. They need a purpose for living."

A PURPOSE IN LIFE

Don Roberts, a 29-year-old ex-thief who used to burgle three houses a day for five years to satisfy his heroin craving, says that he has found a purpose in life as a community relations aide.

"My purpose," he declares, "is to help people. I know a good deal about robbery so I advise people how to protect their property. I know something about kids, so I advise them how to avoid the pitfalls."

Roberts, from Bell Gardens, a low-income area of Los Angeles, started "popping pills" and "smoking the weed" when he was 15. "It seemed like the thing to do, so I did it."

Arrested for stealing tires, he was sent to Juvenile Hall "where I learned the most about crime. The older boys talked about what they had done and explained how to do it.

"When I got out I went to live with my sister and discovered that my brother-in-law was taking heroin. At 20, I was a full-fledged addict.

"From 1960 to 1965 I lived in half a garage. I didn't see or speak to anybody. I lived in this dirty, cramped garage next to a car with only one goal—my next fix. I was an animal. I lived by stealing. When the police finally caught me, I honestly felt relief."

TURNS HIMSELF IN

Sent to the rehabilitation center at Corona, Roberts resolved to go straight when he was released. "My resolve lasted five hours. I was taking heroin before the day was out. I knew I was hooked, so I turned myself in."

While he was serving time, Don discovered that his younger sister had started taking dope. He was so shocked that he began to assess seriously what heroin had done to him and what it would also do to his sister.

He was determined to make an honest living upon his second release. "But it wasn't easy. Once you have a felony on your record, and I had 20 on mine, hardly anyone will give you a job, rent you an apartment, extend even a buck's worth of credit. That's why this community relations program for ex-cons is such a break.

"My parole officer told me about it. And well, it's made a new man of me. It's given me self-respect, decency, authority, a regular salary, the feeling of belonging to society, of not being an outcast.

"I not only go around lecturing to kids, but I talk to the class of police rookies, explaining how things are different on the other side of the tracks and how they can best operate in those areas. I also explain the various methods of housebreaking and burglary."

Working as a community relations aide is not exactly a picnic for Roberts. He's achieved a new stability but his old pals in the neighborhood ostracise him for going straight, and while the police appreciate him, they don't necessarily embrace him.

LETTER FROM A GIRL

His major satisfaction, he says, comes from helping the young. Following one of his lectures in a Los Angeles high school, he received a letter from a young girl: "You were able to convince a friend of mine to stop taking drugs, something I hadn't been able to do. Thank you."

According to Roberts, "kids will listen to a police officer when he talks about crime prevention, but they don't really hear. When an ex-con like myself talks, they not only listen and hear, but later they ask questions. That's when I know I'm doing something good."

## DR. DRAPER'S GENIUS

### HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. PHILBIN. Mr. Speaker, I revise my remarks in the RECORD and include therein a very timely article by Mr. Victor K. McElheny of the Boston Globe staff which recently appeared in that distinguished publication entitled "Draper Believes MIT Will Keep Moon Work."

This article quoted Dr. Charles Draper of MIT, world renowned space and guidance scientist, whose contributions to the space program were so meaningful in making the recent moonshot successful and in other epochal guidance advances.

It is reassuring to know that Dr. Draper is continuing his great work in space and guidance for defense exploration and industry and the good of the country.

I hope that the work of this great scientist will continue for many years to come in all the areas that his genius has so greatly enriched in solving many space guidance problems that heretofore have been regarded as impossible of solution.

I hope that any difference between academic scientists and Dr. Draper will be reconciled for the good of science and the benefit of the Nation and the world.

Let us get on with Dr. Draper's great work and make sure that, whatever the cost, it is not interrupted by unfortunate personal controversy, or ideological confrontations between scholars and their disciples that sometimes spark serious dissension in academic communities. The article follows:

DRAPER BELIEVES MIT WILL KEEP MOON WORK

(By Victor K. McElheny)

Dr. Charles Stark Draper, outgoing director of the Instrumentation Laboratory at the Massachusetts Institute of Technology, made it clear yesterday he does not feel that Apollo guidance work is threatened by MIT's plans to "civilize" the lab.

I–Lab, which operates in a number of buildings near MIT's Cambridge campus, does some $26 million worth of research for the Defense Department each year and about the same amount for the National Aeronautics and Space Administration.

Draper is stepping down Jan. 1 as head of the laboratory. He will be replaced by Professor Charles L. Miller, an expert in "systems analysis" of urban problems.

Draper regards Miller's appointment, announced Sept. 25 as part of an MIT policy to shift I–Lab and Lincoln Laboratory in Lexington toward more civilian work, as a sort of dismissal. He will continue as a consultant and supervisor of projects he started. "I didn't resign—I got fired," he says.

This week, he indicated that changes in the laboratory's course could so weaken its established work in defense and in space that the engineers working on problems of missile, submarine and spaceship guidance might have to leave MIT and form an independent company. He has mentioned this possibility before.

But yesterday through an MIT spokesman, Draper said, he understood that the work for NASA was not being called into question.

Last Spring, a committee on MIT's relations with its two large defense-related laboratories recommended that I–Lab wind up its work on guiding submarine-launched Poseidon missiles as "inappropriate for Institute sponsorship."

## HONORING GEORGE JUE

### HON. PHILLIP BURTON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. BURTON of California. Mr. Speaker, I should like to take this opportunity to call to the attention of my colleagues in the House, the honor which has been bestowed upon a distinguished San Franciscan and leader in San Francisco's Chinese community.

Mr. George Jue, a valued and longtime friend, has been cited by the Department of the Army for his years of generous service to the recreation program for wounded servicemen at Letterman General Hospital at the Presidio of San Francisco.

George Jue has been cited for his humility and generosity repeatedly, and has had resolutions adopted honoring him by the legislature of the State of California, and by the board of supervisors of the city and county of San Francisco.

I am taking the liberty of placing in the RECORD at this time the text of the certificate of appreciation. I am sure that my colleagues join with me in extending this warm expression of appreciation to this most singular man:

THE CERTIFICATE OF APPRECIATION FOR PATRIOTIC CIVILIAN SERVICE IS AWARDED TO GEORGE JUE

*Citation.*—During the period 1951 to 1968, Mr. Jue, and the staff of the Lamps of China Restaurant, supported the patient recreation program of Letterman General Hospital, San Francisco, California, in an outstanding manner. The actual number of free dinners for patients over this seventeen-year period cannot be calculated, but is estimated to number in the thousands. Mr. Jue's concern for the entertainment of wounded American servicemen represents a chronicle of devotion and generosity. He has set an example of patriotism and civic responsibility, demonstrated in countless tangible ways, worthy of emulation by all American citizens.

## IN MEMORY OF A GOLDEN SENATOR

### HON. JACK H. McDONALD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. McDONALD of Michigan. Mr. Speaker, on September 9, I introduced House Joint Resolution 891 designating the American marigold as the national floral emblem of the United States. As we all know, the late Senator Everett Dirksen was an enthusiastic champion of this flower. To honor the deceased senior Senator from Illinois, Mr. David Burpee has named a new golden hybrid marigold "Senator Dirksen."

At this time I would like to call to the attention of my colleagues an article which appeared in the November 19 issue of the Chicago Tribune which provides a more detailed explanation of Mr. Burpee's efforts. The text of the story is as follows:

IN MEMORY OF A GOLDEN SENATOR

(By Art Kozelka)

A new, golden hybrid marigold has been named Senator Dirksen in honor of the late senator from Illinois, who for a decade had championed the marigold as the most appropriate flower for America's national floral emblem.

Naming the new flower was disclosed by THE TRIBUNE by Sen. Dirksen's close friend, David Burpee, president of the W. Atlee Burpee Seed company, becaus, Burpee said, "We believe his many friends in his home state should be the first to know about it."

The flower will be introduced to the public for the first time at the Chicago World Flower and Garden show in the International Amphitheater March 7 to 15, where it will be featured in Burpee's marigold garden. The garden will be dedicated in memory of Sen. Dirksen.

Burpee, who has devoted more than half a century to the development of marigolds regards the Senator Dirksen as the best he has created.

It bears large, golden yellow blooms in profusion, on strong, stout stems. Flowers often are 5 inches across, equally spectacular in the garden or when cut for indoor arrangements. Like all marigolds, they are easy to grow from seeds and rarely are troubled by disease or insects.

Gardening was a hobby of the late senator, and marigolds were his favorite flower. Early last February, addressing Congress in behalf of a joint resolution to designate the marigold as the national floral emblem, he said:

". . . It is actually an American native [flower] and really not native to any other place on earth. It is grown in great profusion in every one of the 50 states and strangely enough is not the official flower of any state.

"I grow thousands of them every year for my own delight and the delight of my neighbors, and I know what this flower will do.

"I class it, therefore, with the American eagle when it comes to a symbol of our country that manifests stamina; and when it comes to beauty, I can think of nothing greater or more inspiring than a field of blooming marigolds tossing their heads in the sunshine and giving a glow to the entire landscape."

Burpee said he had been wanting to name a marigold in honor of Sen. Dirksen, but until now never thought he had one good enough.

"Now," he said, "people from all over the United States have been urging me to do it, and I am proud to have the privilege of naming this best of all marigolds in honor of the great senator from Illinois."

Sen. Dirksen's widow, Louella, and daughter, Joy, wife of Sen. Howard H. Baker [R. Tenn.], were delighted that Burpee wanted to name the new marigold after Sen. Dirksen.

The Burpee seed company's 1970 catalog, which goes to more than 2½ million home gardeners right after Christmas, will feature a full color picture of the Senator Dirksen marigold.

With all this interest in marigolds, it is not inconceivable that it someday may actually become the national floral emblem.

It was just a few days after the senator's death on Sept. 7 that Congressman Jack McDonald [R. Mich.] urged Congress in a joint resolution to grant Sen. Dirksen ". . . in death that wish which he failed to see fulfilled in life."

---

## THE NATIONAL AMPUTATION FOUNDATION: HALF A CENTURY OF DEDICATED SERVICE

---

### HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. HALPERN. Mr. Speaker, it is my great pleasure to speak for a few moments at this time to honor an organization which has been performing a great service for certain special members of our Armed Forces for half a century. This organization is the National Amputation Foundation and the people they serve are those brave young men who, while wearing the uniform of their country, have suffered the amputation of one or more limbs. The National Amputation Foundation has for 50 years, since 1919, been offering valuable assistance to veterans of World War I, World War II, the Korean war, and now the war in Vietnam, who were so seriously injured.

The amputation of limbs causes tremendous physical and psychological problems for a young man, and poses obstacles to surmount that those of us who have not lived through it can only begin to imagine. This is why the National Amputation Foundation's program of assistance and encouragement is so vital and so successful. For who can better help these young men only just beginning to try to cope with their losses than a dedicated group of mature men who have lived through this experience themselves? Their advice and the very example of their own lives can be invaluable to the young amputee.

The services provided by the foundation—legal counsel, vocational guidance and placement, social activities, liaison with outside groups, psychological aid, training in the use of prosthetic devices, and since 1961 manufacture and repair of these artificial limbs in its own shop—are services needed desperately by the newly returned amputee as he faces the strange and sometimes frightening new world his loss has created.

Returning to his home community and a resumption of what he considers normal life, a young amputee must make any number of important adjustments in his life. He may be forced to abandon his former plans for his vocational career because of the limitations imposed upon him by his handicap. He may encounter within himself uncertainties about his social life. These are the areas where the sympathetic counsel the staff of the foundation offers can be so essential if the necessary adjustments are to be made.

Sometimes these problems are simply too tough to be faced alone, and the understanding of those men of the foundation can make all the difference between success and despair. For these men, too, have suffered the loss of a limb and have faced the readjustment to normal community life.

In the last few years the foundation has made a particular effort to reorient the returned Vietnam amputee socially. With visits to both the Walter Reed Hospital in the District of Columbia and the Valley Forge, Pa., hospital, they have helped to cheer up these young amputees and to turn their minds from their disabilities to the lives they will live after rehabilitation. The foundation has sponsored several excursions of amputees to New York City for a good time there, and this past Labor Day some 40 amputees were flown to Las Vegas, Nev., for a happy holiday.

While these activities may seem somewhat frivolous to the casual observer, they are highly effective in helping to reorient and adjust these young men. Many of them are very much concerned about living with their handicaps and the effect of them on their social life. In fact, many of the older members of the foundation report that one of the first questions they are asked by the young amputees is whether they got married before or after the injury.

Again I must express my sincerest admiration for the National Amputation Foundation and for its tireless efforts on behalf of the young men of our country who have given so much. The 50 years of selfless service to the needs of the amputee are a remarkable achievement indeed.

A few of the many laudatory comments the National Amputation Foundation constantly receives, I think, also conveys just what a marvelous, humanitarian effort this voluntary organization has undertaken. For the benefit of my colleagues, I am inserting a few letters Mr. Sol Kaminsky, the foundation's secretary, has received from the branches of the Department of Defense:

DEPARTMENT OF THE AIR FORCE,
*Washington, July 28, 1969.*

Mr. SOL KAMINSKY,
*Secretary, National Amputation Foundation Whitestone, N.Y.*

DEAR MR. KAMINSKY: On behalf of President Nixon, I am replying to your recent letter regarding military air transportation for 40 amputee servicemen from Walter Reed General Hospital, Washington, D.C., to Las Vegas, Nevada, to be guests of Caesar's Palace during September 1–4, 1969.

The interest displayed by the National Amputation Foundation in the welfare of our hospitalized servicemen has done much to boost their morale and attitude towards rehabilitation. Under the circumstances, military air transportation for these 40 amputees has been authorized. Please contact Captain Gordon Hoelscher, Social Work Service, Room G67, Walter Reed General Hospital, Washington, D.C. 20012, as soon as possible for final arrangements.

It is a pleasure to have been of service to you in this worthy endeavor.

Sincerely,

JOHN C. GIRAUDO,
*Brigadier General, USAF.*

---

DEPARTMENT OF THE ARMY,
OFFICE OF THE SURGEON GENERAL,
*Washington, D.C., March 24, 1969.*

Mr. SOL KAMINSKY,
*National Amputation Chapter #76, Disabled American Veterans, Whitestone, N.Y.*

DEAR MR. KAMINSKY: You were most kind to advise me of the whole hearted support that you and other members of National Amputation Chapter #76 are giving to entertain our soldiers who lost their limbs while serving our nation in the Republic of Vietnam.

It is this type of activity which reveals to our servicemen who are so valiantly fighting in distant lands that their efforts are of the utmost importance to the American civilian population, especially those such as you who have given so much in previous conflicts. It is indeed commendable that you and your fellow chapter members are giving the time and facilities to not only entertaining these Vietnam veterans but also the tremendous insight you are offering these men toward a future productive life.

May I take this opportunity to add my appreciation to that of General Hughes and Colonel Coates for the wonderful manner in which you have shown your concern for our patients from Walter Reed General Hospital and Valley Forge General Hospital.

The listings you requested are inclosed, I trust they will be of some assistance for you to continue your invaluable service to our hospitalized Vietnam veterans.

Sincerely,

LEONARD D. HEATON,
*Lieutenant General, The Surgeon General.*

DEPARTMENT OF THE ARMY, WALTER REED GENERAL HOSPITAL, WALTER REED ARMY MEDICAL CENTER,
*Washington, D.C., May 27, 1969.*

Mr. SOL KAMINSKY,
*National Amputation Center,*
*Whitestone, N.Y.*

DEAR MR. KAMINSKY: On behalf of the patients and staff of Walter Reed General Hospital, I wish to express my sincere appreciation to you and the members of the National Amputation Center, Chapter #76, for arranging for a group of our patients to be your guests in New York City following your annual Spring Rehabilitation Ball.

The accommodations for our patients and the numerous social and recreational functions that you coordinated were outstanding. Particularly significant was the warm hospitality and friendship they received throughout their time in New York.

These events provide a most welcome break in hospital routine and have assisted greatly in maintaining a high level of morale at Walter Reed.

Thank you for your continued support and interest in our patient entertainment program.

Sincerely yours,

CARL W. HUGHES,
*Colonel, MC, Commanding.*

---

DEPARTMENT OF THE ARMY, WALTER REED GENERAL HOSPITAL, WALTER REED ARMY MEDICAL CENTER,
*Washington, D.C., October 4, 1969.*

Mr. SOL KAMINSKY,
*Disabled American Veterans,*
*National Amputation Chapter,*
*Whitestone, N.Y.*

DEAR MR. KAMINSKY: I wish to express my sincere thanks and appreciation to the Disabled American Veterans for making the recent trip to Las Vegas possible. It was truly an unforgettable experience for the patients as well as for the staff which accompanied them.

As a physical therapist, it was a privilege and an educational experience to have gone on the trip. It gave me a greater awareness of the problems which the disabled face out of the hospital environment.

The patients displayed a high level of adaptability to new situations becoming quite independent in all activities of self-care and daily living. If they were cautious or dubious as to their being accepted by society, their fears were quickly overcome.

Both physically and psychologically the therapeutic value of the trip was remarkable.

Respectfully,

GILBERT SOSA,
*Capt., AMSC.*

## AGNEW AND THE TV NETWORKS

### HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. DERWINSKI. Mr. Speaker, the national debate which Vice President AGNEW has sparked by his comments on television political commentary continues and I believe that an objective discussion of the subject will be in the national interest.

One of the more objective articles on the subject which I noticed appeared in the November 22 Daily Calumet in a comprehensive report from the publication's Washington reporter, John D. Lofton, Jr.:

AGNEW AND THE TELEVISION NETWORKS
(By John D. Lofton Jr.)

If network television reporters are no better at reporting the news than are the presidents of the networks themselves, then we are in real trouble. Consider the reaction to Vice President Agnew's recent remarks about the television news medium.

CBS President, Frank Stanton replied, in part: "Whatever their (newsmen) deficiencies however, they are minor compared to those of a press which would be subservient to the executive power of government."

Echoed N.B.C. President Julian Goodman: "It is regrettable that the vice president of the United States would deny to television freedom of the press. Evidently, he would prefer a different kind of television reporting—one that would be subservient to whatever political group happened to be in authority at the time."

Unfortunately for these two network presidents, what they had forgotten was that the American people had seen the vice president make his speech, live on television, and nowhere in it were government or political controls advocated. As a matter of fact, Agnew had very wisely headed off this chimera and said very specifically:

"I am not asking for government censorship or any other kind of censorship. I am asking whether a form of censorship already exists when the news that 40 million Americans receive each night is determined by a handful of men responsible only to their corporate employers and filtered through a handful of commentators who admit to their own set of biases . . . Tonight, I have raised questions. I have made no attempt to suggest answers. These answers must come from the media men. They are challenged to turn their critical powers on themselves. They are challenged to direct their energy, talent and conviction toward improving the quality and objectivity of news presentation."

Hardly a call for the intervention of Big Brother. More like "physician heal thy self."

The reaction outside the media itself was equally maladroit but Teddy Kennedy's comments were singularly hypocritical. The senior Senator from Massachusetts said that the Vice President's speech was "an attack designed to pit American against American . . . an attack with the ultimate aim of dividing this country into those who support and those who do not support our President's position in Vietnam."

This charge of divisiveness from a man who only nine days earlier had denounced President Nixon's televised Vietnam talk saying:

"And so this Administration, by clinging to the policies of the past, when the time for peace has come, must expect those who feel differently will rise to this test. The call for unity cannot be responsibly heeded when a leadership has exhibited no policy or plan that unifies. It is difficult to ask a people to join in support of a position that is no different from that which has split our country before."

Undoubtedly what has bugged the networks the most about Agnew's criticisms is not the criticisms themselves, because they have been voiced before, but the fact that they were made at the vice presidential level and with the approval of the President.

Writing earlier this year in the "American Legion" magazine, the syndicated father and son team, Roscoe and Geoffrey Drummond, made a similar appeal for "perspective and balance" and a "wider awareness" by the media that they have a responsibility to do more than sell bad news because it is more exciting.

"The peril is that if any large number of Americans are induced to accept the false image of their nation—the image that wherever you look, virtually nothing is right—then we will be standing at the brink of national impotence, political lethargy and the pervasive conviction that nothing can be put right because so much is wrong," wrote the column-writing duo.

Joseph P. Lyford, liberal Professor of Journalism at the University of California at Berkeley put it another way:

"Today television is relaying versions of a group theater . . . The purpose of the new play is largely the play itself. The script has concerned itself with proclamations and ultimata rather than questions. The language is loud and verbose and increasingly aimed at the destruction rather than the restoration of the dialogue . . . Time given by television and the press to the staged event is time taken away from reporting the happenings that are not contrived . . . If the day comes when television is freed from its dependence on what this or that angry crowd is doing, we will get a very different perspective on what is going on inside this country and inside our heads."

Television reporting of the Democratic National Convention in Chicago last year is a case in point. A report submitted to the chairman of a House Commerce subcommittee speaks of one-sided coverage favoring the cause of the demonstrators:

"In general, there seems to be substantial evidence of animosity by members of the TV news organizations against the Democratic Party, or at least certain of its prominent members, and the administration of the city of Chicago. This seems to have been reflected in the slanting of the reporting of the events as they took place . . . In an attempt to give an over-all impression, it might be said that the coverage presented over the air does, in retrospect, seem to present a one-sided picture which in large measure exonerates the demonstrators and protestors and indicts the city government of Chicago, and, to a lesser degree, the Democratic Party."

Not only distorted, but dull, too, the first Alfred I. du Pont-Columbia University Survey of Broadcast Journalism called television's coverage of the two national political conventions "profound journalistic ennui for purveyor and consumer alike."

In raising certain questions about the media, Vice President Agnew noted that while there is great concern about the financial connections of Senators, Congressmen and Judges, network newsmen seem to be immune from the same close scrutiny.

"When a single commentator or producer, night after night, determines for millions of people how much of each side of a great issue they are going to see and hear; should he not first disclose his personal views on the issue as well?" asked Agnew.

The case of Chet Huntley illustrates why this suggestion is not an idle one.

The Federal Communications Commission last year sharply rebuked N.B.C. for having failed to disclose Chet Huntley's financial interest in the livestock business after he made broadcasts attacking Federal meat inspection requirements.

The commission asserted that a "substantial conflict of interest appears" to have existed with Mr. Huntley's broadcast on meat inspection. In addition, they went on: "N.B.C.'s conduct fell short of compliance with the requirements of the fairness doctrine," which requires "a reasonable opportunity for the presentation of conflicting viewpoints."

In short, Vice President Agnew's remarks about the media were simply a reiteration echo of what FCC commissioner Nicholas Johnson said over a year ago:

"Radio and television mold minds, 200 million of them, in numerous ways every day. It is long past time that we find out just what it is these potters are making out of the clay they knead inside our heads."

## DR. WILLIAM T. PECORA RECEIVES DISTINGUISHED SERVICE AWARD

### HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. RODINO. Mr. Speaker, my very good friend and constituent Dr. William T. Pecora received last week a distinguished award for his outstanding contributions to public service. I am certainly delighted to see this recognition come to one whom I have known and admired for many years.

Dr. William T. Pecora, an earth scientist of international stature who directs the many, far-reaching missions of the U.S. Geological Survey, was named as one of seven winners of 1969 Rockefeller Public Service Awards given annually in recognition of "distinguished service to the Government of the United States and to the American People."

Conceived and financed by John D. Rockefeller III, and administered by Princeton University's Woodrow Wilson School of Public and International Affairs as a national trust, the awards are the highest privately sustained honors for American career civil servants. Each award carried with it a $10,000 cash grant.

Dr. Pecora, selected for the award in the category of the General Welfare or National Resources, was honored Wednesday, December 3 at the Rockefeller awards luncheon at the Shoreham Hotel, Washington, D.C. The presentation was made by Dr. Robert F. Goheen, president of Princeton.

As Director of the 9,000-member U.S. Geological Survey, largest scientific agency in the Department of the Interior, Dr. Pecora—an expert in mineralogy, petrology, and geochemistry—is responsible for planning and directing programs concerned with such fundamental matters as distribution of the Nation's resources, the basic geological framework of the United States, and protection of the environment.

In 30 years with the Geological Survey, for the last 4 as its chief administrator, Pecora, a 56-year-old native of Belleville, N.J., has won wide recognition for his innovative approaches to the earth sciences. He initiated the EROS—earth resources observation satellites—program—an effort in which the Geological Survey joined with NASA and other interested institutions in a project aimed at gathering facts about the natural resources of the earth from earth-orbting satellites carrying sophisticated remote sensing observation instruments.

Responding to the 1964 Alaskan earthquake disaster, Dr. Pecora established the National Center for Earthquake Research in Menlo Park, Calif., an undertaking designed to develop new instruments for monitoring earthquake faults and through laboratory and field investigations producing important information to aid engineering planning in earthquake-prone areas.

A 1933 graduate of Princeton, with honors in geology, Pecora did his graduate study at Harvard receiving his Ph. D. there in 1939, the year he began his career in the Federal service with the Geological Survey. For nearly two decades he carried on basic research related to the occurrence and distribution of hitherto little known or unknown mineral resources. During World War II he directed field investigations in Brazil which led to the discovery of important mica deposits during this period of national emergency.

His work on carbonatites and sulfide-bearing silicate carbonate rocks were major factors in his election in 1965 to the National Academy of Sciences for continuing achievements in original research; he is one of only 40 geologists in that distinguished body.

In 1957, Pecora moved into scientific research administration with his appointment as Chief, Branch of Geochemistry and Petrology of the Geological Survey, and 7 years later was named Chief Geologist. In 1965 he was appointed Director of the U.S. Geological Survey by President Johnson, and was reappointed to that post by President Nixon this past spring.

Dr. Pecora is currently president of the Cosmos Club of Washington, and a resident of this city. A former athlete, he won a national intercollegiate fencing championship in 1933 and in 1936 was a member of the U.S. Olympic fencing team. He is married to the former Ethelwyn Elizabeth Carter; the Pecoras has two children, a son, William C., and a daughter, Ann.

Mr. Speaker, I wish Dr. Pecora many more years of distinguished service, and many more years of happiness and fulfillment.

---

## JOSEPH ELI KOVNER ON POLITICS AND THE WAR

### HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. BROWN of California. Mr. Speaker, this week marks the third month of activities organized by the Vietnam moratorium committee, and, of course, I expect the administration will whip up some more of its special backlashes which seem to be reserved for all critics of our tragic adventurism in Southeast Asia.

But, even though the war leaders prefer to believe that they "own" the "great masses," I feel they are sadly misinformed. Backlashes always seem to reverberate into new lashes, and I will not be surprised to see even greater protests developing this month and through coming months until this cruel war is over.

My longtime friend, Joseph Eli Kovner, head of Kovner Publications in southern California, made many of the above points in a moving column he wrote last month. I agree with Mr. Kovner's outlook on dissent, politics, and the war, and I now place his column in the RECORD at this point:

GALLUP POLL IS WRONG AGAIN! VIETNAM MORATORIUM BACKED BY VOCAL MAJORITY

(By Joseph Eli Kovner)

Some comments on the address by Vice President Spiro Agnew at the Penn. Republican Dinner, Harrisburg, Pa., Oct. 30, 1969.

Coyly, Agnew said, "A little over a week ago, I took a rather unusual step for a Vice President . . . I said something."

As I recall, he hasn't stopped talking before and after his election, or rather, Nixon's election. If he means that everything he said before this particular speech was nothing, I'll have to agree with him.

Guardedly, Agnew said, "Particularly, I said something that was predictably unpopular with the people who would like to run the country without the inconvenience of seeking public office . . . I criticized those who encouraged government by street carnival and suggested it was time to stop the carousel."

This is sheer arrogance. The people should run the government, even when they are not in some kind of public office. The elected officials must not govern without the consent of the governed. If they try, they must be removed, just as Johnson and Humphrey were removed. Agnew is trying to impose a George Wallace type of tyranny over the minds of the populace. And this business of "street carnival" . . . let me say this, last Tuesday, Veterans Day, which used to be known as Armistice Day, being staged were "carnivals" all over this land of ours, propagandizing for this unwanted war in Vietnam instead of memorializing the peace that came about at the end of World War I, and remembering the soldiers who died in defense of our cause, which then, was just. This is what happens when the ultra-conservatives take over the role of patriotism. They have made a mockery of "Armistice Day" or "Veterans Day" and if they have subverted the spirit of this day, and have made this day a day for mongering the Vietnam War, against the wishes of the people of these United States, they will be the ones to suffer the consequences of their folly. The fact is, they will remove Nixon and Agnew faster than you could say "So what's with you, Agnew!"

Belligerently, Agnew said: "It appears by slaughtering a sacred cow I triggered a holy war. I have no regrets, I do not intend to repudiate my beliefs, recant any words, or run and hide."

First, Agnew, brings India's sacred cows into the picture, then, he compares the illustrious members of the United States Senate and Congress, his peer group, mind you, to those engaging in holy war in India. Then, he says, he's not sorry . . . and like a child about to be spanked he utters he won't run and hide."

Paradoxically, Agnew said, "I believe in Constitutional dissent . . . But I do not believe that demonstrations, lawful or unlawful, merit my approval or even my silence, where the purpose is fundamentally unsound. In the case of the Vietnam Moratorium, the objective announced by the leaders—immediate unilateral withdrawal of all our forces from Vietnam—was not only unsound but idiotic. The tragedy was that thousands who participated wanted only to show a fervent desire for peace, but were used by the political hustlers who ran the event."

What he meant to say was, "I don't believe in Constitutional dissent," because you can't have it both ways. If a demonstration is lawful and Agnew doesn't buy it . . . that's really tough!

Our boys will continue to die until we stop this crack-pot realism of Agnew's . . . that an immediate withdrawal will massacre our fighting youths in Vietnam. The tragedy is that wherever we send our soldiers to

fight the holy crusade of anti-communism that is where they are going to die. And they will continue to die until they are told by President Nixon to come on home.

## CONGRESS MUST PROTECT SLEEPING BEAR DUNES

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. DINGELL. Mr. Speaker, for nearly 10 years the Congress has had before it proposals for the creation of a national lakeshore encompassing the Sleeping Bear Dunes area of Michigan.

The proposal has been on the verge of passage in the past; in the 89th Congress it died in the Rules Committee when time simply ran out and Congress adjourned.

We are most hopeful of passage this Congress.

Today the Sleeping Bear Dunes legislation enjoys broad bipartisan support.

My distinguished colleagues from Michigan (Mr. O'HARA and Mr. VANDER JAGT) have introduced Sleeping Bear National Lakeshore bills that are very close in substance. Sixteen members of the Michigan delegation have sponsored one or both of these bills.

The need for passage of this legislation was well stated in a recent editorial in the Michigan State University State News, and I am including its text at this point in the CONGRESSIONAL RECORD:

CONGRESS MUST PROTECT SLEEPING BEAR DUNES

In 1961 Philip A. Hart, D-Mich., introduced the first bill to make Sleeping Bear Dunes a national lakeshore, owned and managed by the National Park System. He successfully brought the bill through the Senate twice, but it still is in the Interior Committee in the House.

Meanwhile, land value continues to escalate and people are still without recreational resources. If Congress doesn't act soon, the opportunity may be lost because private development is proceeding rapidly.

Wayne Aspinall, D-Colo., and chairman of the House Committee of Interior and Insular Affairs, refuses to hold hearings because the Bureau of the Budget will not allocate funds for the project. There is a $275 million backlog for national parks already authorized by Congress. The bureau doesn't expect this to be paid off until 1974.

On June 17, Guy VanderJagt, R-Mich., introduced another bill to establish a Sleeping Bear Dunes National Lakeshore of 61,000 acres. Its primary objective is the preservation of natural and scenic values of the area.

Sleeping Bear Dunes, towering 460 feet above northeast Lake Michigan and adjacent inland lakes, is known for its massive dunes, white sand beaches and deciduous forests.

The area offers a variety of outdoor recreation—swimming, boating, water sports, camping, picknicking, hiking, hunting and fishing. Scientific features of the area attract people interested in geology, biology and ecology.

Preservation of land and inland water surfaces are an alternative to uncontrolled use and development, loss of shoreline access and public outdoor recreation opportunities. The National Lakeshore will preserve the natural scenic and scientific values that first attracted people to the dunes.

The people of Leelanau and Benzie counties, the home of Sleeping Bear Dunes, are opposed to the Lakeshore because they are worried about tax loss and ownership of their property.

Vander Jagt's bill allows many owners of unimproved land continued use of their property, subject only to certain restriction defined in scenic easements purchased from the owner by the federal government. Prior proposals offered protection against condemnation only to improved lands.

This will lower the overall cost of the Lakeshore project, reducing the land the federal government will purchase outright.

With the federal acquisition of lands, local school systems will suffer a loss of tax base. Part of this will be made up by state and federal school aid funds. In addition, Gov. Milliken and several leaders of the Michigan Legislature promised they would work for the passage of state legislation to make up any deficits the area school districts might incur.

National conservation groups are jumping on the Nixon administration, considering it inadequate in meeting the country's growing outdoor recreational needs. Rupert Cutler, East Lansing graduate student who has worked in Washington, D.C., with the Wilderness Society, a conservation group, said the administration seems totally callous and indifferent to conservation and parks.

The Michigan Dept. of Natural Resources supports federal ownership and management of the Lakeshore. Sixteen of the 19 Michigan representatives in Congress have proposed or supported legislation for the Lakeshore. Charles Chamberlain, R-Lansing; James Harvey, R-Saginaw; and William Broomfield, R-Royal Oak have not supported the proposal.

The amount of land under state ownership in the Sleeping Bear Dunes is constantly dwindling. If we wait five more years to pass legislation, more of the land will be in private hands, with many natural features impaired. Congress must act now to protect and preserve the Sleeping Bear Dunes, and make them accessible to visitors through a national lakeshore.

## FUTURE OF OUR SPACE PROGRAM

### HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a speech made by Dr. George Mueller of NASA, Associate Administrator of Manned Space Flight in which he talks about the future of our space program:

ADDRESS BY DR. GEORGE E. MUELLER, NASA, BEFORE THE 25TH ANNUAL GENERAL MEETING, INTERNATIONAL AIR TRANSPORT ASSOCIATION, AMSTERDAM, THE NETHERLANDS—OCTOBER 23, 1969

It is indeed a pleasure to talk with you on the occasion of the 50th anniversary of this unique organization. The international cooperation which characterizes IATA has been a dominant force in expanding the use of aviation technology, so that every place on earth is accessible to every other, in the relatively short span of fifty years, the airplane has changed the world.

The flight of Apollo 11 has again changed the world. We have now taken the first steps to man's free movement throughout the solar system. Within the next fifty years the solar system may be as accessible to our children as the world is to us today.

We now stand at what is undoubtedly the greatest decision point in the history of this planet. Never before has man been in a position to make a conscious decision to follow a path that would change the future of all mankind. Are we to choose the path that leads to men colonizing the solar system, or will we turn back?

If we choose to go forward, then it would seem appropriate for the nations of the earth to associate themselves in an organization, similar to IATA, which would focus the space efforts of all countries for the greatest benefit to all mankind. The developments now being planned in the United States space program will facilitate and eventually lead to the internationalization of space.

Aviation and space, so similar in many respects that the word "aerospace" has been coined to describe the total activity, have enjoyed an interchange which is only beginning to show its synergistic effects in both disciplines. Our space capability was built upon the solid foundation of a healthy and innovative aviation industry and upon the experience of the teams who built the ballistic missiles. But these were only the foundation. Upon that had to be superimposed the Apollo program structure, harnessing the creative work of scientists and investigators in over 200 universities, the work of 20 major manufacturers and over twenty thousand subcontractors, in which more than 300,000 people were employed at the peak of program activity.

Apollo is the largest engineering program that has ever been accomplished. It was done, as it had to be, by the development and employment of new methods and materials as well as the judicious use of the old. Government, science, and industry were so blended that they worked as a single cohesive organization for the attainment of this difficult goal.

New management techniques had to be invented which would be strong enough to maintain the pace and the perfection which the program demanded, and still be resilient enough to withstand accident and accommodate change. It was necessary to plan for opportunities afforded by success as well as for setbacks which could be expected in connection with any research and development program.

Hardware was being manufactured in almost every state in the nation. Millions of parts had to be factory tested, certified "man-rated" and then shipped to Cape Kennedy where they would be integrated into the total system.

Three major centers and a score of smaller ones, each under the direction of strong and innovative people, needed to be carefully focused upon the goal—the lunar landing. A total systems approach was obviously necessary. A pattern of project management was instituted which Fortune Magazine recently called a "management revolution".

Apollo offices were set up at each Center as well as on the premises of the major contractors, much as airline technical offices are installed in the plants of major suppliers of equipment. These project offices monitored design, schedule, cost, performance and quality control and formed a separate network headed by the program offices in headquarters in Washington. Communication lines between all offices remain open at all times. Visibility of all problems at the earliest possible moment was essential to prevent their escalation.

A most experienced group of individuals, the chief executives of the manufacturing companies which were producing the bulk of the hardware were asked to serve as members of the "Apollo Executive Group" which acted both as an advisory board to us, and at the same time, because an effective communications link between Apollo management and their own companies. The dedication of these men has been one of the greatest assets of

the program and a continuing source of real help to me.

In another area of equal importance, the Science and Technology Advisory Committee was formed. This group of 15 renowned scientists, led by Dr. C. H. Townes, included three Nobel Laureates as well as Dr. Lee DuBridge, now Science Adviser to President Nixon. Their constant interest and thoughtful watch over the scientific and new technological developments were responsible for a great part of the success of the program, both in science and in execution.

It was the intent of the Apollo Program not only to create the capability to land men on the moon and return them safely to earth, but to do it within the time and cost constraints originally set. Therefore tight scheduling was obligatory for getting the job done in a timely fashion and was the major factor in cost savings. Toward this objective another new concept was introduced—"all-up" testing. Instead of the incremental testing which had been used in previous research and development programs, each part was thoroughly tested on the ground, and then the whole system was assembled and tested all together in the first flight of this totally new equipment.

Thus, the first Saturn V flight tested for the first time the first, second, and third stages of the Saturn rocket as well as the guidance system, and in addition simulated the flight out to the moon and back with the Command and Service Module. This simulation provided the first test at lunar re-entry velocities of the spacecraft heat shield as well as the first test of the Apollo recovery forces.

This successful mission allowed the third Saturn V to be manned and the first lunar flight (Apollo 8) to be carried out on this first manned test of the Saturn V.

One consequence of this highly successful activity is the fact that we now have nine Apollo-Saturn V's which stand ready to carry out further missions in space. And the program goal, the lunar landing, was completed within the time specified and at the lowest cost estimated in 1961.

The successful operation of hardware and software, of men, machines and systems, points up with extreme clarity one of the most significant influences which the space program is now exerting and which may be expected to proliferate throughout our industrial society. This is what I have chosen to call the "technology of perfection". Manrating of thousands of systems and millions of parts has forced a new element into the American manufacturing system. We have not formerly expected the precision associated with the manufacture of a fine watch to be applied to a giant engineering project, but every time a Saturn V is launched we know that more than three hundred thousand people did all the essential things right.

Of 15 million parts in the Apollo-Saturn vehicle which took off from Cape Kennedy and flew out to the moon on July 16, 1969, the fact is that only one non-critical part failed on that mission. That is a demonstrated reliability of .999,999,996—a really phenomenal level.

Another notable effect of this program is the great mixing of disciplines which has resulted from its needs. Parochial differences had to fall away so that medical doctors could work with aeronautical engineers. Electronics experts planned the portable life support system which sustained Astronauts Armstrong and Aldrin on the moon in company with fabrics manufacturers, chemists, biologists, doctors and engineers. Scientists and engineers worked in harmony to design and develop the complex of tracking stations which carry communications between earth and the spacecraft—no matter where it may be, all the way out to a quarter of a million miles.

In thousands of separate regimes the space program has forced the application of our knowledge of natural laws. These developments compare, at least in number, with those usually associated with a major war. However, it is important to note that wars do not produce new knowledge, but rather demand the application of all knowledge to the needs of the moment. On the contrary, the space program has produced a series of breakthroughs in weather, in communications, in our knowledge of the space about the earth, of the sun, and now of the moon. It has given us new tools and a whole new environment in which to search for fundamental information.

But this is just the beginning. Within the next ten years we can expect the full effect of the space age to be felt. New insights into our complex environment will spur the development of new industries, new products and the new jobs which we need to gainfully employ our expanding populations.

Probably one of the first areas which will be dramatically effected by our space experience is air transportation. Early benefits to the space program bestowed by the experience and the knowledge transferred from the aviation community, are now beginning to be reciprocated.

An inertial guidance system fundamentally the same as that which carried Apollo 11 to the moon is now being installed in the Boeing 747. Data concerning the flammability of non-metallic materials, accumulated for use in the Apollo Modules, is being utilized for interior fittings in that new aircraft.

Less obvious transfers from space to aviation include new composite materials which withstand stresses and temperatures not previously encountered. Optical tooling is already being used for large structures. Welding with new materials and by new processes, originally developed for space, is being used in new aircraft.

While many spacetechnology developments have already found their way into commercial aviation, there are others which will soon come into everday use. Soon, each future generation aircraft will have its own general purpose on-board digital computer. The use of solid-state large-scale integrated circuits for multiplexing and self-checking circuits will eliminate most cabling and much maintenance.

The rate of technology development is directly related to the speed with which our society progresses, the speed with which the standard of living and the amount of each person's wealth increases. We can, because of the large number of space-inspired products and systems, expect a correspondingly large increase in the wealth of all sectors of our society within the next few years. Yet we are only on the threshold of space exploration. We have yet to reap the benefits of the capability to operate in this new territory mankind has acquired. These benefits will be great, beyond our ability to imagine.

We now have the opportunity to place observatories where we will in the space between the earth and the moon which can improve our understanding of the basic physical processes in our solar system. Spacecraft can range throughout our solar system exploring the space environment, and other planets, searching for forms of life.

Weather satellites, already in general use, will be improved so that dependable weather information will become available weeks in advance. The possibility of eventual modification of weather will move closer to realization.

Communications satellites are in use. Improvements in these will allow direct radio and television broadcast to homes, offices—and of major importance, to schools. Other types of satellites to survey the earth give promise of increasing food production, conserving resources and monitoring pollution of water and air.

Scientists are intrigued with the possibilities of making use of the unique characteristics of space for experimentation with materials and processes. Molten metal will take the shape of perfect spheres in the weightlessness of space, so that perfect ball bearings will be produced. We discovered crude examples of this on the moon. Subject only to surface tension and free of the constraints of a mold, crystals of great purity and great size might be grown. Dissimilar materials might be combined, like glass and steel or ceramics with plastics. Bubbles blown into molten steel may yield a material with the strength of steel—and the weight of balsa wood. Simple experiments carried out in this new environment may produce materials and processes not possible on earth.

For the conduct of these and other experiments and for the efficient utilization of the space environment, a large space station accommodating many scientists and technicians will be required. The station will be designed for at least ten years of operational life. Spreading its cost over such a period brings its cost per year within the range of some of our earth laboratories. The station will be a modular installation so that segments can be changed to prevent obsolescence. The modular format also provides the flexibility necessary to a research facility. Three kinds of modules, utility, living and experiment, will form the basic station to which can be added whatever special facilities modules are appropriate at later dates. The installation of such a platform in earth orbit will give us a research development and operations facility for accomplishing the increasingly important space uses we envision for the next decade.

Our space activity thus far has been constrained by the high cost of putting things into orbit, and their inaccessability once they are in space.

Therefore, the primary need for the continuation of all space activity is for a second generation of space vehicles, a completely reusable space transportation system, which I have called a "space shuttle".

The technology for the production of the space shuttle is more advanced today than was the technology for the Saturn V eight years ago. In addition, we have eight years of understanding of the space environment and the systems required to operate in this environment on which to base the design of this vehicle. One encouraging fact is that we now have several designs for such a transportation system which are capable of meeting our objectives. Studies to select the best concept are now being carried out. Using the management techniques which have been developed for Apollo, the chosen system could be flown in six or seven years. I believe that if we wanted to we could have a space shuttle in operation by 1976.

The space shuttle will reduce the cost of space activity by two or even more orders of magnitude, and at the same time it will greatly increase our ability to operate effectively in space.

The desired characteristics of this vehicle will be of particular interest to you, for in many ways they will anticipate those of the next generation of air transports. You may also note that a second, or perhaps third generation of the space shuttle might well be a global transport, so that no place on earth would be more than an hour from any other.

Those elements in the basic design philosophy of the space shuttle to which we are looking for cost reductions are aircraft manufacturing techniques, aircraft development test procedures, maximum flexibility for multiple use and volume production, long life components for repetitive reuse and airline type maintenance and handling procedures for economy of operation. So you see that the transfers from aviation to space are going to be very extensive.

A major point of difference however, will be in the manner of launching this craft, for it will be powered by rocket engines and take off vertically from a launching pad. We expect that some day these could be located

at many major airports since the cleared distance around the vehicle will need only to be in the order of a mile in radius Many of the present jet ports could be used, especially those which have water on one or more sides.

A flight crew will fly the shuttle into earth orbit to dock with the space station. It will deliver and receive payload, perform its other functions which may include satellite maintenance and repair or space rescue, and return through the atmosphere for a horizontal landing at its take-off point on a runway which would not need to be over 10,000 or 12,000 feet long. This flight pattern creates a different noise situation than that of present aircraft. There is, or course, the huge sound of the blast-off which lasts for a few seconds but is localized, to the airport itself. The next sound is generated as the shuttle comes back into the atmosphere but this is hardly heard on earth as the transition to subsonic speed occurs at an altitude of about 100,000 feet. As the craft approaches earth, its speed is subsonic, and its landing sounds will probably be less than those of large jets.

As presently conceived, the space shuttle will consist of an orbiter vehicle containing crew, passenger, and cargo accommodations as well as power and fuel for orbital and landing phases, and one or more booster elements which will carry the bulk of the fuel necessary to achieve orbit. The boosters will also be manned and powered for return to earth and horizontal airport landing. Thus, the total vehicle is reusable. Some concepts propose identical basic configurations for the orbiter vehicle and the boosters, thus achieving production economies. The vehicle is being designed to carry a flight crew and up to 50,000 pounds of cargo and or passengers into and out of orbit, with a 10,000 cubic foot internal payload volume. A nominal orbital altitude of 270 nautical miles and 55 degree inclination is being used as a baseline.

These design parameters permit great operational flexibility so that this craft will be able to take off in any direction.

Designing the internal compartment to accommodate containerized cargo will assure that a wide variety of payloads can be carried.

The vehicle configuration will provide crew and passenger safety comparable to that of current commercial jets. Extremely reliable systems will operate redundantly where feasible; nonredundant systems will be operated well within established operational limits. This approach should allow for the graceful degradation of any system, precluding catastrophic failure and allowing time for a safe return to a landing site of passengers, crew, and vehicle.

The technology of all weather terminal flight control extending from the transition to subsonic flight at 100,000 feet through the final approach and landing of the several configurations under study is expected to be well in hand within the next several years. Extensive flight data from three lifting body configurations in regimes ranging from low supersonic speeds to approach and landing, show the feasibility of these designs. Related work on regular aircraft is continuing to investigate powered landings, automated control systems and operational problems. Results from this work will apply directly to the space shuttle.

The space shuttle will require additions to current technology in such areas as (1) efficient lightweight structures; (2) stage separation methods, (3) reusable, long-lived rocket propulsion, (4) lightweight airbreathing propulsion for terminal flight and landing, (5) automatic all-weather landing systems. In addition, detailed configuration analysis and wind-tunnel testing are needed to determine vehicle elements that can fly satisfactorily in all flight modes, considering different mission modes, variable cargo loads, and the large weights and areas associated with rocket engines at the base of the vehicles. Pertinent research is being expanded with a view to being ready to initiate a prototype design a little over a year from now.

The technology for thermal protection during entry into earth atmosphere for blunt vehicles is in hand as a result of the work done on Mercury, Gemini, and Apollo. Velocities up to 36,000 feet per second, which produce temperatures in the order of 18,000 degrees Fahrenheit are successfully withstood by ablative materials formed by any of three or four compounds and reinforced with glass fibers.

For reusable entry vehicles such as the space shuttle, studies are being made of re-radiative heat shield materials and design concepts that can withstand a number of entries without replacement or refurbishment of the structure. Considerable progress has been made in adapting high-temperature materials including refractory metals such as columbium, as well as more conventional materials such as titanium and some nickel alloys, to this use. Composites of graphite and carbides are also being examined. The combined use or re-radiation with heat sink or convective cooling techniques for hot spots seems to promise an indefinitely reusable vehicle.

The high pressure, staged combustion rocket engines for the space shuttle will differ from the expendable engines used in our previous launch vehicles since they will be designed to have many of the characteristics of the engines in use in modern jet aircraft, including stability over a wide range of operating conditions, variable thrust to permit vehicle control, time between overhauls measured in hours of operation, high performance and operational dependability.

The choice of liquid oxygen and liquid hydrogen as propellants is based on our experience in Apollo, particularly on our ability to handle the propellants safely and relatively easily on the ground during loading and transferring. We feel that it will be possible to load these vehicles directly from tank trucks at the launch pad, thus greatly decreasing both facility and handling costs.

Another great advantage is that there are no toxic products or components of these chemicals and this propulsion system will not add to the pollution of the atmosphere. For simplicity and ease of ground handling we plan to use these propellants throughout the vehicle system, including using $H_2$ for the subsonic engines for landing.

Onboard systems will provide the crew with necessary indications to make proper flight decisions. Today, there are some 20,000 people at Cape Kennedy who are directly involved with the checkout and launch of the Saturn V. Obviously, the space shuttle checkout and launch systems are going to have to be quite different if we are to radically lower operating costs. The approach we are studying employs complete automation of the option of crew override and leads to an airline type operation.

Some recent breakthroughs in electronics can supply the tools we need to achieve these which can provide as many as 1250 bits goals. The large-scale integrated circuits of memory in less than half a cubic centimeter of space are one of the tools which will be employed. Another is thin film memories. These advances will make possible the self-checking subsystems which we will need in the space shuttle. With immense capacity for logic, memory and multiple redundancy in a small volume, the self-checking black-box is going to be a practical reality.

A continuing goal in electronics is to perform more functions with less power, volume, and weight. Microelectronic circuits having a thousand active elements on a chip 150 mils (.001 inch) square are now available. It is estimated that through continued R&D, a million active elements can be placed on a chip 500 miles square. This will require new processes, such as laser or electronic beam techniques, to replace photographic etching and the development of automated design, fabrication, and testing methods.

The necessity for new design for such electronic equipment creates the opportunity for an important advance toward simplicity. At the present time each of our subsystems, be it guidance, communications or engines, is interconnected by cables having literally thousands of wires. Not only does that represent one of the major components of weigh, but it is by far the largest contributor to unreliability. We are ready for a breakthrough and I believe that there can and should be no more than six wires, in one connector, going into or out of any black-box. These six wires might be allocated in the following manner: one wire would connect to a small computer inside the black-box which evaluates all the information from the circuits inside and tells the pilot one of three things—"I am well," or "I am sick" or "I am about to get sick." The second wire will carry all signals into the black-box. The third will carry all of the output signals or responses. The fourth and the fifth will be used for a standard power supply—all electrical equipment will be designed to operate off a 110 volt 400 cycle bus; any different power required will be generated by conversion within the black-box. The sixth wire is a spare. It will be used for something which we have not yet thought of.

The philosophy which will permit this concept is relatively simple—to assign the responsibility for the welfare and checkout of each subsystem to that subsystem. The microminiaturization which has been so notably advanced by the demands of space, now makes it possible and practical to build a small general purpose computer in a volume of about 10 cubic centimeters with enough logic and enough multiple redundancy to make it practical to use it to (1) self-check the internal circuits and (2) to provide time division multiplexing with proper addressing so that six wires can indeed effectively provide all the communications and power connections required.

Another ideal use for a computer on board the space shuttle is to throw switches. As a program switching network a computer could not only flip hundreds of switches according to preset programs but could also assure that they were actually in proper position. Some of the switching functions in Apollo are controlled by computers on the ground, but that task as well as the manual task of throwing and monitoring the 1000 switches in the cockpit can easily and effectively be taken over by a computer on board.

Using a computer inside the cockpit can also greatly simplify the control panel, which in spacecraft now have five times as many switches and instruments as a 707 or a DC8. For the future, I envisage a spacecraft command panel which contains 3 cathode ray displays, one digital, input-output circuit which we call a DSKY, and an On/Off switch for the computer. Two of the cathode ray displays would be used for control information, one for navigation and one for attitude control. These would operate interchangeably so that if one failed all information would be available from the other. These would replace the conventional "8 ball" attitude display systems which, being mechanical, are subject to breakdown. The cathode ray tube, on the other hand, has turned out to be one of our most reliable and long-lasting electronic products, as we have learned from the fine performance of our home television sets. The third cathode ray display would give the pilot information about any part of the total system or his flight plan by displaying the output of his computer. He can ask for any information by punching in the proper code for any system or subsystem, or internal program. Stored in the computer

memory is his checklist for each part of the flight, alternatives available to him in the event of an equipment malfunction, and such special information as propellant reserve, plot of flight path angle, and operational configuration of subsystems.

The electronic advances which are going to permit onboard checkout and control should make the space shuttle much simpler to operate than present commercial jets. Further, our design criteria require that all subsystems should be designed to continue to operate after the failure of any part except for the structure and to gracefully degrade in performance with subsequent failures. Electronic systems will be designed to give adequate warning of potential failures, to continue operation after the failure of two critical components, and to fail safe after any failure.

Present inertial guidance systems are gimballed, platform mounted gyroscopes and accelerometers. In the lunar module we have introduced a strapdown guidance system which replaces the mechanical gimbals with a somewhat more complex electronic system. It has demonstrated more than enough accuracy and computer capability to carry out the space shuttle missions. These strapdown systems with advanced reference devices, the next generation of gyroscopes and accelerometers with improved life and accuracy, should be capable of meeting all our requirements with increased reliability and life and a significant reduction in cost.

Star, planet, and horizons are basic references for navigation and present systems use gimballed trackers for attitude, reference position alignment, and velocity measurement. I expect that we will continue to use this system in our shuttle and space station. However research is under way in several laboratories on holographic pattern recognition techniques for star patterns. This new reference system would have no moving parts and give three axis reference on any spacecraft orientation. This would also be true of aircraft navigation techniques. In another area, the technology of laser radars for rendezvous and docking, which is of course also applicable in clear weather to pin-point landing, has been demonstrated in the laboratory for a range of 65 miles and a docking accuracy of one inch. Efforts in the next five years should increase its range to over 200 miles, and make it an effective competitor with our present radio frequency radars.

Crew and passenger compartments will be maintained in "shirtsleeve" environment. Spacesuits will not be required. As a matter of fact they are not now used in the Apollo program except for extra vehicular activity and in the event of certain emergencies, which, happily, we have not yet experienced. The atmosphere of oxygen and nitrogen in the space shuttle at a nominal pressure of 10 psia and a maximum flight load of three times earth gravity, will allow any reasonably healthy individual to travel in space shuttle without prior conditions.

Communications with the ground can be similar to those now provided by FAA Air Traffic Control, but for orbital operations will, I expect, be carried out through the use of communications satellites, thus greatly simplifying the ground network requirements.

Our planning projections forecast that the space shuttle will have a useful life of 100 missions or more. As is characteristic of aircraft maintenance today, we would expect to replace subsystems, particularly engines and thrusters on a progressive basis.

Launch operations will be simplified by the onboard system diagonostic instrumentation so that only vehicle erection, propellant loading and final boarding of payload and passengers will be necessary. Pre-launch checkout will be carried out on-board by the pilots.

There are several areas which we are studying. One is whether the shuttle should be designed with self-ferrying capability, so that if it lands at an airport other than its home base, it will be able to return home in a subsonic flight mode under its own power.

Another is whether the reusable boost elements should have the capability to carry out their missions in an automatic mode, including a completely automatic landing system.

A third is whether the shuttle would have a "go around" capability in order to improve our ability to land under all conditions. We intend in any event to include a powered landing capability which appears to be desirable to increase the ease of control and to improve performance in winds and gusts. This capability would be compatible with both powered landing and self-ferry ability.

In any event our designs are providing landing visibility at least as good as that of high performance jet and SST aircraft and landing characteristics and handling qualities not more demanding than those of commercial jets.

One other feature we are incorporating in our design is that wherever possible modules be used which can be replaced when the technology advances, without redesigning the total vehicle. We know that changes will occur, but since we do not know which components will be affected, we are trying to introduce standard mountings and interconnections so that systems and subsystems can be replaced without basic configuration changes.

I believe that by the time we can produce the space shuttle that we will be receiving so many benefits from our exploration of space and of the moon, that many nations will want to use these economical space shuttles either by direct purchase or through chartering or leasing them from other nations.

If, as we expect, this shuttle will be the progenitor of a global transport, it will surely be necessary that multi-company and probably multi-national use of the vehicle be facilitated.

The exploration of space will of course, be an international activity. As space engineering capability increases many more nations will take more active parts. It is interesting here to draw an analogy between space and aviation. Although only a few countries of the world manufacture the bulk of air transportation equipment, it is used by almost every nation for its own individual purposes. Within the next decade, no matter which nations provide the mechanical equipment for getting into space, that equipment will be used by means of one or another kind of arrangement, to satisfy the space ambitions of all nations.

No really meaningful estimate of the price of an operational vehicle can yet be made, since the number of vehicles that will be needed is not yet clear. That number is a function, not only of the various jobs it will be called upon to perform, but also of the existence of the system itself. After all, no one needed a telephone, a computer or an airplane before they existed. However, we expect the development cost of the first prototypes to be about six billion dollars spread over a six year period.

I fully expect that by the end of the next decade a number of the people in this room will have flown into and out of space. Consider with me for a moment the possibility of travelling in the space shuttle from, say, Amsterdam to Los Angeles sometime in the 1980's. You will board the regularly scheduled vertical take-off jitney in downtown Amsterdam to fly quickly to Schiphol airport. There, in the center of the field, the Los Angeles bound shuttle will be erected, being fueled with liquid oxygen and hydrogen from tank trucks alongside. As the fueling operation is completed, your luggage will be put into the baggage pod, and with your flight companions, you will enter the passenger module. The passenger compartment will be swung into place in the orbiter section of the shuttle. The flight crew will be conducting their final checkout of the vehicle, querying their on-board digital computer about the condition and configuration of each system and subsystem.

Passenger seats will swivel so that you will be sitting erect until power is applied, at which time the seats will recline so that the gravity load, not more than three times that of earth, will be more easily accommodated. Your seat will be cushioned and provided with its own shock absorbers to lessen the load.

The shuttle will fly west south west on a sub-orbital course as you attain maximum speed of approximately 12,000 miles per hour at 100 miles altitude. Seven or 8 minutes after lift-off from Amsterdam, the booster element will peel off and return for a regular runway landing.

Although there was a huge explosive sound at the airport as the rockets ignited, it lasted only a few seconds, and you will have heard no sound, since it was far below your vehicle. As a matter of fact your whole trip will be practically noiseless. You will not hear the sound of entry into the atmosphere, but neither will people on the ground as that entry will be made at about 400,000 feet above the earth.

While the passenger compartment will have no windows, television cameras mounted at strategic positions on the exterior of the orbiter vehicle will bring unobstructed panoramic views of the earth and of the sky into the cabin. As you leave the pad you will see the great thrusts of fire which propel your craft, and the blue of the Atlantic and the glistening clouds will occupy the television screens as you out-distance the sun on your westward journey.

While you are in flight you will, of course, be weightless. A cabin attendant will assist you to float about the cabin, or you may choose to remain in your seat which can now stay in the reclined position, or not, just as you like. Probably you will want to experiment with this new sensation. Certainly our astronauts seem to enjoy it. However, as descent begins, you will have to return to your seat and belt yourself in—just as in other aircraft. Your views of the sunlit surface will be memorable as the earth seems to come up to meet you at 11,500 miles per hour. For this flight has not only been noiseless and weightless, but there has been no vibration and no feeling of motion after the gravity pull at the launching. Upon entry into the atmosphere, however, you will again encounter the forces of the earth and your shock absorbing seats will return you to a reclining position.

Your next sensation will occur when the subsonic jet engines take-over for your landing on the runway at Los Angeles International Airport, Air traffic control will be programmed, using precise fixes on altitude and position verified by communications satellites, so you will not encounter any traffic delays. The sound of your craft coming in for its landing will actually be less than that of current jets.

Your landing at Los Angeles International Airport will be a subsonic jet runway landing and you will board the scheduled vertical take-off jitney there for its quick flight to downtown Los Angeles. Assuming that you took off from Amsterdam at noon on Monday, you would arrive in Los Angeles before 5 a.m. Monday, in less than an hour's travel time—in time for a swim before breakfast. And if you were really pressed for time and had to return to Amsterdam as soon as possible, you could, theoretically, leave the west coast after noon and be back in Amsterdam before the end of that Monday, after one hour of flight and eight hours of sun time.

We see no technological barriers to this kind of development. One lesson we have learned from the lunar landing, "impossible" as it seemed to most people less than a decade

ago, is that no technological development can really be called "impossible" any more.

This brief description of some of the products, results, and future goals of our National Space Program only hints at its significance in the life of every man.

Who in 1913, ten years after the invention of the airplane, would have guessed the far reaching and myriad changes which that single concept brought about? We can guess, extrapolate, wonder, but our imaginations are taxed when we consider that the space program opens so many new avenues at the same time.

Let me try in conclusion to outline what it is possible to accomplish in space by 1970 and 1989, using what we have learned from the Apollo Program as a base.

If we pursue a reasonably bold, aggressive program, by the end of 1979 we would have modular space stations in synchronous, equatorial orbit, in low altitude polar and in low inclination earth orbits, as well as having our first station in polar orbit around the moon.

The number of people involved may give some idea of the amount of activity I foresee. By the mid 1980's there could be as many as 100 people either living in or in transit through the space stations in low earth orbit, perhaps 50 living in the station in synchronous orbit and perhaps 25 in the space station orbiting the moon. Using basically the same or similar equipment, there may be at least one surface base on the moon with 50 people living there. Nearly daily shuttle flights to the low earth orbit station would be required to support these people and to provide for satellite repair and maintenance.

Nuclear powered space shuttles would be traveling between lunar orbit and earth orbit and between earth orbit and synchronous orbit. They might be flying once every two weeks to the moon and about once every two weeks to synchronous orbit.

There would, of course, be shuttles operating between lunar orbit and the lunar base and between the lunar orbiting station and exploratory sites on the moon.

By the end of 1989, if we have reasonable space activity, and I think, to some extent independent of how much is done in the 70's, I would expect that men would have established their first colony on the moon, and the first permanent base on Mars. And they would be beginning to fly out to the farther planets.

The kind of resources involved are similar to those applied to the Apollo Program.

The key to this program is the space shuttle. It opens a completely new era of transportation on the earth and in space.

It is literally man's key to the solar system. Thank you.

## A NATIONAL TRANSPORTATION PLAN—NOW

### HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. PICKLE. Mr. Speaker, the need for a national transportation plan grows with each technological development we make in the industry. The jumbo jets will be a reality soon and for almost 4 years we have been hearing the laments from our airports regarding their overcrowded and even unsafe traffic conditions. And air transportation is but one part of our jigsaw puzzle approach to the entire transportation picture.

Hopefully, the Department of Transportation will soon have ready their long-promised national transportation plan.

The need is dramatically portrayed in the accompanying article in the Evening Star, and I insert it as this time:

AIR JAM REQUIRES NATIONAL SOLUTION

(By William Hines)

The United States is about as well prepared for the era of the jumbo jets, which dawned this past week, as the State of California is for a force 7.5 earthquake. The difference between the new planes and a major natural disaster is that something could have been done to get ready for the former.

For almost four years now, airport authorities in every big city have been on notice that airplanes twice the size of those in general service could be flying by the end of the 1960s. With a special flight from Seattle to New York last Tuesday, the Boeing 747 superplane kept its date with the nation, but its punctuality was not reciprocated.

On the ground and in the air—but on the ground particularly—the 747 poses some problems which will be overcome in the long run only by development of a comprehensive national transportation policy. Such a policy does not exist today, and nothing in the mumblings and fumblings of Washington officialdom provides a basis for hope that one will emerge soon.

There is a mistaken impression, widely held, that the appearance of a new airplane carrying many more people somewhat faster than older craft necessarily constitutes an advance in intercity transportation. As good a case could be made for exactly the opposite point of view.

The basic problem in air transportation today is that most people who think about it at all regard it as a separate entity, somehow different from ground transportation. But a moment's thought will correct this notion, if one concedes at the very outset that the sole function of transportation is to move people (and goods, to be sure) from one place to another.

The name of the game, as played by someone traveling from coast to coast, is not to get from Sea-Tac Airport on Puget Sound to J. F. Kennedy on Jamaica Bay, but from say the L. C. Smith Tower in Seattle to 49th and Madison in Manhattan.

Viewed in this light, the airport is seen for what it really is: Not a point of origin or termination, but an interface between transportation modes—the place when one exchanges a 60-mph conveyance operation on the ground for one that travels through the air 10 times as fast. The longest journey, as someone once said, starts with a single step.

Somehow or other, this has never been officially recognized, although there is a wide awareness of this fact at subordinate echelons in the federal Department of Transportation. But prevailing transport policy, such as it is, holds an airplane to be a thing apart and the operation of an airport an end in itself, rather than simply a means to an end.

Even the airport is fragmented, with the Federal Government helping out with runways and navigation aids, but leaving up to airport authorities (usually the cities) creation and maintenance of terminal facilities—and to still someone else the furnishing of ground transportation to the city center. These things the localities provide according to their means, and often as not grudgingly.

The fiction that terminal facilities are solely the business of the big city nearest an airport is as ludicrous as the myth that airports are end-points in journeys from city A to city B. The mobility of Americans—particularly Americans traveling on business, but pleasure trippers also—makes every major airport a national rather than a local concern.

Take the case of a family from Concord, Mass., on a vacation trip to Disneyland, or an engineer from Lexington with business in San Bernardino. Why should the cities of Boston and Los Angeles be responsible for the dispatch and reception of these travelers, none of whom originates or terminates in either city?

Another apt case in point is O'Hare Airport outside Chicago, the world's busiest in terms of scheduled passenger aircraft movements. More than half the people using O'Hare neither originate nor terminate anywhere near Chicago, but use the field simply to change airplanes. Atlanta is an even more extreme example; one of the busiest airports in the country, it's overwhelmingly a junction point for people who both start and end their voyages somewhere else.

Yet both Chicago and Atlanta are responsible for the operation of their airports, and as far as the federal government is concerned its obligations end where the runway meets the ramp. Among the big airports of the U.S., the chief exceptions are Washington National and Dulles International, 30 miles outside the capital. These are operated by the Federal Aviation Administration in the absence of a competent municipal or interstate authority to run them.

Most of the big airports in the United States are only now reaching the point where they can cope with the traffic generated by the first wave of jet transports, which came along 10 years ago—and now another wave has moved onto the scene. Another big airport improvement program, this time with more massive and comprehensive federal support, is clearly indicated at the dawn of the jumbo era.

## CHANGES TAKING PLACE IN OUR NATION'S COLLEGES

### HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. DULSKI. Mr. Speaker, there are changes taking place on the campuses of our Nation's colleges and universities. These are deeper and more sophisticated than the spectacular demonstrations and malicious conduct which makes the front pages.

Ronald J. Maselka, an able young reporter on the Washington staff of the Buffalo, N.Y., Evening News, has made a tour of 10 college campuses and come up with some in-depth impressions of what is going on. Following is the third group of stories in his recent excellent series:

PART XI—CAMPUS PAPERS, POLITICIANS AIM TO CAST OFF TRADITIONAL ROLES

(By Ronald J. Maselka)

NEW YORK, October 14.—Mention "student power" today and visions of violent campus radicals immediately come to mind.

But other forms of student power are developing, partially as a response to this dramatic din of protest, partially from a growing acknowledgment that students are genuinely concerned with their education and its future and deserve a role in many university matters. Sometimes this means a louder student voice; sometimes, a student vote.

This development of democratic student power is best seen in the proliferation of committees spouting up at many institutions, including Columbia, Fordham and City College.

But just as the degree of violence and the types of issues raised vary from school to school, so does the extent of student participation in policymaking roles. The range

of involvement, however, is diverse, from university fiscal matters to curriculum and discipline.

One effect of campus unrest has been a large-scale re-examination of the question of university governance, from boards of trustees down.

TWO ELEMENTS OF STUDENT POWER

Amid the campus complex too are two traditional elements of student power—student governments and campus newspapers—which are assuming, or trying to assume, larger roles.

Campus newspapers no longer are a collection of sometimes dated facts and lukewarm editorials. While the "source of information" role is still important, today's campus newspaper seeks to play a more diverse role, particularly through strong editorial positions.

Student governments also are fighting the image of impotency that traditionally saw campus politicians as dance organizers at the least, distributors of funds to other school organizations at the most.

Generally, today's student editors and politicians are liberal, reform-minded.

"They are activists, rather than extremists," a Fordham University spokesman explained.

As Fordham's student body president, William J. Toppeta, a senior from Schenectady, said: "We want to use the channels available to accomplish change. But if those channels get clogged, we will take our causes to the streets in demonstrations without violence."

UNIVERSITYWIDE TREND

The trend toward being universitywide in scope applies to both student government structures and newspapers.

Columbia University, for instance, has a University Senate, which includes faculty, administrators, students and alumni. The old university council and student government have been abolished.

Fordham now has a separate universitywide Faculty Senate and Student Senate, but is studying proposals for a merged unit. In the meantime, Fordham has a united student government, representing students at both its Bronx and Manhattan campuses.

Major student newspapers—even at private schools like Georgetown, Columbia, Fordham and Harvard—are independent of university control. Some are private corporations, even fiscally independent. But even those receiving university subsidies report they are free of university censorship.

CAUGHT IN-BETWEEN

Indications are, however, that most student readers expect their papers to be a sort of buffer between the extreme left, like the Students for a Democratic Society (SDS), and the extreme right, like, the Young Americans for Freedom (YAF).

For instance, noting that Harvard's "Crimson" leaned too much to the left during last spring's disturbances, Carl L. Lindhal, a Harvard senior from Glenview, Ill, noted: "Most people are aware that the Crimson is not exactly a responsible paper in reporting the facts."

A CREDIBILITY GAP

In this respect, student editors find their readers to be their greatest censors.

Acknowledging that the Crimson "has lost its legitimacy over the years," David Blumenthal, new editorial board chairman of the Crimson, explained that he is "unsure of its influence."

He said the Crimson's "obvious biases" last spring "alienated a lot of faculty and administration."

According to Robert Papper, a Columbia graduate student, the campus newspaper, The Spectator, also "lost a lot of respect", during the last two years' disturbances because its "leaning to the left . . . tended to destroy its credibility."

COMPETITION, ANYONE?

One safeguard against onesidedness is that most campus newspapers determine editorial policy on an issue-by-issue basis through editorial board meetings. Other avenues are providing forums for diverse student views, through columnists and letters to the editor.

Another route to campus attention is proposed by the "Harvard Independent," a new paper being produced this year.

Morris B. Abram Jr., a Harvard senior and president of the Independent, said it will specialize in in-depth analysis and coverage of the major issues.

While the campus newspapers are well-read, student government leaders face an uphill fight in gaining campus influence.

Much of its influence comes to bear in joint actions with faculty and administration, and student government remains a key source of moderate communication.

As William H. Guenther, a New York City sophomore and a delegate to Harvard's undergraduate council, explained: "Much of our work is done behind the scenes . . . But you have to prove you are effective to gain student support."

CLEARING THE AIR

In a similar vein, Sharon R. Winnett, a Fordham student government vice president, explained that student government's main task is to relate itself "to students in a more meaningful way."

To stimulate discussion, Fordham's student government plans to take periodic computerized surveys of students on key issues and have the results published in the campus newspaper.

Nothing that student government projects involve much planning and work, Miss Winnett added: "It's a long, not very dramatic process."'

By themselves, campus newspapers and student governments can't counteract violence. But by keeping the university community informed and suggesting alternative directions, indications are they can join efforts to improve the campus atmosphere.

---

PART XII—SIMPLE AWARENESS IS NOT ENOUGH: STUDENTS WANT THINGS CHANGED

(By Ronald J. Maselka)

NEW YORK, October 15.—For decades, thousands of Americans discovered the college campus provided meteoric challenges to their inbred religious, political and social beliefs.

In the past, these confrontations with conflicting ideas seemed to be resolved generally on an individual, private basis. Today's campus turmoil, however, goes beyond this personal grappling with problems to take on an almost group-like public examination of conscience.

College students before were aware of the inequities of American society—for example, the gaps between rich and poor, ghetto and suburbia. This awareness, however, was coupled with a belief that with orderly development and time the system would gradually improve things.

STUDENTS GO DEEPER

Many of today's college students, however, express a desire to go beyond simple awareness of the problems and take up the impatient cry: "We should do something."

The extent of this activism varies, of course, from the radical approach of the New Left to the reforms of the liberals and the subdued concern of the majority.

Many students acknowledge there's "a lot of the follow-the-crowd stuff" about all this questioning. And there is a host of sociological and psychological factors commonly cited as contributing to today's student attitudes.

For instance, this is a generation that does not remember a time without television, a time without spaceshots, a time without civil rights movements. It's a generation that does not identify with gradual progress because it is so attuned to speed and quick change.

LEARNED MORE ABOUT PEOPLE

All this too has brought a changing definition of education.

As Robert Papper, a Columbia University graduate student, explained: "Education today is not just sitting in a classroom listening to a lecturer and then regurgitating it back on an exam. That's memorization, not learning." During the spring 1968 disruptions at Columbia, he said, he learned "more about people" than he had in the classroom.

There's a general feeling too that raising these questions and calling for actions and solutions are a vital part of education today. This is coupled by a growing belief that you can't separate the classroom and the environment.

As one Fordham student noted: "College prods people to think. So you do. And you make a suggestion. But when you get no answer, where do you go from there?"

LITTLE THINGS ACCUMULATE

Today's students are heading in many different directions.

But is there a specific conscious point when a student jumps from a simple awareness of injustice to an active effort to do something about it?

Not generally. This trend of reform and rebellion seems to be more of a metamorphosis than a transformation.

As Sharon R. Winnett, a senior at Fordham's Thomas More College, explained: "It was just a growing accumulation of little points . . . then you start seeing things."

Becoming a reformer is an individual thing and some students do remember a specific experience or set of experiences that set them thinking in a liberal vein.

The example of others has a lot to with it.

START QUESTIONING

As William J. Toppeta, a Fordham College senior from Schenectady, recalled: "When you arrive at college, your mind is opened or expanded. You are hearing things you didn't hear in high school and you start to question things."

What started him asking "who I was and what I was doing here," he said, came when he was a freshman ROTC cadet. During a parade ground inspection, he said, one peace protester with a placard kept following the drilling ROTC contingent to the jeers of all the student onlookers.

The example of one dedicated person set of Bill Toppeta's thinking. He is now student body president at Fordham and the jeering majority of three years ago is now urging that ROTC status at the university be reexamined.

And Charles Haseloff, a 1968 graduate at City College of New York and now a New York University graduate student, recalled an incident in his high school cafeteria when a short teacher stood on a chair to make an announcement and was applauded away by the students.

THINGS CAN BE CHANGED

"I was 14 then," he said, "and I remember I thought that something terrible was going to happen. I could not conceive of students taking this attitude . . . of open, mass disrespect. This was just inconceivable to me . . .

"From then on," he continued, "you suddenly see that you grew up in a certain way and you see that all things aren't created by God, that some things aren't natural law, that they can be different."

For instance, he noted, having grown up thinking Negroes are inferior "and then to be confronted with the fact that they are not, results in questioning. Once you loosen one nail in the structure, the whole thing loosens and begins to shake."

UNLEARNING PROCESS

Probably a more common experience was that of Terrence L. Chorba, a Columbia College junior from a conservative background in the Bronx, who said he "went through an unlearning process" his freshman year.

Part of what happened, he said, was the realization that absolute truth is an elusive thing and "truth is not what exists in your mind."

In the long run, this meant a willingness to listen to both sides of an issue and make a decision himself.

Another partial explanation of campus unrest, then, is found in this same decision by so many to re-examine and question where they are going each day.

---

PART XIII—STUDENTS TOUCHED BY BLEAK VIEW FROM THE COLLEGES' IVORY TOWERS

(By Ronald J. Maselka)

NEW YORK, October 16.—If you want an explanation of student demands for relevance—in their education and from the university—simply:

1—Walk the city streets that intersect the City College of New York on the west side of Harlem.

2—Look down at Harlem from Columbia University's perch on Morningside Heights.

3—Peer through the wrought iron gates on Fordham University's verdant uptown campus at the concrete and asphalt many have charitably called the "changing Bronx."

Then one can sense the motivation behind growing demands for the ivory tower university to extend a hand to the surrounding community.

This need for help is most recognized by minority group students, the blacks and Puerto Ricans who grew up looking at these schools from the outside as their hope for a meaningful future.

Visits to these New York schools show that campus unrest is not racially monolithic.

"There are two very different kinds of movements," explained Charles Haseloff, a graduate student at New York University.

STILL STRIVING FOR RIGHTS

"There is the white struggle, in essence a sort of frantic kind of reaction to this loss, this destruction of ideals, the disillusionment of the American dream in the face of technical and international conflict.

"And there are the black people," he continued, "still striving for the civil and political rights that white students and their fathers and grandfathers achieved 200 years ago."

Like at most public and private universities, Negroes and Puerto Ricans are a minority at Columbia, Fordham and City College. There are indications here also that minority group students are "doing their own thing" with campus unrest, because of their special concerns.

In past incidents at Fordham, Columbia and City College, black students have been involved in their own protests, sometimes accepting, sometimes rejecting white radical support.

THE DANGER IN SEPARATISM

Walk into the cafeteria at Fordham's Student Union Building and this separatism is evident. One sees "The Table" at the front of the massive room, populated by eight blacks. Elsewhere are white faces, with an occasional black one.

The danger in this separatism is that it leaves so much room for misunderstanding.

One white Columbia student noted that he sensed, for instance, a growing inability to disagree with his black friends for fear of being branded "anti-Negro."

"The blacks are using a degree of racism against the whites in a reaction to the racism used against them," he said.

The visitor's immediate reaction to "The Table" is that this is a gesture of defiance.

CITES HIGH SCHOOL EXPERIENCE

Many studies stress, however, that this tendency is not for the sake of racial separatism or black superiority, but is more of a defense mechanism of a minority seeking cohesiveness and direction.

William J. Wright, a Fordham sophomore from Brooklyn, explains "The Table" as "a social thing because we are such a small part of the population here."

A product of what he calls "the black experience in high school," Mr. Wright notes that blacks who went to parochial high schools had "the white high school experience."

Noting that these blacks tend to be less militant because "they are used to going to school with a lot of whites," Mr. Wright said he and other blacks and Puerto Ricans find college provides their first experience at being a school minority.

WAS "LOST" AT FORDHAM

He said he "didn't like it" at Fordham during his freshman year because he got lost among the white students, losing his sense of identity and direction.

The table must be understood in this perspective, he explained.

"A black student is interested primarily in bettering his school for the black students," he added, noting the task specifically is "how to make Fordham ready for black students and help them stay."

The issues that concern white protesters are secondary for blacks, he added.

"The army, the draft, ROTC and many of these other things are so far remote from the educational problem. With us, it's simply a different order of importance to the struggle."

DEBATE WITHIN MINORITIES

Involvement with whites on campus-wide issues, he added, ranges "as far as you are willing to go individually."

There is a debate within the minority communities over whether separatism is good or bad, whether it is better to work within the system or outside it.

Those who, like Fordham's William Wright, think blacks "need to be militant to get what they want." Others believe an integrated effort is best in the long run.

But working through the system takes time and, as in the case of white protesters, impatience is a big factor with black students. They want changes now, not in generations to come.

"Our militancy isn't aimless," Mr. Wright explained. "We know what we want and our task is to get them (the administrators and faculty) to see the reasons why."

IS THIS THE PROPER WAY?

The demands are focusing on ethnic studies, sometimes called black studies or Afro-American studies, and increasing the number of minority students on campus.

But black studies is a developing notion and a division in the Negro community also exists on whether this is the proper route. Some say it tends too much toward introspection. Others say it is needed to understand the special problems of minorities and their proper place in history.

While many schools have created special Afro-American departments, Columbia is still studying the proposal. Another avenue that receives support is to have black-related courses in every department, rather than combined in one department.

MORE BLACK RECRUITING

Universities have responded to the demands for greater racial balance, one administrator noted, because of the realization that a main problem of minority students stems from the generally lower quality of precollege education they receive.

Accelerating recruiting of black students, liaison with guidance counselors to help identify and prepare them early in high school, finding financial aid, providing special orientation programs and continuing tutorial help are part of the university response. Many minority students already on campus return to their high schools and communities to help in this recruitment.

One crucial issue is how the university is going to broaden its access to minority members.

FAVORS UNIVERSAL ENROLLMENT

Acknowledging that the "United States has very nearly achieved universal access to a college education for its white population . . . and there is a need to extend to blacks and Puerto Ricans a privilege that whites already possess." Political Science Prof. Stanley Feingold of city college believes that the university has to "maintain high quality while allowing opportunity for all."

He, for instance, favors universal enrollment—finding a place in some college for everybody—but opposes open admissions—finding a place in a specific college for anybody.

Instead of having separate admissions standards for whites and minorities, some educators favor a lottery system.

ASK RESEARCH IN PROBLEMS

While this debate rages, others suggest community efforts at lower levels ranging from converting some high schools into college preparatory institutions to massive preschool education programs.

Many administrators also point to university research—in urban sociology, crime, delinquency, the courts, drug problems—expertise on things like business practices for local merchants and legal advice to ghetto families, plus more diplomatic approaches to university expansion and its effects on area residents as other indications of the urban university's growing awareness of its community attachment.

The special concern of the vocal minority groups is guaranteeing that the university maintains that awareness.

---

PART XIV—NEW CAMPUS PHENOMENON: FAITH AND MYSTICISM REPLACE REASON

(By Donald J. Maselka)

NEW YORK, October 17.—It's impossible to gauge its depth but there are indications that years of campus violence are beginning to take their emotional toll of some students.

What becomes perceptible is more a series of different reactions, rather than a pattern, that alone do not warrant a conclusion that the worst is over or that it's all downhill now.

But for some students, it is downhill.

Part of it is the mental scar left by the letdown after weeks of emotional peaking for building takeovers, police busts, mass arrests, endless meeting and talking. Part of it is explainable by the view in retrospect that so much effort accomplished so little.

The war is still there, for instance.

The reaction is most visibly seen in the division of the New Left into radical factions and the growing structure of right-wing groups, like the Young Americans for Freedom.

In between, there are a host of reactions, particularly noticeable at places like Columbia University and City College of New York, which had violence, school shutdowns, changes in presidents within the last two years.

QUESTION ACCOMPLISHMENTS

"I really have to question what we accomplished," said Terry L. Chorba, a junior at Columbia who was on both sides of the barricades in 1968 and was injured in the police action.

Now, he finds himself in the "political gray area, not politically affiliated but not disinterested either . . . not taking a stand except a stand against radical violence and total apathy."

Looking back, he said, he realized that revolutionary activity is not progress. "We are not stopping the war by shutting down the university," he said.

Robert Papper, a Columbia graduate student, said he too has a feeling that there are many students who feel that "now that this has happened, let's make some progress."

Acknowledging that some activists have "become exhausted, tired, sort of retired," he said: "You see some students who were active but are not now politically interested. They are doing a lot of thinking."

TIME TO STOP, ABSORB CHANGES

A similar prognosis was given by I. E. Levine, an assistant to the president at City College:

"I've a feeling that people—students and faculty—are about ready to stop and absorb some of the changes that have taken place. I think there's a feeling of emotional weariness on the part of a lot of people."

A pre-med student at Columbia voiced "plain frustration . . . that with all that and all the talk, nothing was accomplished."

Pointing to the tables set up in the Columbia quadrangle representing spokesmen for various political groups, he said: "They haven't figured out yet that they can't change things . . . The university is not like the rest of the country. The rest of the country voted for Richard Nixon."

COUNTER-CULTURE

Besides, he added, the "issues have been around so long they've become cliches, with no emotional connotation any more."

Many administrators hope there is a growing realization, too, that change requires an orderly process and that violence only breeds counter-violence.

But the extreme, apolitical reaction to the turmoil on campus and in society belongs to the counter-culture, the street people, the hippies.

It represents a rejection and a turning inward.

For instance, one student recalled that he was a political activist last year but went to the rock festival at Woodstock last summer and is now content to "develop my own life style."

"You can't solve the world's problems," he said. "You have to solve your own first."

For physics Prof. Arthur Bierman of City College this "current of dissent . . . what seems to represent a reaction of middle-class values, this youth culture or counter-culture, numerically speaking is the important thing, the most significant movement of the youth."

DRUGS ARE KEY ELEMENT

Drugs are an important part of this trend.

Many students estimate that a majority of today's collegians have had some experience with marijuana, of varying degrees and duration.

"It's such a common thing, it's not even a topic of conversation any longer," one explained. "But you smoke grass because it's fun. Only the hard users use it to escape, like alcohol."

But drugs are a particularly key element in the life style of the youth culture.

Prof. Bierman said he thinks this counter-culture is a response "to some very serious weaknesses in our society and its structures, a response to the growing inability of our urban society to provide meaningful community . . . one with affection, purpose, meaning, values, love."

Stressing it was "my own personal opinion," the professor said he detects similarities to latter day Rome, "when similarly the old institutions and old religion had lost their legitimacy and people were looking for a new form of community, a new faith."

REJECTING MATERIALISM

Part of this turning to a community of peers—the similarities in dress, speech and behavior—he said, results because "most kids grow up in a world without frames of reference."

The small town; the stable, extended family; stable neighborhoods, and the "church that was credible" are no longer generally available, he added.

Rejecting the materialism of their elders, he added, these young people are turning to other things, like LSD and astrology, because "they want desperately to believe."

Noting that technological changes are speeding up and the rate is getting faster and the impact is greater," Prof. Bierman said today's young people's phenomenon raises questions like:

Is man capable of adjusting to living with these changes? Are they compatible with man's nature: Was man meant to live in a typical American suburb?

NOTES LOSS OF OPTIMISM

Noting that the industrial revolution and the rise of modern science lead to reliance on reason rather than faith and intuition—"that man could understand what is important . . . coupled with optimism that man's reason will help make things better"—Prof. Bierman said: "This optimism has been destroyed. Never before have human problems been so acute. This counter-culture then is rejecting reason and turning to mysticism and faith, instead of a world dominated by cold reason."

The significance of this, he said, is that basic tenets are "being questioned intensely inside the system by the young, who were supposed to benefit from it."

How widespread this trend is and where it will go is anybody's guess.

But the fact that it exists raises disturbing questions, and as Prof. Bierman noted: "The genuineness of this alienation should not be ignored."

---

PART XV—SITTING DUCKS IN CAMPUS TURMOIL, COLLEGE HEADS FIND HOW TO COPE

(By Ronald J. Maselka)

MADISON, WIS., October 22.—Imagine a captive tied to 10 horses tugging in 10 directions and one will begin to appreciate the predicament university administrators have faced during campus unrest.

Easily identifiable, university presidents and college deans have been the targets of criticism because of their handling or alleged mishandling of campus turmoil. The accusations range from permissiveness, over-tolerance, over-optimism and over-reaction, to indecision, appeasement, cowardice and ineptness.

The highly emotional subject of student protest has magnified their difficulties with students, faculty and governing boards, alumni, parents and corporate contributors, governments, politicians and the man in the street.

Each of these groups has different demands and a different view of things. The administrator's role confirms the notion that a middleman cannot please everyone.

Much criticism of the university administrator's reaction to campus unrest stems from an erroneous belief that he is some sort of dictator with unlimited power. More accurately, he is a mediator attempting to articulate the university community's consensus. Part of the confused and diverse reaction to disruptions, for example, simply reflected the divisions of opinion and confusion of administrators, faculty, students and governing boards alike.

ALIEN TO TRADITIONS

The administrators, however, remain the key popular symbol of university authority and power. Conversations with many of them indicate they are willing to admit they have made some mistakes, and that they are also fast learners.

One key reason for the varied reactions to the student protest movement is that its violence is so alien to the traditional university climate.

"Universities were places where people came because they wanted to be there," explained Dr. Edwin Young, chancellor of the University of Wisconsin's Madison campus. "Now there are people willing and genuinely interested in trying to destroy the university. We are a voluntary society and we weren't geared up to the idea that anyone would be against the university. It is almost sacrilegious to many of us that anyone would want to destroy the university, which is designed to help them. So, we have had to change our posture to take account of this."

ESCALATION OF PROTEST

Noting that he has been confronted repeatedly by alumni, asking: "What's going on here . . . Who's in charge? Arlie M. Mucks Jr., executive director of the Wisconsin Alumni Association, said: "University administrators were not really trained to handle this type of disruptive activity. The university is a slow reacting animal and it is against its nature to mete out swift discipline. Then too, we underestimated the strength of this tiny minority of young people. We underestimated their intent and their capacity for violence."

Other administrators noted that only the escalation of the protest movement—beginning with requests for controversial speakers to peaceful picketing and leading to violent disruption and building take-overs—made it clear that the radicals were not playing the game "by the rules."

As I. E. Levine, an aide to the President of City College in New York, said earlier: "It took time to realize that the old concept of dealing with university problems in a rational way doesn't work with many groups today.

NOT POSSIBLE TO PREPARE

The natural tolerance of a university to accommodate dissenting views also worked toward giving radicals more time.

In one interview, Dr. Lyod H. Elliott, president of George Washington University noted that "this university was not ready to cope with violent confrontations."

"I don't believe it's possible to prepare for this sort of thing until you see the nature of its development," he added: Noting that much of this lack of preparation was due to human nature and the feeling "it can't happen here," Dr. Elliott said: "There's always hope that violence will somehow be avoided and until it's confronted. I guess it's kind of hard to accept it as a reality of life."

In the last couple years, however, administrators have received a real crash course in containing student rebellion. And they are fast learners.

SHORT RANGE VIEW

There is a definite realization, for example, that they had better deal with outbursts competently or repression, through new laws or financial restraints, will result.

While emphasizing that they are flexible and open to discussion of genuine student concerns, their public and private statements make it clear that flexibility should not be confused with weakness.

The short-range view of containment relies on each university community understanding this policy that violations will be dealt with through judicious calls for outside help—even court injunctions.

Dr. Wilson H. Elkins, University of Maryland President, made this clear when he said: "It is the policy of this university to deal with the disruption, seizures or other illegal action as quickly as possible with whatever legal means are necessary. The university will not negotiate with any individual or group under the threat of force."

STUDENTS SUSPENDED

One indication that this firm line is buttressed by detailed planning is an adminis-

tration memorandum at George Washington University that lists the precise procedures and phrases faculty should use when confronted with classroom disruption.

But if universities can do this now, why couldn't they do this before? Why didn't they just kick the violent disrupters out?

To a certain extent they did. Many students have been suspended, put on probation or expelled because of campus disruptions. Others have faced charges in civil courts.

But the unified approach to this violence was lacking, some administrators note, because the rise of the massive multiuniversity and social change affected the university's lines of authority. Like other institutions, it takes time for the university to change.

Most universities "have made the transition from the concept of the old dean, who in this wisdom made the decision that this student was in or out," F. Chandler Young, vice chancellor at the University of Wisconsin at Madison (and no relation to Chancellor Young) noted. He added that a void developed because it "was unclear who was to perform this function."

AWARENESS OF DUE PROCESS

"There was confusion in the minds of everybody about who will do what," he added.

The demise of the old dean was partly tied to the student power movement, he continued, the feeling of students "they could have a greater impact on the university as adult citizens, rather than as little children."

Another element is the increased awareness in the last 15 years of the rights of people to due process, accompanied by a shift in thinking of higher education as a privilege to higher education as a right. Compounding the complexity of the task is the difficulty of learning of who did what when large numbers are involved in a protest, of getting witnesses and of collecting evidence.

As one professor explained: "It was easy to kick them out when there were only a few. But today it's mass civil disobedience."

To cope with this, most universities today have devised new disciplinary procedures involving students and faculty and have rules covering types of offenses common today—but unheard of just a decade ago.

LEGAL SYSTEM NEEDED

One administrator summed up the intent of the maze of rules—a special booklet in some schools: "This is a liberal place tolerant of dissent but the minute dissenters step on the rights of others, we don't permit it."

George Washington's Dr. Elliott feels that building an adequate legal system "will be one of the chief objectives" on his campus.

"I think most campuses," he said, "recognizing this change of times will be required to have legal advice to instruct staff members and security forces and faculty members in the changes of disciplinary procedure and ways of identifying violators and assembling evidence and the entire due process of law."

Wisconsin's rulebook includes some state laws to "make it clear that the university is not a game refuge or a sanctuary," Vice Chancellor Young said. The key element to the campus disciplinary system will be community support, he added.

"They're still reluctant to stand up as witnesses," he said. "We're making progress but we have a long way to go. I intend to be very optimistic about these things. I think we are going to get a disciplinary system that will be accepted by the community, that as they see these procedures tried they will see that people are being dealt with fairly."

MUST DEVELOP TRUST

"I also think there is a greater realization on the part of the students and faculty," Vice Chancellor Young said, "that disruptions of a violent kind bring on repressive violence that hurts all of us."

He said the majority of students are beginning to feel the effects of this repression for the first time, in higher tuition costs and in the state's reduced education budget.

But the key to the future is the development of trust between the administrators, students and faculty, a trust that can only be built on mutual respect, not on fear.

As Fordham University president, the Rev. Michael P. Walsh, SJ, put it: "Young people today above all want to be trusted . . . They want freedom but they also want trust and guidance . . . They are looking for a father figure, for loving authority, not paternalism. When one ceases to be authoritarian, there is always the question of where to draw the line on permissiveness, but if you can trust young people, they will help you draw that line."

## JUSTICE DEPARTMENT ATTORNEYS VIOLATE LEGAL ETHICS

### HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. RARICK. Mr. Speaker, when lawyers paid to represent the U.S. Government donate money to lawyers representing their adversary, at least one of the clients has been unrepresented. And judging from the record, this unrepresented client has been Mr. and Mrs. American citizen.

Small wonder that the courts ignore the Constitution, overlook the law and facts, and decide cases on the basis of consent agreements between purported adversaries. There was no controversy nor diverse interest when both lawyers worked for the same judgment. Sounds more than a split-fee arrangement.

If I hired a lawyer to represent me in a case in court, and then found that he was paying my opposition, I would regard it as highly unethical. In addition to firing the lawyer, I would report it to the bar association for disbarment proceedings.

Mr. Attorney General, the American people have enough unethical conduct with Federal judges. Your staff have no "during good behavior" tenure. If your staff lawyers want to work for the NAACP, give them their liberty—before your Department is faced with demands from the American people for a probe into breach of legal ethics.

I insert a clipping from a local newspaper at this point:

[From the Washington (D.C.) Post, Dec. 4, 1969]

JUSTICE DEPT. LAWYERS GIVE $1,100 TO NAACP

The NAACP Defense Fund, an opponent of the Justice Department in recent school desegregation cases, received more than $1,100 yesterday in 37 checks signed mostly by staff lawyers of the Department's civil rights division.

Fund director-counsel Jack Greenberg said in New York that he had received the checks in the morning mail accompanied by an unsigned letter wishing the fund luck in its money-raising and civil rights pursuits.

In Washington it was learned that many of the contributors considered the donations a form of continuing protest against the civil rights policies of Attorney General John N. Mitchell and Assistant Attorney General Jerris Leonard. Others said their donations were addressed mainly to the fund's most recent fiscal emergency.

Greenberg said the fund, which operates on an annual budget of $3 million, was running $200,000 in the red in October and was further behind now. He said fund-raising was becoming increasingly difficult because of reaction to riots and some violent demonstrations and deep division in some communities over Vietnam.

## MOST MEMBERS WANT TRUE POSTAL REFORM

### HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. DERWINSKI. Mr. Speaker, recognizing that most Members of the House want true postal reform, I wish to direct their attention to the following letter from Postmaster General Blount to Senator GALE MCGEE, chairman of the Senate Post Office and Civil Service Committee. The correspondence developed as a result of the six specific objections which Mr. James Rademacher, president of the National Association of Letter Carriers, presented to the Senate committee on behalf of his organization.

The letter follows:

THE POSTMASTER GENERAL,
*Washington, D.C., December 4, 1969.*

HON. GALE MCGEE,
*Chairman, Committee on Post Office and Civil Service, U.S. Senate, Washington, D.C.*

DEAR MR. CHAIRMAN: The testimony given by Mr. James Rademacher, President of the National Association of Letter Carriers, before your Committee on November 25th seems to show such a thorough misunderstanding of the proposed Postal Service Act of 1969 that I feel obliged to comment and to request that you include this letter in the record of the current hearings of the Committee on postal reform.

Mr. Rademacher's testimony is devoted largely to knocking over a series of straw men. The six "fallacies" with which Mr. Rademacher charges the supporters of postal reform bear little or no relation to what is actually in the bill or to what the proponents of the bill have actually been saying. Let us consider these straw men of Mr. Rademacher's in turn.

*1. "A postal corporation and postal reform are synonymous."*—I have repeatedly said that the corporate form of organization is no panacea, in and of itself, and I agree completely that it would be fallacious to suppose that adoption of a corporate form of organization for the postal service will automatically assure the improvements in postal efficiency that this country so badly needs. I think it is equally clear, however, that so long as management authority is fragmented and disassociated from managerial responsibility, the quality of postal service will be less than it should be and the cost of such service will be more than it should be. It would be the height of absurdity to deny the Postal Service the tools it needs to do its job simply because of a fear that the tools might not be used to the best possible advantage.

Recognizing this to be so, Mr. Rademacher goes on to suggest that the tools which the Post Office admittedly needs would be provided under H.R. 4, the measure currently

being marked up by the House Post Office and Civil Service Committee. This claim, with all due respect, is simply not borne out by the facts.

In the first place, H.R. 11750 would provide assurance that top management will be responsive to the needs of postal users, and will be assured of continuity so long—*and only so long*—as it does its job well. H.R. 4, as originally introduced, contains nothing to prevent the repeated interruptions of top management that necessarily go with having the Postmaster General in the cabinet. The House Committee has tentatively decided to amend H.R. 4 to provide a nine-year term for the Postmaster General and six-year terms for the Assistant Postmasters General. While fixed statutory terms of this kind would certainly promote continuity of management, they are hardly calculated to promote either cooperation among the top management team or responsiveness of that team to the nation's postal needs. Such a statute would protect the Postmaster General and his top aides not only from the demands of partisan politics (which is all to the good), but also from the demands of the nation for better postal service (which is precisely the worst kind of protection).

In the second place, H.R. 11750 provides a statutory framework for labor-management relations under which postal employees would have a direct financial stake in the quality of the postal service received by the mail using public. The bill provides for truly meaningful collective bargaining under the Labor-Management Relations Act. In this connection, let me invite your attention to Supplement III of the statement that Mr. Patrick J. Nilan of the United Federation of Postal Clerks submitted to your Committee on November 21. You will recall that Mr. Nilan strongly urged that postal employees be given the same basic benefits and rights as are provided for employees in private industry under the National Labor Relations Act. H.R. 11750 would do just this, except that it would continue the ban on strikes by postal employees and would provide a fair and impartial disputes-resolving mechanism in lieu of resort to strikes. But H.R. 4 (or, for that matter, S. 309, the text of which is incorporated substantially verbatim in H.R. 4) would *not* provide postal employees with rights equivalent to those enjoyed under the National Labor Relations Act.

Under H.R. 4, wages would continue to be set by Congress. There would be no collective bargaining over "bread-and-butter" issues. Since employees could not bargain for increased wages, they would have no stake in increasing productivity; and since management could not bargain for increased wages, it would have little to offer labor in exchange for labor's agreement on more efficient work practices. Under H.R. 4, moreover, and by way of sharp antithesis to the National Labor Relations Act, the right of employees to organize and elect bargaining representatives of their own choosing would be severely impaired. For instance, H.R. 4 would bar, by statute, the right of employees to organize on an "industrial union" basis, even though every single employee in the Postal Service wanted it. It seems wrong in principle for the Congress to impose upon postal employees a particular kind of labor union structure without leaving the employees any right at all to change that structure if they wish to do so.

In the third place, H.R. 11750 would enable the Postal Service to obtain the capital necessary to acquire the modern buildings and high speed equipment that are essential if the postal system is to be operated on a truly efficient and economical basis. To this end, H.R. 11750 would provide workable bonding authority. For reasons that have been thoroughly discussed in the hearings, it seems clear that the bonding authority provided in H.R. 4 would not enable the Post Office to raise the capital it needs at interest rates bearing a reasonable relation to those paid by other borrowers.

In the fourth place, H.R. 11750 would provide a rate-making mechanism capable of responding promptly to changing market forces and the needs of postal users. It would do this by establishing a full-time panel of expert rate commissioners who would hold full and impartial hearings on suggested rate changes and would make recommendations which the Postal Service could implement on a timely basis, subject to disapproval by concurrent Congressional resolution. H.R. 4, on the other hand, would place rate-making responsibilities in a separate commission that would be convened every fourth year. A rate review that occurs only once every four years is simply not adequate. One of the major difficulties with postal rates in the past has been that they change too infrequently; when changes do finally come, they are necessarily major changes having a major impact on mail users.

In sum, any fair comparison of H.R. 4 with H.R. 11750 will show that H.R. 4 would come nowhere close to achieving "everything the Postal Corporation Bill would achieve in the way of reform. . . ." But perhaps the most astonishing aspect of this part of Mr. Rademacher's testimony is his insinuation that H.R. 11750 would somehow remove the Postal Service from Congressional surveillance. This suggestion simply is not true. The Postal Service would be required to report annually to the Congress on its operations; its part-time directors would be subject to confirmation by the Senate; its activities would be subject to audit by the General Accounting Office; and its rate changes would be subject to Congressional review before they become effective. But quite apart from these specific provisions for Congressional surveillance, the overriding fact is that the Congress will continue to be present, and since the Postal Service will be as much a part of the Federal Government as it is today—albeit in a different organizational form—postal management will be fully aware of the Congressional presence at all times. Congress can obviously step in whenever it wishes, and the Postal Service Act provides that the Congress will be informed of postal operations sufficiently so that it can see the need to step in if that need arises.

*2. "All corporations are inherently more efficient and more desirable than any Government operation."*—Here again, Mr. Rademacher does a splendid job of demolishing a proposition that, so far as we are aware, has never been put forward. As indicated above, we have recommended the form of a Government corporation for the Postal Service because it seems to afford the most convenient means of achieving a better fusion of responsibility and authority, a better matching of costs to benefits, and a better marshalling of resources to meet postal needs. All the rhetoric about Edsels and faceless, soulless corporations, inhumane directors and profit-minded management, is—of course—just that: rhetoric. In this connection, although we are mindful that it is possible to overstress the analogy between the Tennessee Valley Authority and the proposed new United States Postal Service, it should be noted that rhetorical imprecations against corporate management are no more appropriate to the new Postal Service than to the TVA—and they are notably lacking in respect to the latter.

*3. "A Postal Corporation can operate the postal establishment on a break-even basis within five years."*—Mr. Rademacher's assault on this proposition is based on a series of false premises. He apparently assumes that the new Postal Service would undertake to issue $10 billion worth of bonds all at once and before any savings could be realized from the first part of a long-term capital investment program. He totally ignores the fact that the Postal Service Act would give the new Postal Service a right to call at any time on the Treasury Department for up to $2 billion worth of capital, and that private investors would know that this right exists. He projects interest costs of 12% to 15%, although this Committee has received competent testimony from experts in the financial community to the effect that the Postal Service should be able to borrow at rates not substantially higher than those paid by the Treasury itself. He engages in a certain amount of "double-counting," piling an unidentified "contingency fund" on top of an imputed cost of depreciation. Relatively speaking, however, these are all matters of minor detail; the major point that Mr. Rademacher misses is that the management of the Postal Service would be unlikely to float a major bond issue unless a careful economic analysis showed that the costs associated with such borrowing would be clearly outweighed by the savings to be realized through investment of the bond proceeds. In this connection, it is worth recalling that studies performed for the Kappel Commission indicate that capital investments for new postal facilities and equipment should yield cost savings in excess of 20% of the amount invested.

The key to achieving a break-even operation lies in greater productivity—and this is an element that Mr. Rademacher has totally ignored. The fact of enormous productivity increases in the private sector since World War II show what *can* be done. The record of productivity improvement in the postal service has been poor; but there is no reason why, given the necessary reforms, this record should not greatly improve. Mr. Rademacher seems to assume that improvement is impossible. He states correctly that wages represent over 80% of the Post Office Department costs—but he states it as though this were an ineluctable fact of life which, like death and taxes, must be with us forever. Although we see no real possibility of postal employment diminishing, there is no reason at all why, with mail use continuing to rise sharply, postal wage costs must continue to overshadow the costs of facilities, equipment, and labor-saving devices to the extent that they now do. By investing capital in the buildings and tools that our employees need to do their jobs more efficiently, we can increase productivity, reduce the *proportionate* cost of wages (although their absolute cost will increase), and go far toward achieving a self-sustaining operation.

This is not to say, of course, that postal rates will necessarily remain constant. On the contrary, we must expect postal rate increases, given the realities of today's economy. We are convinced, however, that these increases will be less frequent and less precipitous than those which would be necessary if the reforms we are recommending are not forthcoming.

*4. "The Postal Service is on the brink of catastrophe and only a corporation can save it."*—Argument about what did, or did not, cause the breakdown in Chicago in 1966 is not likely to lend much to any serious analysis of what kind of postal reform is needed. I am wholly persuaded that, if basic reforms to the postal system are not forthcoming, we can look forward only to a gradual deterioration in the postal service until it becomes a national disgrace. Whether or not we are in a "race with catastrophe" is largely a matter of semantics. But the fact is that the nation's demands upon our mail system are increasing, and our ability to meet those demands has not been keeping pace. Institutions either change to meet the needs of the times or they die; there is absolutely no reason to suppose that the Post Office is immune from this general rule.

*5. "The Postal deficit is inexcusable; the*

*Post Office should be run on a break-even basis."*—Mr. Rademacher's premise here is that: "There is no way to operate the U.S. Postal establishment as a service and still operate it on a break-even basis." There is a tendency in some quarters to equate "publice service" to "public deficit"; euphemism doubtless has its place, but this is not it. As I pointed out in my earlier testimony before this Committee, the great bulk of mailing costs have to do with carrying business-related mail and the great bulk of tax revenues come from individual citizens; consequently, postal deficits represent a subsidy largely paid by individuals to businesses. I do not believe that the business community either wishes this subsidy or deserves it.

The real question is not whether the postal deficit is "inexcusable" but whether it should be tolerated in a nation which has such great needs for public revenues as ours does—needs such as health and housing, defense and education, progress against poverty and pollution, against the problems of the city, against crime and injustice. Every dollar of postal deficit is a dollar that could better be used elsewhere.

*6. "Postal employees will benefit enormously if a Postal Corporation were to be created."*—I have covered this matter in great detail in my earlier testimony and it is unnecessary to reiterate that testimony here. But I cannot let pass unmentioned two statements in Mr. Rademacher's testimony about the Postal Service Act that are gross distortions of the truth. The first is: "We would be deprived of our right to appeal to Congress." Section 209 of H.R. 11750 explicitly states that, among the provisions of law that shall apply to the Postal Service, is chapter 71 of title 5 of the United States Code—and this chapter contains a statutory guarantee of "the right of employees, individually or collectively to petition Congress or a member of Congress. . . ."

The second is: "We would be permitted to bargain collectively—but only by permission of the managers. If an *impasse* arises, we would be permitted to go to compulsory arbitration *only if the managers gave us permission to do so!"*

On the heels of that remarkable assertion, Mr. Rademacher adds: "This—I think you will agree—is just a cynical little parody of collective bargaining." So it would be—if Mr. Rademacher's comments were not also a cynical little parody of the truth. The facts are, of course, that H.R. 11750 assures postal employees of a right to bargain collectively, and a refusal by postal management to bargain in good faith over any bargainable issue would be an unfair labor practice. The processes of the National Labor Relations Board and of the court would be available—by law—to require faithful discharge of the duty to bargain; "permission of the managers" has absolutely nothing to do with the case. Nor is the compulsory arbitration provision of H.R. 11750 something to be granted or withheld by "the managers." The fact is—and it is entirely unmistakable if one reads section 808 of H.R. 11750—that neither management nor labor can prevent recourse to compulsory arbitration if the independent postal disputes panel decides that an impasse should be referred to arbitration. The postal disputes panel would be completely impartial; postal management would have no influence whatsoever over the selection of its members of the conduct of their duties.

From time to time, we have been asked why the postal unions are opposed to the Postal Service Act. Mr. Rademacher's reckless misrepresentations suggest a possible answer.

Sincerely,

WINTON M. BLOUNT.

Mr. Blount's letter in effect effectively states the position of the Department and I believe the communication to be of such great significance that it deserve the attention of all Members.

## AIRCRAFT NOISE AND SONIC BOOM

## HON. ALLARD K. LOWENSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. LOWENSTEIN. Mr. Speaker, when, in July 1968, Congress unanimously passed the Noise Abatement Control Act, the promise was, in the words of the act, "to afford present and future relief to the public from unnecessary aircraft noise."

Now, 17 months after enactment of that act, literally nothing has been done to implement the mandate of the act "to provide for the control and abatement of aircraft noise and sonic boom." To the contrary, those who live in communities adjacent to airports, who were promised a reduction in noise, have had to endure a continually worsening situation.

As if in response to the escalating decibel rate, the Federal Aviation Agency now has adopted what are, for all intents and purposes, irrelevant standards governing noise levels. Incredible as it may seem, the standards now announced in pursuance of the congressional mandate "to afford present and future relief to the public from unnecessary aircraft noise" apply neither to existing aircraft, nor to the coming generation of jumbo jets, at least not in the foreseeable future. We are told that nothing can be done about the noise levels of the 747 and successor aircraft because aircraft manufacturers have had "inadequate notice."

Inadequate notice, what constitutes adequate notice? Are aircraft manufacturers and airline owners insulated permanently in sound-proof jets where the protests and pleas of everyone else can never penetrate? Maybe we should have expected 5 years of efforts by citizens all over the country to be ignored, but what about the law itself, voted unanimously by the House, overwhelmingly by the Senate, and signed by the President? If the law does not provide "adequate notice," what does? Must people break one law to get another one implemented? How we must pray that it has not come to that in the United States of America.

The simple fact is that an industry that can develop the 747 can develop the technology to control the noise made by the 747. Where there is a will in these matters, there are usually several ways. But all we can get are excuses, evasions, and now deception. Yet no one is fooled that the new noise limits of 108 EPNdB, arrived at without a single session of public hearings, will be responsive to the needs of people living in communities near airports. The 108 limit even rejects in effect the FAA's own carefully considered judgment in 1966 that a ceiling of 106 EPNdB, measured at distances considerably closer than those specified in the new rules, was readily feasible.

Consider what responsible people who have never violated a law must feel in the face of this situation—knowing what is technically feasible, knowing what the law requires, knowing that no relief is even distantly in prospect from the horror of deafening noise ripping communities apart every 30 seconds or every minute.

Airline companies that have spent $3.7 billion to date for new 747's, and that anticipate spending a total of $53 billion for more aircraft and airports between now and 1980, plead that they cannot afford $500,000 to $1 million per plane to retrofit existing aircraft; and a Government that is prepared to shell out $1.2 billion for the SST—against the advice of the administration's own advisory committee—can scrounge together only $978,000 a year for noise-abatement research.

If airlines are so concerned about cost, they might focus on the $2.3 billion in lawsuits pending against a single airport—Los Angeles International—because of jet noise. In the long run, I believe the airlines would save themselves a great deal of trouble—and even money—if they would concern themselves now with their impact on the health, spirit, and economic conditions of the communities that they have blighted so cavalierly over the years.

But the FAA is the gravest offender against commonsense and the public good. The people have spoken through their elected Representatives, but this small group of men who are appointed for the purpose of implementing the law apparently cannot hear the voice of the people through the din of the jets.

But if the regulations dealing with new planes are misleading and inadequate, the delay in issuing any regulations at all for existing aircraft is outrageous and incendiary. For even the fairest noise certification standards for new aircraft would produce only belated and marginal relief for the afflicted areas.

In the light of that fact it is incredible that the FAA has yet to take the first tentative steps toward easing the suffering caused by existing aircraft. Seventeen months is a long time in the life of a human being and in the development of a community. It is long enough to schedule and hold hearings and to formulate reasonable regulations. It is too long to allow schools, meetings, and religious services to be disrupted, and far too long to allow the sleep of countless people to be impaired and to allow their health and hearing to be imperiled.

The intent of the Congress could not be more clear. Nor could the duty of the FAA. Areas adjacent to airports must be made habitable now, not when present aircraft have become obsolete and the airlines get around to facing the consequences of their past misbehavior, if they ever do.

The FAA is supposed to be a regulatory agency. People are supposed to be more important than machines. It is past time that this regulatory agency regulated machines in the interest of people, instead of undercutting the will of the people in the interest of a few companies that own machines. The situation is precisely that simple.

The technology is available to correct this intolerable situation, and there are many of us here in the Congress who expect the FAA to see to it that it is corrected forthwith. We invite the help of the President and trust he understands the urgency of this invitation.

## NIXON'S UNION MAN

## HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. AYRES. Mr. Speaker, last March it was my privilege and pleasure to be present at the swearing-in ceremonies of my old friend W. J. Usery, Jr., as Assistant Secretary of Labor. I felt assured that this most important post was being placed in most capable hands.

Last week, Richard J. Levine, one of the Nation's most able labor editors, wrote a very comprehensive story about Assistant Secretary Usery that appeared in the Wall Street Journal. I felt certain that my colleagues would be interested in learning the background of this new member of the administration's team.

The story follows:

[From the Wall Street Journal, Dec. 2, 1969]

NIXON'S UNION MAN: USERY MOVES SMOOTHLY FROM MACHINISTS POST TO ROLE AS LABOR AIDE

(By Richard J. Levine)

WASHINGTON.—"What's a trade unionist like you doing working for a Republican Administration?"

Union skeptics still occasionally ask that question of Assistant Secretary of Labor Willie J. Usery Jr., who has emerged as the Government's top troubleshooter on the increasingly turbulent bargaining front. But the former Machinists Union official with the Georgia drawl and disarming country-boy manner hears it far less frequently than when he first arrived in Washington.

Mr. Usery—a Democrat who voted for Hubert Humphrey and the only labor leader in the Nixon Administration—has been able to prosper in an important sub-Cabinet post without compromising his commitment to the goals of organized labor. In the past 10 months, the strapping Assistant Secretary for Labor-Management Relations has become a key member of the Labor Department team, generally impressing Government, union and management officials with his abilities as a bureaucrat, the chief liaison officer with the AFL–CIO and an effective, fair-minded mediator of labor conflicts.

J. P. Hiltz, chief bargainer for the nation's railroads, now dealing with Mr. Usery in a dispute that threatens to result in a strike, credits him with "a very good understanding" of management's position at the bargaining table. "Because he has such a good feel for the union's problems, he can discount that and concentrate on managements'."

The only strong criticism of Mr. Usery has come from the fast-growing Federal-employe unions. One, the National Association of Government Employes, has accused him of showing favoritism to an AFL–CIO affiliate in a bitter representation battle at the Norfolk, Va., naval shipyard—a charge he denies.

The 54-year-old Mr. Usery's toughest assignments are on the bargaining front, where, as a mediator, he sees his role as helping the parties focus the issue and fashion new approaches "without trying to dictate" the terms of a settlement.

"It's easy for negotiators and mediators to blunder into a strike," he stresses. "It takes skill to get a settlement."

NONSTOP NEGOTIATIONS

Earlier this year, President Nixon praised Mr. Usery's "stamina and skill" in helping hammer out a pay-and-benefits agreement that averted a nationwide railroad strike by the Signalmen's Union; in more than 28 hours of unbroken negotiation, he kept the pressure on both sides without real arm-twisting, until they came to terms on the knotty issue of extra increases for skilled workers. In another weekend of nonstop mediation, he helped bring a quick end to a Teamsters walkout that had crippled Pan American World Airways.

Now the Assistant Secretary is grappling under an approaching deadline with his most difficult dispute to date—a protracted wage battle that pits the nation's railroads against four shopcraft unions, led by Mr. Usery's own International Association of Machinists. If there's no agreement by 12:01 a.m. tomorrow, when a 60-day cooling-off period expires, 48,000 workers will be free to strike; only an act of Congress could order them back to work. The railroads have threatened a lockout even if only a few of them are struck.

In a last-ditch effort to head off a nationwide rail tieup, Labor Secretary George P. Shultz directed Mr. Usery to move the negotiations from the railroads' bargaining headquarters to the Labor Department and start round-the-clock sessions at 10 a.m. yesterday. Just before the start of the nonstop bargaining, Mr. Usery said he was "optimistic that a settlement can be reached."

In addition to mediating disputes, Mr. Usery has counseled the Administration on labor matters, using his knowledge of union affairs to help shape a new Executive order governing Federal-employe unions and proposals on farm workers' bargaining rights and pension-fund regulation.

As the main day-to-day link between the Administration and the labor movement, the Assistant Secretary is determined to keep lines of communications open and relations civil. Frequently, he is in touch by phone two or three times a day with AFL–CIO Secretary-Treasurer Lane Kirkland or James Gildea, George Meany's executive assistant. These conversations have dealt with such matters as the Pittsburgh dispute between white building tradesmen and blacks seeking more construction jobs—which Mr. Usery has been mediating off and on since mid-September—and arrangements for an appearance by Astronaut Edwin Aldrin at the AFL–CIO convention in October.

"AN ELEMENT OF MISTRUST"

Mr. Usery, who was an obscure union representative when tapped for the sub-Cabinet last January, believes the Nixon Administration has been "fair to labor" so far. Nonetheless, he observes:

"It's very difficult for a labor leader to come into a Republican Administration. There is an element of doubt and mistrust between both factions. In a sense you have to be a mediator between Government and labor."

(Some union men vividly recall how one past experiment in labor-Republican cooperation fizzled. In January 1953, Dwight Eisenhower named Martin Durkin, then head of the Plumbers Union, as his Labor Secretary. Mr. Durkin quit in anger eight months later, feeling the President had violated an understanding that he would propose liberalization of the Taft-Hartley law.)

Critical tests of Mr. Usery's skill as a mediator between "Government and labor," as well as between labor and management, lie ahead.

With the Administration's anti-inflationary policies threatening to push unemployment higher, union chieftains are turning hostile toward the White House. And at the bargaining table, employers concerned about a profit pinch are locking horns more frequently with union negotiators seeking fat wage gains to keep abreast of still-rising prices.

Labor Secretary Shultz and other officials are bracing for a wave of strikes next year, when major contracts expire in the auto, rubber, meat-packaging, trucking and railroad industries. As a result, many observers expect Mr. Usery will find himself in the midst of more disputes, despite the Administration's pledge to avoid interference. But associates believe he'll be equal to further challenges.

Mr. Shultz describes his colleague as an "immensely talented" individual "who has this knack or ability to get people working together along constructive lines." Though their backgrounds and personalities are very different, Mr. Usery (an ebullient one-time welder) and Mr. Shultz (a soft-spoken former professor) have developed a close relationship.

"Shultz has a way of making up his own mind," says one insider. "But he won't make it up without first having Bill's advice. He has a great deal of respect for his judgment." The Assistant Secretary voices his views either in frequent private meetings with his boss or in the regular Tuesday morning conference of the department's top officials.

HARSH WORDS

To the delicate task of helping labor and the Administration understand each other, Mr. Usery "brings a pretty highly developed sense of what unions like and don't like," declares an AFL–CIO staffer. "There has to be a person like Usery who is current with the problems of the trade union movement and the Administration whom we can talk to frankly."

But harsh words about Mr. Usery's performance have come from the Federal-employe unions.

Recently the Independent National Association of Government Employes (NAGE) attacked him for allegedly showing favoritism to the AFL–CIO Metal Trades Council, of which the Machinists Union is part. The NAGE is trying to oust the council as representative of 7,800 blue-collar workers at the Norfolk shipyard.

NAGE President Kenneth T. Lyons charges that Mr. Usery, in view of his AFL–CIO background, "is in an obvious conflict-of-interest situation." He says "the unique manner in which this entire matter has been treated . . . raises the strong suspicion in our mind" that the NAGE "has not been treated with impartiality by the AFL-CIO infested Labor Department."

The NAGE is upset at the Navy's indefinite postponement, at Labor Department request, of a union representation election that had been scheduled for Nov. 6. Secretary Shultz has said he asked for the postponement in order to examine a request by an AFL–CIO that an arbitrator be appointed to examine federation charges that the NAGE obtained the election date with "fraudulent and deceitful tactics." The Navy had previously dismissed such charges.

Mr. Usery says the accusations against him are "absolutely false." Though his office has been involved in the matter, he says, "I haven't had anything to do with it. . . . I personally haven't made any recommendation to the Secretary of Labor."

A COOL RECEPTION

Federal-employe leaders have also given the new Executive order covering their unions—which the Assistant Secretary helped draft—a cool reception. Among other things, the directive establishes a council to oversee the Government's relations with its employees and a special "impasse panel" to help settle disputes.

While the United Federation of Postal Clerks concedes the order may bring "improvement in some areas," it argues that there are "new restrictions" on union activity. For example, the Nixon directive specifically forbids that negotiations be held during normal work hours of employes bargaining for the union.

No such controversy surrounds Mr. Usery's work at the bargaining table, where labor experts agree his impartiality, tenacity and knowledge of labor relations are valuable

assets. "He knows the business," asserts an old Labor Department hand. "He knows how parties feel and react and what instincts motivate them."

All these qualities were on display in the April dispute between the Signalmen and the railroads, and Mr. Usery's performance did much to enhance his prestige.

The Assistant Secretary entered the dispute shortly after the 13,000 member union announced on Tuesday, April 8, its intention to strike the following Monday at 6:01 a.m. One of his first moves was to get the parties to begin talking again. "If you can't agree on anything but the time of day," he says, "you start there and build."

"I started helping them at 10 a.m. Saturday," he has recalled. "At 4:30 a.m. Sunday, everyone was hanging on the ropes and wanted to take a break. In keeping with the Secretary's policy of leaning heavily on the collective bargaining system, I kept the parties negotiating until they finally reached agreement at 2:30 Sunday afternoon.

"I wouldn't say that we did much for regular hours and meals. But there was no nationwide rail shutdown Monday morning. It's amazing what the parties can achieve with some honest-to-goodness hard bargaining."

APPEALS TO PATRIOTISM

A lot of that "hard bargaining," insiders say, was due to Mr. Usery's sure touch and refusal to accept defeat. He reminded both sides, with appeals to their patriotism, of the public interest involved in a rail strike, and he constantly cajoled the chief negotiators to try to understand each other's position.

After the accord, Mr. Shultz says, both sides agreed that "it was their settlement," that no arms had been twisted. Railroad bargainer Hiltz said later that Mr. Usery "played it straight down the middle. He's persistent as hell. He just keeps gnawing away at the bone until he gets all the marrow out." Signalmen's President C. J. Chamberlain put it another way: "When Usery zeroes in on you, he has a way of getting things out of you."

Willie J. Usery (known around the Labor Department as Bill or W.J.) has clearly enjoyed his rapid rise from a $16,000-a-year union job to a $38,000-a-year sub-Cabinet position. Declares retired Machinists Union President Roy Siemiller: "Bill likes the prestige and recognition given a little country boy from Georgia."

Mr. Usery grew up in Milledgeville, Ga., and went to work as a welder in 1941 after two years at Georgia Military College. He joined the Machinists Union in 1949 at Armstrong Cork Co. in Macon. Seven years later the Machinists assigned him to coordinate union activities at Cape Kennedy, then Cape Canaveral, in Florida.

When he arrived at the cape, where he became an avid rocket and space buff, the union had 17 members there; when he left to come to Washington, it had 4,600. As the top Machinists official at the cape, Mr. Usery participated in most of the national aerospace labor negotiations, coming in contact with former Lockheed Aircraft Corp. Vice President James Hodgson. When Mr. Hodgson was chosen as Under Secretary of Labor, he recommended Mr. Usery to Mr. Shultz "as the smartest and ablest union official I had dealt with at any level."

A SHOWER IN THE OFFICE

Though now ensconed in one of the Labor Department's plus third-floor executive suites, Mr. Usery hasn't lost his informal charm. One evening he wandered into the Secretary's outer office, his broad face split by a grin, and drawled: "Not so many years ago I didn't even have a shower in my house, and I just now took one in my office." And, after a typical 12-hour day, he is given to announcing, "I'm plumb wore out."

Still, some department associates suspect the nood-gatured Georgian of putting on an act. "If he wants to, he can speak with very little Southern accent and few errors," says one official. "I accused him of being a phony one day after I heard him tell a phone caller who asked for Mr. Usery—'This is he.'"

Put on or not, his casual manner, which helps him get to know people on a first-name basis, is undoubtedly useful in his role as a mediator. He says: "I have found that a good personal relationship with a man will make him a lot less likely to turn down my proposal out of hand."

The Assistant Secretary has been accepting two or three speaking engagements a week (at the AFL–CIO convention he gave four), addressing such groups as the Amalgamated Transit Union, the American Society of Hospital Personnel Administrators and the Painters Union. He reads a prepared text poorly and is at his best in off-the-cuff remarks or in later conversation over a dry Beefeaters martini.

Apart from his peacemaking successes, Mr. Usery is winning considerable influence on policy within the Republican-ruled Labor Department.

Secretary Shultz says the mechanism to provide farm workers with a limited right to strike—which is part of the Administration's proposal to give bargaining rights to agricultural employees—was "more Usery's idea than anyone else's."

His thinking is also reflected in a bill drafted by the Labor Department, but not yet proposed by the Administration, to tighten regulation of welfare and pension funds. He has grown concerned about the tempting target that $115 billion in retirement fund assets makes for organized crime. One feature of the bill would bar persons convicted of such crimes as robbery and extortion from serving as pension-plan administrators.

Mr. Usery says his Washington experience has been broadening in many ways, and he recently mused:

"As a union official, I was representing skilled workers with high school educations in relatively high-paying jobs. Now when I look across my office, I see 81 million people in the work force—black, white, yellow, the physically handicapped, the illiterate. In this job, you have to be concerned about the welfare of all the people."

---

## THE UNSUNG SAILOR OF SCIENCE

---

## HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. FASCELL. Mr. Speaker, oftentimes our attention is not brought to historical figures and their accomplishments. One such figure in our naval history was Rear Adm. Charles Henry Davis.

Admiral Davis was not only an outstanding naval officer, but he was also a man of science. His effort helped make the Navy a service associated with science and scientific accomplishment.

A very interesting and informative article relating the many accomplishments of Admiral Davis was written by Mr. Don Groves. I commend the article, "The Unsung Sailor of Science," to the attention of our colleagues:

THE UNSUNG SAILOR OF SCIENCE

(By Don Groves)

(The author is a Naval Reserve Officer currently attached to a unit (5–8) of the Navy's Research Program (ONR). He has had a wide range of experience in the Navy both while on active duty during World War II and Korea, as well as in the Reserve Program. His civilian experience has included electrical and mechanical design, systems engineering and advanced engineering in Naval Warfare as well as Materials Science. Groves is a member of the ASNE, The Marine Technology Society and a Fellow of The Washington Academy of Science plus several other scientific and engineering societies.)

"Our government does not spend nearly fifteen percent of its budget in the research and development business because science has a powerful lobby; in fact, scientists are still rather untutored at the game; nor because the United States is hungry for a better understanding of nature, or what lies on the other side of the moon; nor—finally—as a contingency investment against the risk that some other nation will surpass us. Each of these factors certainly plays a part, but basically the investment is made because our society has understood the dependence of its future on science and technology." (Hon. Paul H. Nitze, former Secretary of the Navy.)

The people of this country have always been interested in science, and our society has always "understood the dependence of its future on science and technoloy". Even in the earliest days, an unexplored continent provided a powerful stimulus to the curiosity of our ancestral pioneers. In this rugged environment, they realized that even their survival and that of their families depended upon a better understanding of nature.

As that understanding increased and our nation began to develop, the sea represented to many colonal Americans and later to great numbers of early nineteenth century Americans as much of a frontier as did the prairies and mountains in the West. For rather practical reasons, American merchantmen and whalers traveled to little known seas and lands. Fur sealers even ventured to the Antarctic for what they then allowed was a source of promising wealth to the country.

But . . . scientific curiosity itself and the desire for national prestige provided the prime motivation to the majority of our forefathers. And it was this that made the Navy the service that has historically been associated with science and scientific accomplishment in this country. In 1825, President John Quincy Adams requested Congress to establish a Naval Academy "for the formation of scientific and accomplished officers." Five years later the Naval Observatory and the Hydrographic Office were founded jointly as the Depot of Charts and Instruments which, under Commander Matthew Fontaine Maury compiled and published the first hydrographic charts ("Wind and Current Charts" and "Sailing Directions") and helped found the science of oceanography. In 1838, a University of Pennsylvania Professor of Chemistry and Physics became the Navy Department's first scientist. And in 1842, a Naval officer, Lt. Charles Wilkes, headed the first great American scientific venture overseas. This particular expedition and Wilkes' view, as expressed in a letter to the Secretary of the Navy prior to the expedition, to the effect that the Navy should provide the scientists and "not act simply as the hewers of wood and drawers of water" set an example which stimulated subsequent U.S. scientific expeditions.

These and many other noteworthy events in history directly established the Navy's foundations in the scientific work of our nation. However, various activities of the Navy have also, over the years, helped to shape a more meaningful relationship of not only the Navy's but of our entire government with science. Such a significant role is often overlooked. Moreover, perhaps the most unsung hero in all Naval history is this remarkable man who played the key part in this same role. His name is Rear Admiral Charles H. Davis, USN.

Davis, as fine a professionally qualified officer as the Navy had in a time when it ships were built of wood and men were of steel, was also a recognized scientist—recognized,

that is, by some of the great men of science on whose shoulders our own scientists now stand.

Charles Henry Davis was born in Boston in 1807 and died at the Naval Observatory in Washington in 1877. He was educated at the Boston Latin School and entered Harvard in 1821. He left college in 1823 to enter the Navy but subsequently completed work for his degree, and his name is listed with the Class of 1825.

Seventeen years of his early life were spent almost constantly at sea in the Navy. He served on board such ships as the frigate, *United States;* the schooner, *Dolphin;* and the sloops, *Vincennes, Erie,* and the *Ontario.* The famous naval heroes Dahlgren, Maury and Dupont were among his first shipmates. In this fast company, one of his skippers, Capt. Gordon, on the *Ontario,* reporting on the qualifications of his officers to Commodore James Biddle who commanded the squadron stated that:

"Lieutenant C. H. Davis is devoted to the improvement of his mind; his country may expect much from him."

This succinct fitness report on Davis was both accurate and prophetic. He was indeed a man interested in probing into the "whys" of everything around him. During all these years at sea, he devoted himself at every opportunity to studies of astronomy and hydrography. Such study, coupled with his experience and knowledge of navigation, brought him into a billet in 1842 with the Coast Survey that exactly suited his attitudes, objectives and abilities.

In 1842 the Coast Survey—recognized then as the one great scientific institution in the U.S. under government control—was involved in a preliminary but ambitious hydrostatic survey of the entire East Coast. Moreover, at that time there was much to be done by the Coast Survey in the examination of harbors and plans for harbor improvements.

Davis spent six years with the Survey under the superintendency of a most remarkable man, Professor Alexander Dallas Bache, the great grandson of Benjamin Franklin. Bache was an eminent sicentist, the first President of the National Academy of Sciences, in 1863, a man whose scholarship was without a flaw, an effective administrator, and a natural leader of men. He made a profound and lasting impression on Davis.

Working under Professor Bache, Davis spent an effective tour of six years with the Coast Survey. He discovered the "Davis' New South Shoal" (20 miles south of Nantucket shoals) and became an acknowledged U.S. authority on tides and currents, and especially their effects on the formation of coastlines and reefs. He published several papers on the subject and his scientific work, "The Law of Deposit of the Flood Tide" won wide acclaim.

In 1849, the Navy in recognition of his talents placed Lt. Davis in charge of publishing an American Ephemeris and National Almanac. At the time our navigators and astronomers were still dependent on the British Nautical Almanac, a disadvantage which had long been apparent to Davis. His Coast Survey work had strengthened his conviction of the necessity of a National Ephemeris and he looked forward to the assignment.

Harvard University and the Cambridge Observatory were established as the headquarters for the work on the Almanac. Here in the congenial and intellectually stimulating society of such men as zoologist Louis Agassiz, mathematician Benjamin Pierce, the Director of the Observatory, George Bond, and many other established scientists of the day, Davis effectively established the foundation of the American Ephemeris and Nautical Almanac.

While still engaged in work on the Ephemeris, Davis read a paper on the Solar Eclipse of 1851 before the Sixth Annual Meeting of the American Association for the Advancement of Sciences. Here, at this Albany, N.Y. meeting he listened with avid interest to an address by his friend, Professor Alexander Dallas Bache.

Bache, in his address as retiring President of the AAAS, dwelt on the need for a national scientific organization:

"I would throw out for your consideration some reasons which induce me to believe that an institution of science, supplementary to existing ones, is much needed in our country, to guide public action in reference to scientific matters. . . .

"It is, I believe, a common mistake to associate the idea of academical institutions with monarchial institutions. We show in this, as in many other things, the prejudice of our descent. We have among us the two extremes of exaggerated nationality and of excessive imitation; let us modify each by the other, and be wise. A national institute is not necessary to Great Britain, with her rich and powerful universities. Republican France has cherished her Institute, seeking rather to extend than to curtail its proportions. . . . Nor does the idea of a necessary connexion between centralization and an institution strike me as a valid one. Suppose an institute of which the members belong in turn to each of our widely scattered states, working at their places of residence and reporting their results; meeting only at particular times, and for special purposes; engaged in researches, self-directed, or desired by the body, called for by the Congress or by the Executive, who furnish the means for the inquiries. The detail of such an organization could be marked out so as to secure efficiency without centralization, and constant labor with its appropriate results. The public treasury would be saved many times the support of such a council, by the sound advice which it would give in regard to the various projects which are constantly forced upon their notice, and in regard to which they are now compelled to decide without the knowledge which alone can ensure a wise conclusion. The men of science who are at the seat of government either constantly or temporarily, are too much occupied in the special work which belongs to their official occupations to answer such a purpose; besides, the additional responsibility which, if they were called together, they must necessarily bear, would prove too great a burden, considering the fervid zeal, and I might almost say fierceness, with which questions of interest are pursued and the very extraordinary means resorted to to bring about a successful conclusion. . . .

"Our country is making such rapid progress in material improvements, that it is impossible for either the legislative or executive departments of our Government to avoid incidentally, if not directly, being involved in the decision of such questions. Without specification, it is easy to see that there are few applications of science which do not bear on the interests of commerce and navigation, naval or military concerns, the customs, the lighthouses, the public lands, post-offices and post-roads, either directly or remotely. If all examination is refused, the good is confounded with the bad, and the Government may lose a most important advantage. If a decision is left to influence, or to imperfect knowledge, the worst consequences follow.

"Such a body would supply a place not occupied by existing institutions, and which our own is, from its temporary and voluntary character, not able to supply."

Such an idea for an organization of this type that would be of use to the country as a whole in matters relating to science and technology was certainly not new. Washington, Jefferson, Franklin, John Adams, had, although in rather vague terms, proposed a permanent national scientific association designed to further science in the national interest. By far, the most aggressive group of advocates of the overall Academy idea before the Civil War were called the "Scientific Lazzaroni" (scientific Beggars). This brotherhood of American scientists was headed by Professor Bache and Joseph Henry, Secretary of the Smithsonian Institution. The Bache-Henry circle included Louis Agassiz, Wolcott Gibbs, Benjamine Pierce, and Charles H. Davis.

Several attempts by this group and others to found a National Scientific Association or Academy were made in the 1850's but they encountered very great opposition from the States Rights' Groups in Congress who, at the time, questioned the appropriateness of any centrally oriented Federal Institution. In fact, the 1846 legislation that created the Smithsonian Institution had passed only by a very narrow margin against opposition, most prominently from the States Rights' Groups. Only the fact that over $500,000 in private money was available for financing kept the Smithsonian idea from being dropped completely. Nevertheless, Davis retained his deep interest in the Academy movement, and because of this he was destined to eventually evolve a practical plan for its establishment.

Davis had been promoted to Commander in 1856 (after 31 years of service) and he spent the next three years in command of the sloop, *St. Marys.* This was a busy command. He cruised in the Pacific visiting several of the ports on the West Coast of South America, the Marquesas and Sandwich Islands, and surveyed some of the uninhabited islands in the South Pacific. Incidentally, the principal purpose of such surveys at the time was to determine the value of the guano deposits of these islands. Several months were spent refitting the *St. Marys* at the newly established Mare Island Navy Yard commanded by Farragut who Davis recognized in his 1857 letters as one who possessed the qualities of a great Naval Commander."

In 1857, Davis was sent to Nicaragua to monitor the dramatic events then taking place in that country. At this time the power of William Walker, the American adventurer, who had in two short years' (1855–1857) time *became* Generalissimo then President and Dictator of Nicaragua, had crumbled. Davis' part in handling the Walker episode (he was instrumental in securing the surrender of Walker and he carried him and 16 of his principal officers out of the country aboard the *St. Marys*) brought out conspicuously the leading traits of his professional character—fearlessness of responsibility, independence and soundness of judgment, and strong self reliance. While not every one in the U.S. politically agreed at the time with Davis' conduct in the affair, the event served to mark him as an officer who was to be reckoned with and depended upon in matters of action as well as matters of science.

Davis was relieved of command of the *St. Marys* in 1859 and he returned to Harvard again as head of the Nautical Almanac work. During his absence his English translation of Gauss' "Theoria Matus Corporum Colestium" had been published and he had the honor of giving the mathematical world the first English version of the Method of Least Squares. During his cruise on the *St. Marys,* he had translated Kerhallet's "General Examination of the Pacific Ocean" and written several papers on astronomy and hydrography.

When the Civil War started, Commander Davis was summoned to Washington where he spent some time first in bureau work as a member of what was known as the Construction Board*. This Board had under con-

*In this job, Davis took a rather dim view of the design of the *Monitor.* He felt it worthless as a seaworthy ship and endorsed the design only on the premise that

sideration the plans of ships to be built and added to the Navy. Later he served as Fleet Captain in the expedition against Port Royal** and as Flag Officer in command of the Mississippi flotilla. By virtue of this command he was made a Commodore in July 1862, and for his gallent conduct in the victories of Fort Pillow and Memphis*** he was made a Rear Admiral on 7 February 1863. (The list of Rear Admirals at this time included Farragut, Goldsborough, Dupont, Foote, Davis, and Dahlgren. Each had been promoted for cause.)

Only a few months before had the Navy Bureau of Navigation been established as the Navy's main scientific organization with Commodore Davis as its first Chief. In addition to being the time of his promotion, February of that year proved to be an eventful period both for Admiral Davis and the country.

In February of 1863 the Secretary of the Navy, Gideon Welles, also appointed a "Permanent Commission" to advise the government on inventions and other scientific proposals with which the government at Washington was flooded. The letter of appointment to this Commission is as follows:

"NAVY DEPARTMENT,
*"February 11, 1863.*

"SIR: The Department proposes to organize upon the following programme a permanent commission to which all subjects of a scientific character on which the Government may require information may be referred.

"Propositions relative to a permanent scientific commission:

"1st. There shall be constituted a permanent commission consisting of, for the present, Commodore Davis, Professor Henry, and Professor Bache, to which shall be referred questions of science and art upon which the Department may require information.

"2nd. This commission shall have authority to call in associates to aid in their investigations and inquiries.

"3rd. The members and associates of the Commission shall receive no compensation for their services.

"You are directed to act as a member of the Commission in conjunction with Professor Henry and Professor Bache.

"Such matters as are presented to the Department will be referred to you for examination and report by the Commission.

"I am respectfully,

"GIDEON WELLES,
*Secretary of Navy.*
"CHARLES H. DAVIS,
*"Commodore, Chief of Bureau of Navigation."*

"This Commission which was originated by Davis is interesting because it led directly to the establishment of the National Academy of Sciences. Or, as Admiral Davis himself wrote that month in letters to his family in Boston:

"February 2, 1863. How much have I told you, if anything, about a Permanent Commission or Academy? Bache, Henry, and myself are very busy on this topic, and have made a move which will no doubt result in the Permanent Commission. The Academy is more doubtful."

"February 20. Inclosed is a copy of the order creating the Permanent Commission. But the Academy is to be introduced into Congress by Mr. Wilson (Senator from Massachusetts). The whole plan of it was arranged last night between Mr. Wilson, Agassiz, Bache and Ben (Professor Pierce). It was my plan amplified and improved."

"February 24. I told you a word about the Academy in one of my notes, but only a word, being in a hurry. The appointment of a Permanent Commission was suggested to me by one of my letters, which quoted a passage from the British War Office which spoke of a Select Commission; and when I mentioned it to Bache and Henry they acquiesced, and the latter presented the plan to the department. You saw, by the copy of the Secretary's letter to me, that our plan was accepted without any change whatever. We had hardly got through this thing before the idea flashed upon my mind that the whole plan, so long entertained, of the Academy could be successfully carried out if an act of incorporation were boldly asked for in the name of some of the leading men of science from different parts of the country. This I submitted to Bache and Henry with details, but the view was not immediately adopted. The next step was Agassiz coming to Washington as one of the regents of the Smithsonian Institution. Then followed a visit to Agassiz by Senator Wilson, who had nominated him to the regency. At this meeting, which took place at Bache's, Ben, Bache, and Dr. Gould were present; and it was there that the mode of proceeding was devised. Mr. Wilson introduced the bill last Saturday."

In summary, these letters, coupled with other evidence, indicate that immediately upon returning to Washington for duty Davis participated in various discussions among his scientific associates on the important question of how to best aid the Union. The value of such discussions again clearly illustrated to Davis the need for a formal national scientific organization. Having served as a member of various advisory boards, the idea occurred to him not long before February 2, 1863, that this organization might take the form of a Permanent Commission. He at once discussed this idea with Bache and Henry, who agreed that the plan was meritorious, while at the same time clinging to the idea of founding an academy. Henry was so favorably impressed with the commission plan that he immediately presented it to the Navy Department. This plan received the prompt attention of the Secretary of the Navy, who issued an order on February 11, creating the Permanent Commission.

While still awaiting the outcome of his plan to establish this scientific commission, the idea occurred to Admiral Davis that the academy, so long coveted, might be organized by the simple process of asking Congress for its incorporation "in the name of some of the leading men of science from different parts of the country." This idea was also presented to Blache and Henry, who, however, were not immediately convinced of its merits. About this time the great Harvard zoologist, Louis Agassiz, having been nominated by Senator Henry Wilson, of Massachusetts, a regent of the Smithsonian Institution, came to Washington and met him on February 19, at the house of Professor Bache. Also at this same meeting were Professor Pierce, Dr. B. A. Gould, and Admiral Davis. Davis' plan of incorporating an academy was discussed by all present, and it was eventually decided that Senator Wilson should introduce a bill of incorporation, which he did on Saturday, February 21. As his letters, indicate, Admiral Davis asserts that the plan of action adopted on this occasion was his own, "amplified and improved."

The bill passed both the Senate and the House on 3 March 1863 and was signed by President Lincoln on the same day. Thus, was created a unique national institution—a private organization with a federal charter. Made up of distinguished scientists and engineers, the Academy had two chief purposes: to foster the orderly development of science and its use for human welfare, and to advise the Federal Government on request and without fee, on matters relating to science and engineering.

It has long been well recognized that this Academy has proved of inestimable value to this nation. The unique mechanism of the Academy of Sciences and its sister Academy of Engineering by which the country's scientists, physicians, and engineers can contribute their knowledge as individuals to the solution of various pressing national problems works just as effectively today as it did over 106 years ago. Such effectiveness of operation and flexibility of charter are high tributes to Davis and the early planners of the Academy.

Navy support was vital in the initial stages of the Academy's work. Such support has always been important to the success of the endeavor. The Academy's first report, incidentally, was on a Navy subject. It dealt with the very practical and important problems of calibrating compasses aboard ships equipped with iron smoke-stacks. The Secretary of the Navy requested such an investigation. And, although documented history is vague on this point, we may presume that Admiral Davis requested the Secretary to make such a request, as well as a good many of the others that were made by the Navy during Davis' lifetime.

Indeed, Admiral Davis was very active in the affairs of the Academy in 1863 and 1864 and remained as Chief of the Bureau of Navigation until 1865. He relinquished this post to assume the Superintendency of the Naval Observatory. Here, he established its operations so efficiently that the French copied our system and placed their National Observatory under the administration of a Naval officer of eminent scientific attainments.

But Admiral Davis was still considered a flag officer of the line and, after two years at the Observatory, he was called once more to sea duty. In 1867 he assumed command of the Brazilian squadron. In 1869, upon his return to the U.S., he was made a member of the Light-House Board in Washington. During his absence in Brazil, Harvard conferred upon him the degree of Doctor of Laws, at this time, the first such honor in the history of the University ever paid to a Naval Commander. From 1870–1874 he commanded the Norfolk Naval Station and from 1874 to the time of his death in 1877 (February) he again had charge of the Naval Observatory.

In a word, Charles Henry Davis was indeed in all ways a very remarkable man. And in the early days of our country he combined his very unusual and remarkable talents in science, administration, and Naval warfare to applications directed solely to his country's welfare. His contributions were many, varied, and important. In the biographical memoirs of the august Academy of Sciences he helped to found, some insight to the man himself can be gained by these words which were written 20 years after his death:

". . . He entered the field of science when the gate stood wide open to him, and although not a man of genius, he went as far as a deep love of knowledge and truth and the talents which God had bestowed would carry him. Whatever he had to do he did with all his might; and so when the test came which sorted men according to the merit that was in them, the scientific officer went easily to the front and the idler dropped into

---

it could be hastily constructed and could render some service as a floating battery in smooth water. He is said to have signed the report authorizing the construction and then turning the model over to the inventor and remarking, "Mr. Erickson, you can take that little thing home and worship it and it will be no sin, for it is not made in the likeness of anything in the heavens above or the earth beneath or the waters under the earth."

** An interesting account of this battle is contained in the article, "The Great Stone Fleet Calculated Catastrophe," by Cdr. Arthur Gordon, U.S. Naval Institute Proceedings, Dec. 1968.

*** Regarding the battle of Memphis, Admiral Porter stated: "For the second time RADM Davis was a strictly Naval victory and won it without a single mistake."

oblivion. He passed the alembic of trying times . . ."

But in the 1899 book, "The Life of Charles Henry Davis, Rear Admiral 1807–1877" by his son, Capt. Charles H. Davis, USN, it was said this way:

"In his official character, Admiral Davis was, first and foremost, a naval officer. He belonged to that class which it is the honor of the regular services of the army and navy to produce, and whose reward is generally only the fulfillment of a high ideal all its own; which it is often the privilege of vulgar malice to flout and condemn, but which is truly the safeguard and bulwark of the republic. He was incidentally a student, but he was neither a pedant nor a dreamer. He could borrow from the past elucidation and example, but he brought the labors of the study to aid, not to impede, the demands of stirring action in the present. He lived intensely and earnestly in the times in which his life was cast.

Since the close of his active career, the service which he loved has passed through a long and almost hopeless period of decadence and neglect, until it has, by a sudden transition, again attained to a position of respectable importance. A sharp line of demarcation has been drawn in men's minds between its former state and its present,—between, in the cant phrase of the day, the old navy and the new. The service has forgotten its past, or at the best remembers it only as a subject for curiosity, bearing a very trifling relation to the present. Tradition and the trace of continuity are lost. Nor is this unnatural. It is due in some measure, perhaps, to a shallow and il-liberal scheme at Annapolis, but mainly to the vigor and energy with which the whole navy has arisen, from the enforced lethargy of years, to adapt itself to new conditions and the engrossing pursuits which they demand. But if successive phases of studied neglect and contempt and spasmodic popularity have left the service untainted, it is because the men who compose it to-day, whether they will it so and realize it or not, are, in standard and ideal, the logical heirs and successors of a preceding generation.

It would be false to the teachings of his life to close a review of Admiral Davis' career in any other spirit than that of hopeful expectation and encouragement. Unless the signs of the times are wholly illusory the navy, released from a degrading struggle, against bigotry and caprice, for a mere continued existence, will find its acknowledged place as a factor in the march of the nation as a world-power, even towards a realization of the dream of universal peace. In the even and progressive current of usefulness, succeeding not only because it is skillful with its tools, but because a heritage of earnestness, self-sacrifice, and devotion is its own, it may learn to recognize its own past, and the lives of the men who made it, not as "a series of pictures which please us more or less according to the attitudes of the principal figures and the beauty of the coloring, but as the records of living, acting men, governed by exactly the same passions and motives as ourselves, and therefore always affording us, if we choose to analyze their conduct, the surest and safest rules for our own government; for the interval which divides us from any period of history is really nothing in this respect."

ACT OF INCORPORATION

An act to incorporate the National Academy of Sciences

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That Louis Agassiz, Massachusetts; J. H. Alexander, Maryland; S. Alexander, New Jersey; A. D. Bache, at large; F. B. Barnard, at large; J. C. Barnard, United States Army, Massachusetts; W. H. C. Bartlett, United States Military Academy, Missouri; U. A. Boyden, Massachusetts; Alexis Caswell, Rhode Island; William Chauvenet, Missouri; J. H. C. Coffin, United States Naval Academy, Maine; J. A. Dahlgren, United States Navy, Pennsylvania; J. D. Dana, Connecticut; Charles H. Davis, United States Navy, Massachusetts; George Englemann, Saint Louis, Missouri; J. F. Frazer, Pennsylvania; Wolcott Gibbs, New York; J. M. Giles, United States Navy, District of Columbia; A. A. Gould, Massachusetts; B. A. Gould, Massachusetts; Asa Gray, Massachusetts; A. Guyot, New Jersey; James Hall, New York; Joseph Henry, at large; J. E. Hilgard, at large, Illinois; Edward Hitchcock, Massachusetts; J. S. Hubbard, United States Naval Observatory, Connecticut; A. A. Humphreys, United States Army, Pennsylvania; J. L. Le Conte, United States Army, Pennsylvania; J. Leidy, Pennsylvania; J. P. Lesley, Pennsylvania; M. F. Longstreth, Pennsylvania; D. H. Mahan, United States Military Academy, Virginia; J. S. Newberry, Ohio; H. A. Newton, Connecticut; Benjamin Peirce, Massachusetts; John Rodgers, United States Navy, Indiana; Fairman Rogers, Pennsylvania; R. E. Rogers, Pennsylvania; W. B. Rogers, Massachusetts; L. M. Rutherfurd, New York; Joseph Saxton, at large; Benjamin Silliman, Connecticut; Benjamin Silliman, Junior, Connecticut; Theodore Strong, New Jersey; John Torrey, New York; J. G. Totten, United States Army, Connecticut; Joseph Winlock, United States Nautical Almanac, Kentucky; Jeffries Wyman, Massachusetts; J. D. Whitney, California; their associates and successors duly chosen, are hereby incorporated, constituted, and declared to be a body corporate, by the name of the National Academy of Sciences.

SEC. 2 *And be it further enacted, That the* National Academy of Sciences shall consist of not more than fifty ordinary members, and the said corporation hereby constituted shall have power to make its own organization, including its constitution, bylaws, and rules and regulations; to fill all vacancies created by death, resignation, or otherwise; to provide for the election of foreign and domestic members, the division into classes, and all other matters needful or usual in such institution, and to report the same to Congress.

SEC. 3 *And be it further enacted,* That the National Academy of Sciences shall hold an annual meeting at such place in the United States as may be designated, and the Academy shall, whenever called upon by any department of the Government, investigate, examine, experiment, and report upon any subject of science or art, the actual expense of such investigations, examinations, experiments, and reports to be paid from appropriations which may be made for the purpose, but the Academy shall receive no compensation whatever for any services to the Government of the United States.

GALUSHA A. GROW,
*Speaker of the House of Representatives.*
SOLOMON FOOTE,

## PITTSBURGH'S LEGAL SERVICES PROGRAM—SAVINGS THROUGH NOMINAL BONDS

### HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. MOORHEAD. Mr. Speaker, on October 27 and again on November 24, for the RECORD, I expressed my support for the legal services program conducted by the Office of Economic Opportunity, and my intention to oppose the "Murphy amendment" giving Governors an ultimate veto authority over these programs—should it be offered on the House floor.

I reiterate my opposition to this amendment and in support of my position, include at this point in the RECORD an article describing Pittsburgh's nominal bond program appearing in November's OEO newsletter.

I am very proud of our local program in Pittsburgh, and of the services being performed for some of our less affluent citizens by Mr. Stanton Wettick and his team of dedicated attorneys.

When we debate H.R. 12321 in the House, I urge my colleagues to consider the accomplishment of many programs such as Pittsburgh's, and vote down any damaging amendments that would give undue power to the State capitals. The article follows:

A LEGAL SERVICES PROJECT: SAVINGS THROUGH NOMINAL BOND

PITTSBURGH.—Neighborhood Legal Services here has developed a bail bond project which is saving about $1,200 a month in investigators' salaries, is paid by the Office of Economic Opportunity. The savings, estimated at $10,000 to $20,000 a month in jail detention costs—not to mention other social service costs—are realized by local jurisdictions. The program serves Allegheny County, the City of Pittsburgh and several local jurisdictions in the county.

Called the Nominal Bond Program, it processes some 150 cases a month, with three NLS investigators responding around the clock to the needs of people being jailed who cannot raise bail and some of whom have no friends or contacts whom they can phone for help. Usually within 24 hours the NLS team can round up enough supporting data on the jailed person's employment, family responsibilities or past record of lawful behavior to back up an appeal for release. The decision, however, rests with the judge.

In about 100 cases per month, or two out of three handled by NLS, the local magistrate or Justice of the Peace finds the evidence adequate and sets bail at the nominal rate, or $1.

Without NLS help the accused would have to await trial proceedings in jail until the case comes up on the court docket, with the local jurisdiction meanwhile bearing the costs of detention. This can run up to $500 a month, but averages out at about $100 per person, according to Stanton Wettick, originator of the program and director of NLS since June.

He is even more concerned about the human savings, which also represent real savings in social service and welfare costs. If a person lands in jail without someone to support him, he stands a greater chance of losing his job. For heads of families this means putting the entire family on welfare. There are also the losses in terms of purchasing power and taxes.

The investigation is carried out by nonlawyers, most of whose work can be done by telephone. They spend about two or three hours per case. Wettick feels that the success of the program is due as much to the fact that someone is taking an interest in the accused as the facts themselves. So far the courts and other contracts have been cooperative, and the only losers appear to be the firms which formerly wrote those bonds at an average cost of $50 each.

"This month we're writing more bail than the professional bondsmen," Wettick adds with a grin.

Pittsburgh's four-year-old NLS program got what his staff calls "a shot in the arm" when Wettick took over as director. A veteran of the Legal Services Program in

Charleston, West Virginia, he also teaches poverty law at the University of Pittsburgh, where he is in a prime position to recruit the top graduates. His staff of 16 presently includes four Reginald Hebersmith Fellowship students from Pitt and two VISTA lawyers, all OEO-funded.

The staff is divided between a central office core of specialists and roving neighborhood teams of two who staff NLS offices from two to five days a week, depending upon the neighborhood served. There are eight offices in Pittsburgh and five in rural Allegheny County communities.

The entire program is funded by OEO for approximately $420,000.

## THOMAS VAIL: A BLEND OF BROTHERHOOD AND LEADERSHIP

### HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. FEIGHAN. Mr. Speaker, the December newsletter of the National Conference of Christians and Jews includes a front page article concerning one of Cleveland's most outstanding citizens, Tom Vail, editor and publisher of the Cleveland Plain Dealer.

The National Human Relations Award by the National Council of Christians and Jews is a fitting testimonial to this dedicated man. I believe this article is worthy of the attention of my colleagues:

THOMAS VAIL—A BLEND OF BROTHERHOOD AND LEADERSHIP

In a time when leadership and dynamic forthrightness are at a premium it is reassuring to focus on the career of the young publisher-editor of the Plain Dealer, Tom Vail. A newspaperman's newspaperman, Tom Vail set out to make his mark in the field of journalism and at the same time see to it that the tremendous influence and power of his newspaper and his pen be used for the good of all men, everywhere.

The National Conference of Christians and Jews in their selection of Mr. Vail to be the recipient of the National Human Relations Award recognizes that Tom Vail has blended his qualities of leadership, his successful journalistic career and his essential belief in human dignity and the Brotherhood of Man under the Fatherhood of God into a personal way of life that has become a powerful force for good. When Mr. Vail receives the highest honor of the Conference on Sunday night, February 8, 1969 at a civic dinner in Cleveland it will be because of "his leadership as National Brotherhood Week Chairman in 1969; the tremendous amount of time, energy, resources and the influence and prestige of his newspaper he has devoted to the righting of intergroup wrongs in the areas of race, religion and community."

The Awards Committee pointed out that under his direction his newspaper, the Plain Dealer, has supported every campaign and every cause that seeks to better relationships between the races and other minority groups in this country. He has put himself and his newspaper in the forefront of the struggle for racial equality, fair housing and equal employment opportunity.

He is a young energetic, brilliant American leader who has picked up the banner of the essential dignity of the individual and is helping to build a better and new society for all men.

Mr. Vail is a Co-Chairman of the Northern Ohio Chapter of the NCCJ and has been a Board member of this organization for the past six years. In 1967 his newspaper support of Carl B. Stokes in his campaign for Mayor in the Primary Election was a giant stride in breaking down of racial barriers in contemporary American politics.

He became publisher and editor of the Plain Dealer at the age of 36. He has spent 20 years as a newspaper reporter and publisher.

Mr. Vail comes from a famous family of great prominence in the business, civic and social affairs of Cleveland. His father, grandfather, and great-grandfathers were founders and contributors to many of the most important businesses and civic institutions in the Cleveland area. He was born in Cleveland, June 23, 1926, the son of Herman L. Vail and the late Delia White Vail. He is a great-grandson of the late Liberty E. Holden, founder of The Plain Dealer. His grandfather, the late Windsor T. White, was a founder of the White Motor Co., world's largest manufacturer of trucks.

He has served on the boards of many highly important local and national organizations. He served on the President's Health Manpower Commission in 1967. He is on the U.S. Advisory Commission on Information. He is president of the Cleveland Convention and Visitors Bureau and a director of the Greater Cleveland Growth Assn. He is a trustee of the Washington Journalism Center and the Cleveland Council on World Affairs, and an executive board member of the Greater Cleveland Council of the Boy Scouts of America.

Mr. Vail is a director of the Forest City Publishing Co.; director of the Art Gravure Corp.; member of the board of the Associated Press; recently completed six years on the board of the Bureau of Advertising of the American Newspaper Publishers Assn.; secretary and Executive Committee member of Newspaper 1, an association of some 30 leading newspapers of the country. He is a member of the American Newspaper Publishers Assn. and of the American Society of Newspaper Editors.

## VITA–U.S.A.

### HON. DANIEL E. BUTTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. BUTTON. Mr. Speaker, in view of President Nixon's recent announcement of the creation of a National Center for Voluntary Action to help motivate and mobilize citizen-volunteers to "master common needs and problems," I think it is timely and appropriate to inform the Congress of a volunteer program in my home district which has already achieved outstanding success in mobilizing large numbers of volunteers to help solve the problems of poverty in the United States. I am speaking of the new U.S.A. Division of Volunteers for International Technical Assistance.

On past occasions I have commented on VITA's more than 9 years' experience in successfully providing technical consultation through its volunteers in helping to improve conditions in the developing world. Working with private citizens, missionaries, Peace Corps volunteers, and AID personnel, VITA's international operation continues with that important task. Recently, VITA counterpart organizations were established in the Philippines and Ceylon, and more are planned in the coming months.

Now I am happy to report that VITA, through its new USA program, is calling on its roster of over 6,000 volunteers to provide technical and professional assistance to both public and private anti-poverty efforts. At a time when we are reviewing the authorization for the Office of Economic Opportunity, I think it significant to point out that VITA–U.S.A. was created with a grant from OEO last January. As an example of cooperation between a Government agency and the private sector in helping to seek solutions to some of America's critical problems, the VITA–U.S.A. program is very much in keeping with the President's recent remarks on voluntarism and the innovative thrust of OEO under Mr. Rumsfeld.

In a November 4 statement on voluntarism the President said:

From the beginning of our country, Americans have worked together voluntarily to help master the common needs and problems. A major goal of this administration is to recognize and enlist the energies and resources of the people themselves, as well as government, in a renewal of this historic American approach.

A recent review of the first 9 months of VITA–U.S.A.'s operation indicates solid success in enlisting the energies and resources the President spoke of. Under unanimous consent I insert excerpts from that review and from a recent program description prepared by VITA:

VITA–USA: A PROGRAM DESCRIPTION

The USA Division of Volunteers for International Technical Assistance (VITA) came into being with the signing of an OEO contract in January 1969. This was the culmination of discussions which OEO initiated in the summer of 1968 and reflected the reputation VITA had acquired in providing volunteer technical assistance to the developing nations since 1960.

VITA–USA shares an expanding roster of over 6,000 Volunteers with the organization's International Division. In the first nine months of operation, VITA–USA received more than 300 inquiries from all parts of the United States and its territories.

VITA–USA accepts requests for technical assistance from any organization, group, or individual—public or private—engaged in domestic anti-poverty work. The single criterion applied is that the recipient of VITA consultation not be able to afford normal fees for such services.

Requests are sometimes answered by mail but more frequently involve face-to-face contact. This is accomplished in one of two ways. In the first method, a volunteer living near the requester visits the client and often accomplishes the assignment in his spare time. Presently there are two field offices with small staffs who support the community service activities of VITA's Boston and Washington, D.C. Chapters.

Second method: the volunteer spends a block of time on "short term assignment". In such cases volunteers are usually required to travel to another area and must take leave from their jobs. Travel expenses are paid by VITA. The volunteer's employer makes a vital contribution by continuing his salary during the leave period. Duration of the assignments vary from one day to several weeks.

VITA Volunteers represent a wide range of skills from architecture and engineering to business management, systems analysis, education, and psychology. In the USA program they have assisted self-help housing groups, trained hotel employees, done marketing surveys, developed a volunteer manpower management system, and designed simple, easy to build playground equipment.

To date, new volunteers have been recruited on the basis of need in specific skills categories. On-board Volunteers are frequently used to recruit or refer others and even help in the selection and screening process when assignments are made. Many volunteers, particularly in the national headquarters area, give administrative assistance to staff members by working in the inquiry service, serving on research committees, and by representing VITA at meetings and conferences.

Once a request is received, the Inquiry Service staff check the roster to locate one or more volunteers with the skills required. They use a telephone interview guide to determine the person's willingness, availability, and suitability in terms of experience and attitude. The client himself usually participates in the selection process by also speaking with the candidate to make a final suitability determination. The volunteer's effectiveness is measured following receipt of reports submitted by him and by the client with whom he has dealt.

Although VITA–USA is still a new program, the response by those who have been assisted indicates that it has been very successful. Acceptance by community people being helped is based on two factors: *responsiveness*—we assist only those who request help, and *performance*—the volunteers have consistently provided competent professional assistance.

Basic elements of our plan for the second and third years of operation are the considerable expansion of local staff supported chapters in a number of American cities to better serve concentrated urban areas and an enlarged National Consulting Service to handle requests from smaller towns and rural areas.

---

VITA–USA: A Summary Review of the First 9 Months

General Conclusions: Based on the success of the program it may be said that the major hypothesis of the demonstration has been proven: "VITA's volunteer force, which has been utilized effectively in aiding developing countries, can be applied to help solve problems of poverty in the USA."

The USA program is unique in its ability to mobilize and apply volunteers for use in urban and rural poverty settings and on a national scale. The basic principles that have led to acceptance by community people needing help are:

1. Responsiveness: assistance is given only to those who request help and only in the form that it is requested.

2. Performance: the staff has shown an ability to handle volunteer selection, logistics of volunteer assignments, and follow-up. Volunteers have consistently demonstrated their ability to provide competent, professional assistance.

The first two chapter projects established in Boston and Washington demonstrate the need for additional ones in metropolitan areas where manpower resources covering a broad skills spectrum can be mobilized.

The National Consulting Service is mostly needed by small cities and rural areas.

Quantity of Effort: During the nine months covered by the review, 316 requests were received by the program. Responding to them, over 500 volunteers contributed 7000 hours.

The program start-up was smooth, with top-notch staff being recruited within targeted dates. (Interestingly, six of the staff are ex-Peace Corps volunteers.) Methods and procedures have been developed, and an ongoing evaluation permits continual improvement of these procedures.

Voluntary technical assistance is extremely economical since the consulting time is free.

Quality of Effort: Evaluations of the Boston Project and the National Consulting Service include the following conclusions on operating procedures: (1) the requesters give VITA–USA high marks on volunteer selection and speed of response. (2) VITA–USA cases involve mostly "soft technology" and are much more complex than previous international requests. They require more in-depth, on-site help, and follow-up. (3) the volunteer's interest in providing repeated or long term assistance to our requests is increased when the staff provide him with up-to-date feedback on the results of his efforts. (4) there are still many potential users of VITA's services who do not clearly understand how to take advantage of the program or who have as yet not even heard of it.

Unique Characteristics: (1) Flexibility and Concern: there is frequent intermittent involvement, thanks to VITA's flexibility and lack of "red tape", (2) VITA–USA often serves as a bridge to other private or governmental resources, in many cases bringing together for the first time those in need with those in the best position to provide assistance, (3) Availability: for the first time in many communities VITA represents a source of free technical assistance. Too often in the past community projects needing such assistance have gone without and failed; (4) Objectivity: volunteers serve as objective outsiders; their advice can be used publicly or privately to help the requester achieve his goals. Examples illustrating these points:

A California Community Action Agency director reports valuable assistance in changing organization structure and personnel methods as a result of management analysis by a VITA Volunteer.

An Urban League housing project in Omaha is being considered for a $160,000 grant and is using a report by two qualified volunteers to back up its case.

Quote from a crafts project in Harlan, Kentucky: "VITA provided the assistance needed to this small agency which had neither funds nor confidence to seek elsewhere. In areas where volunteers were not available, excellent referrals were made, quite unlike others I have dealt with." As a result of VITA's help in costing and market sources, a grant providing initial capital has been obtained and a market established in Washington, D.C. Sixty people are involved.

Quote from Wyoming Community Health Council, New Richmond, Virginia: "I had contacted OEO in Washington and was told that the chances of getting a consulting firm were very dim. I contacted VITA but did not expect any results . . . VITA provided the assistance asked for and more . . . provided a *stimulus* to the project when many were discouraged and about to give up hope. Dr. Starkweather has shown the way. We have hired a health specialist and are preparing the proposal for funding."

*Areas of Greatest Contribution:* Based on experience to date, VITA's staff has been able to define areas where the program seems to be able to have its greatest impact. One of the areas is the field of *business development in rural areas and small cities.* Three ventures off to a successful start, due heavily to VITA volunteer assistance, are:

1. "Jack of All Trades Service Corporation", a maintenance business formed by the Bennington-Rutland Opportunity Council, Inc., received help from volunteer Richard Bowen on systems of floor maintenance, equipment procurement, job bidding. "Mr. Bowen brought over a floor machine and worked day and night to train the men. He visited our customers and set up a program of cleaning for each. Also helped with calls on new customers, increasing business."

2. A quilting group in North Carolina received information on production, marketing, and design. The co-op has been formed, and the first quilt samples are in production.

Other areas of special competence include *Management Methods and Systems Analysis, Fund Raising Assistance, Engineering—particularly rural water systems and sanitation, Education of the Disadvantaged, Recreation and Playgrounds, and Business Development.*

VITA–USA has developed a model for establishing a nationwide network of effective urban chapter programs. Whereas one chapter program was the goal for the first year, two staffed projects have been stated. The Boston Project is already up to over 500 volunteer man hours per month being devoted to projects with high success potential. The District of Columbia Project is well under way.

---

## NIXON THROUGH THE LOOKING GLASS

---

### HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. BROWN of California. Mr. Speaker, Washington often gets referred to as a "wonderland," and these days certainly are no exception.

And if there were ever an issue that seemed to place everyone within a veritable caucus race, it is that of the Vietnam war; the more we race, the more we pout, the more we seem to be still in the same tragic position.

These thoughts come to my mind after reading the following poem by Miss Carol Stevens, managing editor of the Eastside Sun in Los Angeles. Miss Stevens reacted to current antics here in the Capital by deftly parodying Lewis Carroll in a manner I found both amusing and telling.

So as to share this bit of verse with my colleagues, I place it in the RECORD at this point:

[From the Eastern Sun, Nov. 13, 1969]

NIXON THROUGH THE LOOKING GLASS

(By Carol Stevens)

"The time has come," the Walrus said,
"To talk of many things;
Of budget cuts and Vietnam
Of presidents—and flings—
And why the sea is full of oil—
And whether liberty rings."

"But wait a bit," Dick Nixon cried,
"Before we have our chat;
It isn't fair to talk of peace
Or dangerous things like that."
"That's very true," said the Agnew,
"Off with their heads if they do!"

"A space of peace," the Walrus said,
"Is what we chiefly need,
And some cash for education
Would be very good indeed—
And solutions to pollution
Before our dissolutions."

"But not from us," Dick Nixon cried,
Turning a little blue.
"Military and industry agree,
Too dismal a thing to do."
"That's fine for them," the Walrus said,
"We're the ones in the stew!"

The President said nothing but,
"Just keep as quiet as mice."
The Majority took their cue,
And they were very nice.
Their wires and letters agreed with Dick
The Way they're told to do.

"It seems a shame," the Walrus said,
"To play them such a trick."
"In Vietnam we've gone so far
We can't turn back," says Dick.
"We have to stop," the Walrus said,
"While Vietnam exists!"

"I weep for you," the Walrus said;
"I deeply sympathize.
The Great White Father has it hard,
But I'm the one who dies."
Holding his "Peace Now" sign up high;
"End the war now!" he cries.

"O Nixon," said the Vocal Few,
"You've had a pleasant run.
How about tackling our problems now?"
But answer came there none,
And this was scarcely odd, because
He'd gone to get his gun.

## MORE EFFECTIVE BUDGET PROCEDURES ARE NECESSARY TO STRENGTHEN THE U.N.

**HON. BENJAMIN S. ROSENTHAL**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. ROSENTHAL. Mr. Speaker, our distinguished colleague, the gentleman from Florida (Mr. FASCELL), recently spoke perceptively on how the United Nations should deal with its formidable array of problems. As a congressional representative to the General Assembly, Mr. FASCELL is particularly well equipped to assess the major obstacles confronting the world body. His speech should be read by all those who wish an insight into how the U.N., so vital to the cause of world peace, can be made more effective.

THE UNITED NATIONS BUDGET FOR 1970

(Statement by Congressman DANTE B. FASCELL, U.S. Representative to the General Assembly [1])

Before commenting on the budget estimates for 1970 and several other important issues which will be before our committee, I should like to say a few words about a somewhat larger but also a relevant, issue.

Since I have been attending this session, I have listened carefully to statements presented both in this committee and in the plenary session, and I have been struck by a theme which appeared to recur in many of them—a theme reflecting certain uneasiness, even certain profound concern, about the direction in which this organization is moving and its capacity for effective action.

I would like to stress, Mr. Chairman, that this theme, this concern, was not particular to any one delegation nor to the delegates from any one geographical area. It was expressed by representatives of small states and of large ones, of those which are advancing along the ladder of development as well as by more developed countries.

Viewing its present, and looking back at the development of this organization during the past 24 years, I find this concern to be fully warranted. For nearly two and a half decades, the United Nations and its affiliated organs and agencies have grown considerably in response to the wishes of their member states and the needs of the moment. This growth has been necessary and beneficial to the world community, but we would be less than frank with each other if we were to claim that it has proceeded at all times along clearly defined, rational, and systematic lines. As a result, many thoughtful people, looking at the complex proliferating machinery of the United Nations system, conscious of its financial and other problems, have wondered aloud about this organization's ability to respond effectively during the next 10 or 25 years to both the legitimate desires of its membership and the immensely challenging tasks which lie ahead of us.

All of us are agreed, I am certain, that the United Nations is a vitally important organization which should, and indeed must, continue to respond to the needs of its members. At the same time, is it not for us who have some responsibility for the future of mankind to take the necessary steps to assure that our cumulative efforts may actively promote the cause of peace and development for all people?

These are, admittedly, large issues, and some may say that they do not belong in the Fifth Committee. I feel otherwise. I believe that this committee has a legitimate and vital concern for the effectiveness of this organization, its management, and wise use of the resources entrusted to it by the world community.

For example, we ought to devote attention and comprehensive consideration to the relationships—financial, budgetary, administrative, and other—between the United Nations, its voluntary programs and the entire family of U.N. specialized agencies.

Several items on the agenda of the Fifth Committee relate to this subject. Therefore, this committee is competent to act in this field with a view to proposing changes and improvements which will assure a more systematic, coordinated, and efficient utilization of scarce resources—manpower as well as financial. The methods and procedures which we have followed during the past 24 years are not necessarily suitable to the tasks which will confront the United Nations family of organizations during the next quarter of a century. It is incumbent upon us, therefore, as necessary, to devise new, effective methods of coping with future challenges.

Accordingly, I would suggest that in approaching the agenda items before us, and in our corridor conversations, we begin to focus on ways and means to make this organization as effective an instrument as possible. And in doing so, I would hope that we could keep certain basic concepts in mind. They are:

First, that we recognize that the task before us is a collective effort in which we are all vitally interested and that, while there are and will always be differences of opinion on various items, there is no rational basis for confrontation. This is an organization to which we have all contributed and which is of major importance to all of us. Accordingly, we must listen to each other and realize that none of us is the exclusive repository of wisdom.

Secondly, we should recognize that, in order to carry out the purposes and principles of the charter and to be a vital force in international life, the United Nations must develop its capacity to meet the needs of its members. As we take on new activities we must constantly reassess our priorities to see whether they are still valid. None of us, I am certain, is willing to abandon his early dreams and hopes for the United Nations, and none of us wants to place what has sometimes been called a "ceiling" on its essential activities. But at the same time, all of us should agree that the organization's growth should follow a rational pattern related to the increasingly challenging and complex tasks which will confront our world during the next 25 years.

BUDGET ESTIMATES FOR 1970

Because we feel as we do about this matter, Mr. Chairman, we are pleased that the Secretary General has taken the lead in dealing with the problems which have troubled us and that in this he has the support of the Advisory Committee on Administrative and Budgetary Questions. We believe that the Secretary General has been wise to consider that the present is a period in which to assess the existing resources, capacity, and methods of work of the United Nations—that it is a period of consolidation. We consider that his budget estimates for 1970 [2] on the whole reflect this view and that he should be commended for them. We consider them to be a considerable improvement, particularly at this stage in the life of the organization, over the estimates which were presented last year. I should add, Mr. Chairman, that we consider that the Advisory Committee has done its usual excellent job in making its recommendations with respect to the estimates.

It is, of course, true, as many representatives have pointed out, that we have no clear picture as yet as to what the final budget level will be, and so it is premature to take a position with respect to it. We, like other delegations, will carefully scrutinize the additional estimates which will come before us.

Before going further, Mr. Chairman, I would like to emphasize one point to which sufficient attention is seldom given. The United States does not mean to speak as if the major administrative and budgetary problems about which we are concerned can be solved by the Secretary General alone. We recognize that these problems have been created, to a very large extent, by the demands of member governments themselves; that we all share the responsibility for the existence of these problems. We must realize that greater discipline and restraint on our part is required if the development of this organization in the administrative and budgetary area is to be orderly and rational.

PPROVISIONAL POSTS

A number of delegations have questioned the credit sought by the Secretary General to provide for 234 provisional posts in 1970. It can, of course, be questioned whether the request of the Secretary General for this credit is wise, in view of the manpower survey being undertaken and in view of the fact that a number of existing posts have not yet been filled. Further, one can question the provisional-post approach—which was tried and discarded some years ago—and we do not favor it as a normal method of budgeting. However, we recognize that the Advisory Committee has scrutinized this credit very carefully and has decided to accept it for 1970, with some reduction and some question as to the total, in the light of the limitations the Secretary General has imposed upon himself with respect to its use. Further, we can understand why the Secretary General has chosen to call for posts on a provisional basis during the period in which the manpower survey is underway. While sharing the misgivings of the Advisory Committee on the numbers involved, we believe that this limited approach can be accepted as an exceptional measure to deal with an unusual situation.

There is another area to which many delegations have referred as one in which savings can be made; that is, conference and documentation costs. We strongly share this view. The problems which exist in this area arise almost entirely from the demands of member states, and there is only a minimal amount which the Secretary General can do on his own to solve them. We are convinced that the best way in which to deal with this matter is for this committee to approve the recommendations of the Committee of Seven, which are before us.[3]

The Secretary General is making an effort to deal with that part of the problem which is his responsibility. Recognizing the interest of this committee in the matter, he designated the Office of Conference Services as the first area to be the subject of the survey being undertaken by the new Administrative Management Service. The survey is now underway and is expected to be completed by the end of the year. In this connection, we

[1] Made in Committee V (Administrative and Budgetary) on Oct. 21 (U.S./U.N. press release 128).

[2] U.N. doc. A/7606.

[3] U.N. doc. A/7359.

would like to congratulate the Secretary General for the manner in which he has responded to this committee's request for a study of the utilization and deployment of the entire Secretariat.

PLANNING ESTIMATES, 1971

One of the most important items which will come before us is the planning estimates for 1971. We can say little on this subject at the present time, since the Secretary General's proposals are not yet before us. We assume that, in preparing the 1971 planning estimates, the Secretary General will be guided by the same philosophy which he has sought to reflect in the 1970 estimates; namely, that no significant increase in existing staff resources will be sought until the results of the manpower survey become reasonably clear.

UNFORESEEN EXPENSES

Let me now turn to another matter, the report of the Advisory Committee on procedures for dealing with unforeseen expenses and their financing.[4] This report was held over from last year because of an understandable desire on the part of many delegations for additional information and clarification. We believe that this committee should at this session adopt the Advisory Committee's recommendations. As we have pointed out on an earlier occasion, the size of the supplemental appropriations for 1969—of which only a part qualified under the present resolution on unforeseen and extraordinary expenses—makes clear that additional discipline is needed in incurring obligations during a financial year and approving proposed expenditures which were not foreseen at the time annual appropriations for that year were made.

SUBSIDIARY ADMINISTRATIVE BODIES

We share the concern expressed by the Secretary General, by the chairman of the Advisory Committee, and by a number of delegations to the effect that the activities of subsidiary bodies, established to help bring about efficiency and economy, may not be properly interrelated. Perhaps the problem results from the fact that this committee was not sufficiently careful when it established the terms of reference of these bodies. We consider it essential that the activities of the various subsidiary organs which are now dealing with administrative, budgetary, and management problems be carefully aligned and that their responsibilities and relationships be clearly delineated. To accomplish this, we believe that the Advisory Committee should examine this problem in depth during the coming year, in consultation with the other bodies involved, and should present this committee with specific recommendations next year as to how we should deal with it.

STRENGTHENING THE ADVISORY COMMITTEE

For many years now, we have been calling upon the Advisory Committee to study more and more problems, and obviously we will have to rely increasingly on this committee as United Nations operations expand and grow more complex. It seems to us that the time has come to recognize that we have overloaded the Advisory Committee in relation to its existing program and method of work. We believe that it is, in part, because the Advisory Committee is so overloaded that we have tended in recent years to create new bodies to perform tasks in the administrative, budgetary, and management field. It occurs to us that what is needed for the future is to ensure that members elected to the Advisory Committee are able to devote more time, perhaps substantially full time, to this important committee. This will, in turn, enable it to give greater attention to its program of work, including providing broader services to the committee, by being in session during a substantial part of the year. It also occurs to us that it may very well be necessary for the future to make arrangements to enable the chairman of the Advisory Committee to serve on a full-time, year-round basis. We recommend that the Advisory Committee be asked to look into this matter seriously during the coming year and report its conclusions to us at the next session of the Assembly.

SCALE OF ASSESSMENTS

In response to the General Assembly's request of last year, the Committee on Contributions has made a report to us of the results of its review of the criteria and terms of reference used in establishing the scale of assessments. We are impressed with the general conclusions of the committee, contained in paragraphs 47 through 50 of its report.[5] In particular, we agree that the various guidelines laid down for the committe by the General Assembly have withstood the test of time and permit the establishment of a balanced and equitable scale based primarily on the principle of capacity to pay. Accordingly, we believe that no new guidelines are required for the Committee on Contributions in connection with its establishment of a new scale of assessments next year.

FINANCIAL SOLVENCY

Speaking earlier before this committee, the Secretary General reported to us on the financial position of the organization. If we believe that there is a vital necessity for the survival and continued development of this organization to carry out the purposes of the charter, we cannot permit the existing financial situation to continue. All our other efforts will be in vain unless we can solve the financial problem. Our own views concerning the responsibility for this problem are well known and need not to be repeated here. We believe, that, as part of the overall effort to put this organization on a sound basis by its 25th anniversary, a most serious effort must be made during the coming year to find a solution. We suggest that this committee request the Secretary General to devote his own efforts and those of appropriate senior staff members during the coming year to an attempt to negotiate the *modus vivendi*, of which he spoke at our first meeting.

Mr. Chairman, in concluding this, my first intervention in the deliberations of this committee, I want to return briefly to my earlier remarks concerning the need for a meaningful reappraisal of the operations of this organization and its affiliated agencies in order to find out where we are, where we wish to go, and how we hope to get there. It is an obvious fact, not requiring any lengthy elaboration, that a sound financial basis and effective management are essential if this organization is to enjoy significant growth and live up to the expectations which millions of peoples throughout the world have placed in it.

The financial resources required to sustain the organization's growth will not be forthcoming if the member states lose faith in the organization's ability to use them wisely and effectively. Already, a number of governments have questioned the wisdom of providing the United Nations with significantly increased support unless and until our organizational structures, methods of work, and guidelines for future development are changed so as to alleviate the concern which has been expressed in this forum. In my view, the United Nations must respond to this situation. Then and only then will most of our members be willing to give proper attention to considering the inputs of resources which may be required to make the engine go.

It is for this reason that I have suggested that the United Nations use the next year wisely. It is for this reason that I have urged that this committee take the necessary action to set in motion the several suggestions set forth above. If we can find solutions to these problems alone, it will, I believe, set the pact for the rest of the organization. If we catch the beat here, this very rhythm may well pulsate throughout the entire organization in time to give us all the basis for celebrating a truly glorious 25th anniversary.

## FINLAND'S 52D ANNIVERSARY OF INDEPENDENCE

### HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. BLATNIK. Mr. Speaker, on December 6, 1969, the Finnish nation celebrated her 52d anniversary of independence. Although young as an independent and sovereign state, Finland is a country with old and strong traditions of the same democratic ideals and democratic system of government as those we Americans cherish.

Finland is a border land. Its geopolitical position has shaped its history and made it a bridge and a meeting ground between East and West. This fact has in recent days and weeks been clearly demonstrated by the decision of the United States and the Soviet Union to start the so-called SALT talks on the limitations of strategic armaments in Helsinki, Finland. The starting of these talks marks a historical occasion of the utmost importance and urgency for mankind as a whole.

We can only be grateful to Finland, a country which maintains friendly relations with all nations across the dividing lines of military blocks and ideological alinements, for offering a neutral ground for these talks and for making every effort to create a favorable atmosphere for the success of the talks. This is a laudable policy and effort in serving the cause of peace.

For most Americans Finland is a country of honesty, a country that meets her obligations and has a strong spirit of righteousness and freedom. It is a country which has been internationally recognized as one of the leading nations in modern architecture, city planning, and modern design. We Americans can be proud of the friendship and mutual understanding that have always characterized the relations between our two countries.

This friendship began with the adventurous Finnish immigrants who came to this country in past centuries and helped to build our great Nation. This friendship has been reinforced by the Finnish nation's abiding example of valor and industry.

On this occasion, I think we should remember Finland's struggle for freedom. We can congratulate the Finnish people for having been able to remain a free country in conditions which have not always been easy. I hope that they will count among their nation's resources the enduring friendship of the American people.

## VIETNAM: 111 B.C.–1969 A.D.—BRIEF HISTORY PREPARED BY UNIVERSITY OF PITTSBURGH STUDENT

## HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. MOORHEAD. Mr. Speaker, a day or two after the Vietnam moratorium of October 15, I received a copy of a history-in brief of Vietnam, "111 B.C.–A.D. 1969, written by sophomore Bill Gormley of the University of Pittsburgh, which appeared in the Pitt News of October 13.

This article was written to help convey to the leadership of our country some of the reasons why so many of the young people are opposed to the war.

In preparing this narrative, I think Mr. Gormley has done a very able job of expressing the mixture of curses and blessings which has befallen this small and unfortunate nation, during its long history. Accordingly, I am pleased to include his article in the RECORD for the attention of my colleagues:

VIETNAM: 111 B.C.–A.D. 1969

(By Bill Gormley)

Vietnam's strategic location, fertile territory, and mineral resources have been curses as well as blessings. Richly endowed by nature and nestled conveniently between the sea and the Asian mainland, Vietnam has inevitably been eyed lustfully by mightier nations and has found freedom an elusive ideal.

In 111 B.C., Vietnam was annexed by China, her powerful northern neighbor. Submitting for a millennium, the Vietnamese finally rebelled against their masters, bringing Chinese hegemony to an end in 939 A.D. Except for a brief period during which the Chinese resumed control, Vietnam remained independent for over 900 years.

During the latter half of the 19th century, however, western nations proceeded to bear their share of "the white man's burden." France, with little difficulty, colonized Vietnam. Although some Vietnamese physically resisted the French and later harassed French soldiers and officials, most Vietnamese felt impotent before the European giant.

RISE OF NATIONALISM

Conditions changed, though, as the 20th century ushered in a new era. Contagious nationalistic fervor spread quickly. Resentment against colonial rulers became pronounced. Those Vietnamese who journeyed to Europe to be educated or to fight the Kaiser's troops could hardly fail to be impressed by the gap between democratic theory and colonial practice.

One such Vietnamese, a young nationalist who would later be known as Ho Chi Minh, appeared at the Versailles Peace Talks in 1919, begging the great powers to grant his people their independent. Ho's plea fell on deaf ears. Turning to another source for help, Ho became a member of the French Communist Party, which sympathized with his cause.

Quickly acquiring a reputation, Ho was sent to the Soviet Union and China where he worked as a political organizer. In 1930, he established the Vietnamese Communist Party dedicated to the eviction of the French colonialists. Before long, Ho's organization emerged as the strongest anti-French group in Vietnam, attracting support from communist and non-communist sources.

ORGANIZATION OF VIETMINH

Late in the 1930's, the Japanese invaded Indochina, ousted the French, and imposed a new dictatorship on the people of Vietnam. In response to this different threat, Ho Chi Minh organized a broader independence movement, the Vietminh, which soon encompassed Vietnamese nationalists of various political affiliations.

In the vanguard of the Japanese resistance movement, Ho Chi Minh and the Vietminh won the informal recognition of the Allies and the special appreciation of the United States. In addition to supplying the U.S. with vital intelligence information, Vietminh soldiers helped rescue American pilots shot down over Indochina.

President Roosevelt, grateful for the assistance of the Vietminh and committed to the principle of self-detetermination for all peoples, vowed to press for a free Vietnam after the war. Although President Roosevelt didn't live to witness the event, his hope was realized on September 2, 1945, when Ho proclaimed Vietnam's independence.

ESTABLISHMENT OF FREE STATE

Ousting the Japanese puppet, Bao Dai, the Vietminh established a government which France recognized as "a free state" in March, 1946. In November however, convinced that they could reimpose colonial control over Vietnam, the French bombed the port of Haiphong, killing 6,000 Vietnamese civilians and beginning a long and bloody war.

President Truman, afraid of alienating the French and jeopardizing the future of Atlantic defense alliance proposals, refused to back Vietnam's freedom fighters, despite the commitments of his predecessor. Vietnamese nationalists concluded that the Allies had double crossed them.

Boldly, the French sought American support for their campaign against the Vietminh, soft-pedaling the nationalistic nature of the independence movement. At first, the United States shrank scrupulously from involvement and actually urged the French to meet the Vietminh's demand for an end to colonial rule.

CHANGE IN SYMPATHIES

Two events, however, changed America's attitude toward the Vietnamese conflict. First, China went communist. Second, the Korean War broke out. As a result of the two developments, the United States stopped viewing the struggle in Vietnam as a struggle for freedom. Suddenly, it was part of a devious communist attempt to take over the world.

The United States decided to side with the French against the Vietminh. By 1954, America was supplying 80 per cent of France's war material. In the end, however, the overwhelming desire of the Vietnamese people for independence proved decisive. Assisting the guerrillas, Vietnamese peasants helped bring about France's humiliating defeat at Dienbienphu.

The Geneva Accords of 1954 ended the conflict, providing for a temporary division of Vietnam in order to separate the hostile sides and make a cease-fire effective. French forces were to assemble south of the 17th parallel. Vietminh troops were to gather north. Most importantly, nationwide elections were to be held in 1956.

RESULTS OF DIVISION

France, anxious to leave Vietnam and little concerned about the country's future, departed unceremoniously, allowing the United States to fill the power vacuum. Backed by American dollars, Ngo Dinh Diem, a Catholic aristocrat who had not opposed the French, emerged as the most important leader in the southern zone.

Ho Chi Minh, a national hero as a result of his primary role in the war for independence, basked in the warmth of his countrymen's esteem and confidently looked forward to the elections he almost certainly would win. According to the late President Eisenhower, Ho was so popular at the time of the fighting that he could have garnered as much as 80 percent of the national vote.

Diem, gazing into his crystal ball, reached the same conclusion and recognized that if the elections were held, he would lose his post. Despite the specific language of the Geneva Accords, Diem announced in July, 1955 that he would not permit the promised elections to occur.

The thought of a communist electoral victory in Vietnam alarmed the United States little less than it disturbed Diem. Dreading the probable consequences of the implementation of the treaty, American unabashedly applauded Diem's decision, arguing that elections in the northern zone of Vietnam would not be free.

In response to charges that the Geneva Accords had been violated Diem correctly pointed out that he had not signed the agreements. However, the Geneva Accords specifically provided that any administration which accepted rule of the south after the French would be responsible for carrying out the 1954 electoral arrangements.

American spokesmen also aptly argued that the United States had not signed the Geneva Accords. However, in a unilateral declaration issued June 29, 1954, the U.S. government had solemnly pledged to support the principle of "unity through free elections" with reference to Vietnam and had promised not to contravene the Geneva Agreement.

INTERNAL CONFLICT

Outraged by Diem's refusal to allow the promised elections to take place, the Ho Chi Minh government repeatedly called upon Diem to alter his decision and pleaded with the French to see that the Geneva Accords were carried out. Their efforts were to no avail. Embittered, the Vietminh felt betrayed.

Weighing his alternatives, Ho decided against declaring war on Diem. Weary of strife, Ho's supporters needed a respite after 15 years of exhausting conflict. Recognizing that his followers could endure only so much. Ho chose to build up the northern half of his country before challenging the man who had seized control of the southern half.

Diem, in the meantime, attempted to strengthen his position by abolishing village election in the south, replacing elected leaders with his own appointees. Labeling Vietminh and community smpathizers ipso facto enemies of the state, he rounded up dissenters of various sorts, imprisoning some and executing others.

Displaying little tact, Diem limited the autonomy of the Montagnards and persecuted the powerful Cao Dai and Hoa Hao sects. Forcing the peasants to pay rents to absentee landlords, he alienated the bulk of the population steadfastly refusing to initiate a significant land reform program. Resentment against the southern leader mounted quickly.

The northern government made a similar mistake. Confiscating private property and redistributing the land to the peasants, overzealous officials executed and imprisoned landlords with little finesse. Opposition to the brutual excesses of agrarian reform was widespread and one village finally rose in revolt.

Unlike Diem, however, Ho Chi Minh opted to admit his errors. The northern government engaged in an exercise of self-criticism, apologizing to the people for its mistakes. The two men responsible for the persecution of the landlord class resigned from their posts and a more popular agrarian reform program was inaugurated.

Meanwhile, a number of powerful southern

groups became increasingly upset with the repressive tactics of the Diem regime and began to retaliate vigorously. In the spring of 1960, a group of prominent southerners issued a declaration of grievances and were subsequently arrested. In November, military forces launched an abortive coup.

Although southern communists and former Vietminh, Diem's prime targets, were perhaps more disturbed than anyone else by Diem's actions, they had refrained, by and large, from fighting back, because Ho Chi Minh had counseled otherwise. Convinced that Diem's unpopularity made his downfall imminent, Ho argued that there was no need for vigorous guerrilla activity.

Conditions in the south, however, became so intolerable for some that native communists decided to move, with or without Ho's support. On December 20, 1960 the National Liberation Front (NLF) was established by southern Vietminh veterans. Ho, realizing that conflict could no longer be postponed, formally recognized the NLF early in 1961.

The southern insurgents mounted an intense guerrilla campaign and achieved a considerable degree of success. Native southerners who had gone north in 1954, expecting to stay only two years, returned home after a long absence to fight against Diem. Later, native northerners joined them.

AMERICAN INTERVENTION

From America's point of view, the "infiltration" represented an act of aggression. The Geneva Accords had labeled the 17th parallel a "provisional military demarcation line . . . not in any way (to) be interpreted as constituting a political or territorial boundary." However, the United States had come to regard the line as a permanent border and Vietnam's southern zone as a separate state.

Unable to cope with his opponents, Diem pleaded with the United States for more military aid, asking for both weapons and advisors. President Kennedy viewing the prospect of a communist victory in Vietnam with dismay, complied with the request.

As American aid to Diem and northern support of the NLF increased, the fighting in the south grew bloodier and more intense. Religious friction complicated the picture. Arresting Buddhists protesting against the disappropriate number of Catholics holding high posts, Diem incurred the wrath of an extremely powerful group.

On November 1, 1963 a military junta gunned down Diem and seized the reins of power in the southern part of Vietnam. On November 22, John Kennedy was assassinated and Lyndon Johnson became President of the United States. With new leadership in two quarters, it seemed possible that the war in Vietnam would take a new direction or that a settlement would be reached.

However, President Johnson continued to send men and material to Vietnam because of his belief in the "domino theory." And Diem's successors were no more anxious than their predecessor had been to relinquish their power to another group.

Although the war dragged on, its nature changed significantly as a result of several developments. Late in July, 1964, southern vessels, "covered" by American destroyers, bombarded some northern islands and attacked a group of fishing boats in the Gulf of Tonkin. In retaliation, northern torpedo vessels attacked two American destroyers.

ESCALATION

Calling the action unprovoked, President Johnson asked for the power to "take all necessary measures to repel any armed attack against the forces of the United States and to prevent further aggression." Without full knowledge of the facts and not realizing the implications of such a blank check, the Senate complied with the President's request.

On February 7, 1965 NLF forces launched a surprise raid on an American barracks in Pleiku. Deeming a reprisal necessary, President Johnson ordered U.S. planes to bomb the north. Shoving into the background his campaign references to the undesirability of a "wider war," the President continued the bombing raids after the initial retaliation.

Escalation proceeded at a rapid pace. In June, President Johnson authorized the use of American troops in combat, and America's involvement in the war changed dramatically. The other side's forces swelled too and China and the Soviet Union began to pump more and more equipment into Vietnam.

APPEASEMENT

Dissent within the United States became pronounced and assumed a critical form. Stunned by the showing of peace candidate Eugene McCarthy in New Hampshire and challenged by Robert Kennedy as well, President Johnson decided not to seek re-election and proceeded to de-escalate the war within the framework of his political philosophy.

Former Vice-President Richard Nixon emerged victorious in November, promising to end the war and labeling peace his prime objective. Hoping to avoid fury of both hawks and doves, President Nixon too de-escalated the war but refused to end it dramatically. Nine months after Nixon's inauguration, death still stalks the people of Vietnam.

## MIRACLE OF EVANGELINE

### HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. RARICK. Mr. Speaker, great fanfare is currently given to culture and cultural appreciation, but little note is taken of traditional American values.

From the News and Courier, of Charleston, S.C., we have a story of community action in the traditional American spirit by free men who are dedicated to perpetuate their American heritage.

The "Miracle of Evangeline" is a short editorial relating how parents in a small Louisiana community have struggled to retain their God-given rights of authority and decision concerning their children. Now that the bureaucrats in Government have federalized the once public schools, this community has converted a cattle auction barn into an independent center of education boasting an enrollment of some 2,500 ambitious and earnest young people—the type who seek and will suffer to attain an education.

Perhaps this story of ingenuity, and community spirit has not been reported by the biased and prejudiced national press because they fear the example might serve as an inspiration to others. Citizens banding together to gain freedom at considerable personal sacrifice, should be news—but it is censored.

Every American who appreciates the struggle of our forefathers against tyranny will join in complimenting the Honorable Mayner Fontenot and his fellow Evangelinians of Ville Platte, La., for their display of true American perseverance and courage. We wish them well, and commend them for keeping alive this flame of liberty, no matter how small, for thier posterity, knowing that it will blaze again across our land.

Mr. Speaker, I ask that the editorial from the News and Courier be made a part of my remarks so that all our colleagues may be reminded that people who are determined to be free and to plan their own destiny will do so, not because of Federal programs, Federal aid or someone else's ideas—but in spite of them.

The editorial follows:

[From the Charleston (S.C.) News and Courier, Dec. 2, 1969]

MIRACLE OF EVANGELINE

From a roundabout source we have obtained an account of a private school system established by citizens of Evangeline Parish in Louisiana. The system, including a high school housed in an abandoned cattle auction barn, is serving 2,500 pupils. The elementary department, housed in various buildings throughout the parish, has an enrollment of more than 1,800, and more than 600 are in the high school.

Mayner Fontenot of Ville Platte, La., has said in a letter, which was passed on to us, that little publicity has been given to this effort by citizens of a rural region. In a two-week period they contributed more than $300,000 to set up an alternative school system to the public schools, which had been forced by court order to comply with federal guidelines.

"It is my opinion," Mr. Fontenot wrote, "that something has transpired to prevent the television stations and larger newspapers from publicizing our efforts to retain our God-given right of choosing how to educate our children. Having only a small weekly newspaper in our area, I am reluctant to believe that these larger newspapers will be generous enough to print our efforts . . . We have set the pace for our state, and for myself, I wouldn't trade places with any other citizen of this nation."

A summary of the campaign to establish this "instant" school system—accomplished in about six weeks—is entitled "The Miracle of Evangeline—Fruit from Our Labor." It tells about volunteer work by carpenters, truck drivers, painters, plumbers, laborers, poor and wealthy, parents and children, who worked and planned.

"Dedicated teachers who had come forth to join us worked 18 hours per day," the document reports, "put their skills and experience in high gear to recruit teachers and to plan a system of education second to none. Realizing that they would have shortages of both equipment and facilities, they achieved magnitude with what they had . . . Our giant had then fed its appetite for learning . . . We will have unsurpassed school spirit in our academy and will be demanding of our teachers. And they will send out into our society true Americans dedicated to the survival of their country."

We pass along this story, which was news to us, for the information of readers and the inspiration of the public. Evangeline Parish is not a rich territory in money. Obviously it is populated by people who care, a force greater than money.

## THE OMBUDSMAN IN NEW ZEALAND

**HON. HENRY S. REUSS**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. REUSS. Mr. Speaker, the following article by Kent M. Weeks, the College of Wooster, titled "Public Servants in the New Zealand Ombudsman System" appeared in the November–December issue of Public Administration Review.

The article brings up points favorable to an ombudsman system that could be adopted by the United States:

PUBLIC SERVANTS IN THE NEW ZEALAND OMBUDSMAN SYSTEM

(By Kent M. Weeks)

(NOTE.—An investigation of the effects of the New Zealand Ombudsman's Office on department heads and public servants was carried out by interviews, a mailed questionnaire, and an inspection of the Ombudsman's complaint files. It was found that the apprehensions expressed by public servants when the Ombudsman was first proposed in 1961 have not materialized. There has been a change in attitude among public servants themselves who acknowledge that the Ombudsman has not inpaired staff efficiency or candor. The support for the institution expressed by public servants is due to the impartiality of the Ombudsman himself; the small proportion of the complaints investigated by the Ombudsman that are found to be valid; the fact that his investigations have not impaired efficiency; and the fact that public servants themselves are using the Ombudsman Office to appeal their own personal grievances.)

Concern about the increasinig influence of government ( ver the life of a citizen has prompted a quest for protective devices to insure that the citizen receives fair treatment from administrative authorities. The Scandinavian institution, Ombudsman, adopted by New Zealand in 1962, has caught the imagination of administrators, legislators, political scientists, and lawyers.[1] The Ombudsman is an impartial government officer who reviews complaints from citizens against administrative decisions. With access to departmental files, he has the power to criticize and to make recommendations to the departments; he has no powers of enforcement. Proponents of the system see the Ombudsman as a nonpolitical and easily accessible channel to be used by the citizens in challenging the fairness—not merely the legality—of an administrative ruling.

The functioning of the Ombudsman Office in New Zealand affords some interesting data regarding two areas of inquiry.[2] First, have the investigations and findings of the Ombudsman impaired the efficiency of the public service? And second, how do the public servants themselves view the Ombudsman system?

In the United States the response to the Ombudsman proposals have been glacial.[3] It appears that some legislators and public servants approve what they see on the surface, but, as in the case of the iceberg, are fearful of what lurks below. Legislators are apprehensive lest the Ombudsman undermine their own casework function that provides a vital link to their constituencies. Civil servants see the Ombudsman as detrimental to staff efficiency and as an antibureaucratic office undercutting their authority. And there is a general apprehension about adding another layer of bureaucracy to governments already overburdened by what some critics think is excessive bureaucracy.

Footnotes at end of article.

However, none of these apprehensions are substantiated by the New Zealand experience.[4] A questionnaire designed to elicit opinion regarding structural and functional aspects of the Ombudsman system was sent to each of the 42 heads of departments under the jurisdiction of the Ombudsman Office and to a random sample of 45 public servants in these departments. Thirty-three (79 per cent) of the department heads and 29 (64 per cent) of the randomly selected public servants returned completed questionnaires. Certain heads of departments and public servants, some of whom had responded and some of whom had not, were interviewed in New Zealand.

There has been a remarkable change in attitude among public servants in New Zealand. The initial opposition of the public servants to the Ombudsman proposal has been supplanted by support for the institution by all but a few public servants for several reasons: the skillful drafting of the legislation, in which certain public servants played an important role; the impartiality of the Ombudsman himself; the small proportion of complaints investigated by the Ombudsman that are found to be valid; [5] the fact that his investigations have not impaired efficiency; and the fact that the public servants themselves are using the Ombudsman Office to appeal their own grievances pertinent to personnel matters.

EFFECT OF THE OMBUDSMAN ON ADMINISTRATION

The effect of the Ombudsman system on the efficiency of the administration, on the relationship between departments and their cabinet overseers, and on the public image of the administration has been the subject of some debate. In New Zealand, where the government is the largest single employer,[6] the department head wields considerable power. The permanent head provides continuity when governments change; and as advisor to his political mentor, the minister in charge of his department, he aids in preparing legislation, offering proposals for new legislation, and speech writing. Not only must he be a capable administrator, but he is expected to draw attention to the political implications of his recommendations. There is a shared interest. Minister and department head have a stake in the output and image of the department. Although decisions of ministers are not subject to review by the Ombudsman, the recommendations made to a minister by a department may be reviewed.[7]

When reviewing a complaint, the Ombudsman [8] deals directly with the department head, who assigns the complaint to a top-level officer. The complaint is then shot out to a field officer who writes a summary of the facts and his analysis of the case. The field report, and in some cases the original file, is then reviewed by the Officer assigned to the case who then recasts the answer to the Ombudsman. The Ombudsman functions as mediator between complainant and department head. If the Ombudsman finds that a complaint is justified, he then negotiates with the department head in an attempt to find a solution acceptable to both department head and complainant. Three-quarters of the justified complaints are reconciled in this manner prior to a formal recommendation being issued by the Ombudsman.

There is evidence to suggest that the very existence of the Ombudsman has had an indirect effect upon complaint review within the departments. The Ombudsman himself once advised: "The decisions of the Ombudsman Office has encouraged departmental officers to take great care in the exercise of discretionary powers which were final and not open to challenge before the establishment of the Office." [9] Seventy-three percent of the permanent heads and 79 per cent of the public servants supported his statement.[10] One department head noted that the Ombudsman "is an influence on judgments—his existence makes officials more cautious in reaching decisions which can have a serious effect on the rights and liberties of individuals." A labour MP observed that the mere existence of the Office "is an indication to public servants that they must be rather more cautious in the exercise of discretion than they would be if they did not know there was someone who could query the exercise of their discretion." [11] Indeed, the question of the exercise of discretion is crucial. When given six choices, department heads, public servants and MP's ranked lack of flexibility in applying legislation and government regulations to particular situations, inadequate reasons given for decisions, delay in reaching a decision and unfairness as the four most important causes of complaints against administrative decisions. Not one respondent listed corruption as a source of complaints. The data suggests that the largest portion of complaints arise, not because the citizen feels that a public servant has abridged the law, but because the law has been applied unfairly or unwisely in a particular situation.

Certain departments may now be spending more time in keeping records in anticipation of review by the Ombudsman. In the United States records made in anticipation of review are known as "Pearl Harbor Files." One department head noted that his field offices are spending more time on cases, because they are attempting to keep a complete record, including notations of telephone conversations. Another department head suggests that the Ombudsman system is not inexpensive, for one of his assistants spends a large portion of his time following up each complaint submitted to the department. But the general view of department heads and public servants is that the Ombudsman system has not resulted in increased record keeping for them. Only four departments are spending more time keeping records, and all but three of these note that the added record keeping is a worthwhile expenditure of time. Although the public servants have not been consumed with additional record-keeping duties, departmental officers at the top level are probably spending more time in reviewing the complaints than they would if the citizen himself had submitted the complaint directly to the department.

The effect of the Ombudsman upon the complaint review workload borne by the departments has been negligible. The number of complaints addressed directly to public servants has not decreased since the advent of the Ombudsman. By their own admission, very few department heads or public servants has ever suggested to a complainant that he see the Ombudsman.[12] Moreover, none of the department heads or public servants have selected as a reason for having an Ombudsman Office: "to relieve members of the public service of processing some citizen complaints." However, one department head has noted that the Ombudsman might have discouraged certain perennial complainers: "Some real old troubleshooters have resigned."

It has been suggested that the Ombudsman's access to all records kept by departments, including internal departmental comments, might impair the staff efficiency and candor of public servants. Documents might have to be cleaned up prior to being placed in the files, and public servants might be restrained in expressing themselves frankly out of concern that some day the Ombudsman might review the file. Yet this suggestion is rejected by department heads and public servants.

It appears that department heads and public servants themselves do not think that the Ombudsman has affected efficiency. When asked what effect the Ombudsman has had upon efficiency, none of the respondents indictate that the public service has become less

efficient. When asked their attitude about the Ombudsman Office, respondents rank "interferes with the efficiency of the public service," sixth of seven choices. The charge heard during the debate on the legislation, that an Ombudsman is antiadministration, is supported by only two department heads and no public servants. The Ombudsman has explained his own intent: "The Ombudsman is not concerned to try to find fault if no fault exists; and it has proved necessary to advise a few complainants, in quite forceful terms, that they should cease groundless attacks on Departments or officials.[13]

The New Zealand experience suggests that an Ombudsman need not impair efficiency and that he may enhance the image of the public service. His investigations reveal that only a small percentage of complaints are justified. The Ombudsman has publicly praised the public service and exonerated particular public servants who have been the object of unsubstantiated charges by citizens. The Ombudsman suggests that because "thorough and independent investigation of allegations of malpractice establishes that those allegations are unfounded, the Office act as a valuable shield to the administration. . . ." [14]

The establishment of the Ombudsman Office may have contributed to the improved public service image.[15] There may be other explanations, but in 1965 the State Services Commission acknowledged that the "reports of the Ombudsman have also shown, and done much to bring home to the general public, that a sense of responsibility and fair play exists among public servants." [16] The Swedish Ombudsman has suggested that at the least, the dissatisfaction of a disgruntled citizen is shifted from the department to the Ombudsman.[17]

The Public Service Association, once bitterly opposed to the Office, has not failed to use the Ombudsman's findings in its public relations efforts. The Association proudly points to the small proportion of complaints found to be justified and to the fact that no complaint where personal charges have been made against a public servant has been supported by the Ombudsman. The foregoing discussion bears directly upon the remarkable change in attitude of the public servants toward the Ombudsman system.

ATTITUDE OF PUBLIC SERVANTS TOWARD THE OMBUDSMAN SYSTEM

The Public Service Association, pressure group for the 46,000 permanent staff members of the public service, set the tone for the debate on the Ombudsman legislation in its editorial in the *Public Service Journal* in August 1961:

"The Parliamentary Commissioner (Ombudsman) for Investigations Bill, now before Parliament is sheer humbug. It is half baked. It panders to sectional prejudice—those directed against officialdom. If it works at all it will cause confusion and disgruntlement. . . . It is a hoary institution introduced in primitive Sweden a century and a half ago." [18]

The Association raised several objections when the legislation was first introduced and again in testimony to the parliamentary committee which reviewed the legislation in August 1962. The Association opposed the exclusion of ministers' devisions from the Ombudsman's review, for it was feared that a department "could find itself in an embarrassing position in having to defend a decision which was not its own while, apparently, being at the same time precluded from making the full facts known without the consent of its Minister." [19] It was argued that the bill appeared to be aimed at individual acts of public servants, which properly should be dealt with within the departments. The Association was concerned about the limited protections granted to public servants who were involved in the Ombudsman's investigations. A public servant was entitled to a hearing before the Ombudsman only if he was to be criticized; yet it was argued that "circumstances could arise in which an officer's reputation could be affected by the Commissioner's reports whether he was specifically mentioned in it or not." [20] Finally, the Association argued that the bill should be expanded to cover decisions of local government bodies—where the need for review was greater—that were financed by the national government.[21]

But the tune has changed. The Public Service Association acknowledged as early as 1965: "It is becoming increasingly clear that the office of Ombudsman is not necessarily the trap for public servants which many of us feared when it was first established." [22] The change in opinion about the Ombudsman is most notable among the department heads. If they had been asked to vote on the Ombudsman legislation in 1962, ten permanent heads and five public servants say they would have voted against the act. Yet, by 1967, only two permanent heads and four public servants indicate they would oppose a proposal for an Ombudsman. All members of both groups indicate they are satisfied with the way the Ombudsman Office is operating, with the exception of one permanent head who has consistently noted his dissatisfaction with the Office.

There is some division of opinion regarding the need for the Office. It has been argued that the house-review procedures already operating in many departments provide adequate channels for complaint review. However, the Ombudsman and many MP's suggest that once decisions are made, impartial review at higher levels within the department is difficult to achieve.[23] Moreover, where an administrative official is given discretionary authority to make decisions regarding the interpretation and implementation of legislation, supervision by a minister is exceedingly difficult. Thirty-nine per cent of the department heads and 24 per cent of the public servants indicate that an appeal to an administrative official is the most effective method for influencing an administrative decision, whereas 39 percent of the department heads and 48 per cent of the public servants indicate an appeal to the Ombudsman is most effective. In any event, it appears that impartial review by the Ombudsman does facilitate a final disposition of complaints. Rarely do complainants whose complaints have been found unjustified by the Ombudsman turn to other grievance channels. Only one public servant indicates that a complainant turned down by the Ombudsman has appealed to him for redress of the same complaint. Nonetheless, 39 per cent of the permanent heads and 17 per cent of the public servants say that continuation of the office is unimportant; 9 per cent of the permanent heads and 13 per cent of the public servants say that the Office should be abolished.

Among department heads, attitudes toward the Ombudsman Office fall into one of three dimensions. Most department heads, who say that investigations by the Ombudsman "permit better understanding of official action," are supportive of the Office. In effect, the goals of the department and the Ombudsman, namely sound administration, are congruent. Repeatedly the word "safety valve" is mentioned; the Ombudsman is an alternative outlet for the "aggrieved person who cannot see that the department's decision is fair and in accord with the law." There are a few permanent heads who are moderately supportive of the Ombudsman because of what he has not found. He has largely dispelled notions about graft and corruption in the public service and he has "proved in practice to be no friend of the snipers." There are a few department heads, not supportive, who simply tolerate the Office—described once as "an experiment in progressive political science"—and try to stay as far away as possible.

One final point deserves attention. The change in attitude of public servants toward the Ombudsman is partly attributable to the fact that they are using the Ombudsman system to appeal grievances about working conditions, promotions, and transfers. In fact public servants represent the second largest group of complainants. And the percentage of complaints investigated found to be justified is somewhat higher than the overall percentage.[24] The Public Service Association has endorsed repeatedly the Ombudsman's review of personnel complaints from public servants, and its general secretary distributes annually to its field staff a memorandum reviewing cases in which the Ombudsman has set forth guidelines for dealing with personnel problems of public servants. Although the State Services Commission is opposed to Ombudsmanic review of complaints from public servants—on grounds that the Ombudsman is provided to enable citizens to complain about administrative decisions, not to serve as an additional appeal authority between public servants and their government employers—the department heads and public servants are opposed to excluding their complaints from review by the Ombudsman.

In New Zealand public servants have benefited from the Ombudsman system. Even though the chief value of the institution is in its service to the citizen complainant, the effect of the system's operation on the public servants has been far from onerous. The findings of the Ombudsman have enhanced the image of the public service. Even if that feature of the system which allows for review of complaints submitted by public servants were deleted from proposals in this country, it would be in the interests of public servants to support the transference of the system. The introduction of an Ombudsman system to facilitate increased responsiveness by administrators to the needs of the citizen need not diminish efficiency. For the citizen and for the public servant, the Ombudsman may prove to be a significant institutional innovation for affording both political responsiveness and administrative efficiency.

FOOTNOTES

[1] For a review of some of the literature on the Ombudsman, see the PUBLIC ADMINISTRATION REVIEW, Charles S. Ascher, "The Grievance Man or Ombudsmania," Vol. XXVII (June 1967), pp. 174–178. Two other comprehensive works have been published: Stanley V. Anderson (ed.), *Ombudsman for American Government?* (Englewood Cliffs, N.J.: Prentice Hall, Inc., 1968), and Roy V. Pell (ed.), "The Ombudsman or Citizen's Defender: A Modern Institution," *The Annals of the American Academy of Political and Social Science* (May 1968).

[2] The research for this study, part of a larger study on the New Zealand Ombudsman System, was conducted during the summer of 1967 in New Zealand. The financial support of the National Science Foundation through Grant No. GS–1527 for improving doctoral dissertation research in political science is gratefully acknowledged by the author.

[3] According to Walter Gellhorn, in the last five years, some 47 state legislatures have had Ombudsman proposals before them. See "The Ombudsman's Relevance to American Municipal Affairs," *American Bar Association Journal*, Vol. 54 (February 1968), p. 134. In only one state, Hawaii, has a proposal been enacted, and there the office has remained unfunded and unstaffed for over a year. There has been Ombudsman legislation pending in Congress since 1965.

[4] Members of the New Zealand Parliament responding to a questionnaire indicated that their caseload has not been diminished since the advent of the Ombudsman and that they are processing complaints as before.

[5] For the period October 1, 1962, to March 31, 1967, of the complaints fully investigated, 18 per cent were catalogued as justified. However, 54 per cent of the complaints submitted to the Office were not investigated for lack of jurisdiction or other reasons; hence, of the total complaints submitted to the Ombudsman, only 8 per cent were catalogued

as justified. In other countries, about 10 to 20 per cent of complaints fully investigated are found to be valid. For comparative data see Kent M. Weeks, *A Comparative Analysis of the Civil Ombudsman Offices in Denmark, Finland, New Zealand, Norway and Sweden* (Berkeley, Calif.: Institute of Governmental Studies, University of California, January 1967).

[6] The State Services Commission, formerly called the Public Service Commission, employed 68,842 persons in 1967, about 2.5 per cent of the total population, as compared with about 1.5 per cent employed by the federal government in the United States. There are additional state employees not under the State Services Commission.

[7] This compromise was obtained so that the "constitutional" principle of ministerial responsibility to Parliament would not be violated by the interposition of the Ombudsman.

[8] The New Zealand Ombudsman, Sir Guy Powles, is an attorney (although the Ombudsman legislation does not require that the appointee be an attorney) who had had military experience and experience in government most recently as High Commissioner to Western Samoa and to India. His staff consists of an administration assistant, formerly with the New Zealand Army; a legal officer, who is an attorney and who had served as legal officer to the State Services Commission; an investigator, formerly a British citizen employed in the colonial office; and two clerk-typists.

[9] G. Powles, "The Citizen's Rights Against the Modern State, and Its Responsibilities to Him," *International and Comparative Law Quarterly*, Vol. 13 (1964), p. 785.

[10] When data from the questionnaire is cited, the term "public servants" is used to refer to the group of randomly chosen public servants.

[11] Mr. Finlay, New Zealand Parliament, *Hansard's Parliamentary Debates*, May 18, 1967, p. 648.

[12] For a two-year period ending June 30, 1967, only six permanent heads and nine public servants recalled referring complaints to the Ombudsman; they made such a suggestion a total of 35 times.

[13] *Report of the Ombudsman for the year ended 31 March 1964* (Wellington, N.Z.: Government Printer, 1964), p. 5.

[14] *Ibid.*

[15] In any event, 45 per cent of the permanent heads and 50 per cent of the public servants indicated that since the establishment of the Ombudsman Office, the attitude of the public toward the public service was more favorable. None thought the public attitude was less favorable.

[16] *Report of the State Services Commission for the year ended 31 March 1965* (Wellington, N.Z.: Government Printer, 1965), p. 5.

[17] See the remarks of Alfred Bexelius in U.S. Congress, Senate Committee on the Judiciary, *Ombudsman, Hearings*, before a subcommittee of the Committee on the Judiciary, United States Senate, 89th Congress, 2nd Session, 1966, p. 19.

[18] "'Ombudsman' Bill Sheer Humbug," *Public Service Journal*, Vol. 48 (August 1961), p. 2.

[19] New Zealand Public Service Association, "Submissions of the New Zealand Public Service Association, to the Chairman and Members of the Statutes Revision Committee of the House of Representatives," unpublished mimeo., August 8, 1962.

[20] *Ibid.*

[21] The legislation excludes from the Ombudsman's review decisions of local government agencies, most complaints from military personnel, the decisions of judicial officers, and decisions of certain other departments. Eighty-eight per cent of the department heads and 93 per cent of public servants indicate that the jurisdiction of the Ombudsman Office should be extended to local government agencies that are financed by the national government. An amendment to the Ombudsman Act was adopted in December 1968, giving the Ombudsman Office limited jurisdiction over education boards and hospital boards based on the rationale that these local agencies receive the bulk of their financing from the national government.

[22] *Public Service Journal*, Vol. 52 (July 1965), p. 1.

[23] Of the 56 complaints classified as justified by the Ombudsman during the year ending March 31, 1967, 12 complainants had contacted a departmental officer and had failed to obtain redress prior to submitting their complaints to the Ombudsman.

[24] Of the 77 complaints against the State Services Commission during the period October 1, 1962, to March 31, 1967, and fully investigated, 22, or 29 per cent, have been classified as justified, as compared to 18 per cent for all of the Ombudsman's investigations.

## THE MAKING OF A JUSTICE

### HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. ROUDEBUSH. Mr. Speaker, of all the editorial comment concerning the Haynsworth rejection by the Senate, I believe that Owen Hansen of the Lebanon, Ind., reporter, has come up with the most pertinent observation.

In a satirical approach to a serious subject, Owen gets to the heart of the matter.

As the Indiana writer suggests, the Senate is looking for someone who can walk on water.

The article follows:

THE MAKING OF A JUSTICE

(By Owen Hansen)

Much has been said about the defeat of Clement Haynsworth as a justice of the U.S. Supreme Court.

The Senate says it will suggest that more stringent rules be mandatory in the nomination of future judges. This would insure that the background of the nominee is perfectly clean.

I suggest that the candidate be nominated at birth. This method would permit the mother and father to stop the future jurist from engaging in such nefarious activities as playing marbles as a kid, buying up any properties when at the Monopoly table at home and dating until he is 27.

Should any free soap samples be sent to the nominee's home by mail, a watchful mother can immediately report same to the postal authorities to assure there will be no later accusations of payola.

Should the infant be brought up knowing that someday he will be called on to appear before the Senate for advice and consent, he can pave his path ahead of time by never visiting the South, by working his way through the ranks of organized labor and serving then for a tenure on the NAACP's policy committee.

The Supreme Court justice of the future should be made to be born in a manger and wear a halo over his head.

He should spend his years from 16 to 35 in a monastery of the Redemptionist Order and be vaccinated daily against the disease of temptation.

And then the final day comes when the future jurist takes his test before Congress to see whether he is fit to serve on the nation's highest court. If he can walk on water, he's in. If he sinks, he can then join the renown law firm of Fortas and Haynsworth.

---

## SOCIAL SECURITY INCREASES AND SOCIAL PROGRAMS

### HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 8, 1969*

Mr. PHILBIN. Mr. Speaker, I was very much pleased to learn that the House Ways and Means Committee had approved a 15-percent rise in social security payments as provided in a bill I introduced some time ago.

This bill should give some much needed relief to social security recipients but, of course, it is far from being adequate, when one considers that the minimum payments are $55 per month.

However, I feel that under all the circumstances, much higher increases are warranted, but was of the opinion that the 15-percent increase would probably be signed by the President, whereas a higher increase, such as I was prepared to support, might not be.

In any event, I think we are moving in the right direction, but much remains to be done before we have a social security payment scale that will do justice to many covered by the Social Security System.

I believe that our House Ways and Means Committee, at a very early date, should inaugurate full hearings to overhaul the social security and medicare laws to provide better coordination and more realistic benefits that will reflect the sharp increases in our price levels and cost of living. All social security programs should be bracketed under one statutory roof.

I again urge our appropriate House committees to give painstaking consideration to the very serious problems stemming from increased needs throughout the Nation of modern, hospital accommodations at reasonable rates, since the current situation affecting hospitals, rates, health plans, and the capacity of many people to afford and pay escalated hospital and related costs gives rise to some of the most challenging problems we face.

I believe that the Congress must make a broadside attack upon these problems, and come up with suitable legislation that will effectively solve them on a long-run basis that will coordinate various social programs.

Further delay in this field will lead not only to hopeless confusion, but to intolerable aggravation of the problems arising from lack of modernized, hospital accommodations, care and treatment, and the rapid, sharp increases in costs in these areas.

I hope the leaders of the Congress and the committees concerned in these areas will take early action to come up with a broad, comprehensive revision and consolidation of current laws to provide the authority and the funds needed to put these great social programs in proper perspective and provide suitable, effective relief, and insure the best modern care and the means to pay for it, to those who are currently finding it increasingly impossible to do so under present conditions. This is a subject of primary priority that cannot be deferred and face further deterioration.

# SENATE—*Tuesday, December 9, 1969*

The Senate met at 10 o'clock a.m. and was called to order by Hon. HAROLD E. HUGHES, a Senator from the State of Iowa.

The Reverend John T. Tavlarides, dean, St. Sophia Greek Orthodox Cathedral, Washington, D.C., offered the following prayer:

Our Father, we offer You a eucharist of humility and gratefulness for our life and for the privilege of service in this august assembly.

We do so because we are made in the image of Your Son. We would be the presence of Him in the world.

Coworkers with You in a world where love and death are opposed, where death is destruction and love is creation, we would transfigure impoverishment into enrichment, humiliation into glory, crucifixion into resurrection.

We would be free by Your love.

In this love, send Your Holy Spirit to bless our Nation, our leaders and us; to make real Your promise, "They shall fight against thee; but they shall not prevail against thee, for I am with thee and I will deliver thee." Amen.

## DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will read a communication to the Senate.

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
*Washington, D.C., December 9, 1969.*

*To the Senate:*

Being temporarily absent from the Senate, I appoint Hon. HAROLD E. HUGHES, a Senator from the State of Iowa, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
*President pro tempore.*

Mr. HUGHES thereupon took the chair as Acting President pro tempore.

## THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Monday, December 8, 1969, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Subcommittee on Labor of the Committee on Labor and Public Welfare and the Committee on Commerce and its subcommittees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Subcommittee on Administrative Practices and Procedures of the Committee on the Judiciary be authorized to meet during the session of the Senate today.

Mr. SCOTT. Mr. President, at the request of other Senators, I must object.

The ACTING PRESIDENT pro tempore. Objection is heard.

## LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the calendar, commencing with Calendar No. 569 and continuing with Calendar Nos. 570, 572, 573, 574, and then 571.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## TACHIKAWA AIRBASE CIVILIAN EMPLOYEES

The bill (H.R. 2238) to provide for the relief of certain civilian employees paid by the Air Force at Tachikawa Airbase, Japan, was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-574), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the proposed legislation is to relieve a group of civilian employees paid by the Air Force accounting and finance officer at Tachikawa Airbase, Japan, of liability to refund to the United States amounts representing overpayments of living quarters allowances (LQA) occurring during the period beginning on April 2, 1961, and ending April 13, 1963.

STATEMENT

The facts of the case as set forth in House Report No. 195 are as follows:

The Department of the Air Force in its report to the committee on a similar bill in 1968 stated that it recommends the enactment of the bill in view of the particular circumstances surrounding the payments of living quarters allowances referred to in the bill. The Comptroller General in his report on the same bill indicated that since relief involved a question of policy for the Congress, the General Accounting Office would offer no recommendation concerning the merits of the matter.

As noted by the Air Force in its report, Government civilian employees living in foreign areas are granted living quarters allowances in accordance with the provisions of the Department of State standardize regulations. These regulations provide that an employee is entitled to a flat-rate living quarters allowance according to his grade. Should the head of an agency determine that an employee's expenses are substantially well covered by a living quarters allowance rate received prior to a promotion, that individual is required to authorize a payment of less than the full living quarters allowance applicable to the rate set which otherwise would have been applicable after a promotion to a higher grade. As will be noted in this report the issue as to the employees affected by this bill involved the question of a determination of whether employees expenses were substantially well covered by a rate applicable prior to a promotion.

In a report issued in August 1964, the Comptroller General criticized the Air Force for failing to reduce living quarters allowances of certain employees who were promoted and given increased allowances. The basis of the criticism of the Comptroller General was that the living expenses of these employees prior to promotion was determined by the General Accounting Office to have been "substantially well covered" by the allowance rates applicable to them before promotion. In reply the Assistant Secretary of the Air Force for Finance Management agreed that the Air Force had erred in not reducing the living quarters allowance rates of the employees involved. However, the Assistant Secretary maintained that this retroactive determination did not make the payments illegal and, therefore, should not be recovered from the employees. It was pointed out that the employees were entitled to the living quarters allowance prescribed for their civil service grades unless administrative action was taken to reduce those specific allowances. Here the administrative action had not been taken, and it was, therefore, asserted that the allowances were proper when paid. In a letter dated May 4, 1965, the Comptroller General reaffirmed his view that the payments of living quarters allowances to promoted employees which had been subsequently determined to be in excess of their needs, as outlined above, were "illegal payments" and had to be recovered from them.

## CREATION OF AN ADDITIONAL JUDICIAL DISTRICT, LOUISIANA

The bill (S. 1646) to create an additional judicial district in the State of Louisiana, and for other purposes, was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 1646

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 98 of title 28 of the United States Code is amended to read as follows:

"§ 98. Louisiana

"Louisiana is divided into three judicial districts to be known as the Eastern, Middle, and Western Districts of Louisiana.

"Eastern District

"(a) The Eastern District comprises the parishes of Assumption, Jefferson, Lafourche, Orleans, Plaquemines, Saint Bernard, Saint Charles, Saint James, Saint John the Baptist, Saint Tammany, Tangipahoa, Terrebonne, and Washington.

"Court for the Eastern District shall be held at New Orleans.

"Middle District

"(b) The Middle District comprises the parishes of Ascension, East Baton Rouge, East Feliciana, Iberville, Livingston, Pointe Coupee, Saint Helena, West Baton Rouge, and West Feliciana.

"Court for the Middle District shall be held at Baton Rouge.

"Western District

"(c) The Western District comprises six divisions.

"(1) The Opelousas Division comprises the parishes of Evangeline and Saint Landry.

"Court for the Opelousas Division shall be held at Opelousas.

"(2) The Alexandria Division comprises the parishes of Avoyelles, Catahoula, Grant, LaSalle, Rapides, and Winn.

"Court for the Alexandria Division shall be held at Alexandria.

"(3) The Shreveport Division comprises the parishes of Bienville, Bossier, Caddo, Claiborne, DeSoto, Natchitoches, Red River, Sabine, and Webster.

"Court for the Shreveport Division shall be held at Shreveport.

"(4) The Monroe Division comprises the parishes of Caldwell, Concordia, East Carroll, Franklin, Jackson, Lincoln, Madison, Morehouse, Ouachita, Richland, Tensas, Union, and West Carroll.

"Court for the Monroe Division shall be held at Monroe.

"(5) The Lake Charles Division comprises the parishes of Allen, Beauregard, Calcasieu, Cameron, Jefferson Davis, and Vernon.

"Court for the Lake Charles Division shall be held at Lake Charles.

"(6) The Lafayette Division comprises the parishes of Acadia, Iberia, Lafayette, Saint Martin, Saint Mary, and Vermilion.

"Court for the Lafayette Division shall be held at Lafayette."

SEC. 2. The district judge for the Eastern District of Louisiana holding office on the day immediately prior to the effective date of this Act, and whose official station on such date is Baton Rouge, shall on and after such date, be the district judge for the Middle District of Louisiana. All other district judges for the Eastern District of Louisiana holding office on the day immediately prior to the effective date of this Act shall be district judges for the Eastern District of Louisiana as constituted by this Act.

SEC. 3. (a) Nothing in this Act shall in any manner affect the tenure of office of the United States attorney and the United States marshal for the Eastern District of Louisiana who are in office on the effective date of this Act, and who shall be during the remainder of their present terms of office the United States attorney and marshal for the Eastern District of Louisiana as constituted by this Act.

(b) The President shall appoint, by and with the advice and consent of the Senate, a United States attorney and marshal for the Middle District of Louisiana.

SEC. 4. The table contained in section 133 of title 28 of the United States Code is amended to read as follows with respect to the State of Louisiana:

| "Districts | Judges |
|---|---|
| * * * * * | |
| "Louisiana: | |
| "Eastern | 7 |
| "Middle | 1 |
| "Western | 3". |

SEC. 5. Section 134(c) of title 28 of the United States Code is amended by deleting the first sentence.

SEC. 6. The provisions of this Act shall become effective one hundred and twenty days after the date of enactment of this Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–575), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the proposed legislation is to create an additional judicial district in the State of Louisiana by dividing the present Eastern District of Louisiana into two districts, the Eastern and Middle Districts.

STATEMENT

At present, the Eastern District of Louisiana consists of two divisions, one of which sits in New Orleans and the other in Baton Rouge, the State capital. S. 1646 would convert the Baton Rouge division into a new district to be known as the Middle District of Louisiana.

In recent years the Eastern District of Louisiana has had one of the most persistent civil backlog problems in the United States. At the end of fiscal year 1969, there were 4,208 civil cases pending on the docket and the median interval for trial of a civil case was 19 months, well above the national median of 13 months. In fact, the civil business of the Eastern District is exceeded in only two other Federal districts, the Southern District of New York and the Eastern District of Pennsylvania. The vast bulk of the workload in the district is in the New Orleans division where, through the efforts of the judges and personnel of the Eastern District, the Federal Judicial Center, and the Administrative Office of the U.S. Courts, better calendar control and new procedures in the clerk's office have been accomplished recently. These joint efforts have been almost entirely directed at the New Orleans division. Indeed, the problems and caseload demands of the Baton Rouge division are very different from those confronting the New Orleans division.

The number of cases filed yearly in the Baton Rouge division of the Eastern District of Louisiana exceeds the number filed in 21 districts in the United States.[1] A significant part of the civil caseload of the Baton Rouge division is made up of maritime and seaman's cases attributable to the Port of Baton Rouge, now ranked seventh in the Nation. The Baton Rouge division also has an average of 44 civil cases per year involving the United States of America. Moreover, since the State penitentiary at Angola, La., is located in the Baton Rouge division, a majority of the habeas corpus petitions for the entire State of Louisiana fall to the Baton Rouge division.

On the criminal side of the docket, the Baton Rouge division handles an average of 148 hearings per year requiring the presence of the U.S. attorney or one of his assistants. These appearances are in addition to those required to meet demands of the civil calendar. There is no assistant U.S. attorney assigned to the Baton Rouge division and for each civil or criminal case appearance, the U.S. attorney or an assistant must travel from New Orleans, a distance of nearly 80 miles.

Other major administrative difficulties are also created by the lack of a district court at Baton Rouge. The division could be much more efficiently operated if it were a district unto itself. Furthermore, since the Federal Court Building in Baton Rouge has recently been extensively renovated, no new physical facilities are anticipated if S. 1646 becomes law.

S. 1646 has the support of the Judicial Council of the Fifth Circuit, the judges of the Eastern District and the Louisiana State Bar Association. Support has also been expressed by the U.S. attorney, the chief probation officer, and the U.S. marshal for the Eastern District. More significantly, despite a general policy in opposition to the creation of new districts, the Judicial Conference of the United States at its meeting on October 31, 1969, considered the proposal contained in S. 1646 and voted its approval thereof. A copy of a letter expressing the Judicial Conference's recommendation is attached hereto and made a part of this report.

[1] Discussion of the need for a new Middle District of Louisiana may be found in hearings before the Subcommittee on Improvements in Judicial Machinery, "Federal Judges and Courts," 91st Cong., first sess., pp. 202–213, 499.

## MRS. EZRA L. CROSS

The bill (H.R. 4744) for the relief of Mrs. Ezra L. Cross was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–577), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the proposed legislation is to waive sections 8119 to 8122, inclusive, of chapter 81 of title 5, of the United States Code, so that Mrs. Ezra L. Cross of Flint, Mich., can file a claim for compensation under the codified provisions of the Federal Employees Compensation Act based on the death of her husband, Ezra L. Cross, a former employee of the Agency for International Development. The proposed legislation provides that no benefits would accrue by the enactment of a bill for any period prior to the date of enactment except for reimbursable hospital, medical, funeral, and burial expenses.

STATEMENT

In its favorable report on the bill, the House of Representatives set forth the facts of the case as follows:

The report of the Agency for International Development of the Department of State indicates that it would have no objection to the enactement of the bill should the Congress determine that legislative relief is appropriate. The Department of Labor similarly indicated it would have no objection should the Congress find that there are adequate reasons for not filing a claim within the time limited. The Department of Labor further recommended the amendment added by the committee in lieu of the last paragraph of the bill which bars retroactive benefits except for reimbursable hospital, medical, funeral, and burial expenses.

The bill, H.R. 4744, was the subject of a subcommittee hearing on Wednesday, April 16, 1969. The claimant, Mrs. Ezra L. Cross, appeared at that hearing and testified concerning the circumstances of her husband's death. Dr. Ezra L. Cross worked with Foreign Aid from 1950–61. He was first assigned to Manila, and then to Asuncion, Paraguay. Subsequently he was assigned to Quito, Ecuador, and he passed away in that city on the night of September 30, 1961.

As is noted in the report of the Department of State, at the time of his death, Dr. Cross was serving as a Foreign Service Reserve officer and he was assigned to the mission of the International Cooperation Administration, the predecessor agency of AID, at Quito, Ecuador. The committee has been advised that at the time of his death, Mrs. Cross was not advised of her right to file for compensation under the then applicable provisions of the Federal Employees' Compensation Act. This is borne out by the report of the Department of State. In that report, it is stated under AID practice, and when feasible, officials of the Agency meet with the widow and survivors to assist them in preparing the necessary documents for settlement of claims for Government-sponsored insurance and benefit programs. Such meetings are not scheduled as a part of any mandatory procedure, but have proved to be of a mutually convenient and beneficial nature, both for the Agency and the families of its employees. At that time, if the possibility of a service-

connected injury having been involved in the death of the employee is indicated, the widow is advised of her right to file a claim for compensation for the consideration of the Bureau of Employees' Compensation. In Mrs. Cross' case, however, the customary meeting did not take place. All claim forms for moneys due Mrs. Cross, by reason of her husband's status as a Federal employee at the time of his death, were executed in Quito when she returned there to close out her household. The State Department further agreed that there was apparently no opportunity for a personal exchange between Mrs. Cross and Washington offices at any time immediately following her husband's death. The departmental report further stated that had there been such an opportunity, the Department felt that Mr. Cross' apparent problems with the altitude would have surfaced and Mrs. Cross would have been apprised of the existence of the benefits program provided under what was then the Federal Employees' Compensation Act and of her right to file a claim with the Bureau of Employees' Compensation.

In view of these statements in the departmental report, the members of the subcommittee questioned Mrs. Cross concerning the events which occurred immediately following her husband's death. She stated that she left Ecuador shortly after her husband passed away and went to Flint, Mich. She remained in that city for approximately 2 weeks and then returned to Quito, Ecuador. When she arrived there she was advised by State Department personnel that she would have to act quickly to settle her affairs there because it appeared that there would be civil disturbances within the country at any time. Because of the restriction on movement of people under these circumstances, the packing of her belongings and like personal matter were difficult for her and contact in the office of her late husband was with a secretary of a new executive officer who had just arrived. The executive officer had not known her husband and was not familiar with all of the circumstances of her husband's death.

The next point that is relevant to the consideration of this bill is the point expressly stated in the departmental report to the effect that at the time that Mrs. Cross was attempting to settle matters, there was nothing in the records of the Department to indicate that Dr. Cross' death was due to any other cause than a heart attack. At the hearing Mrs. Cross complained that the initial reports made to Washington were to the effect that her husband had died of a heart attack. However, as is indicated in the departmental report, the autospy report listed the cause of death as "posterior myocardial infarction," with a contributory cause of "epistaxis with aspiration of blood and phlegm." In addition, departmental records covering Mr. Cross' service from February 15, 1952 through December 1960, in the Philippines and Paraguay (both low altitude posts) reflect that Mr. Cross was in excellent health with no limiting factors demonstrated and was described by his colleagues as an energetic, well-adjusted person.

The Department has further stated that there was nothing in its records indicating any physical problems for the time period between Mr. Cross' departure from Washington to Ecuador and his death. The report then significantly states that it was not until almost 6 years after his death that AID officials became aware that there may have been complicating factors that could have contributed to his death. At the hearing Mrs. Cross explained that these individuals in Washington indicated that these circumstances could provide the basis for a claim under the Federal employees compensation provisions now found in chapter 81 of title 5 of the United States Code. Mrs. Cross therefore sought information concerning Federal employees compensation and pointed out that Dr. Cross was physically not able to cope with the high altitude of Ecuador. Additionally inquiry resulted in statements by two AID employees who had worked with Mr. Cross in Ecuador which corroborated that Mr. Cross had been affected by the altitude.

Mr. Cross' death came after he had been in Ecuador about 8 months. Mrs. Cross only arrived in Quito on July 4, 1961. After being in that country 6 months, and after her arrival, Mr. Cross made a few short business trips. During a more extensive trip he fell ill and was eventually evacuated to Panama. Mrs. Cross states that she was unaware of the serious problems Mr. Cross had been having: Inability to sleep well and headaches, commonly regarded as initial reactions to high altitude living in Quito.

The committee is impressed with the following summary in the report of the Agency for International Development of the Department of State:

"In summary, throughout the period of almost 6 years that followed Mr. Cross' death during which the time period for filing a claim had expired, (1) the Agency was not aware of any circumstances that would have indicated the possibility of a service-connected injury having been involved in Mrs. Cross' death, and (2) Mrs. Cross was not aware of the benefits program established by this statute, for which she was eligible to apply."

In view of the facts summarized by the Department and referred to in this report and as more fully set forth in the testimony at the subcommittee hearing, the committee has concluded that this is a proper subject for legislative relief. The evidence before the committee shows, in its opinion, that there is adequate basis for a waiver of the statute of limitations to permit the filing of a claim. Clearly, the unusual circumstances faced by Mrs. Cross made it difficult, if not impossible, to adequately be advised of her rights to file. Accordingly, the most equitable resolution of the matter is to extend the relief provided in the amended bill. Accordingly, it is recommended that the bill as amended be considered favorably.

The committee concurs in the action taken by the House of Representatives and recommends that the bill, H.R. 4744, be considered favorably.

## NATIONAL BLOOD DONOR MONTH

The joint resolution (S.J. Res. 154) to authorize and request the President to proclaim the month of January of each year as "National Blood Donor Month" was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S.J. RES. 154

*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,* That, in recognition of the vital role of the voluntary blood donor in medical care, the President is authorized and requested to issue annually a proclamation designating the month of January of each year as "National Blood Donor Month".

## VOLUNTEERS OF AMERICA WEEK

The Senate proceeded to consider the joint resolution (H.J. Res. 10) authorizing the President to proclaim the second week of March 1970, as Volunteers of America Week which had been reported from the Committee on the Judiciary with an amendment, in line 3, after the word "issue", strike out "annually".

The amendment was agreed to.

The amendment was ordered to be engrossed and the joint resolution to be read a third time.

The joint resolution was read the third time, and passed.

## THE CUSTOMS COURTS ACT OF 1969

The Senate proceeded to consider the bill (S. 2624) to improve the judicial machinery in customs courts by amending the statutory provisions relating to judicial actions and administrative proceedings in customs matters, and for other purposes, which had been reported from the Committee on the Judiciary, with amendments on page 2, line 9, after "(b)," strike out "When a judge in the Customs Court, in issuing an interlocutory order," and insert "When the chief judge of the Customs Court issues an order under the provisions of section 256(b) of this title; or when any judge in the Customs Court, in issuing any other interlocutory order,"; on page 5, line 16, after the word "commissions.", strike out "Judges whose commissions bear the same date shall have precedence according to the seniority of their commissions." on page 7, line 16, after "(b)," strike out:

Upon application of a party and for good cause shown, or upon his own initiative, the chief judge may authorize a judge of the court to preside at a trial of hearing in a foreign country.

And insert:

Upon application of a party or upon his own initiative, and upon a showing that the interests of economy, efficiency, and justice will be served, the chief judge may issue an order authorizing a judge of the court to preside in an evidentiary hearing in a foreign country whose laws permit such a hearing: *Provided, however,* That an interlocutory appeal may be taken from such an order pursuant to the provisions of section 1541(b) of this title, subject to the discretion of the Court of Customs and Patent Appeals as set forth in that section.

On page 8, line 12, after the word "the" where it appears the first time, insert "administrative"; in line 21, after the word "drawback;", strike out "and" and insert "or"; on page 10, line 13, after "515(b)", strike out "or 515(c)"; on page 11, line 8, after the word "There", strike out "may" and insert "shall"; in line 10, after the word "shall", strike out "not exceed" and insert "be not less than $5 nor more than"; at the beginning of line 22, strike out "decision contested in the protest." and insert "decision or decisions listed in section 514 of the Tariff Act of 1930, as amended, that were contested in the protest."; on page 12, line 7, after "(f)", strike out:

Upon service of the summons on the Secretary of the Treasury or his designee, the appropriate customs officer shall forthwith transmit the following documents to the United States Customs Court as an official record of the civil action: (1) consumption or other entry; (2) commercial invoice; (3) special Customs invoice; (4) copy of protest; and (5) copy of denial of protest, in whole or in part, if any denial has been issued."

And insert:

Upon service of the summons on the Secretary of the Treasury or his designee, the

appropriate customs officer shall forthwith transmit the following items, if they exist, to the United States Customs Court as part of the official record of the civil action: (1) consumption or other entry; (2) commercial invoice; (3) special Customs invoice; (4) copy of protest; (5) copy of denial of protest in whole or in part (6) importer's exhibits; (7) official samples; (8) any official laboratory reports; and (9) the summary sheet. If any of the aforesaid items do not exist in the particular case, an affirmative statement to that effect shall be transmitted as part of the official record.

On page 16, line 10, after the word "his", insert "own"; in line 19, after the the word "on", strike out "January" and insert "July"; on page 20, line 4, after the word "after", strike out "January" and insert "July"; in line 7, after the word "before", strike out "the date of enactment" and insert "July 1, 1970,"; in line 9, after the word "before", strike out "January" and insert "July"; in line 10, after the date "1970", strike out the period, insert a comma and "or with respect to which a protest has not been disallowed in whole or in part before July 1, 1970."; on page 26, line 12, after the word "Decisions.", strike out:

The appropriate customs officer shall review a protest filed in accordance with section 514 of this Act and may allow or deny such protest in whole or in part. Thereafter, he shall remit or refund any duties, charge, or exaction found to have been assessed or collected in excess, or pay any drawback found due. Notice of the denial of any protest shall be mailed in the form and manner prescribed by the Secretary of the Treasury.

And insert:

Unless a request for an accelerated disposition of a protest is filed in accordance with subsection (b) of this section the appropriate customs officer, within two years from the date a protest was filed in accordance with section 514 of this Act, shall review the protest and shall allow or deny such protest in whole or in part. Thereafter, any duties, charge, or exaction found to have been assessed or collected in excess shall be remitted or refunded and any drawback found due shall be paid. Upon the request of the protesting party, filed within the time allowed for the filing of a protest under section 514 of this Act, a protest may be subject to further review by another appropriate customs officer, under the circumstances and in the form and manner that may be prescribed by the Secretary in regulations, but subject to the two-year limitation prescribed in the first sentence of the subsection. Notice of the denial of any protest shall be mailed in the form and manner prescribed by the Secretary.

On page 27, line 13, after the word "be", strike out "filed in writing with" and insert "mailed by certified or registered mail to"; in line 19, after the word "following", strike out "receipt" and insert "the date of mailing by certified or registered mail"; in line 21, after the word "following", strike out "receipt" and insert "mailing"; after line 22, strike out:

(c) CONSTRUCTIVE DENIAL OF PROTEST. Any protest which has not been allowed or denied in whole or in part in accordance with paragraph (a) of this section and which is not deemed to be denied in accordance with paragraph (b) of this section, shall be deemed denied after two years have elapsed from the date the protest was filed in accordance with section 514 of this Act."

On page 38, line 9, after the word "thereof", strike out "'Customs" and insert "Appropriate customs"; in line 14, after the word "'or", strike out the word "a" and insert "an appropriate"; in line 17, after the word "thereof", strike out "'a" and insert "an appropriate"; and in line 21, after the word "'or", insert "appropriate"; so as to make the bill read:

S. 2624

A bill to improve the judicial machinery in customs courts by amending the statutory provisions relating to judicial actions and administrative proceedings in customs matters, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

TITLE I—JUDICIAL ACTIONS IN CUSTOMS CASES

SHORT TITLE

SEC. 101. This title may be cited as "The Customs Courts Act of 1969".

APPEALS FROM CUSTOMS COURT DECISIONS—JURISDICTION

SEC. 102. Section 1541 to title 28 of the United States Code is amended to read as follows:

"§ 1541. Appeals from Customs Court decisions

"(a) The Court of Customs and Patent Appeals has jurisdiction of appeals from all final judgments or orders of the United States Customs Court.

"(b) When the chief judge of the Customs Court issues an order under the provisions of section 256(b) of this title; or when any judge in the Customs Court, in issuing any other interlocutory order, includes in the order a statement that a controlling question of law is involved as to which there is substantial ground for difference of opinion and that an immediate appeal from its order may materially advance the ultimate termination of the litigation, the Court of Customs and Patent Appeals may, in its discretion, permit an appeal to be taken from such order, if application is made to it within ten days after the entry of the order: *Provided, however,* That neither the application for nor the granting of an appeal hereunder stays proceedings in the Customs Court unless a stay is ordered by a judge of the Customs Court or by the Court of Customs and Patent Appeals or a judge of that court."

APPEALS FROM CUSTOMS COURT DECISIONS—PROCEDURE

SEC. 103. Section 2601 of title 28 of the United Stataes Code is amended to read as follows:

"§ 2601. Appeals from Customs Court decisions

"(a) A party may appeal to the Court of Customs and Patent Appeals from a final judgment or order of the Customs Court within sixty days after entry of the judgment or order.

"(b) An appeal is made by filing in the office of the clerk of the Court of Customs and Patent Appeals a notice of appeal which shall include a concise statement of the errors complained of. A copy of the notice shall be served on the adverse parties. When the United States is an adverse party service shall be made on the Attorney General and the Secretary of the Treasury or their designees. Thereupon, the Court of Customs and Patent Appeals shall order the Customs Court to transmit the record and evidence taken, together with either the findings of fact and conclusions of law or the opinion, as the case may be.

"(c) The Court of Customs and Patent Appeals may affirm, modify, vacate, set aside, or reverse any judgment or order of the Customs Court lawfully brought before it for review, and may remand the cause and direct the entry of an appropriate judgment or order, or require such further proceedings as may be just under the circumstances. The judgment or order of the Court of Customs and Patent Appeals shall be final and conclusive unless modified, vacated, set aside, reversed, or remanded by the Supreme Court under section 2106 of this title."

PRECEDENCE OF AMERICAN MANUFACTURER, PRODUCER, OR WHOLESALER CASES

SEC. 104. Section 2602 of title 28 of the United States Code is amended to read as follows:

"§ 2602. Precedence of American Manufacturer, producer, or wholesaler cases

"(a) Every proceeding in the Court of Customs and Patent Appeals arising under section 516 of the Tariff Act of 1930, as amended, shall be given precedence over other cases on the docket of such court, except as provided for in paragraph (b) of this section, and shall be assigned for hearing at the earliest practicable date and expedited in every way.

"(b) Appeals from findings by the Secretary of Commerce provided for in headnote 6 to schedule 8, part 4, of the Tariff Schedules of the United States (19 U.S.C. 1202) shall receive a preference over all other matters."

DUTIES OF CHIEF JUDGE; PRECEDENCE OF JUDGES

SEC. 105. Section 253 of title 28 of the United States Code is amended to read as follows:

"§ 253. Duties of chief judge; precedence of judges

"(a) The chief judge of the Customs Court, with the approval of the court, shall supervise the fiscal affairs and clerical force of the court;

"(b) The chief judge shall promulgate dockets.

"(c) The chief judge, under rules of the court, may designate any judge or judges of the court to try any case and, when the circumstances so warrant, reassign the case to another judge or judges.

"(d) Whenever the chief judge is unable to perform the duties of his office or the office is vacant, his powers and duties shall devolve upon the judge next in precedence who is able to act, until such disability is removed or another chief judge is appointed and duly qualified.

"(e) The chief judge shall have precedence and shall preside at any session which he attends. Other judges shall have precedence and shall preside according to the seniority of their commissions. Judges whose commissions bear the same date shall have precedence according to seniority in age."

SINGLE-JUDGE TRIALS

SEC. 106. Section 254 of title 28 of the United States Code is amended to read as follows:

"§ 254. Single-judge trials

"Except as otherwise provided in section 255 of this title, the judicial power of the Customs Court with respect to any action, suit or proceeding shall be exercised by a single judge, who may preside alone and hold a regular or special session of court at the same time other sessions are held by other judges."

PUBLICATION OF DECISIONS

SEC. 107. Section 255 of title 28 of the United States Code is redesignated as section 257 and is amended to read as follows:

"§ 257. Publication of decisions

"All decisions of the Customs Court shall be preserved and open to inspection. The court shall forward copies of each decision to the Secretary of the Treasury or his designee and to the appropriate customs officer for the district in which the case arose. The Secretary shall publish weekly such decisions as he or the court may designate and abstracts of all other decisions."

THREE-JUDGE TRIALS

SEC. 108. There shall be a new section 255 of title 28 of the United States Code as follows:

"§ 255. Three-judge trials

"(a) Upon application of any party to a cause of action or upon his own initiative, the chief judge of the Customs Court shall designate any three judges of the court to hear and determine any cause of action which the chief judge finds: (1) raises an issue of the constitutionality of an Act of Congress, a proclamation of the President or an Executive order; or (2) has broad or significant implications in the administration or interpretation of the customs laws.

"(b) A majority of the three judges designated may hear and determine the cause of action and all questions pending therein."

TRIALS AT PORTS OTHER THAN NEW YORK

SEC. 109. There shall be a new section 256 of title 28 of the United States Code as follows:

"§ 256. Trials at ports other than New York

"(a) The chief judge may designate any judge or judges of the court to proceed, together with necessary assistants, to any port or to any place within the jurisdiction of the United States to preside at a trial or hearing at the port or place.

"(b) Upon application of a party or upon his own initiative, and upon a showing that the interests of economy, efficiency, and justice will be served, the chief judge may issue an order authorizing a judge of the court to preside in an evidentiary hearing in a foreign country whose laws permit such a hearing: *Provided, however,* That an interlocutory appeal may be taken from such an order pursuant to the provisions of section 1541(b) of this title, subject to the discretion of the Court of Customs and Patent Appeals as set forth in that section."

JURISDICTION OF THE CUSTOMS COURT

SEC. 110. Section 1582 of title 28 of the United States Code is amended to read as follows:

"§ 1582. Jurisdiction of the Customs Court

"(a) The Customs Court shall have exclusive jurisdiction of civil actions instituted by any person whose protest pursuant to the Tariff Act of 1930, as amended, has been denied, in whole or in part, by the appropriate customs officer, where the administrative decision, including the legality of all orders and findings entering into the same, involves: (1) the appraised value of merchandise; (2) the classification and rate and amount of duties chargeable; (3) all charges or exactions of whatever character within the jurisdiction of the Secretary of the Treasury; (4) the exclusion of merchandise from entry or delivery under any provisions of the customs laws; (5) the liquidation or reliquidation of an entry, or a modification thereof; (6) the refusal to pay a claim for drawback; or (7) the refusal to reliquidate an entry under section 520(c) of the Tariff Act of 1930, as amended.

"(b) The Customs Court shall have exclusive jurisdiction of civil actions brought by American manufacturers, producers, or wholesalers pursuant to section 516 of the Tariff Act of 1930, as amended.

"(c) The Customs Court shall not have jurisdiction of an action unless (1) either a protest has been filed, as prescribed by section 514 of the Tariff Act of 1930, as amended, and denied in accordance with the provisions of section 515 of the Tariff Act of 1930, as amended, or if the action relates to a decision under section 516 of the Tariff Act of 1930, as amended, all remedies prescribed therein have been exhausted, and (2) except in the case of an action relating to a decision under section 516 of the Tariff Act of 1930, as amended, all liquidated duties, charges an exactions have been paid at the time the action is filed.

"(d) Only one civil action may be brought in the Customs Court to contest the denial of a single protest. However, any number of entries of merchandise involving common issues may be included in a single civil action. Actions may be consolidated by order of the court or by request of the parties, with approval of the court, if there are common issues."

REPEAL OF SECTION 1583—REVIEW OF DECISIONS ON PROTESTS

SEC. 111. Section 1583 of title 28 of the United States Code is repealed.

TIME FOR COMMENCEMENT OF ACTION

SEC. 112. Section 2631 of title 28 of the United States Code is amended to read as follows:

"§ 2631. Time for commencement of action

"(a) An action over which the court has jurisdiction under section 1582(a) of this title is barred unless commenced within one hundred and eighty days after:

"(1) the date of mailing of notice of denial, in whole or in part, of a protest pursuant to the provisions of section 515(a) of the Tariff Act of 1930, as amended; or

"(2) the date of denial of a protest by operation of law pursuant to the provisions of section 515(b) of the Tariff Act of 1930, as amended.

"(b) An action over which the court has jurisdiction under section 1582(b) of this title is barred unless commenced within thirty days after the date of mailing of a notice sent pursuant to section 516(c) of the Tariff Act of 1930, as amended."

CUSTOMS COURT PROCEDURE AND FEES

SEC. 113. Section 2632 of title 28 of the United States Code is amended to read as follows:

"§ 2632. Customs Court procedure and fees

"(a) A party may contest denial of a protest under section 515 of the Tariff Act of 1930, as amended, or the decision of the Secretary of the Treasury made under section 516 of the Tariff Act of 1930, as amended, by bringing a civil action in the Customs Court. A civil action shall be commenced by filing a summons in the form, manner, and style and with the content prescribed in rules adopted by the court.

"(b) There shall be a filing fee payable upon commencing an action. The amount of the fee shall be fixed by the Customs Court but shall be not less than $5 nor more than the filing fee for commencing a civil action in a United States district court. The Customs Court may fix all other fees to be charged by the clerk of the court.

"(c) The Customs Court shall provide by rule for pleadings and other papers, for their amendment, service, and filing, for consolidations, severances, and suspensions of cases, and for other procedural matters.

"(d) The Customs Court, by rule, may consider any new ground in support of a civil action if the new ground (1) applies to the same merchandise that was the subject of the protest; and (2) is related to the same administrative decision or decisions listed in section 514 of the Tariff Act of 1930, as amended, that were contested in the protest.

"(e) All pleadings and other papers filed in the Customs Court shall be served on all the adverse parties in accordance with the rules of the court. When the United States is an adverse party, service of the summons shall be made on the Attorney General and the Secretary of the Treasury or their designees.

"(f) Upon service of the summons on the Secretary of the Treasury or his designee, the appropriate customs officer shall forthwith transmit the following items, if they exist, to the United States Customs Court as part of the official record of the civil action: (1) consumption or other entry; (2) commercial invoice; (3) special Customs invoice; (4) copy of protest; (5) copy of denial of protest in whole or in part; (6) importer's exhibits; (7) official samples; (8) any official laboratory reports; and (9) the summary sheet. If any of the aforesaid items do not exist in the particular case, an affirmative statement to that effect shall be transmitted as part of the official record."

PRECEDENCE OF AMERICAN MANUFACTURER, PRODUCER, OR WHOLESALER CASES

SEC. 114. Section 2633 of title 28 of the United States Code is amended to read as follows:

"§ 2633. Precedence of American manufacturer, producer, or wholesaler cases

"Every proceeding in the Customs Court arising under section 516 of the Tariff Act of 1930, as amended, shall be given precedence over other cases on the docket of the court, and shall be assigned for hearing and trial at the earliest practicable date and expedited in every way."

NOTICE

SEC. 115. Section 2634 of title 28 of the United States Code is amended to read as follows:

"§ 2634. Notice

"Reasonable notice of the time and place of trial before a judge of the Customs Court shall be given to all parties to any proceeding, under rules prescribed by the court."

BURDEN OF PROOF; EVIDENCE OF VALUE

SEC. 116. Section 2635 of title 28 of the United States Code is amended to read as follows:

"§ 2635. Burden of proof; evidence of value

"In any matter in the Customs Court:

"(a) The decision of the Secretary of the Treasury, or his delegate, is presumed to be correct. The burden to prove otherwise shall rest upon the party challenging a decision.

"(b) Where the value of merchandise is in issue:

"(1) Reports or depositions of consuls, customs officers, and other officers of the United States and depositions and affidavits of other persons whose attendance cannot reasonably be had, may be admitted in evidence when served upon the opposing party in accordance with the rules of the court.

"(2) Price lists and catalogs may be admitted in evidence when duly authenticated, relevant, and material.

"(c) The value of merchandise shall be determined from the evidence in the record and that adduced at the trial whether or not the merchandise or samples thereof are available for examination."

ANALYSIS OF IMPORTED MERCHANDISE

SEC. 117. Section 2636 of title 28 of the United States Code is amended to read as follows:

"§ 2636. Analysis of imported merchandise

"A judge of the Customs Court may order an analysis of imported merchandise and reports thereon by laboratories or agencies of the United States."

WITNESSES; INSPECTION OF DOCUMENTS

SEC. 118. Section 2637 of title 28 of the United States Code is amended to read as follows:

"§ 2637. Witnesses; inspection of documents

"(a) In any proceeding in the Customs Court, under rules prescribed by the Court, the parties and their attorneys shall have an opportunity to introduce evidence, to hear and cross-examine the witnesses of the other party, and to inspect all samples and all papers admitted or offered as evidence, except as provided in subsection (b) of this section.

"(b) In an action instituted by an American manufacturer, producer, or wholesaler, the plaintiff may not inspect any documents or papers of a consignee or importer disclosing any information which the Customs Court deems unnecessary or improper to be disclosed."

DECISIONS; FINDINGS OF FACT AND CONCLUSIONS OF LAW; EFFECT OF OPINIONS

SEC. 119. Section 2638 of title 28 of the United States Code is amended to read as follows:

"§ 2638. Decisions; findings of fact and conclusions of law; effect of opinions

"(a) A decision of the judge in a contested case shall be supported by either (1) a statement of findings of fact and conclusions of law, or (2) an opinion stating the reasons and facts upon which the decision is based.

"(b) The decision of the judge is final and conclusive, unless a retrial or rehearing is granted pursuant to section 2639 of this title or an appeal is made to the Court of Customs and Patent Appeals within the time and in the manner provided in section 2601 of this title."

RETRIAL OR REHEARING

SEC. 120. Section 2639 of title 28 of the United States Code is amended to read as follows:

"§ 2639. Retrial or rehearing

"The judge who has rendered a judgment or order may, upon motion of a party or upon his own motion, grant a retrial or a rehearing, as the case may be. A party's motion must be made or the judge's action on his own motion must be taken, not later than thirty days after entry of the judgment or order."

REPEAL OF SECTIONS 2640, 2641, 2642—REHEARING OR RETRIAL; FRIVOLOUS PROTEST OR APPEAL; AMENDMENT OF PROTESTS, APPEALS, AND PLEADINGS

SEC. 121. Sections 2640, 2641, and 2642 of title 28 of the United States Code are repealed.

EFFECTIVE DATE

SEC. 122. (a) This title shall become effective on July 1, 1970, and shall thereafter apply to all actions and proceedings in the Customs Court and the Court of Customs and Patent Appeals except those involving merchandise entered before the effective date for which trial has commenced by such effective date.

(b) An appeal for reappraisement timely filed with the Bureau of Customs before the effective date, but as to which trial has not commenced by such date, shall be deemed to have had a summons timely and properly filed under this title. When the judgment or order of the United States Customs Court has become final in this appeal, the papers shall be returned to the appropriate customs officer to decide any remaining matters relating to the entry in accordance with section 500 of the Tariff Act of 1930, as amended. A protest or summons filed after final decision on an appeal for reappraisement shall not include issues which were raised or could have been raised on the appeal for reappraisement.

(c) A protest timely filed with the Bureau of Customs before the effective date of enactment of this Act and which is disallowed, as to which trial has not commenced by such date, shall be deemed to have had a summons timely and properly filed under this title.

(d) All other provisions of this Act shall apply to appeals and disallowed protests deemed to have had summonses timely and properly filed under this section.

MISCELLANEOUS AMENDMENTS

SEC. 123. (a) The analysis of chapter 11 of title 28 of the United States Code, immediately preceding section 251 of such title, is amended by striking the caption of section 254 and substituting therefor the caption, "Single-judge trial.", by striking the caption of section 255 and substituting therefor the caption "Three-judge trials." and by adding the following captions at the end of the analysis of that chapter:

"256. Trials at ports other than New York.
"257. Publication of decisions."

(b) The analysis of chapter 93 of title 28 of the United States Code, immediately preceding section 1541 of such title is amended by striking the caption of section 1541 and substituting the caption "Appeals from Customs Court decisions."

(c) The analysis of chapter 95 of title 28 of the United States Code, immediately preceding section 1581 of such title, is amended to read as follows:

"Sec.
"1581. Powers generally.
"1582. Jurisdiction of the Customs Court."

(d) The analysis of chapter 167 of title 28 of the United States Code, immediately preceding section 2601, is amended to read as follows:

"Sec.
"2601. Appeals from Customs Court decisions.
"2602. Precedence of American manufacturer, producer, or wholesaler cases."

(e) The analysis of chapter 169 of title 28 of the United States Code, immediately preceding section 2631 of such title is amended to read as follows:

"Sec.
"2631. Time for commencement of action.
"2632. Customs Court procedures and fees.
"2633. Precedence of American manufacturer, producer, or wholesaler cases.
"2634. Notice.
"2635. Burden of proof; evidence of value.
"2636. Analysis of imported merchandise.
"2637. Witnesses; inspection of documents.
"2638. Decisions; findings of fact and conclusions of law; effect of opinions.
"2639. Retrial or rehearing."

## TITLE II—ADMINISTRATIVE PROCEEDINGS IN CUSTOMS MATTERS

SHORT TITLE

SEC. 201. Titles II and III of this Act may be cited as "The Customs Administrative Act of 1969".

AMENDMENT OF SECTIONS

SEC. 202. Unless otherwise provided, whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or provision of the Tariff Act, the reference shall be considered to be made to a section or provision of the Tariff Act of 1930, as amended (19 U.S.C. 1202 et seq.).

EFFECTIVE DATE

SEC. 203. Titles II and III of this Act shall take effect with respect to articles entered, or withdrawn from warehouse for consumption, on or after July 1, 1970, and such other articles entered or withdrawn from warehouse for consumption prior to such date, the appraisement of which has not become final before July 1, 1970, and for which an appeal for reappraisement has not been timely filed with the Bureau of Customs before July 1, 1970, or with respect to which a protest has not been disallowed in whole or in part before July 1, 1970.

APPRAISEMENT, CLASSIFICATION, AND LIQUIDATION PROCEDURES; COLLECTIONS AND REFUNDS; LIMITATIONS

SEC. 204. (a) Section 500 of the Tariff Act (19 U.S.C. 1500) is hereby amended to read as follows:

"SEC. 500. APPRAISEMENT, CLASSIFICATION, AND LIQUIDATION PROCEDURES.—

"The appropriate customs officer shall, under rules and regulations prescribed by the Secretary—

"(a) appraise merchandise in the unit of quantity in which the merchandise is usually bought and sold by ascertaining or estimating the value thereof by all reasonable ways and means in his power, any statement of cost or costs of production in any invoice, affidavit, declaration, or other document to the contrary notwithstanding;

"(b) ascertain the classification and rate of duty applicable to such merchandise;

"(c) fix the amount of duty to be paid on such merchandise and determine any increased or additional duties due or any excess of duties deposited;

"(d) liquidate the entry of such merchandise; and

"(e) give notice of such liquidation to the importer, his consignee, or agent in such form and manner as the Secretary shall prescribe in such regulations."

(b) Section 488 of the Tariff Act (19 U.S.C. 1488) is repealed.

(c) Section 505 of the Tariff Act (19 U.S.C. 1505) is amended to read as follows:

"SEC. 505. PAYMENT OF DUTIES.—

"(a) DEPOSIT OF ESTIMATED DUTIES.—Unless merchandise is entered for warehouse or transportation, or under bond, the consignee shall deposit with the appropriate customs officer at the time of making entry the amount of duties estimated by such customs officer to be payable thereon.

"(b) COLLECTION OR REFUND.—The appropriate customs officer shall collect any increased or additional duties due or refund any excess of duties deposited as determined on a liquidation or reliquidation.

REPEAL OF SEPARATE APPRAISEMENT PROCEDURE; VOLUNTARY RELIQUIDATIONS

SEC. 205. Section 501 of the Tariff Act (19 U.S.C. 1501) is amended to read as follows:

"SEC. 501. VOLUNTARY RELIQUIDATIONS.—

"A liquidation made in accordance with section 500 or any reliquidation thereof made in accordance with this section may be reliquidated in any respect by the appropriate customs officer on his own initiative, notwithstanding the filing of a protest, within ninety days from the date on which notice of the original liquidation is given to the importer, his consignee or agent. Notice of such reliquidation shall be given in the manner prescribed with respect to original liquidations under section 500(e)."

DUTIABLE VALUE

SEC. 206. Section 503 of the Tariff Act (19 U.S.C. 1503) is amended to read as follows:

"SEC. 503. DUTIABLE VALUE.—

"Except as provided in section 520(c) (relating to reliquidations on the basis of authorized corrections of errors) or section 562 (relating to withdrawal from manipulating warehouses) of this Act, the basis for the assessment of duties on imported merchandise subject to ad valorem rates of duty or rates based upon or regulated in any manner by the value of the merchandise, shall be the appraised value determined upon liquidation, in accordance with section 500 or any adjustment thereof made pursuant to section 501 of the Tariff Act: *Provided, however,* That if reliquidation is required pursuant to a final judgment or order of the United States Customs Court which includes a reappraisement of imported merchandise, the basis for such assessment shall be the final appraised value determined by such court."

PROTESTS

SEC. 207. Section 514 of the Tariff Act (19 U.S.C. 1514) is amended to read as follows:

"SEC. 514. FINALITY OF DECISIONS; PROTESTS.—

"(a) FINALITY OF DECISIONS.—Except as provided in secton 501 (relating to voluntary reliquidations), section 516 (relating to petitions by American manufacturers, producers, and wholesalers), section 520 (relating to refunds and errors), and section 521 (relating to reliquidations on account of fraud) of this Act, decisions of the appropriate customs officer, including the legality of all orders and findings entering into the same, as to—

"(1) the appraised value of merchandise;

"(2) the classification and rate and amount of duties chargeable;

"(3) all charges or exactions of whatever character within the jurisdiction of the Secretary of the Treasury;

"(4) the exclusion of merchandise from entry or delivery under any provision of the customs laws;

"(5) the liquidation or reliquidation of an entry, or any modification thereof;

"(6) the refusal to pay a claim for drawback; and

"(7) the refusal to reliquidate an entry under section 520(c) of this Act.

shall be final and conclusive upon all persons (including the United States and any officer thereof) unless a protest is filed in accordance with this section, or unless a civil action contesting the denial of a protest, in whole or in part, is commenced in the United States Customs Court in accordance with section 2632 of tilte 28 of the United States Code within the time prescribed by section 2631 of that title. When a judgment or order of the United States Customs Court has become final, the papers transmitted shall be returned, together with a copy of the judgment or order to the appropriate customs officer, who shall take action accordingly.

"PROTESTS

"(b) (1) IN GENERAL.—A protest of a decision under subsection (a) shall be filed in writing with the appropriate customs officer designated in regulations prescribed by the Secretary, setting forth distinctly and specifically each decision described in subsection (a) as to which protest is made; each category of merchandise affected by each such decision as to which protest is made; and the nature of each objection and reasons therefor. Only one protest may be filed for each entry of merchandise, except that where the entry covers merchandise of different categories, separate protests may be filed for each category. In addition, separate claims with respect to any one category of merchandise that is the subject of a protest are deemed to be part of a single protest. A protest may be amended under regulations prescribed by the Secretary any time prior to the expiration of the ninety-day period in which the protest could have been filed under section 514 of this Act. Except as otherwise provided in section 557(b) of this Act, protests may be filed by the importer, consignee, or any authorized agent of the person paying any charge or exaction, or filing any claim for drawback, or seeking entry or delivery, with respect to merchandise which is the subject of a decision in subsection (a).

"(2) TIME FOR FILING.—A protest of a decision, order, or finding described in subsection (a) shall be filed with such customs officers within ninety days after but not before—

"(A) notice of liquidation or reliquidation, or

"(B) in circumstances where subparagraph (A) is inapplicable, the date of the decision as to which protest is made.

"(c) LIMITATION ON PROTEST OF RELIQUIDATIONS.—The reliquidation of an entry shall not open such entry so that a protest may be filed against the decision of the customs officer upon any question not involved in such reliquidation."

REVIEW OF PROTEST

SEC. 208. Section 515 of the Tariff Act (19 U.S.C. 1515) is amended to read as follows:

"SEC. 515. REVIEW OF PROTESTS.—

"(a) ADMINISTRATIVE REVIEW AND MODIFICATION OF DECISIONS.—Unless a request for an accelerated disposition of a protest is filed in accordance with subsection (b) of this section the appropriate customs officer, within two years from the date a protest was filed in accordance with section 514 of this Act, shall review the protest and shall allow or deny such protest in whole or in part. Thereafter, any duties, charge, or exaction found to have been assessed or collected in excess shall be remitted or refunded and any drawback found due shall be paid. Upon the request of the protesting party, filed within the time allowed for the filing of a protest under section 514 of this Act, a protest may be subject to further review by another appropriate customs officer, under the circumstances and in the form and manner that may be prescribed by the Secretry in regulations, but subject to the two-year limitation prescribed in the first sentence of the subsection. Notice of the denial of any protest shall be mailed in the form and manner prescribed by the Secretary.

"(b) REQUEST FOR ACCELERATED DISPOSITION OF PROTEST.—A request for accelerated disposition of a protest filed in accordance with section 514 of this Act may be mailed by certified or registered mail to the appropriate customs officer any time after ninety days following the filing of such protest. For purposes of section 1582 of title 28 of the United States Code, a protest which has not been allowed or denied in whole or in part within thirty days following the date of mailing by certified or registered mail of a request for accelerated disposition shall be deemed denied on the thirtieth day following mailing of such request.

PETITIONS BY AMERICAN MANUFACTURERS, PRODUCERS, OR WHOLESALERS

SEC. 209. Section 516 of the Tariff Act (19 U.S.C. 1516) is amended to read as follows:

"SEC. 516. PETITIONS BY AMERICAN MANUFACTURERS, PRODUCERS, OR WHOLESALERS—VALUE AND CLASSIFICATION.—

"(a) The Secretary shall, upon written request by an American manufacturer, producer, or wholesaler, furnish the classification, and the rate of duty, if any, imposed upon designated imported merchandise of a class or kind manufactured, produced, or sold at wholesale by him. If such manufacturer, producer, or wholesaler believes that the appraised value is too low, that the classification is not correct, or that the proper rate of duty is not being assessed, he may file a petition with the Secretary setting forth (1) a description of the merchandise, (2) the appraised value, the classification, or the rate or rates of duty that he believes proper, and (3) the reasons for his belief.

"(b) If, after receipt and consideration of a petition filed by an American manufacturer, producer, or wholesaler, the Secretary decides that the appraised value of the merchandise is too low, or that the classification of the article or rate of duty assessed thereon is not correct, he shall determine the proper appraised value or classification or rate of duty, and notify the petitioner of his determination. All such merchandise entered for consumption or withdrawn from warehouse for consumption more than thirty days after the date such notice to the petitioner is published in the weekly Customs Bulletin shall be appraised or classified or assessed as to rate of duty in accordance with the Secretary's determination.

"(c) If the Secretary decides that the appraised value or classification of the articles or the rate of duty with respect to which a petition was filed pursuant to subsection (a) is correct, he shall so inform the petitioner. If dissatisfied with the decision of the Secretary, the petitioner may file with the Secretary, not later than thirty days after the date of the decision, notice that he desires to contest the appraised value or classification of, or rate or duty assessed upon, the merchandise. Upon receipt of notice from the petitioner, the Secretary shall cause publication to be made of his decision as to the proper appraised value or classification or rate of duty and of the petitioner's desire to contest, and shall thereafter furnish the petitioner with such information as to the entries and consignees of such merchandise, entered after the publication of the decision of the Secretary at such ports of entry designated by the petitioner in his notice of desire to contest, as will enable the petitioner to contest the appraised value or classification of, or rate of duty imposed upon, such merchandise in the liquidation of one such entry at such port. The Secretary shall direct the appropriate customs officer at such ports to notify the petitioner by mail immediately when the first of such entries is liquidated.

"(d) Notwithstanding the filing of an action pursuant to section 2632 of title 28 of the United States Code, merchandise of the character covered by the published decision of the Secretary (when entered for consumption or withdrawn from warehouse for consumption on or before the date of publication of a decision of the United States Customs Court or of the United States Court of Customs and Patent Appeals, not in harmony with the published decision of the Secretary) shall be appraised or classified, or both, and the entries liquidated, in accordance with the decision of the Secretary and, except as otherwise provided in this chapter, the final liquidations of these entries shall be conclusive upon all parties.

"(e) The consignee or his agent shall have the right to appear and to be heard as a party in interest before the United States Customs Court.

"(f) If the cause of action is sustained in whole or in part by a decision of the United States Customs Court or of the United States Court of Customs and Patent Appeals, merchandise of the character covered by the published decision of the Secretary, which is entered for consumption or withdrawn from warehouse for consumption after the date of publication of the court decision, shall be subject to appraisement, classification, and assessment of duty in accordance with the final judicial decision in the action, and the liquidation of entries covering the merchandise so entered or withdrawn shall be suspended until final disposition is made of the action, whereupon the entries shall be liquidated, or if necessary, reliquidated in accordance with the final decision.

"(g) Regulations shall be prescribed by the Secretary to implement the procedures required under this section."

REFUNDS AND ERRORS

SEC. 210. Section 520(c) of the Tariff Act (19 U.S.C. 1520 (c)) is amended by—

(a) striking the words "the Secretary of the Treasury may authorize a collector to" and substituting the words "the appropriate customs officer may, in accordance with regulations prescribed by the Secretary,";

(b) striking the word "appraisement," wherever it appears in paragraph (1); and

(c) deleting "sixty" and substituting "ninety" and deleting "ten" and substituting "nine" in paragraph (1).

## TITLE III—MISCELLANEOUS AMENDMENTS

TECHNICAL AND CONFORMING AMENDMENTS

SEC. 301. The Tariff Act of 1930, as amended (19 U.S.C. ch. 4), is further amended as follows:

(a) Section 305 (19 U.S.C. 1305) is amended by—

(1) striking the word "collector" in the first paragraph and inserting in lieu thereof "appropriate customs officer"; and

(2) striking the term "the collector" where it first appears in the second paragraph and inserting in lieu thereof "the appropriate customs officer" and by striking the term "the collector" wherever it thereafter appears in the paragraph and inserting in lieu thereof "such customs officer".

(b) Sections 311, 315, 432, 434, 438, 441, 443–447, 449–450, 452–455, 457, 485, 490, 492, 496, 521, 555, 562, 584, 586, 609, 613, and 614 (19 U.S.C. 1311, 1315, 1432 1434, 1438, 1441, 1443–1447, 1449–1450, 1452–1455, 1457, 1485, 1490, 1492, 1496, 1521, 1555, 1562, 1584, 1586, 1609, 1613, and 1614) are amended by striking the word "collector" wherever it appears in the sections and inserting in lieu thereof "appropriate customs officer".

(c) Section 401 (10 U.S.C. 1401) is amended by—

(1) striking subsections (h), (i), and (j);

(2) redesignating subsections (k), (l, (m), and (n) as subsections (h), (i), (j), and (k), respectively, and amending redesignated subsection (i) to read as follows:

"(i) OFFICER OF THE CUSTOMS: CUSTOMS OFFICER.—The terms 'officer of the customs' and 'customs officer' mean any officer of the Bureau of Customs of the Treasury Department (also hereinafter referred to as the 'Customs Service') or any commissioned, warrant, or petty officer of the Coast Guard, or any agent or other person authorized by

law or designated by the Secretary of the Treasury to perform any duties of an officer of the Customs Service."

(3) adding a new subsection (l) to read as follows:

"(l) SECRETARY.—The term 'Secretary' means the Secretary of the Treasury or his delegate."

(d) Section 402a (19 U.S.C. 1402) is amended by—

(1) striking the word "appraiser" wherever it appears in the section and inserting in lieu thereof "appropriate customs officer"; and

(2) striking the word "APPRAISER'S" in the heading of subsection (b) and inserting in lieu thereof "CUSTOMS OFFICER'S".

(3) striking the words "subject to review in reappraisement proceedings under section 501" and inserting in lieu thereof "subject to protest in accordance with section 514".

(e) Sections 448, 493, and 608 (19 U.S.C. 1448, 1493, and 1608) are amended by striking the term "the collector" where it first appears in each section and inserting in lieu thereof "the appropriate customs officer" and by striking the term "the collector" wherever it thereafter appears in each section and inserting in lieu thereof "such customs officer".

(f) Section 451 (19 U.S.C. 1451) is amended by—

(1) striking the word "collector" where it appears the first time in the section and inserting in lieu thereof "appropriate customs officer";

(2) striking out the word "collector" where it appears the second time in the section and inserting in lieu thereof "such customs officer"; and

(3) striking the word "collector" where it appears the third time in the section and inserting in lieu thereof "appropriate customs officer".

(g) Section 467 (19 U.S.C. 1467) is amended by striking the words "collector of customs" and inserting in lieu thereof "appropriate customs officer".

(h) Section 482 (19 U.S.C. 1482) is amended as follows—

(1) subsection (e) is amended by striking the term "collector of customs" and inserting in lieu thereof "appropriate customs officer"; and

(2) subsection (f) is amended by striking "collector of customs or the person acting as such, or by his deputy" and inserting in lieu thereof "appropriate customs officer".

(i) Section 484 (19 U.S.C. 1484) is amended as follows—

(1) subsection (a) is amended by striking the word "collector" and inserting in lieu thereof "appropriate customs officer";

(2) paragraph (1) of subsection (c) is amended by striking the term "the collector" where it first appears in the paragraph and inserting in lieu thereof "the appropriate customs officer" and by striking the term "the collector" where it thereafter appears in the paragraph and inserting in lieu thereof "such customs officer";

(3) paragraph (2) of subsection (c) is amended by striking the term "The collector" and inserting in lieu thereof "The appropriate customs officer" and by striking the term "the collector" wherever it appears in the paragraph and inserting in lieu thereof "such customs officer";

(4) subsection (g) is amended by striking the term "collector or the appraiser" and inserting in lieu thereof "appropriate customs officer";

(5) the second and third sentences of subsection (j) are amended by striking the word "collector" and inserting in lieu thereof "customs officer"; and

(6) The fourth sentence of subsection (j) is amended by striking the term "a collector" and inserting in lieu thereof "a customs officer" and by striking the terms "the collector" and "such collector" and inserting in lieu thereof "such customs officer".

(j) Section 491 (19 U.S.C. 1491) is amended by striking the words "by the appraiser of merchandise and sold by the collector" and inserting in lieu thereof "and sold by the appropriate customs officer".

(k) Section 499 (19 U.S.C. 1499) is amended as follows—

(1) the first sentence is amended by striking the word "appraiser" and inserting in lieu thereof "appropriate customs officer";

(2) the second sentence is amended by striking the term "The collector" and inserting in lieu thereof "Such officer";

(3) the fifth sentence is amended to read: "Such officer may require such additional packages or quantities as he may deem necessary.";

(4) the sixth sentence is amended to read: "If any package contains any article not specified in the invoice and, in the opinion of the appropriate customs officer, such article was omitted from the invoice with fraudulent intent on the part of the seller, shipper, owner, or agent, the contents of the entire package in which such article is found shall be subject to seizure, but if no such fraudulent intent is apparent, then the value of said article shall be added to the entry and the duties thereon paid accordingly.";

(5) the seventh sentence is amended by striking the word "collector" and inserting in lieu thereof "appropriate customs officer"; and

(6) the last sentence is amended by striking the words "appraiser's return of value" and inserting in lieu thereof "appraisement" and by striking the words "value returned by the appraiser" and inserting in lieu thereof "appraisement".

(l) Section 502 (19 U.S.C. 1502) is amended by striking the words "appraiser, deputy appraiser, assistant appraiser, or examiner of merchandise" and inserting in lieu thereof "customs officer".

(m) Section 506 (19 U.S.C. 1506) is amended as follows:

(1) paragraph (1) is amended by striking the term "the collector" where it first appears in the paragraph and inserting in lieu thereof "the appropriate customs officer" and by striking the term "the collector" where it thereafter appears in the paragraph and inserting in lieu thereof "such customs officer"; and

(2) paragraph (2) is amended by striking the word "collector" and inserting in lieu thereof "appropriate customs officer".

(n) Section 509 (19 U.S.C. 1509) is amended by striking the term "Collectors and appraisers" and inserting in lieu thereof "Appropriate customs officers".

(o) Section 510 (19 U.S.C. 1510) is amended by—

(1) striking the words "or a division of such court," the first time they appear;

(2) striking "or an appraiser, or a collector" and inserting in lieu thereof "or an appropriate customs officer";

(3) striking "an appraiser" and inserting in lieu thereof "an appropriate customs officer, or";

(4) striking the words "or a division of such court," the second and third times they appear; and

(5) striking "or appraiser or collector" and inserting in lieu thereof "or appropriate customs officer".

(p) Section 511 (19 U.S.C. 1511) is amended by—

(1) striking the words "or an appraiser, or person acting as appraiser, or a collector" and inserting in lieu thereof "or an appropriate customs officer";

(2) striking the term "the collectors" and inserting in lieu thereof "customs officers"; and

(3) striking the term "the collector" and inserting in lieu thereof "the appropriate customs officer".

(q) Section 512 (19 U.S.C. 1512) is amended by—

(1) striking the word "collector" and inserting in lieu thereof "customs officer"; and

(2) striking the word "collectors" and inserting in lieu thereof "customs officers".

(r) Section 513 (19 U.S.C. 1513) is amended by striking the word "COLLECTOR'S" in the heading thereof and inserting in lieu thereof "CUSTOMS OFFICER'S" and by striking the words "collector or other" wherever they appear in the section.

(s) Section 523 (19 U.S.C. 1523) is amended by striking the word "collectors' " and inserting in lieu thereof "customs officers' ".

(t) The fifth sentence of section 557(b) (19 U.S.C. 1557(b)) is amended by striking the words "an appeal for reappraisement under section 501" and inserting in lieu thereof "a protest contesting an appraisement decision in accordance with section 514".

(u) Section 560 (19 U.S.C. 1560) is amended by striking the words "collector or other".

(v) Section 563 (19 U.S.C. 1563) is amended by—

(1) striking the term "collectors of customs" and inserting in lieu thereof "appropriate customs officers"; and

(2) striking the word "collector" and inserting in lieu thereof "customs officer".

(w) Section 564 (19 U.S.C. 1564) is amended by striking the term "collector of customs" and inserting in lieu thereof "customs officer".

(x) Section 565 (19 U.S.C. 1565) is amended by—

(1) striking the term "collector of customs" and inserting in lieu thereof "appropriate customs officer"; and

(2) striking the word "collector" wherever it thereafter appears in the section and inserting in lieu thereof "customs officer".

(v) Section 595 (19 U.S.C. 1595) is amended by striking the words "collector of customs or other".

(z) Section 602 (19 U.S.C. 1602) is amended by—

(1) striking the word "COLLECTOR" in the heading and inserting in lieu thereof "CUSTOMS OFFICER"; and

(2) striking the word "collector" where is first appears in the section and inserting in lieu thereof "appropriate customs officer" and by striking the word "collector" wherever it thereafter appears in the section and inserting in lieu thereof "customs officer".

(aa) Section 603 (19 U.S.C. 1603) is amended by—

(1) striking the word "COLLECTOR'S" in the heading thereof and inserting in lieu thereof "CUSTOMS OFFICER'S"; and

(2) striking the words "collector or the principal local officer of the Customs Agency Service" and inserting in lieu thereof "appropriate customs officer".

(bb) Section 604 (19 U.S.C. 1604) is amended by striking the word "collectors" and inserting in lieu thereof "customs officers".

(cc) Section 605 (19 U.S.C. 1605) is amended by—

(1) striking the word "collector" and inserting in lieu thereof "appropriate customs officer"; and

(2) striking the word "collector's" and inserting in lieu thereof "customs officer's".

(dd) Section 606 (19 U.S.C. 1606) is amended by striking the words "collector shall require the appraiser to" and inserting in lieu thereof "appropriate customs officer shall".

(ee) Sections 607 and 610 (19 U.S.C. 1607 and 1610) are amended by—

(1) striking the words "returned by the appraiser"; and

(2) striking the word "collector" and inserting in lieu thereof "appropriate customs officer".

(ff) Section 612 (19 U.S.C. 1612) is amended as follows:

(1) the first sentence is amended by striking the term "the collector" where it first appears and inserting in lieu thereof "the

appropriate customs officer"; by striking the words "by the appraiser"; by striking the term "the collector" where it thereafter appears and inserting in lieu thereof "such officer"; and by striking the words "within twenty-four hours after receipt by him of the appraiser's return";

(2) the second sentence is amended by striking the term "the collector" and inserting in lieu thereof "such officer"; and

(3) the third sentence is amended by striking the word "collector" and inserting in lieu thereof "customs officer".

(gg) Section 617 (19 U.S.C. 1617) is amended by striking the word "collector" and inserting in lieu thereof "customs officer" and by striking the words "or customs agent."

(hh) Section 618 (19 U.S.C. 1618) is amended by striking the words "customs agent, collector, judge of the United States Customs Court, or United States commissioner," and inserting in lieu thereof "customs officer".

(ii) Section 623 (19 U.S.C. 1623) is amended by striking the term "collectors of customs" and inserting in lieu thereof "customs officers".

(jj) Section 641 (19 U.S.C. 1641) is amended by striking the words "collector or chief" wherever they appear and substituting therefor "appropriate".

(kk) Section 648 (19 U.S.C. 1648) is amended by striking the term "Collectors of customs" and inserting in lieu thereof "Customs officers".

SEC. 302. The last paragraph of so much of section 1 of the Act of August 1, 1914, as relates to the Customs Service, as amended (38 Stat. 623; 19 U.S.C. 2), is amended to read as follows:

"The President is authorized from time to time, as the exigencies of the service may require, to arrange, by consolidation or otherwise, the several customs-collection districts and to discontinue ports of entry by abolishing the same or establishing others in their stead. The President is authorized from time to time to change the location of the headquarters in any customs-collection district as the needs of the service may require."

SEC. 303. Section 2 of the Act of March 4, 1923, as amended (19 U.S.C. 6), is amended by—

(a) striking the first and second sentences and inserting in lieu thereof the following: "Any officer of the customs service designated by the Secretary of the Treasury for foreign service, shall, through the Department of State, be regularly and officially attached to the diplomatic missions of the United States in the countries in which they are to be stationed, and when such officers are assigned to countries in which there are no diplomatic missions of the United States, appropriate recognition and standing with full facilities for discharging their official duties shall be arranged by the Department of State."; and

(b) striking the words "and employees" in the last sentence of the section.

SEC. 304. Section 2619 of the Revised Statutes, as amended (19 U.S.C. 31), is amended to read as follows:

"A bond to the United States may be required of any customs officer for the true and faithful discharge of the duties of his office according to law."

SEC. 305. Section 2620 of the Revised Statutes, as amended (19 U.S.C. 32), is amended to read as follows:

"The amounts, conditions for filing, and procedures for the approval of bonds required of customs officers shall be set forth in regulations prescribed by the Secretary of the Treasury.

SEC. 306. Section 8 of the Act of August 24, 1912, as amended (19 U.S.C. 50), is amended by striking the term "Collectors of customs" and inserting in lieu thereof "Customs officers".

SEC. 307. Section 2654 of the Revised Statutes, as amended (19 U.S.C. 58), is amended by striking the word "Collectors" and inserting in lieu thereof "Customs officers".

SEC. 308. Section 251 of the Revised Statutes (19 U.S.C. 66) is amended by striking the word "collectors" and inserting in lieu thereof "customs officers".

SEC. 309. Section 3 of the Act of June 18, 1934, as amended (19 U.S.C. 81c) is amended by—

(a) striking the term "collector of customs" and inserting in lieu thereof "appropriate customs officer"; and

(b) striking the word "collector" and inserting in lieu thereof "appropriate customs officer".

SEC. 310. The Act of June 28, 1916 (19 U.S.C. 151), is amended by striking the term "collector of customs" and inserting in lieu thereof "appropriate customs officer".

SEC. 311. Section 202(a) of the Act of May 27, 1921 (19 U.S.C. 161(a)), is amended by striking the word "report".

SEC. 312. Section 208 of the Act of May 27, 1921 (19 U.S.C. 167), is amended by striking the term "the collector" where it first appears in the section and inserting in lieu thereof "appropriate customs officer" and by striking the term "the collector" wherever it thereafter appears in the section and inserting in lieu thereof "such customs officer".

SEC. 313. Section 209 of the Act of May 27, 1921, as amended (19 U.S.C. 168), is amended by—

(a) striking the words "appraiser or person acting as appraiser" where they first appear in the section and inserting in lieu thereof "appropriate customs officer";

(b) striking the words "report to the collector" where they first appear in the section;

(c) striking the words "each appraiser or person acting as appraiser" and inserting in lieu thereof "such customs officer"; and

(d) striking the words "and report to the collector".

SEC. 314. Section 210 of the Act of May 27, 1921, as amended (19 U.S.C. 169); is amended by—

(a) striking the words "appraiser or person acting as appraiser" and inserting in lieu thereof "appropriate customs officer";

(b) striking the term "the collector" and inserting in lieu thereof "such customs officer"; and

(c) striking the words "appeal and" and "appeals and".

SEC. 315. Section 5 of the Act of February 13, 1911, as amended (19 U.S.C. 261), is amended by striking ", and any customs officer who may be designated for that purpose by the collector of customs,".

SEC. 316. Section 5 of the Act of February 13, 1911, as amended (19 U.S.C. 267), as amended by—

(a) striking the words "inspectors, storekeepers, weighers, and others"; and

(b) striking the term "collector of customs" wherever it appears in the section and inserting in lieu thereof "appropriate customs officer".

SEC. 317. Section 3111 of the Revised Statutes (19 U.S.C. 282) is amended by striking the words "other or" and by striking the words "a collector or other" and inserting in lieu thereof "an".

SEC. 318. Section 3126 of the Revised Statutes (19 U.S.C. 293) is amended by striking out "collectors" and inserting in lieu thereof "appropriate customs officers".

SEC. 319. Sections 2863 and 3087 of the Revised Statutes, as amended (19 U.S.C. 341 and 528), are amended by striking the word "collector" and inserting in lieu thereof "appropriate customs officer".

SEC. 320. The Act of June 16, 1937 (19 U.S.C. 1435b), is amended by—

(a) striking the words "collector of customs, or any deputy collector of customs designated by him" and inserting in lieu thereof "appropriate customs officer"; and

(b) striking the words "jointly by the Secretary of Commerce and".

REPEALS

SEC. 321. The following laws are hereby repealed:

(a) section 2613 of the Revised Statutes, as amended (19 U.S.C. 5);

(b) the last paragraph of so much of section 1 of the Act of July 5, 1932, as relates to the Bureau of Customs (47 Stat. 584; 19 U.S.C. 5a);

(c) section 3 of the Act of March 4, 1923 (19 U.S.C. 7);

(d) section 2629 of the Revised Statutes, as amended (19 U.S.C. 8);

(e) section 2625 of the Revised Statutes, as amended (19 U.S.C. 9);

(f) section 2630 of the Revised Statutes, as amended (19 U.S.C. 10);

(g) section 2632 of the Revised Statutes, as amended (19 U.S.C. 11);

(h) the Act of February 6, 1907, as amended (19 U.S.C. 36);

(i) section 2633 of the Revised Statutes (19 U.S.C. 37);

(j) section 7 of the Act of March 4, 1923 (19 U.S.C. 51); and

(k) sections 1 and 2 of the Act of August 28, 1890 (19 U.S.C. 63).

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the amendments be considered and agreed to en bloc.

The ACTING PRESIDENT pro tempore. Without objection, the amendments are considered and agreed to en bloc.

Mr. HRUSKA. Mr. President, this is a measure to modernize and update a system created in 1890. In that year a board of general appraisers, which was an administrative tribunal created to relieve the heavy burden that customs litigation was placing on Federal district and circuit courts, was put into operation.

It exercised quasi-judicial functions in reviewing appeals from decisions of the Bureau of Customs.

In 1926, a Customs Court was created. Very little beyond a change in name was effected. No essential changes were made in powers, procedures, or duties.

In 1956, Congress declared it to be an article III court, but in many respects it has continued to function as an administrative tribunal, reviewing actions of the Bureau of Customs.

Through the years, various discussions and proposals were advanced for revision of the court. In 1968 a concrete, meaningful step was taken. In October of that year, the senior Senator from Maryland (Mr. TYDINGS), at the request of the administration, introduced S. 4194. It contained most of the basic provisions that appear in the bill now under consideration.

The present bill has received the earnest study and advocacy of Senator TYDINGS throughout. As chairman of the Subcommittee on Improvements in Judicial Machinery, he took active leadership in the processing and revision of the measure to its present state.

He is to be commended. It is rewarding and encouraging to be able to serve on the subcommittee which he heads so well.

THE CUSTOMS COURT

Mr. President, this court is composed of a chief judge and eight judges. It has a clerk and deputy clerks, a marshal and deputy marshals, a librarian, reporters,

and other supporting personnel. It is a court of record under article III of the Constitution of the United States.

The Customs Court has exclusive jurisdiction over civil cases under the tariff laws, the internal revenue laws relating to imported merchandise, the several customs simplification acts, the proclamations of the President issued under reciprocal trade agreements, and also under other proclamations imposing taxes or quotas on imported goods.

It also has appellate jurisdiction of cases litigating the value of imported merchandise. It tries cases without a jury, making findings of fact and applying the law.

Its principal offices are located in New York City.

CHANGES IN NATURE AND VOLUME OF CUSTOMS COURT WORK

In recent years, a number of developments have had a substantial impact on the work of the Bureau of Customs and the U.S. Customs Court. These include: First, significant increase in imports into the United States for each of the past few years; second, a new set of tariff schedules; and third, a more aggressive attitude by American importers and manufacturers in challenging customs decisions. As a consequence, there has been a sharp rise in the number of disputed customs matters in the Bureau of Customs and in the number of cases received by the Customs Court.

The problems that beset the Customs Court are revealed by the statistics showing its annual imput and output of cases. In fiscal year 1963, the court received 35,000 new cases. The number grew to over 75,000 cases in fiscal year 1969. In this same period, its rate of termination of cases increased from an annual average of 32,000 during the period between fiscal year 1963 and fiscal year 1966, to almost 49,000 in fiscal year 1969.

Despite its increasing productivity, with its input substantially exceeding its rate of terminations, the court has been faced with a growing accumulation of pending cases. In fiscal year 1963 these amounted to 186,452; in fiscal year 1969 to 431,612.

It must be noted, however, that these figures are somewhat deceptive since, in customs matters, a single decision may frequently affect a large number of cases that have been suspended during the trial of a test case. On the other hand, the test case, under which there are thousands of cases suspended, is rare and generally involves a threshold issue common to a great variety of merchandise. The suspended cases often involve other issues of fact or law that for convenience have been suspended because of the desire to dispose of the common threshold issue first. The resolution of the threshold issue, therefore, will not ipso facto dispose of the suspended cases.

As a matter of fact, the decision in a test case does not necessarily control the disposition of cases suspended thereunder unless the suspension involves identical merchandise, and, in any case, there is always the question as to whether the merchandise in the suspended case is similar in all material respects to that in the decided case. Also, of course, each of the suspended cases must be examined by counsel to determine any remaining issues and to settle the amount of duties on the importation. In addition, either the importer or the Government might be dissatisfied with the trial of the decided case or feel that additional testimony or arguments are available which will result in a different decision and, therefore, will decide to retry the issue rather than abide by the decision in the earlier case.

SCOPE OF BILL

The purpose of the proposed legislation is to modernize the procedures in the customs courts and the Bureau of Customs so as to permit these agencies to keep up with their sharply increased workload. This will be accomplished by eliminating outmoded provisions in the present law which require the customs courts and the Bureau of Customs to engage in time-consuming, inefficient, and unnecessary practices. In its place new procedures will be initiated to permit these agencies to cope efficiently and effectively with the rising volume of customs matters that come before them.

The bill in no way affects the substantive provisions in the customs or tariff laws. It does not change in any way the rates of duties or any other provisions of the tariff schedules. It will have no substantive effect on the laws relating to import quotas, import controls, or antidumping.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point an enumeration of some 14 major changes contained in the bill.

There being no objection, the material was ordered to be printed in the RECORD as follows:

MAJOR CHANGES CONTAINED IN BILL

1. The Bureau of Customs will liquidate an entry, deciding at that time all issues relating to the dutiable status of the merchandise, including its appraised value and classification.

2. The importer will have 90 days in which to decide whether he wishes to protest the decision and secure administrative review. This longer period of time will provide the importer with sufficient opportunity to study the matter and decide whether any useful purpose would be served by seeking further administrative review. He would no longer be pressured by an unrealistically short time limit into filing a protest for protective purposes only.

3. The Bureau of Customs will have 90 days from the date of liquidation to reliquidate the entry on its own initiative. This will, in many cases, avoid the necessity for the importer to go to Customs Court to correct administrative errors. It will also permit the Bureau of Customs to conform administrative actions to relevant decisions of the Customs Court reached within the 90 day period following liquidation and to take any other administrative action necessary for the accurate determination of duty liability.

4. An overall limit of two years will be set in which the Bureau of Customs must dispose of a protest on its merits. Notice of the denial of a protest, in whole or in part, will be mailed to the importer.

5. The importer will be able to obtain accelerated disposition of his protest by mailing a request by certified or registered mail to the Bureau of Customs at any time after 90 days have elapsed from the date of filing the protest. If, within the next 30 days, the Bureau of Customs does not allow or deny his protest in whole or in part, it is deemed denied on the 30th day following the mailing of the request.

6. The importer will have 180 days in which to decide whether or not to litigate a denial of a protest by the Bureau of Customs. This should be sufficient time for the importer to reach a carefully considered decision on the issues involved. It should eliminate many cases that are now on the Court's docket simply because the importer, as a result of the restrictive nature of the present 30 or 60 day time limit, is forced to file the appeal or protest as a protective measure.

7. Automatic reference of all appeals for reappraisement and all denials of protest to the Customs Court, will be eliminated. If an importer wishes to obtain judicial review, he will be required to file a summons in the Customs Court.

8. The Court will be required to fix a filing fee for commencing an action in an amount not less than $5.00 and not exceeding the filing fee for commencing a civil action in the United States district court.

9. There will be a single judicial proceeding in which all issues, including both appraisement and classification, will be considered. The importer will be able to include in one cause of action all entries of merchandise presenting common issues. The Court will have authority to order actions consolidated or severed, as circumstances warrant.

10. All cases in the Customs Court will normally be tried by a single judge. This will increase the judicial manpower available for hearing and deciding cases, since approximately 60 percent of all cases in the Customs Court are now heard by a three-judge trial division.

11. The Chief Judge will have the authority, on application or on his own initiative, to designate three-judge trials when he finds that a cause of action either (a) raises a constitutional question or (b) has broad or significant implications in the administration or interpretation of the customs laws. The use of a three-judge court will provide a means for obtaining carefully considered decisions in landmark or other important cases.

12. In contested cases, the judge will have the option of supporting his decision by either an oral or written statement of findings of fact and conclusions of law or by an opinion stating the reasons and facts upon which his decision is based. This will eliminate the present requirement that the judge write an opinion in every case.

13. Cases outside of New York will be tried in the same manner as other cases and the judge will have full authority to hear and decide the case.

14. Appeals from all cases will go directly to the Court of Customs and Patent Appeals. This will relieve the Customs Court of its present burden of having to set up three-judge divisions to hear appeals from single-judge decisions in appraisement cases.

Mr. HRUSKA. Mr. President, in summary, both the Bureau of Customs and the Customs Court are handicapped by outdated procedures that cannot be changed without corrective legislation. To institute modern and effective methods of administration and adjudication in the customs field, favorable action on the attached bill is recommended. The major provisions in the bill are generally acceptable to the bench, the bar, and the importers concerned with customs matters.

Mr. President, I urge the adoption of the bill.

Mr. TYDINGS. Mr. President, goods arriving in the United States are subject to examination by the Bureau of Customs which appraises the goods, classifies them under the tariff schedules of the United States—that is, determines the dutiable category—and calculates the amount of duty. The importer pays the estimated duties upon entry and

posts bond to guarantee payment of any additional duties that may later be found due and the goods move into commerce while the processes of appraisement and classification take place.

If the importer disagrees with the value at which his goods are appraised he may file a written appeal for reappraisement with the Bureau of Customs. Thereupon the process of classification and the final assessment of duties comes to a halt. Customs has no substantial function to perform with this appeal. The appeal is simply forwarded to the Customs Court where it automatically becomes a case. Such a case is heard by a single judge of the Customs Court, subject to appeal to a three-judge division of the same court, with the right of further appeal to the Court of Customs and Patent Appeals.

After the appraisal issue is resolved, the case is returned to the Bureau of Customs. If, at this point, the importer disagrees with the classification given to his merchandise, he may file a protest with Customs. Customs may thereupon modify or reverse its original action. If it does not, it transmits the protest with the relevant papers to the Customs Court and again it becomes a case without further action by the importer. Such a case is heard by a three-judge division of the Customs Court, with the right to appeal to the Court of Customs and Patent Appeals.

For the past several years the workload of the U.S. Customs Court has been increasing sharply. In fiscal year 1963, the court received 35,000 new cases. In fiscal year 1969, this had grown to over 75,000 cases. During the same period, its rate of termination of cases increased from an annual average of 32,000 for the period between fiscal year 1963 and fiscal year 1966 to almost 49,000 for fiscal year 1969.

There has thus been a growing accumulation of pending cases in the Customs Court despite the increased productivity of the court. In fiscal year 1963, these pending cases totalled 186,452; by the end of fiscal year 1969, the total had reached 431,612.

Outmoded statutory provisions that establish the procedures for deciding customs cases are major contributing factors in the court's increased workload, compelling the Bureau of Customs and the Customs Court to engage in time-consuming, inefficient, and unnecessary practices.

The major defects in present statutory procedures include the following:

First. If questions of both appraisement and classification are presented in a single entry of merchandise, the importer cannot have all issues resolved in a single proceeding. Instead, he must first contest the appraisement issue. Only after this issue has been finally determined, by the courts if necessary, may he contest the classification of the merchandise.

Second. The Bureau of Customs cannot correct administratively any errors of appraisement. When an importer files an appeal for appraisement, the Bureau is automatically divested of jurisdiction, and the appeal is automatically before the Customs Court.

Third. The importer has unrealistically short periods of 30 days in appraisement and 60 days in classification questions to decide whether to contest the decision of the Bureau of Customs by appealing the appraisement or protesting the classification. As a consequence, in many cases importers are compelled to file appeals or protests as protective measures.

Fourth. The Bureau of Customs must automatically refer denials of protest to the Customs Court for disposition without regard to whether or not the importer intends or desires to litigate the Bureau's decision.

Fifth. The court has no statutory authority to charge a filing fee for commencing judicial actions. Since there is no filing fee, there is no restraining influence to cause the importer to select only meritorious actions for litigation.

Sixth. Protest cases, which constitute about 60 percent of all customs cases, must be decided by a three-judge division of the court rather than by a single judge.

Seventh. Single-judge decisions in appraisement cases are subject to review by a three-judge division of the court even though the Court of Customs and Patent Appeals has appellate jurisdiction over final decisions of the Customs Court in both appraisement and protest cases.

Eighth. Single judges trying classification cases in ports outside of New York have no power to decide a case, but must return the hearing record to New York for decision by a three-judge division which need not necessarily include the judge who heard the case at the other port.

In seeking to modernize the procedures in the Bureau of Customs and the Customs Courts by revising these statutory provisions, S. 2624 provides for the following:

First. A single, continuous procedure for deciding all issues in any entry of merchandise, including appraisement and classification issues.

Second. Greater authority in the Bureau of Customs to correct errors administratively and to provide more meaningful administrative review.

Third. Substantial increase in the length of time for importers to file requests for administrative and judicial review.

Fourth. Elimination of automatic referrals of protests to the Customs Court.

Fifth. Normally all customs cases before the Customs Court will be tried and decided by a single judge.

S. 2624 will bring the Customs Court and the Bureau of Customs into the modern era.

The PRESIDING OFFICER (Mr. GRAVEL in the chair). The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and the third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. HRUSKA. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

## S. 3220—INTRODUCTION OF A BILL RELATING TO OBSCENITY CONTROL IN THE MAILS

Mr. MANSFIELD. Mr. President, just as the "pushers" are the ones most responsible for and, therefore, the most guilty in the traffic of narcotics so is the "pusher" who distributes pornographic material through the mails the most responsible and the most guilty in that area.

It is not a question so much of being the recipient of narcotics or pornographic materials, although that is a vital question, but, rather, it is more a question of how we must deal with those who have the primary responsibility. In that respect, I am glad to note, very glad to note, that the Judiciary Committee of yesterday reported out a narcotics control bill which the Senate may be assured will be called up for action as expeditiously as possible.

I am today introducing a bill dealing with pornography which seeks to put the "fix" on those who are primarily responsible for the propagation and continuation of the distribution of unsolicited pornographic materials into the homes of our people.

This traffic in smut must cease and those who are responsible for it must be punished.

Mr. President, pornography, obscenity, filth, and perversion; that is the package that is sent to my constituents in Montana. That is what is being sent to citizens across the land. And its distributors reach into the privacy of one's home through an instrumentality of the Federal Government—the U.S. Post Office Department.

Much is said lately about our first amendment. Freedom of religion and of the press; the right to assemble peaceably and to speak out—these are fundamental guarantees under our Constitution. But what is also protected is our right of privacy and that right, though long recognized as equally fundamental, is perhaps the least enforced of all of our freedoms when it comes to the filth and dirt that is brought to our homes by the Post Office.

I do not criticize the Post Office Department. Its hands are tied. But we in the Congress could untie them if we act now—this year—to crack down on the peddlers of filth.

There are pending in committees of both the House and Senate a number of proposals aimed directly at the 20 or so corporate panderers of obscenity whose ruthless exploitation reaps millions of dollars a year out of the pornography market at the expense of the young and unsuspecting, the unaware and the unsophisticated. No one is safe from their acts of corruption. Their aim is simple: to reach into the very privacy of one's home with a message of indecency and perversion.

I am a cosponsor of a number of the proposals that seek to curb these filth panderers. And today I submit another proposal on the subject—one that seeks clearly to protect the young and the unsuspecting, the unaware, and the unsophisticated.

My proposal would compel the filth peddler to mark the envelope he uses—

the one that is now often blank—with a warning that the enclosure could be obscene or offensive. With such a warning there can be no mistake. The addressee is fully protected. He would be put on notice, as would his entire household. He would know and his famly would know that what is inside may violate his standards of decency and those he wishes to impress upon his children. And that is his right.

May I say that such a warning is not new to the legislative field. It has already been imposed by the Congress in the case of cigarettes. Indeed, without even deciding that there is a danger involved in smoking, cigarette manufacturers are compelled to warn each purchaser of a possible hazard. By the same token, under my bill, it need not be decided that the material enclosed is obscene, per se. But if there is that possibility, then the envelope must say in plain and simple words, "The Enclosed Material May Be Obscene or Offensive to the Addressee."

A second feature of my proposal would permit the addressee of obscene mail to return the matter to the sender, without charge. And it is left up to the addressee himself to decide what violates his standard of decency. The return mail fee would be paid by the original sender—the pusher, in other words—with an additional handling charge.

Finally, violators of either of these provisions would be met with a penalty of $5,000.

Perhaps my proposal is not a perfect solution. It is one, however, that I believe brings into proper balance the right of privacy on the one hand and the right of the press to use the mails on the other. If enacted it will for the first time impose an effective check on the distribution of obscenity in our society and place the burden where it belongs—on the filth peddler.

Mr. President, the Missoulian, of last December 4 carried a story on this matter written by Lynn Schwanke. In it Postmaster Guy Rogers of Missoula relates very clearly many of the problems faced by his office on this problem. I ask unanimous consent that the article be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection it is so ordered.

(See exhibit 1.)

Mr. MANSFIELD. Mr. President, I urge the Committee on the Judiciary to act on the obscenity proposals now. I can assure the Senate that once on the calendar, they will receive the highest priority of the joint leadership.

I urge the committee to act swiftly as well on the crime proposals. I am happy to note they have acted on at least one of the narcotics proposals. Certainly there are no issues more critical to the quality of our lives today. The proposed Drug Abuse Control Act, the dangerous substances proposal, the bail reform and witness immunity measures, the organized crime matters and all of the proposals in these areas are vitally needed to deal effectively with drugs and crime. It is up to us in the Congress to do everything in our capacity to see that all of these matters are written firmly into the law books as soon as possible and hopefully, before this session closes.

Mr. President, I send my bill on obscenity to the desk and ask that it be appropriately referred.

EXHIBIT 1

ROGERS SAYS RECEIVERS MUST COMPLAIN—LOCAL MAIL FAT WITH PORNOGRAPHY, SAYS POSTMASTER

(By Lynn Schwanke)

Missoula's mail is growing fat with pornographic materials, Postmaster Guy Rogers says.

Each year more of the questionable literature seems to circulate through the Missoula Post Office, Rogers said.

"There's nothing we can do about it" according to the postmaster. "In essence the Supreme Court has decreed that no one person censor another person's mail. Unless we get direct complaints from the receiver, our hands are tied."

The postmaster said he could not make an accurate estimate of the amount of pornography which passes through the local post office, but he described it as "a tremendous amount."

Rogers said the material is easy to recognize, "especially when we get 3,000 envelopes alike and one complaint."

Pornography is defined by the dictionary as "a portrayal of erotic behavior designed to cause sexual excitement."

Rogers said one of the contributing factors to the growing volume of pornography is the import market. He said the literature is legal in Sweden and Denmark, and it comes through the U.S. mails clearly marked "pornography" and "is put up like Life magazine."

The only recourse the post office has to halt obscene materials is through the persons who receive it, Rogers said.

The official said the post office has numerous complaints about the materials from individuals. Persons who receive the literature and wish to complain may go to the post office and sign a form which states they do not want the material and find it offensive. The form is sent to Washington, D.C., to the Office of the General Council which contacts the mailing firm and orders that the name of the complainant be taken from the mailing lists.

"Actually all it does is help the mailers correct their mailing lists," Rogers said.

If the firm does not remove the name of the complainant from its list, the Post Office Department has the power to exclude all that firm's mailings from the U.S. mail.

"It's impossible to stamp it out," Rogers said. He explained that the companies will do business under one name then change to another title and move to another town before authorities can move in.

"In the old days we could get them for fraud, but now they deliver what they promise," the postal official said.

Rogers noted that most of the material is pictures and films of nude women in suggestive poses. He said the increase in volume probably is due to the percentage of return orders. "People do order this stuff," he said, "and when they do, it costs them."

The postmaster also noted that mailing lists make it easy for the pornographic literature to be widespread. He said companies delivering the obscene materials can easily buy alphabetized mailing lists with all pertinent mailing information, including ZIP codes, then resell them when they are done. Rogers said a lot of the material goes to business addresses.

"We get a lot of people who complain," the postmaster said, "but until the legislatures do something about it and the courts take something other than a liberal point of view, we can't stop it."

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 3220) to protect a person's right of privacy by providing for the designation of obscene or offensive mail matter by the sender and for the return of such matter at the expense of the sender, introduced by Mr. MANSFIELD (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Post Office and Civil Service.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that my name be added as a cosponsor of the bill (S. 3220) just introduced by our able majority leader on the subject of pornography.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HUGHES. Mr. President, with regard to what has been said by the distinguished Senator from Montana, I believe this would be an opportune time for me to report to the Senate on the activities of a subcommittee of which I am chairman, which comes under the parent Committee on Labor and Public Welfare. The subcommittee to which I refer is the Subcommittee on Alcoholism and Narcotics, Addiction, and Drug Abuse.

Primarily I wish to report that after months of dedicated work by this subcommittee, including hearings that were held in the District of Columbia on two occasions, in California, New York, Denver, and with the anticipation of holding hearings in other areas of the country in the field of alcoholism, narcotics, and drugs, this subcommittee is approaching the subject matter from the point of view of the health problems, the educational problems and the problems of recovery, rehabilitation, treatment, and prevention.

This is a very comprehensive problem that I think fits right in line with the constructive legislation that the majority leader has been talking about. For far too long in this country we have taken a rather punitive and dim attitude toward users of substances that have both been legal and illegal, without an approach to the problem of recovery, rehabilitation, and prevention of these problems arising in our society. We have been viewing statistics now for many years indicating that there are at least 6 million alcoholics—and they are critical alcoholics—in the United States. It is my personal opinion that the number is at least double that, with probably another 6 million in progressive stages of that vicious disease.

Each of these 6 million alcoholics affect at least another 3 persons around them, or a total of 18 million in the country—which means that we are dealing with probably 25 million men and women, at the very minimum, in relationship to the drug alcohol.

We go on to the estimate of the possibility of there being 10 million or 12 million experimenters and users of marihuana and hundreds of thousands of other users of narcotics of everything from heroin to the amphetamines to the barbiturates, on down to the hallucinogens such as LSD. So that we are dealing with a major, critical problem in this Nation today.

It is not only a great contributor to the crime element in this country which needs to continue perpetrating crimes in

order to support these habits, but also a great contributor to the glut in our hospitals and mental institutions of people receiving little if any help. It has been testified to in my subcommittee by recovered narcotics addicts that they could almost as easily obtain heroin inside the walls of prison as they could out on the street.

Certainly, incarcerating men and women under these conditions does nothing to contribute to their recovery and thereby reducing their crime activities, once released into the social structure.

Thus, basically, what we are dealing with is a massive problem involving 25 million to 40 million people in this country.

The need is for an adult educational program, in addition to an educational program in the medical schools of America, and also in the elementary and secondary schools, and the colleges and universities of America, and the need for these preventive programs to be carried out at every level of the social structure. We are dealing with the needs of recovery itself. There is no longer in America any question that alcoholism is recoverable and treatable. It is no more difficult to treat a patient for alcoholism than any other kind of treatment in a hospital.

The statements and attitudes of hospital associations and medical associations in America are that they will accept alcohol patients and that they will treat them, but the facts prove otherwise.

Insurance programs are inadequate. For example, I have yet to find one discharged veteran of our armed services that has received any disability for chronic alcoholism which he incurred while in the service of the United States of America; yet we have testimony that 1 in every 6 beds in a veterans hospital is filled by an alcoholic patient. As a result, we are not really reaching the men and women of America who have incurred this disease while in the service of their country.

None of us is able to measure the traumatic effect of war that may start these men and women down the long road of no recovery to ultimate dismissal from the services under a less than honorable discharge condition.

Thus, I believe that as a result of the massive program we are studying and undertaking in the particular subcommittee I chair, probably by late next spring we will be ready and able to produce some comprehensive legislation which will complement this particular legislation that we are talking about today in an area that, hopefully, will then bring the Senate in a position to consider an all-out and comprehensive approach to these particular problems.

Mr. LONG. Mr. President, will the Senator from Iowa yield?

Mr. HUGHES. I yield.

Mr. LONG. I compliment the distinguished Senator from Iowa for his statement and the very fine work he is doing in this field.

It occurs to me that this Government should have greater reason to help with this disease in view of the fact that it receives so much money in revenue from alcoholic beverages. In many instances, the Government is collecting a large amount of money in taxes from the source which is creating such a great deal of mischief and destroying so many lives, as has been so eloquently described by the Senator from Iowa. Treatment should be made available to those very people to whom the Senator makes reference.

I would urge the Senator to bring before the Senate the kind of legislation he would think appropriate. I assure him that this Senator will certainly expect to support whatever can be developed that would help to provide an answer to this difficult problem.

Mr. HUGHES. I want to thank the Senator from Louisiana because, truly, the statistics are even more devastating than I have indicated.

For example, it has been reported that 40 percent of patients in mental hospitals in America today are there because of alcoholism.

An estimate of up to 50 percent of men and women in the prisons of the United States are there because of crimes committed while under the influence of alcohol.

Statistics indicate that between 25,000 and 35,000 Americans die on our highways every year as a result of alcohol-related accidents.

Certainly with these devastating statistics available to the Nation concerning the drug alcohol itself, we should be able to take a reasonable and intelligent approach to the problems of education, rehabilitation, recovery, and prevention, so that those who are ill of this tragic disease will no longer be destroyed.

When we deal with hard alcoholism we have a problem comparable to drugs, but different. We can do something about alcoholism, but with the rapidly developing change in our drug culture in the United States today, it can be said that the parents of the teenagers of America are scared to death. They are really frightened. They know that when their children go to school they will be exposed to drugs of all kinds, and their parents do not know what to do about it.

It is the responsibility of this Government to come forth with a constructive program.

---

## S. 3221—INTRODUCTION OF A BILL DEALING WITH THE HUMANE TREATMENT OF ANIMALS

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent that I may proceed for 5 additional minutes in the morning hour.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. YOUNG of Ohio. Mr. President, I introduce for appropriate reference a bill to assure the humane treatment of animals used for experimental purposes by research facilities.

The PRESIDING OFFICER. Without objection, the bill will be received and appropriately referred.

The bill (S. 3221) to amend the act of August 24, 1966 (Public Law 89–544), in order to prescribe effective criteria for the care and treatment of animals used for research and experiment purposes by research facilities, and for other purposes, introduced by Mr. YOUNG of Ohio, was received, read twice by its title, and referred to the Committee on Commerce.

Mr. YOUNG of Ohio. Mr. President, may I make it clear at the outset that this is not an antivivisection measure. It legislates against unnecessary cruelties in the use of animals in experiments for research purposes.

The unnecessary, senseless, inhumane cruelties afflicted on animals in the name of research and science sometimes are enough to cause one's blood to run cold.

I do not maintain that animals should not be used for legitimate medical research purposes, but I do assert that all procedures in connection with this sort of thing should be controlled, regulated, and carefully supervised. Unscrupulous operators who conduct, for profit, their business with cruelty and neglect should be eliminated. The quacks and sadists must go. We must see to it that those experiments that are conducted are absolutely essential and that the animals themselves are subjected to a minimum of torture.

My record in support of medical research and education speaks for itself. I would not introduce or support any measure to outlaw or curtail research which is responsibly and humanely conducted.

However, needless suffering does nothing to advance science or human welfare, and a nation as idealistic in tradition and as large in resources as ours must not condone this cruelty.

This bill applies only to vertebrate animals used in experiments by Federal agencies and by recipients of grants from the Federal Government. There are many instances on record in which scientists working for Federal agencies were guilty of unnecessary cruelty and torture of animals used in research experiments. Since the Federal Government is one of the biggest customers for experimental animals and, through research grants, one of the main supporters of research laboratories throughout the Nation, it is not only the Government's right, but our duty to see that something is done to correct this intolerable situation. Perhaps such legislation would encourage State governments to enact similar laws.

Mr. President, man's inhumane treatment to man is not so separate from his inhumanity to animals. We must not ignore the conditions that now exist. Mercy is indivisible.

I speak with considerable feeling on this subject. My Washington home has been brightened during the past several years by the fact it is also the home of a little Yorkshire terrier and three cats.

One was purchased in 1960 from Bill Gold, of the Washington Post, for all of a dollar. That cat is a coal-black cat that we call Lilly. She has become a prima donna in our home.

One was a starving, terrified little kitten that I picked up around midnight 5 years ago in the bushes adjoining the Greenbriar Apartment on Massachusetts Avenue. This little kitten came out of the bushes. She was dirty at the time and so thin you could almost see through her ears. She came out of the bushes and rubbed my leg and purred. The door

attendant said he was the only one who had fed that kitten in 2 weeks; that someone had thrown her out of an automobile. I remarked about the inhumane action of throwing a little kitten out of an automobile in front of one of the most luxurious apartment houses in Washington. Later I could not forget that kitten, and, after midnight, went there again.

I was about to leave when the little kitten again came out of the bushes. I took that kitten home. At that time she was near death. Now, she has grown to be a beautiful, affectionate cat that we call Pinky.

The third cat was a vagabond tomcat in our neighborhood that, according to reports of neighbors, had been left by a family who had moved from our neighborhood. The cat had wandered around, getting fed wherever he could. One morning we found him in our back yard, badly mangled and bleeding. We took him to a veterinarian nearby. The veterinarian first said, "I would like to see the other fellow," but then concluded from the wounds that some animal had come up from the Potomac, and Tom Bushytail had tangled with it and was almost killed. After 2 days and 3 nights and an expenditure of $30 Tom Bushytail was almost well again. So now we call him Tom Cedric Bushytail, who weighs 14¾ pounds ringside and is a big, affectionate cat.

So I speak for adults and children the country over made happier because of faithful dogs and affectionate cats who have become really a part of their family life.

Legislation setting forth standards for the treatment of animals used in research experiments should be enacted without further useless delay.

## THE NEXT DECADE IN VIETNAM

Mr. YOUNG of Ohio. Mr. President, it is obvious that there will never be peace in South Vietnam until and unless a coalition government is established in Saigon composed of all elements of South Vietnamese political life, including representatives of the National Liberation Front, instead of the militarist Saigon regime of General Thieu and Air Marshal Ky which has barred neutralists, so-called, many Buddhists, and representatives of the National Liberation Front from voting or participating in government.

The administration has not faced up to the fact that the only way this war will be brought to an end is for both sides to compromise on a political solution—a compromise that must include a coalition government in Saigon and free elections. It is equally clear that Thieu and Ky are not going to preside over their own removal from power, so any negotiations in which they have a hand are doomed from the outset. There can be no escape from this hard truth.

The desire of those Saigon militarist leaders to remain in power is totally inconsistent with President Nixons' statement that "what is important is what the people of South Vietnam want." These incompatible policies hold out the prospect not of peace but of a prolonged military occupation which will continue indefinitely to drain American treasure and lives.

The fact is that while professing a desire for peace, the administration has failed to create the political conditions in Vietnam under which peace is possible.

Until the President begins to make a real effort toward solving the central task of forming a coalition government in Saigon, there is no real hope for peace, but only the bleak outlook of at least 10 years of American occupation to maintain in power a corrupt government that has the support of but 20 percent at the most of the people of South Vietnam.

Mr. President, there recently appeared in the St. Louis Post-Dispatch an outstanding editorial entitled "The Next Decade in Vietnam" setting forth in clear and concise terms the dilemma facing the administration in South Vietnam. I ask unanimous consent that the editorial be printed in the RECORD at this point as part of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NEXT DECADE IN VIETNAM

The nature of the stalemate at the Paris peace talks was clearly illustrated when Ambassador Lodge told the press after this week's meeting that the United States would be willing to talk with Hanoi about a coalition government for South Vietnam "and other matters."

Since Hanoi has expressed willingness to resume private talks if a coalition government as well as troop withdrawals are discussed, Mr. Lodge's remark seemed to clear the way for negotiations. An hour later, however, he amended his statement to emphasize that any results of bilateral talks would be subject in effect to veto by the Thieu-Ky government in Saigon—which is implacably opposed to even the thought of coalition. So the stalemate persists.

The obstacle remains the Nixon Administration's insistent confusion of the present Saigon government with the people of South Vietnam. So long as we consider our commitment as being, not to the people, but to the military junta headed by President Thieu and Vice President Ky, it is impossible to see how the negotiating stalemate can be broken.

Ambassador Lodge misstates the case when he accuses Hanoi of demanding that we withdraw all our troops and overthrow the Saigon government as we go. We do not have to overthrow anybody. All we have to do is to allow political forces other than the Thieu-Ky regime to express themselves. Those forces already exist, as witnessed by the recent emergence of Gen. Duong Van Minh as a leading non-Communist opponent of the regime who wants to end the war. Big Minh might very well be able to form a peace government far more representative of the South Vietnamese people than the Thieu-Ky regime, if only the U.S. would let him.

Walter Lippmann is right, we think, in attributing the negotiating stalemate to the Administration's failure to reach the basic decision that *all* American forces, and not just the ground combat troops, should be withdrawn. Writing in *Newsweek*, Mr. Lippmann says:

"Our strategy is not to buy concessions from Hanoi with our military withdrawal, but to buy patience and endurance from the American people for an indefinitely long American occupation in South Vietnam. . . . The theory is that a long occupation, using some 200,000 support troops and the artillery and the Air Force, can be made acceptable to the American people. The official strategy is addressed not to negotiating with our adversaries but to placating American opinion. . . . The right policy, I believe, is to *negotiate* our withdrawal, to obtain, in return for withdrawing our 500,000 men, substantial and honorable concessions."

What kind of concessions could be obtained? It now seems quite clear that both Hanoi and the National Liberation Front are ready to accept a long period of independence for South Vietnam. Mr. Lippmann, who was recently in Paris, says the French are convinced that a settlement could be obtained on the principle that "for at least 10 years after the Americans leave, there shall be two Vietnams, one with its capital in Hanoi, one with its capital in Saigon."

Such a settlement, as he says, would be far from an American defeat, and it would not be dishonorable. Accomplishing a 10-year period of independence and military neutrality, during which the South Vietnamese would be free to determine their own future without outside interference, would represent some gain, at least, from our costly and bloody investment. We would fall short of the original objective, which was to crush the Communists, but this goal has become clearly unattainable in any case.

Is it not better to accept a more modest mission than to go on for years trying to salvage a mistaken one? The real choice lies between 10 years of independence for South Vietnam, during which the self-determination we claim to have been fighting for would have a chance to work, and at least 10 years of American occupation to prop up a government unable to win the support of its people. If Mr. Nixon thinks the latter policy can be made acceptable to Americans, in our judgment he is in error.

## IRRESPONSIBLE SENATE ACTION

Mr. WILLIAMS of Delaware. Mr. President, considerable concern is developing throughout the country over the irresponsible manner in which the Senate during the past few days had turned what was intended to be a tax revision measure into a multibillion-dollar revenue loss.

Since H.R. 13270 was reported to the Senate, a series of amendments have been added which, if retained in conference, will reduce the Government's revenue by approximately $11,980 million with $10,280 million of this loss materializing in 1970.

Our Government today, on an administrative budget basis, is already operating at a deficit in excess of $500 million per month, and if the bill as presently before the Senate should become law it will completely nullify the administration's efforts to bring this inflation under control.

As a result of a series of deficits created during the past several years, our country today is confronted with a serious financial crisis, and this is no time for the Congress to consider politics.

As evidence that this concern over the recent irresponsible actions which have been taken by the Senate is shared by others throughout the country, I ask unanimous consent to have printed in the RECORD at this point a series of editorials, the first of which appeared in the Philadelphia Bulletin on Sunday, December 7, entitled "Irresponsible Senate Action"; the second, an editorial appearing in the December 7 issue of the National Observer entitled "Big Favors on Taxes"; next, an editorial appearing in the Evening Journal of Wilmington, Del., on Friday, December 5, entitled "Tax Cut vs. Revenue Loss"; and last,

an editorial appearing in today's Washingto Post entitled "Jobs, Taxes, and Inflation."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Philadelphia (Pa.) Sunday Bulletin, Dec. 7, 1969]

IRRESPONSIBLE SENATE ACTION

New fiscal difficulties for the Federal Government, already implicit in the emphasis Congress has placed on tax cutting over tax reform, will become more threatening if several actions taken on the Senate floor are permitted to stand.

The Senate was fiscally irresponsible in adopting the Gore amendment to the reform-tax relief bill, under which the personal income tax exemption would be increased, in two steps, from $600 to $800.

Put aside debate over whether this is a better method of granting tax relief than rate reductions and other devices. Its timing is atrocious. Its fiscal impact over the next couple of years would be to lose several billion dollars more in revenue to the Treasury than under the provisions recommended by the Senate Finance Committee.

The short-term deficit effect fuels the fires of inflation in a most crucial period. It compounds the trouble the Administration faces in shaping anti-inflationary budgets under pressure of already authorized spending programs and proposed new or expanded ones.

The Senate was also irresponsible when it modified the repeal of the 7 percent investment credit subsidy to business that its Finance Committee recommended. This would forfeit about $720 million in taxes annually and further contribute to the imbalance between those provisions of the bill which would gain revenue and those which would lose it.

Fiscal responsibility is not a matter of being all head and no heart; it is a matter of social responsibility, too. The country's troubles multiply when legislators won't add. It is no kindness to the electorate to legislate without regard to the connection between spending and taxing. Inflation eats into every paycheck, undermines the nation's ability to put its troubled house in order.

A still greater revenue loss—estimated at $1.9 billion a year—would be produced by the Dominick amendment approved by the Senate providing tax credits for parents up to $325 for a child's college expenses. As appealing as this is to burdened parents, the move under these circumstances is heedless of the effect on the Government's balance sheet.

At least the bill passed by the House in part took account of the acute fiscal difficulties immediately ahead in the timing of its net giveaway, and the bill recommended by the Senate Finance Committee was fully responsible in this respect. The hope must be that when the Senate and House bills go to conference for adjustment of their conflicting provisions the fiscal imprudence shown on the Senate floor will be corrected.

But next year is an election year for the House.

---

[From the National Observer, Dec. 7, 1969]

BIG FAVORS ON TAXES

No one pretends that tax legislation can stay free of party politics. But there are some conscientious lawmakers, notably Arkansas' Rep. Wilbur Mills, who take tax-writing seriously. His Ways and Means Committee did a fairly competent job on tax reform, producing a bill that made few people ecstatically happy, but which made an honest attempt at reform without knocking the latch off the door of the U.S. Treasury.

Such professionalism does not extend to the Senate. In that body, where breast-beating over the plight of the nation's poor is most vigorous, the true goal of tax reform has been forsaken in a transparent grab for votes. Democrats took credit last week for giving the little fellow a break by voting an increase in the personal exemption, and Republicans fell all over themselves trying to fix the blame for their party's defeat.

It didn't make much difference to the sponsoring Democrats that the increased exemption may not last through the final version of the bill. Or that the provision may produce such a sizable loss of revenue, at a time when inflation fighting should be the top domestic concern, that President Nixon may feel compelled to veto the entire tax-reform package. Or that the increased exemption would produce little real benefit for low-income taxpayers over the less-easily understood benefits in the House-passed version.

All that made any difference to Senator Gore and his friends last week was the victory his party had won. Everybody who has ever filled out a return can understand an increase in the personal exemption.

There are a few, though, for whom good politics requires a longer view. Massachusetts' Republican Edward Brooke, for example, told his Senate colleague that an increase in the personal exemption would be "an illusory change." Further, if Senate liberals are serious about the need for big Federal spending in coming years to cure the country's social and environmental ills, they had better be careful about capricious tax cutting.

Tax cutting, after all, is what tax reform has really come down to in the Senate. The tax cutters find it easy to claim credit for doing us all a big favor, but the favor will, as Senator Brooke noted, "only prolong the economic crisis which now is reducing the buying power of every American family." The country can stand a certain amount of congressional politics, but it can't stand many big favors like Mr. Gore's.

---

[From the Wilmington (Del.) Journal, Dec. 5, 1969]

TAX CUT VS. REVENUE LOSS

President Nixon's implied threat of a veto was not sufficient to dissuade the Senate from voting to increase the personal income tax exemption. It approved by a convincing 58–37 margin Sen. Albert Gore's plan to raise the current $600 personal exemption to $700 next year and to $800 in 1971.

What taxpayer can look at that prospect without sighing in eager anticipation? But the American taxpayer owes himself a jolt of economic reality along with his fantasy of higher personal exemptions.

The nation is currently engaged in a double-barreled fight against inflation. Monetary policy, with its high interest rates, is one barrel, one fortunately not too susceptible to the political tug-of-war in Congress.

Fiscal policy, as represented in the current effort to cut government spending as sharply as possible, is much more exposed to capricious legislative action. While it is true that over-all tax reform has been a bipartisan issue this year, it is also true that the federal government cannot look favorably on measures that will seriously reduce revenues.

The tax bill passed earlier by the House would provide about $9 billion in tax cuts by way of reduced rates. They would eliminate taxation of many low-income families now forced to pay. Sen. Gore complains, however, that the rates are disproportionately kind to taxpayers at higher income levels. It is the purpose of increased personal exemptions to adjust the burden in what Sen. Gore considers a more equitable fashion, still reducing personal income taxes about $9 billion.

The Administration, however, cannot ignore the prospect of a revenue loss of $5 billion in the second year of the Gore plan, because of other tax losses the measure still contains. It seems likely that the White House would be happy to live with the personal exemption device for reducing taxes if the measure managed in some other way to prevent that imposing loss in needed revenue.

It is now up to House-Senate conferees to resolve their differences on the two tax reduction methods. A dispassionate observer would have to suppport whichever the conferees found most palatable, so long as the revenue reduction remained about the same.

President Nixon's immediate problem would seem to be his lack of persuasiveness in opposing the Gore amendment, which cost him another unnecessarily embarrassing setback at the hands of the Senate and indignant criticism from his Senate minority leader, Hugh Scott of Pennsylvania.

Mr. Nixon's concern lest the Congress dry up too many sources of revenue in the tax reform bill is legitimate and really in the longrange interest of the American taxpayer. It is important now that he avoid antagonizing members of Congress, including those of his own party, over unnecessary details of the bill. What the President needs is a tax reduction measure he can live with, not one containing unacceptable reductions in revenue voted by a Congress piqued at executive ultimatums on tax reform.

---

[From the Washington Post, Dec. 9, 1969]

JOBS, TAXES AND INFLATION

The good news that unemployment fell sharply in November has brought fresh consternation to the economists and officials who are trying to chart a safe course between inflation and recession. The sudden rise of unemployment from 3.5 to 4.0 in September had been widely read as evidence of a turndown in economic activity. Along with some other indicators, that rise in joblessness had prompted President Nixon to warn businessmen against betting on continued inflation. Now the recording of a low seasonably adjusted unemployment rate of 3.4 per cent of the labor force in November seems to leave the President's forecast hanging in midair.

If skyrocketing prices, wages and interest rates had been moderated, the country could well rejoice over the placement of 360,000 job-seekers in a single month. In the present context of economic developments, however, the good fortune of these individuals adds to the shadows hanging over the country. For if this dramatic rollback of unemployment is not a statistical fluke, it suggests that private businesses are lunging ahead with their overly rapid expansion plans despite soaring interest rates, wages and raw material costs. It confirms what the official surveys of busiess intentions had previously shown: that a vast number of companies are still trying to beat inflation, not by slowing down its pace, but by speeding their operations to get ahead of the still higher costs they see ahead.

This escalating inflationary psychology could be disastrous in the end if it is permitted to run on unchecked. The Federal Reserve Board seems determined to reverse the trend with its credit squeeze, and some economists believe that overly tight restraints are already sowing the seeds of recession. The appalling part of the picture is that the Fed is getting precious little support from other sources. The Treasury has attempted to do its part by planning budgetary surpluses for the next two years; but the tax-cutting spree in Congress is threatening to make the government itself a contributor to the inflationary spiral once more.

What seems to be dominant in the minds of senators who are heaping one bonanza on another in the tax bill is the political rewards for cutting taxes. A sound argument can be made, however, that they are voting for more inflation, more economic dislocations (such as the critical undoing of the housing industry) and perhaps for a credit-squeeze bust that will lead to a depression. Certainly this is no time to be cutting taxes to stimulate

more demand and consequent economic activity. Sober-minded legislators are warning that this attempt to convert the tax-reform bill into a Christmas tree with goodies for everyone will undermine the whole concept of Congress as a responsible regulator of the economy. But there is little evidence that these wise words of warning heard on Capitol Hill. The President added his own warning last night that he could not sign a tax-reform bill containing an $800 personal exemption and the proposed 15 per cent increase in Social Security benefits. Hopefully, these warnings will be heeded.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

## COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. HUGHES in the chair) laid before the Senate the following letters, which were referred as indicated:

CONSUMER PRODUCT TESTING ACT OF 1969

A letter from the Special Assistant to the President for Consumer Affairs, transmitting a draft of proposed legislation to assist consumers in evaluating products by promoting development of adequate and reliable methods for testing characteristics of consumer products (with accompanying papers); to the Committee on Commerce.

REPORTS OF COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on improvements needed in settling claims for termination of communications services, Department of Defense, Federal Communications Commission, dated December 9, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a secret report on U.S. Assistance to the Kingdom of Thailand (with an accompanying report); to the Committee on Government Operations.

AUTHORIZATION OF LONGER TERM LEASES OF CERTAIN INDIAN LANDS

A letter from the Acting Secretary of the Interior, transmitting a draft of proposed legislation to amend the Act of August 9, 1955, to authorize longer term leases of Indian lands on the Yavapai-Prescott Community Reservation in Arizona (with an accompanying paper); to the Committee on Interior and Insular Affairs.

## REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. YARBOROUGH, from the Committee on Labor and Public Welfare, with amendments:

S. 2809. A bill to amend the Public Health Service Act so as to extend for an additional period the authority to make formula grants to schools of public health; (Rept. No. 91–586).

By Mr. EASTLAND, from the Committee on the Judiciary, without amendment:

S. 1389. A bill for the relief of Alex G. W. Miller (Rept. No. 91–587):

H.R. 2208. An act for the relief of James Hideaki Buck (Rept. No. 91–588);

H.R. 4560. An act for the relief of Sa Cha Bae; (Rept. No. 91–589);

H.R. 5133. An act for the relief of Pagona Anomerianaki (Rept. No. 91–590);

H.R. 6600. An act for the relief of Panagiotis, Georgia and Constantina Malliaras. (Rept. No. 91–591); and

H.R. 10156. An act for the relief of Lidia Mendola (Rept. No. 91–592).

By Mr. EASTLAND, from the Committee on the Judiciary, with amendments:

S. 2102. A bill for the relief of Percy Ispan Avram (Rept. No. 91–593).

By Mr. JACKSON, from the Committee on Interior and Insular Affairs, with amendments:

S. 3014. A bill to designate certain lands as wilderness (Rept. No. 91–594).

## EXECUTIVE REPORTS OF A COMMITTEE

As in executive session, the following favorable reports of nominations were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary:

Robert W. Rust, of Florida, to be U.S. attorney for the southern district of Florida;

Henry L. Brooks, of Kentucky, to be U.S. circuit judge for the sixth circuit;

Alfred T. Goodwin, of Oregon, to be U.S. district judge for the district of Oregon;

Cristobal C. Duenas, of Guam, to be judge of the district court of Guam;

R. Dixon Herman, of Pennsylvania, to be U.S. district judge for the middle district of Pennsylvania;

David L. Middlebrooks, Jr., of Florida, to be U.S. district judge for the northern district of Florida;

John Henry Schneider, of Virginia, to be an Assistant Commissioner of Patents;

Clarence M. Coster, of Minnesota, to be an Associate Administrator of Law Enforcement Assistance; and

Harry Connolly, of Oklahoma, to be U.S. marshal for the northern district of Oklahoma.

## BILLS AND A JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. MANSFIELD (for himself, Mr. BYRD of West Virginia, and Mr. GRAVEL):

S. 3220. A bill to protect a person's right of privacy by providing for the designation of obscene or offensive mail matter by the sender and for the return of such matter at the expense of the sender; to the Committee on Post Office and Civil Service.

(The remarks of Mr. MANSFIELD when he introduced the bill appear earlier in the RECORD under the appropriate heading.)

By Mr. YOUNG of Ohio:

S. 3221. A bill to amend the Act of August 24, 1966 (Public Law 89–544), in order to prescribe effective criteria for the care and treatment of animals used for research and experiment purposes by research facilities, and for other purposes; to the Committee on Commerce.

(The remarks of Mr. YOUNG of Ohio when he introduced the bill appear earlier in the RECORD under the appropriate heading.)

By Mr. HARRIS:

S. 3222. A bill to designate certain lands in the Wichita Mountains National Wildlife Refuge in Oklahoma as wilderness; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. HARRIS when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MAGNUSON (for himself, Mr. ALLOTT, Mr. BENNETT, Mr. BURDICK, Mr. CANNON, Mr. CHURCH, Mr. COOPER, Mr. DOLE, Mr. HANSEN, Mr. HATFIELD, Mr. HRUSKA, Mr. JACKSON, Mr. JORDAN of Idaho, Mr. MANSFIELD, Mr. MCGOVERN, Mr. METCALF, Mr. MILLER, Mr. MOSS, Mr. MURPHY, Mr. PACKWOOD, Mr. PEARSON, and Mr. YOUNG of North Dakota):

S. 3223. A bill to amend the Interstate Commerce Act in order to give the Interstate Commerce Commission additional authority to alleviate freight car shortages and for other purposes; to the Committee on Commerce.

(The remarks of Mr. MAGNUSON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. DOLE:

S.J. Res. 167. A joint resolution providing for the display in the Capitol Building of a portion of the moon; to the Committee on Rules and Administration.

(The remarks of Mr. DOLE when he introduced the joint resolution appear later in the RECORD under the appropriate heading.)

## S. 3222—INTRODUCTION OF A BILL TO DESIGNATE CERTAIN LANDS IN THE WICHITA MOUNTAINS WILDLIFE REFUGE IN OKLAHOMA AS WILDERNESS

Mr. HARRIS. Mr. President, I reintroduce a bill to designate certain lands in the Wichita Mountains Wildlife Refuge in Oklahoma as wilderness.

Mr. President, the Department of the Interior 2 years ago conducted hearings in Lawton, Okla., concerning a proposal to designate certain lands within the Wichita Mountains Wildlife Refuge as wilderness in order to assure the retention of these lands in their natural state. On the basis of recommendations made at the hearings, the Department of the Interior has decided that some 8,900 acres within the boundaries of the refuge meet the criteria and should be designated a wilderness area in order to preserve their natural beauty.

There are abundant reasons for preserving this area as it has always been. Certainly the study of such subjects as geology and ecology will be enriched for those in the area who are interested. And perhaps more importantly, this act would further protect what is rapidly becoming a unique experience for Americans, camping in a true wilderness. And finally, this refuge will preserve for the people of southwestern Oklahoma and surrounding States the privilege, should they so desire, of simply viewing nature unmarred by that which is manmade.

I would hope, Mr. President, that the bill can be enacted with a minimum of delay.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 3222) to designate certain lands in the Wichita Mountains National Wildlife Refuge in Oklahoma as wilderness, introduced by Mr. HARRIS, was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

## S. 3223—INTRODUCTION OF A BILL RELATING TO ALLEVIATION OF FREIGHT CAR SHORTAGES

Mr. MAGNUSON. Mr. President, I introduce, for appropriate reference, a bill to amend the Interstate Commerce Act so as to clarify the ICC's authority to utilize penalty per diem in solving freight car supply problems and to provide a clarified basis for prescription by the Commission of a schedule of basic per diem charges. The following Senators have joined with me in sponsoring this legislation: Senators ALLOTT, BENNETT, BURDICK, CANNON, CHURCH, COOPER, DOLE, HANSEN, HATFIELD, HRUSKA, JACKSON, JORDAN of Idaho, MANSFIELD, MCGOVERN, METCALF, MILLER, MOSS, MURPHY, PACKWOOD, PEARSON, and YOUNG of North Dakota.

In 1966 Congress enacted Public Law 89-430, the purpose of which was to alleviate the recurring national shortage of railroad freight cars. That statute authorized the Interstate Commerce Commission to set incentive per diem rates and in so doing consider factors encouraging the acquisition and maintenance of a car supply fleet adequate to meet the needs of commerce and the national defense.

On May 13, 1969, almost 3 years later, the ICC appeared before the Surface Transportation Subcommittee of the Senate Commerce Committee to testify that it had not been able to set incentive per diem rates.

The problem of freight car shortages continues to grow worse. Despite assurances of further action upon completion of a study in progress since 1966, the situation has deteriorated to the point of the present crisis. And, I am sorry to say, at least one of the ICC's recent decisions may contribute significantly to a further worsening of the freight car supply.

The per diem system established by the ICC in 1968 is based on time used and mileage. It has been challenged by 20 railroads and 21 States on the grounds that it does not encourage movement of freight cars to the West to carry western grain and timber to market. In fact, the ICC system exacerbates the problem because its mileage basis provides incentive to retain empty freight cars on other lines until a load is obtained to pay their way back to the owner railroad's lines. In addition to the inherent deficiency of the time used, mileage system, the system is based on 1966 statistics and could prove to be unreasonably expensive to administer.

It is apparent that there must be greater utilization and better distribution of present freight cars and that acquisition and maintenance of the freight car fleet must be encouraged. The western railroads have established a good record for increasing their car supply. Unfortunately, their cars leave western lines and do not quickly return. The 1968 ICC formula not only discourages western lines from building new freight cars, but, incredibly enough, penalizes them for doing it.

The time for study has long since passed. The first part of the bill I introduce today, in effect, relieves the ICC of its discretionary responsibility for setting the basic per diem rates.

This is a technical bill and it goes further than Congress normally goes in directing an independent agency in the performance of one of its tasks. But, in this area of responsibility, it appears that we may have reached a point where it is necessary to develop and prescribe in some detail the basic principles which the ICC should follow in setting per diem rates. The basic per diem provisions are drawn from the conclusions reached by a task force created by the Association of American Railroads after a 4½ year study.

The second objective of the bill is contained in section 4. This section is perhaps of greater relevance to the existing emergency situation. It contains provisions similar to those recommended by the ICC earlier this year, and also in past Congresses, giving the Commission authority to impose penalty per diem rates during periods when an emergency freight car shortage exists.

As I have tried to make crystal clear in the past, most recently during the May hearings on freight car supply, I do not believe additional legislation is necessary to permit the ICC to impose penalty per diem rates on an emergency basis. However, to the extent that questions exist, legislation will hopefully eliminate uncertainty over the Commission's authority in this area.

With this bill, the Special Subcommittee on Freight Car Shortages of the Senate Commerce Committee will be able to hold a full hearing on the merits of the problem in the immediate future. I am hopeful that corrective action and meaningful solutions will not be far distant.

I look forward to early hearings on this bill. While I believe that the bill will help remedy the freight car shortage problem, I am not wedded to its language and will carefully consider information developed in hearings.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD at this point.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3223) to amend the Interstate Commerce Act in order to give the Interstate Commerce Commission additional authority to alleviate freight car shortages and for other purposes, introduced by Mr. MAGNUSON (for himself and other Senators), was received, read twice by its title, referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

S. 3223

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Congress finds it essential that a system of compensation for the use of any type of freight car should contribute to sound car service practices (including the efficient utilization and distribution of cars) and encourage the acquisition and maintenance of car supply adequate to meet the need of commerce and the national defense; that to achieve these goals such system should provide just and reasonable compensation to freight car owners, including a fair return on value, and should minimize the administrative expense of such system; that included in such system should be authority to establish car-hire or car-rental charges at the level necessary to meet emergency supply problems; that such system should be predicated solely upon the time a car is held or used; and, therefore, it is the purpose of this amendment to authorize and to direct the Interstate Commerce Commission to prescribe such system of compensation.

DEFINITIONS

SEC. 2. For the purposes of this amendment—

(a) "Freight car" means every new, rebuilt and acquired used car owned by or leased to railroads which may be subject to interchange among such railroads.

(b) "Shop facilities" means those railroad facilities consisting of shops and machinery, engine houses, power plants and machinery, together with the land and tracks therefor.

(c) "Additions and betterments" means the same as that prescribed in the Interstate Commerce Commission's Uniform System of Accounts (49 C.F.R. 1201).

(d) "Value base" means:

(i) For cars, including subsequent additions and betterments, reproduction cost less depreciation based upon

(1) Original cost new for new and acquired used cars.

(2) The initial value determined in accordance with the mechanical interchange rules of the Association of American Railroads and the Interstate Commerce Commission Uniform System of Accounts for rebuilt cars.

(3) Such reproduction cost deflated by a freight car capacity index; and

(ii) For shop facilities, including additions and betterments, original cost.

(e) "Depreciation" means straight line except that for cars nine (9) years old and less, a 1.5 declining balance shall be utilized to the point where the results are exceeded by straight line, and except such depreciation for a car shall not exceed six (6) percent per annum. Initially, car life shall be twenty-seven (27) years, subject to annual review and adjustment, and depreciation in the last year shall be extended for an additional three years.

(f) "Return on investment" means one and seventy-five hundredths (1.75) times the latest five (5) year average of yields on railroad bonds as applied to the depreciated value base.

(g) "Operating and maintenance cost" means, but is not limited to, the following items, the bases of which are prescribed in the Interstate Commerce Commission Uniform System of Accounts:

(i) A proportion of interest and depreciation on shop facilities.

(ii) A proportion of taxes on railroad property used in transportation, undepreciated value of freight cars and payroll taxes.

(iii) Freight train car repairs.

(iv) Train supplies and expenses representing:

(1) Repacking journal boxes.

(2) Roller-bearing lubrication.

(3) Repair track portion of Air Brake, clean, oil, test and stencil.

(4) Repair track portion of re-light weighing.

(v) Maintenance of repair facilities, including machinery therein.

(vi) A proportion of miscellaneous maintenance of equipment accounts.

(vii) Deadhead haul cost and interest on materials and working capital.

(viii) A proportion of general expense.

There should be excluded, however, all train yard inspection and handling line responsibility repairs arising from accident.

(h) "Total annual ownership cost" means the accumulation of depreciation, rate of return on investment and operating and maintenance costs annually.

(i) "Car day divisor" means the ratio of average freight car loadings to peak freight car loadings for the four-week period in each

of the previous five years when freight car loadings were maximum for each type of freight car adjusted by a standard home bad-order ratio based on the experience of at least twenty-five (25) percent of the national per diem freight car fleet.

(j) "Car day cost brackets" means that each freight car shall be assigned to its appropriate car day cost bracket in a series commencing with 0.00 to $1.87 and progressing upwards in increments of 75 cents; with applicable daily rate per car per day separated by increments of 75 cents.

(k) "Daily car hire rates" means that the daily rates shall be applied per each 24-hour period from midnight to midnight or divided for allocation to lesser periods of time.

BASIC PER DIEM AMENDMENT

SEC. 3. Section 1(14)(a) of the Interstate Commerce Act (49 U.S.C. Section 1(14)(2)) is amended to read:

"SEC. 1(14)(a). In fixing such compensation to be paid for the use of any type of freight car, the Commission shall determine the value base of freight cars and shop facilities with additions and betterments, the depreciation thereon and a rate of return on investment. The total annual ownership costs, including operating and maintenance costs, shall be converted by a car day divisor to car day cost brackets so as to produce daily car hire rates. Such rates shall be recomputed annually.

"Upon petition of any carrier complaining that special circumstances beyond its control compel it to incur unduly high car-hire costs, the Commission, after hearing, if it finds it to be in the national interest, may prescribe appropriate reclaim arrangements for the future which will relieve the excessive burden of car-hire charges."

EMERGENCY POWERS

SEC. 4. The first sentence of section 1(15) of the Interstate Commerce Act is amended by striking out "(c)" and "(d)" and inserting in lieu thereof "(d)" and "(e)", respectively, and by inserting immediately after clause (b) of such sentence a new clause as follows: "(c) to impose on one or more carriers, when a shortage or threatened shortage of freight cars exists, such charges (in addition to the daily car-hire or car-rental rates then in effect) applicable to any type of freight car in any section of the country during such emergency, or threatened emergency, as in the opinion of the Commission are reasonably calculated to relieve such shortage or threatened shortage by promoting the expeditious movement, distribution, interchange or return of freight cars, and the additional charges shall be paid by the carrier using such cars to the owners;".

PENALTIES

SEC. 5. Section 1(17) of the Interstate Commerce Act is amended by striking out "$100 nor more than $500 for each such offense and $50", and inserting in lieu thereof the following: "$200 nor more than $1,000 for each such offense and $100".

## SENATE JOINT RESOLUTION 167—INTRODUCTION OF A JOINT RESOLUTION RELATING TO DISPLAY OF LUNAR MATERIAL IN THE ROTUNDA OF THE CAPITOL

Mr. DOLE. Mr. President, the rotunda of the Capitol is one of the most frequently visited sites of our national heritage. Each year countless numbers of Americans and visitors from foreign lands come to see the historic paintings and sculpture there as well as the magnificent architecture of the dome. Since the rotunda is one of the Nation's great historic places, it seems appropriate to include among its treasures a memento from mankind's greatest adventure, the Apollo moon program.

The Senate and the House each have their flags which were carried on Apollo 11. These are indeed meaningful to the membership of both bodies, but an exhibit of material from the moon's surface would add a special dimension of immediacy to our astronauts' accomplishments for the visitors who come to the Capitol in such great numbers.

There could be no finer place to pay tribute to our astronauts and all those who have contributed to our space program than in the Capitol rotunda. In addition to honoring America's space effort, an exhibit of this sort would be a worthy monument to all of our past accomplishments and sacrifices and a source of inspiration as we face the challenges of the future.

Mr. President, I introduce this joint resolution for appropriate reference.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred.

The joint resolution (S.J. Res. 167) providing for the display in the Capitol Building of a portion of the moon, introduced by Mr. DOLE, was received, read twice by its title, and referred to the Committee on Rules and Administration.

## ADDITIONAL COSPONSOR OF A BILL

S. 3039

Mr. DOLE. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Texas (Mr. YARBOROUGH) be added as a cosponsor of S. 3039, to provide that certain highways extending from Laredo, Tex., to the point where U.S. Highway 81 crosses the border between North Dakota and Canada shall be known collectively as the "Pan American Highway."

The PRESIDING OFFICER. Without objection, it is ordered.

## ADDITIONAL COSPONSOR OF JOINT RESOLUTION

SENATE JOINT RESOLUTION 61

Mr. GRIFFIN. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Illinois (Mr. SMITH) be added as a cosponsor of Senate Joint Resolution 61, proposing an amendment to the Constitution of the United States relative to equal rights for men and women.

The PRESIDING OFFICER. Without objection, it is so ordered.

## SENATE RESOLUTION 293—RESOLUTION SUBMITTED AUTHORIZING THE PRINTING OF ADDITIONAL COPIES OF "INDIAN EDUCATION: A NATIONAL TRAGEDY—A NATIONAL CHALLENGE"

Mr. KENNEDY. Mr. President, I submit for appropriate reference a resolution to authorize the printing of 3,000 additional copies of the final report of the Subcommittee on Indian Education. This report was entitled "Indian Education: A National Tragedy—A National Challenge." Its number is 91–501.

Mr. President, neither the document room nor the Committee on Labor and Public Welfare have any copies of this report remaining. Yet, there are nearly 500 requests from educational institutions alone for the report.

Consequently, I believe it highly important that this resolution be approved.

The PRESIDING OFFICER. The resolution will be received and appropriately referred.

The resolution (S. Res. 293), which reads as follows, was referred to the Committee on Rules and Administration:

S. RES. 293

*Resolved by the Senate (the House of Representatives concurring)*, That there be printed for the use of the Senate Committee on Labor and Public Welfare three thousand additional copies of the 1969 report of its Special Subcommittee on Indian Education entitled "Indian Education: A National Tragedy—A National Challenge" (Senate Report 91–501).

## TAX REFORM ACT OF 1969—AMENDMENTS

AMENDMENT NO. 413

Mr. DOLE submitted an amendment, intended to be proposed by him, to the bill (H.R. 13270) to reform the income tax laws, which was ordered to lie on the table and to be printed.

AMENDMENT NO. 414

Mr. HARRIS (for himself, Mr. GRAVEL, Mr. FANNIN, and Mr. MCGOVERN) submitted an amendment, intended to be proposed by them, jointly, to House bill 13270, supra, which was ordered to lie on the table and to be printed.

AMENDMENT NO. 416

Mr. DOLE submitted an amendment, intended to be proposed by him, to House bill 13270, supra, which was ordered to lie on the table and to be printed.

AMENDMENT NO. 417

Mr. COOK. Mr. President, the purpose of the amendment I submit today on behalf of myself and my colleague (Mr. COOPER) is to delete section 213 of the bill reported by the Finance Committee. This section would introduce into the code an entirely new principle and would, in practice, apply standards to agricultural pursuits not required of any other business. It is unfair, arbitrary, and discriminatory. It sets up rules governing the question of whether an individual taxpayer is engaged in a particular activity for a profit. It gives to the Internal Revenue Service the authority to determine a taxpayer's intent, without regard to the realities of many businesses which it would affect. The section contains a presumption that if the taxpayer shows a profit in 2 out of any 5 consecutive years, he will be presumed to be in the activity for profit. Even this arbitrary presumption can be negated by IRS merely by its issuing a regulation. Past actions of IRS dictate that the service will undoubtedly interpret this presumption to mean that if the taxpayer fails to make that profit in 2 out of 5 years, he is not engaged in the business for profit and try to disallow all losses.

The danger of the section is its real

threat to new investors in many agricultural pursuits, such as cattle raising, horse breeding, citrus production, pecan growing, and so forth. New capital and the yen to venture into these chancy fields has given this Nation a viable citrus industry, production of quality nuts, abundant supplies of beef, and a booming horse industry that already pours over a billion dollars into tax coffers. While the section might appear on the surface a desirable provision to control some abuses, it will have the effect of prohibiting new people and fresh capital from entering these fields. Orange groves require a minimum of 6 years to bear fruit and produce income, pecans take 11 years, building a quality registered herd of cattle 5 to 10 years by selective breeding. It requires a minimum of 3 years after a mare is bred before its foal can run its first race. Even after a horse is put on a track, there is only 1-in-10 chance of winning.

These businesses need substantial initial investment, and several years before any hope of income and profit. Section 213 threatens these industries. It would provide an unnecessary umbrella of noncompetitive protection, temporarily, of those already in the business—and consequently, the public could end up paying higher prices.

In my State of Kentucky, this section is going to largely destroy the horse breeding and racing industries. New investors are not going to pay the price for top thoroughbreds while faced with the likelihood that if they lose, the Internal Revenue will disallow their losses. And yet, I never met a man who went into the horse business—or any business—without the intention of making a profit. So long as the tax rates are not 100 percent, it will always be more economical to make money in any venture rather than to lose it. It should be noted that direct taxes from parimutuel betting this year will exceed half a billion dollars. Section 213 jeopardizes this tax to State and local governments.

If my amendment is adopted, it will mean that present law on this subject will remain in force.

Under present law—found in section 270 of the code—if a taxpayer loses in excess of $50,000 in a business each year for 5 consecutive years, his deductible losses for each of those 5 years is limited to $50,000.
